Ward Leonard Electric Company. (See Bullinger, Frederic H., assignor.)
Wardwell, Simon W., deceased, Providence, R. I.; C. V. J. Christensen, E. C. Smith, A. A. Armington, and W. W. Bardsley, executors. Yarn retriever for braiding or similar machines. No. 1,423,587; July 25.
Warner, Arthur W., Media, Pa., assignor to The American Gas Company of New Jersey, Camden, N. J. Water seal for gas retorts. No. 1,423,975; July 25.
Warner, Robert K., West Haven, Conn. Sampling apparatus. No. 1,423,890; July 25.
Wasyl Klymko et al. (See Andrusyszyn, Frank, assignor.)
Watrous, Denton J. (See Hibbard, R. B., Watrous, and Bassette.)
Wayne, Herbert N., Washington, D. C. Universal joint. No. 1,424,051; July 25.
Weber, George A., Stamford, Conn. Nonpuncturable tire. No. 1,423,976; July 25.
Weber, George A., Stamford, Conn. Nonpuncturable tire. No. 1,423,977; July 25.
Weibel, Emil A., Fairbank, Iowa. Handle. No. 1,424,052; July 25.
Weintraub, Ezechiel, New York, N. Y., assignor to General Electric Company. Preparing catalyzing material. No. 1,423,978; July 25.
Weisberg, Louis, and R. S. Potter, Grantwood, N. J., assignors to The Barrett Company. Polyglycerol resin. No. 1,424,137; July 25.
Western Electric Company. (See Cardwell, Allen D., assignor.)
Western Electric Company. (See Freile, Bruce, assignor.)
Westinghouse Air Brake Company, The. (See Farmer, Clyde C., assignor.)
Wheeler, James W., jr., Chattanooga, Tenn. Direction indicator. No. 1,423,588; July 25.
Wherry, John A., New Orleans, La., assignor to Underwood Typewriter Company, New York, N. Y. Typewriter. (Reissue.) No. 15,426; July 25.
Whitaker, William H., assignor to American Atomized Fuel Company, Shelbyville, Ill. Pulverized-fuel carburetor and feeder. No. 1,424,053; July 25.
White, Arthur J. (See Mitchell, P. L., and White.)
White, Edward T. (See Canell, Charles E., assignor.)
White, Ida E., administratrix. (See White, Joseph B.)
White, James S., assignor to Allied Golf Company, Chicago, Ill. Golf bag. No. 1,423,891; July 25.
White, Joseph B., deceased, by I. E. White, administratrix, Clarion, Iowa. Seed and ground tester. No. 1,423,979; July 25.
Whiting Corporation. (See Townsend, John S., assignor.)
Wiehl, Alfred, Brooklyn, N. Y. Phonograph-record cabinet. No. 1,424,054; July 25.
Wilde, Adolph, Bellflower, Ill. Tractor coupling. No. 1,423,785; July 25.
Wilder, Eugene, Boulder, Colo. Aeroplane. No. 1,424,055; July 25.
Will & Baumer Candle Company, The. (See Grosemann, Robert, assignor.)
Williams, Arthur G., Grantwood, N. J., assignor to The Barrett Company. Production of dicarboxylic acid. No. 1,423,980; July 25.
Williams, Charles H., assignor to Chicago Railway Equipment Company, Chicago, Ill. Brake-beam release and support. No. 1,423,892; July 25.
Williams, William E., Chicago, Ill. Highway road. No. 1,423,893; July 25.
Williams, William E., Wilmette, Ill. Bumper for automobiles. No. 1,423,894; July 25.
Williamson, G. H., & Sons, Limited. (See Drury, Frank, assignor.)
Willson, Andrew E. (See Willson, Mabel W. and A. E.)
Willson, Mabel W. and A. E., Grand Rapids, Mich. Powder puff. No. 1,423,745; July 25.
Wilson Welder & Metals Company. (See Churchward, Jack, assignor.)
Winblad, Niklas, Stepney, Conn., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn. Ignition apparatus for internal-combustion engines. No. 1,424,056; July 25.

Wing, Claude E., College Point, and H. Schelhammer, Whitestone Landing, assignors to American Hard Rubber Co., New York, N. Y. Machine for making combs. No. 1,423,981; July 25.
Winston, William J. (See Mitts, P. S., and Winston.)
Winters, Lee L., Ann Arbor, Mich. Motor-meter lock. No. 1,423,822; July 25.
Witzenmann, Emil, Pforzheim, Germany. Flexible metal hose. No. 1,424,057; July 25.
Wolfe, Arthur P., Lockport, N. Y., assignor to Harrison Radiator Corporation. Supporting and actuating means for automobile radiator shutters. No. 1,423,982; July 25.
Wolff, Albert, Berlin, Germany. Sterilizing air. No. 1,423,704; July 25.
Wood, Frederick W., Ashton-under-Lyne, assignor to Woods Die Press Improvements Company, Limited, London, England. Die press for printing and embossing. No. 1,423,589; July 25.
Wood, John T., East St. Louis, Ill. Washboiler attachment. No. 1,423,823; July 25.
Wood, Lyndon D. (See Falk, Hilbert L., assignor.)
Woodard, William E., Forest Hills, N. Y. Trailer truck for locomotives. No. 1,423,895; July 25.
Woods Die Press Improvements Company, Limited. (See Wood, Frederick W., assignor.)
Woodward, Oscar, Babylon, assignor to Remington Accounting Machine Corporation, New York, N. Y. Calculating machine. No. 1,423,637; July 25.
Woolcock, John, assignor to W. J. Stewart, London, England. Molding of concrete products such as blocks, panels, structures, and the like. No. 1,423,983; July 25.
Wyckoff, William L., Brooklyn, N. Y. Calculating rule. No. 1,423,896; July 25.
Yanochowski, George A., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Connector switch. No. 1,423,897; July 25.
Yanochowski, George A., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Automatic telephone system. No. 1,423,898; July 25.
Yanochowski, George A., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill. Automatic telephone system. No. 1,423,899; July 25.
Yehling, William W., Butte, Mont. Spike. No. 1,424,058; July 25.
Youngs, George B., New York, N. Y. Brake. No. 1,424,059; July 25.
Youngstown Sheet & Tube Company, The. (See Jupp, A. E., and Crooks, assignors.)
Zeier, George W., Ethan, S. Dak. Husker. No. 1,424,060; July 25.
Ziegler, George J., assignor of one-third to S. Gibbons, one-third to E. Stewart, and one-third to F. C. Beutel, Los Angeles, Calif. Tractor. No. 1,424,128; July 25.
Zilen, Victor W., assignor to Lucey Manufacturing Corporation, Chattanooga, Tenn. Crown-block cable guard. No. 1,423,550; July 25.
Zimmerman, Walter, Kansas City, Kans. Garment fastener. No. 1,423,590; July 25.
Zoelly, Heinrich, and A. Gaag, Zurich, Switzerland. Servo-motor-controlling mechanism. No. 1,423,786; July 25.

ALPHABETICAL LIST OF PATENTEES OF DESIGNS.

Barci, George, assignor to Susquehanna Silk Mills, New York, N. Y. Textile fabric. No. 61,266; July 25.
Chapman, William M., Hartford, Ind. Ash tray. No. 61,267; July 25.
Enoch, J. Olive, Los Angeles, Calif. Stocking baby doll. No. 61,268; July 25.
Farnsworth, Kenneth C. (See Roberts, C. V., and Farnsworth.)
Forman Bassett Company, The. (See Meyer, Frank, assignor.)
Gandioz, Edmond, Watford, England, assignor to Witcombe, McGeachin & Co., New York, N. Y. Textile fabric, wall paper, wrapping paper, or article of similar nature. No. 61,269; July 25.
Javal, Fernand, Paris, France. Paper or similar article. No. 61,270; July 25.
Krupicka, Ella, assignor to Susquehanna Silk Mills, New York, N. Y. Textile fabric. No. 61,271; July 25.
Lindner, Harold H., assignor to Montague & Co. Inc., New York, N. Y. Valance. No. 61,272; July 25.
Lockwood, Catharine B., Washington, D. C. Toy doll. No. 61,273; July 25.
Mayer, Joshua W., New York, N. Y. Ring or similar article. No. 61,274; July 25.
Meyer, Frank, Lakewood, Ohio, assignor to The Forman Bassett Company. Safety paper. No. 61,275; July 25.
Montague & Co. Inc. (See Lindner, Harold H., assignor.)
Pelt, Joseph, Newark, N. J. Knitted cape. No. 61,276; July 25.
Roberts and Mander Stove Company. (See Roberts, C. V., and Farnsworth, assignors.)
Roberts, Clarence V., and Kenneth C. Farnsworth, assignors to Roberts and Mander Stove Company, Philadelphia, Pa. Gas heater. No. 61,277; July 25.
Rowland, Gladys, assignor to Susquehanna Silk Mills, New York, N. Y. Textile fabric. No. 61,278; July 25.
Schulze, John W., assignor to Alfred Vester Sons, Inc., Providence, R. I. Husk for lighting fixtures. No. 61,279; July 25.
Shiman Bros. & Co. Inc. (See Shiman, David, assignor.)
Shiman, David, assignor to Shiman Bros. & Co. Inc., New York, N. Y. Finger ring. No. 61,280; July 25.
Strasser, William, assignor to Susquehanna Silk Mills, New York, N. Y. Textile fabric. Nos. 61,281–4; July 25.
Susquehanna Silk Mills. (See Barci, George, assignor.)
Susquehanna Silk Mills. (See Krupicka, Ella, assignor.)
Susquehanna Silk Mills. (See Rowland, Gladys, assignor.)
Susquehanna Silk Mills. (See Strasser, William, assignor.)
Susquehanna Silk Mills. (See Tardy, Viola, assignor.)
Tardy, Viola, assignor to Susquehanna Silk Mills, New York, N. Y. Textile fabric. Nos. 61,285–6; July 25.
Vester, Alfred, Sons, Inc. (See Schulze, John W., assignor.)
Witcombe, McGeachin & Co. (See Gaudioz, Edmond, assignor.)

Newsom, Joseph N., and H. E. Harder, assignors to Newsom Valve Company, St. Louis, Mo. Valve device for pneumatic tires. No. 1,423,873; July 25.
Newsom Valve Company. (See Newsom, J. N., and Harder, assignors.)
Nicholls, Albert E., Wilson Creek, Wash. Internal-combustion engine. No. 1,423,677; July 25.
Nicoll, Herbert. (See Gibson, R. E., and Nicoll.)
Nilson, Richard D., Bell, Pa. Rope ladder construction. No. 1,424,115; July 25.
Nitrogen Corporation, The. (See Arnold, E. E., and St. Clair, assignors.)
Nitrogen Corporation, The. (See Clancy, John C., assignor.)
Nitrogen Corporation, The. (See St. Clair, Palmer, jr., assignor.)
Noble, Donald, Bridgeport, Conn., assignor to The Singer Manufacturing Company. Paper-feeding mechanism. No. 1,424,116; July 25.
Nocting, William H., assignor to Faultless Caster Company, Evansville, Ind. Ball-bearing caster. No. 1,424,028; July 25.
Nolan, Thomas C. (See Potter, L. D., and Nolan.)
Nordiska Kullager Aktiebolaget. (See Leon, Karl O., assignor.)
Nordström, Ott, Matfors, and A. Mörck, Sundsvall, Sweden. Means for continuous predrying of fuel. No. 1,423,728; July 25.
Norlander, Charles A., assignor of one-half to C. E. Davidson, Greenville, Ill. Carburetor. No. 1,423,579; July 25.
Northrup, Elmer C., San Francisco, Calif. Box-nailing machine. No. 1,423,778; July 25.
Northwestern Manufacturing Company. (See Shallcross, Wilmer M., assignor.)
Oakley, John, Springfield, Mass. Broach. No. 1,423,814; July 25.
Oefinger, John L., Denver, Colo. Broom holder. No. 1,423,678; July 25.
Ohio Brass Company, The. (See Matthes, Samuel S., assignor.)
Okonite Company, The. (See Loomis, Evarts G., assignor.)
Olin, Fred C., Buffalo, N. Y. Tractor. No. 1,423,962; July 25.
Oliver, Sewall K., Columbia, S. C. Warp take-up and tensioning mechanism for looms. No. 1,423,729; July 25.
Oliver, Thomas C. (See Hechenbleikner, I., and Oliver.)
O'Neil, Thomas J., Pittsburgh, Pa. Antiskid device. No. 1,423,963; July 25.
Oppenheim, Albert. (See Christie, Lewis D., assignor.)
Orr, Clifford B., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Inner tube for pneumatic tires. No. 1,424,135; July 25.
Orr, George D., Cincinnati, Ohio. Accessory for automobiles. No. 1,423,730; July 25.
Orr, William V., Cleveland, Ohio. Suction cleaner. (Reissue.) No. 15,423; July 25.
Osborn, Alden E., New York, N. Y. Motor vehicle. No. 1,423,731; July 25.
Oswald, Richard W., Pittsburgh, Pa. Fan wheel. No. 1,423,964; July 25.
Ozabal, Rudolph, Chicago, Ill. Ash receptacle. No. 1,423,538; July 25.
P. & M. Company, The. (See Henggi, Lewis O., assignor.) (Reissue.)
Paige, Jason, Evanston, Ill. Track switch. No. 1,423,965; July 25.
Palmaffy, Nicholas, West Orange, N. J. Valve. No. 1,423,966; July 25.
Palmer, Martin J., Chicago, Ill. Pocketbook protector. No. 1,423,539; July 25.
Pancoast, William G., Wilmette, and W. J. Grotenhuis, Chicago, Ill., assignors, by mesne assignments, to Biflex Products Company. Automobile bumper-attaching hanger. No. 1,423,874; July 25.
Park City Cornice Works, Inc. (See Pitz, A. G., and Saur, assignors.)
Park, Nelson V., Niles, Mich. Electroplating process. No. 1,423,815; July 25.
Parks, Dennis. (See Mitchell, J. E., and Parks.)
Parsons, Stuart W., assignor to The Stanley Works, New Britain, Conn. Manufacture of swivel members. No. 1,424,029; July 25.
Partee, James, Santa Cruz, Calif. Concrete building structure. No. 1,423,779; July 25.
Paulson, Walter H., assignor to H. D. Lathrop, Chicago, Ill. Can-washing machine. No. 1,423,816; July 25.
Pavitchich, Steve, Woodriver, Ill. Drain valve. No. 1,423,679; July 25.
Peck, Harry E., Waverly, N. Y. Shoehorn. No. 1,424,030; July 25.
Peerless Smoking Jacket Company. (See Leiken, Philip, assignor.)
Perfect Vacuum Canning Company. (See Bach, Nells P., assignor.)
Perfecto Gear Differential Co. (See Starr, Charles E., assignor.) (Reissue.)
Peters, Peter H., Downers Grove, Ill. Folding chair. No. 1,424,031; July 25.
Peterson, Peter R., Salt Lake City, Utah, assignor to Ideal Rim Tool Co., Jacksonville, Fla. Rim tool. No. 1,423,875; July 25.
Pfaff, Michael. (See Falk, Andrew, assignor.)
Pfanstiehl, Carl, Highland Park, assignor to Pfanstiehl Company, Inc., North Chicago, Ill. Poppet valve. No. 1,423,876; July 25.
Pfanstiehl Company. (See Pfanstiehl, Carl, assignor.)
Pfeil, Frank L. H., Philadelphia, Pa. Internal-combustion engine. No. 1,423,680; July 25.
Phillips Mine & Mill Supply Co. (See Phillips, R. F., and McCloskey, assignors.)
Phillips, Robert F., and L. J. McCloskey, assignors to Phillips Mine & Mill Supply Co., Pittsburgh, Pa. Washer for mine-car wheels. No. 1,423,877; July 25.
Pickering, Theodore H., assignor to Josiah Anstice & Company, Inc., Rochester, N. Y. Vegetable peeler. No. 1,424,032; July 25.
Piernikowski, Wladyslaw, and S. Grudsinski, Philadelphia, Pa. Spring wheel. No. 1,423,733; July 25.
Pitho Plastic Board Company. (See Lockhart, James A., assignor.)
Pittsburgh Oil Refining Corporation. (See Bolleau, Walter K., assignor.)
Pitz, Adolph G., and O. X. Sauer, assignors to Park City Cornice Works, Inc., Bridgeport, Conn. Skylight lift. No. 1,423,817; July 25.
Pixley, Leland F., Afton, N. Y. Ice conveyer. No. 1,423,732; July 25.
Pledger, Thomas C. (See Broadway, W., and Pledger.)
Poppenhusen, Herman A., Hammond, assignor to Green Engineering Company, East Chicago, Ind. Liquid-cooled conduit for furnaces. No. 1,423,540; July 25.
Popper, Isaac C., New York, N. Y. Automatic butter-cutting machine. No. 1,424,117; July 25.
Porter Brothers Textile Company. (See Hill, W. E., and Firth, assignors.)
Post, George B., assignor to Huff, Daland & Company, Inc., Ogdensburg, N. Y. Airplane. No. 1,423,681; July 25.
Post, Nathaniel B., Chicago, Ill. Coffee roaster. No. 1,423,818; July 25.
Potter, Laurens D., and T. C. Nolan, Emmetsburg, Iowa. Loader device. No. 1,423,878; July 25.
Potter, Ralph S. (See Weisberg, L., and Potter.)
Potter, Stephen J., assignor to Sheet Lathing Corporation, Syracuse, N. Y. Plaster support for walls. No. 1,423,879; July 25.
Potts, Samuel A. (See Gains, Chester R., assignor.)
Powers, Fred W., assignor to The Powers Regulator Company, Chicago, Ill. Water mixer. No. 1,423,880; July 25.
Powers Regulator Company. (See Powers, Fred W., assignor.)
Pullman Davenport and Upholstered Furniture Company. (See Kramer, J., Kuehne, and Kopplin, assignors.)
Putnam, Alexander S., Los Angeles, Calif. Bed-rail fastener. No. 1,423,623; July 25.
Putt, Harlie O., Elkhart, Ind. Oscillator for magnetos. No. 1,423,734; July 25.
Putt, Harlie O., Elkhart, Ind. Oscillator for magnetos. No. 1,423,735; July 25.
Radford, George S., assignor, by mesne assignments, to Central Union Trust Company of New York, New York, N. Y. Color-matching room. No. 1,423,882; July 25.
Ramer, Jacob B., Chambersburg, Pa. Equalizing and steering gearing for motor vehicles. No. 1,424,118; July 25.
Reinhold, Philip A., Akron, Ohio. Tractor and plowing attachment therefor. No. 1,423,736; July 25.
Remington Accounting Machine Corporation. (See Selb, George A., assignor.)
Remington Accounting Machine Corporation. (See Woodward, Oscar, assignor.)
Remy Electric Company, The. (See Replogle, James B., assignor.)
Rench, W. S. (See Ericson, Louis E., assignor.)
Renwick, Frank F. (See Agnew, A. J., and Renwick.)
Replogle, James B., Detroit, Mich., assignor to The Remy Electric Company. Engine governor. No. 1,424,140; July 25.
Rice, Roy E., Bucyrus, Ohio, assignor to Roberts and Schaefer Company, Chicago, Ill. Limit switch for electric-driven hoists. No. 1,423,624; July 25.
Richards, Earl M., Wilkinsburg, Pa. Fluid-pressure brake. No. 1,424,033; July 25.
Richmond, George E., Enid, Okla. Thrashing machine. No. 1,424,119; July 25.
Ricks, D. A., et al. (See Johnson, Adolph A., assignor.)
Bigert, Herman, Brooklyn, N. Y. Clamp. No. 1,424,034; July 25.
Robbins, George A. H., and S. F. E. Einsiedel, Brisbane, Queensland, Australia. Resilient core for motor tires. No. 1,423,580; July 25.
Roberts and Schaefer Company. (See Rice, Roy E., assignor.)
Robson, John, Anita, Iowa. Four-horse equalizer. No. 1,423,682; July 25.
Rockoff, Bernard. (See Rockoff, Elias, assignor.)
Rockoff, Elias, assignor of one-half to B. Rockoff, Chicago, Ill. Stem for electric-lighting fixtures. No. 1,423,683; July 25.
Rockwell, Edward D., Bristol, Conn. Valve-stem cap. No. 1,423,541; July 25.
Rockwell, Hugh M., Bristol, Conn., assignor, by mesne assignments, to Standard Steel and Bearings Incorporated, Wilmington, Del. Bore gauge. No. 1,423,542; July 25.
Rogers, Frank J., Independence, Kans. Well-cleaning device. No. 1,423,625; July 25.
Rogers, Harry R., assignor to Chicago Car Seal Company, Chicago, Ill. Seal. No. 1,423,881; July 25.

Rogers, Herbert D., Lewistown, Ill. Bee escape. No. 1,423,883; July 25.
Roof, Robert M., Anderson, Ind. Multiple-valve-grinding machine. No. 1,424,035; July 25.
Roos, Delmar G., assignor, by mesne assignments, to The Locomobile Company, Bridgeport, Conn. Clutch. No. 1,424,036; July 25.
Rose, Abel, Cleveland, Ohio. Trousers support. No. 1,423,684; July 25.
Rossman, William F., assignor to American Zinc, Lead & Smelting Company, St. Louis, Mo. Making of zinc retorts and other refractory shapes. No. 1,424,120; July 25.
Roush, Herbert E. (See King, George W. and C. S., Jacoby, Roush, and Holmes.)
Rudiger, Abraham M. (See Brautigam, Anthony F., assignor.)
Rudolph, Emett H., Pershing, Okla. Tank-car-loading device. No. 1,424,037; July 25.
Rush, Allan C., Los Angeles, assignor of one-half to H. L. Miller Glendale, Calif. Ocean pier. No. 1,423,884; July 25.
Sual, Henry G. (See Stafford, Frederick S., assignor.)
Sandell, Henry K., assignor to H. S. Mills, Chicago, Ill. Transmitting pictures and the like. No. 1,423,737; July 25.
Sandell, Henry K., assignor to H. S. Mills, Chicago, Ill. Sheet-perforating machine. No. 1,423,738; July 25.
Sato, Ryuji, and C. Matsui, New York, N. Y. Swimming race. No. 1,424,038; July 25.
Saur, Otto X. (See Pitz, A. G., and Saur.)
Sautter, Michael, Spokane, Wash. Husking mitten. No. 1,423,543; July 25.
Schaaf, John B., assignor of one-half to C. Arbogast, Cincinnati, Ohio. Curtain-window light. No. 1,423,685; July 25.
Schaedler, Wilfred J., Brooklyn, N. Y. Tank gauge. No. 1,423,544; July 25.
Schaper, Henry C., assignor to The General Automatic Scale Company, St. Louis, Mo. Weight indicator for scales. No. 1,423,885; July 25.
Schat, Ane P., The Hague, Netherlands. Automatically-braked davit. No. 1,423,739; July 25.
Schelhammer, Herman, Whitestone Landing, assignor to American Hard Rubber Co., New York, N. Y. Comb-cutting machine. No. 1,423,967; July 25.
Schelhammer, Herman, Whitestone Landing, assignor to American Hard Rubber Co., New York, N. Y. Comb-cutting machine. No. 1,423,968; July 25.
Schelhammer, Herman. (See Wing, C. E., and Schelhammer.)
Schelter, John C., Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me. Last. No. 1,423,740; July 25.
Schulte, Louis, Chicago, Ill. Electrotinning. No. 1,423,686; July 25.
Schultz, John M., assignor to J. S. Chennour, Chicago, Ill. Typewriter attachment. No. 1,423,687; July 25.
Schürmann, Carl, Dusseldorf, Germany. Multiple-roll supercalender. No. 1,423,969; July 25.
Schuske, Henry F. G., St. Joseph, Mo. Seam-setting tool. No. 1,423,581; July 25.
Scott, Fletcher J., Hurdland, Mo. Sawing machine. No. 1,424,039; July 25.
Scott, John E., Philadelphia, Pa. Saltcellar. No. 1,424,040; July 25.
Scott, Michael J. (See Des Roches, Hilton H., assignor.)
Schulse, John F. W. (See Bailey, G. C., Fischer, and Schulse.)
Seamless Rubber Company. (See De Gowin, Isaac, assignor.)
Searle, Frederick B., Denver, Colo. Steam drifter mechanism for locomotives. No. 1,423,688; July 25.
Secretary of War, United States of America. (See Malby, Seth G., assignor.)
Sedelbauer, William J., Toledo, Ohio. Gasoline purifier. No. 1,423,970; July 25.
Selb, George A., Ilion, assignor to Remington Accounting Machine Corporation, New York, N. Y. Calculating machine. No. 1,423,741; July 25.
Selin, Harry A., Reading, Pa. Signal device for railway train-order semaphores. No. 1,423,689; July 25.
Semenza, Marco, Milan, Italy. Means for the suspension of electric contact wires. No. 1,423,582; July 25.
Sencsak, Anna, et al. (See Andrusyszyn, Frank, assignor.)
Seymour, Frederick S., Manchester, Iowa. Fuel feed for heating devices. No. 1,424,041; July 25.
Shallcross, Wilmer M., assignor to Northwestern Manufacturing Company, Milwaukee, Wis. Automatic regulator for coke ovens. No. 1,424,042; July 25.
Shapiro, Harry. (See Shapiro, Jacob and H.)
Shapiro, Jacob and H., New York, N. Y. Toy. No. 1,423,819; July 25.
Shaw, Helen A., executrix. (See Shaw, Walter.)
Shaw, Walter, deceased, Dedham, Mass., by H. A. Shaw, executrix, assignor to United Shoe Machinery Corporation, Paterson, N. J. Fastener-setting machine. No. 1,423,626; July 25.
Sheet Lathing Corporation. (See Potter, Stephen J., assignor.)
Shepherd, Sylvester B. (See Daniel, David C., assignor.)
Sherman, Alvin G., assignor to Detroit Vapor Stove Company, Detroit, Mich. Burner regulator. No. 1,423,627; July 25.
Sherman, John Q., Dayton, Ohio. Rotary punch. No. 1,423,690; July 25.
Shorter, Leo J. (See Cole, J. A., and Shorter.)
Sibley, Amos H., Shipbottom, and G. L. Van Allen, Newark, N. J., assignors to General Dental Mfg. Co. Tube tooth and crown. No. 1,423,628; July 25.
Sidebotham, Melvin H. (See La Bombard, L. E., and Sidebotham.)
Siegfried, Joseph, Lafayette, assignor of one-fourth to J. Held, West Lafayette, and one-fourth to C. Held, La Fayette, Ind. Window. No. 1,423,629; July 25.
Silverman, Harry A., New York, N. Y. Heater unit. No. 1,423,742; July 25.
Simmons, Ralph C., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Blank-handling mechanism. No. 1,423,630; July 25.
Simmons, Ralph C., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Heel-breasting machine. No. 1,423,743; July 25.
Singer Manufacturing Company, The. (See De Voe, Albert H., assignor.)
Singer Manufacturing Company, The. (See Noble, Donald, assignor.)
Skaife, Walter, London, England. Dog clutch. No. 1,423,631; July 25.
Skall, Max A., New York, N. Y. Protecting device for show windows. No. 1,424,043; July 25.
Slinger, Cornelius H., Hawthorne, N. J. Friction band for let off mechanism. No. 1,423,780; July 25.
Smith & Davis Mfg. Co. (See Isen, Alexander, assignor.)
Smith, Charles S. (See Hastings, H. J., and Smith.)
Smith, Curtis E., St. Joseph, Mo. Hoisting apparatus. No. 1,423,971; July 25.
Smith, Edwin C., et al., executors. (See Wardwell, Simon W.)
Smith, Henry L., Paterson, N. J. Steering-wheel lock for vehicles. No. 1,423,632; July 25.
Smith, Henry L., Paterson, N. J. Swimming harness. No. 1,423,633; July 25.
Smith, John J., Winnipeg, Manitoba, Canada. Combined tube expander and beading tool. No. 1,423,545; July 25.
Società Anonima Brevetti Beccari. (See Beccari, Giuseppe, assignor.) (Reissue.)
Sokolov, Jacob, assignor to Defiance Combination Auto Lock Corporation, Detroit, Mich. Lock for automobiles. No. 1,423,691; July 25.
Solack, Joseph, Scranton, Pa. Boat. No. 1,424,044; July 25.
Solhéid, Leo, Dusseldorf, Germany. Flushing apparatus. No. 1,423,634; July 25.
Somerville, George W., Wilmington, assignor of one-half to T. Nelson, Lebec, Calif. Tire protector. No. 1,423,692; July 25.
Sorensen, Andrew, Oakland, Calif. Washing machine. No. 1,423,972; July 25.
South Side Manufacturing Company, The. (See Hedberg, John A., assignor.)
Spain, William, Riverside, assignor of one-half to Corn Products Refining Company, Argo, Ill. Machine for applying ears to pails. No. 1,423,693; July 25.
Specialty Automatic Machine Company. (See La Bombard, L. E., and Sidebotham, assignors.
Speer, Jeannette L., Trappe, Md. Reversible glove. No. 1,423,546; July 25.
Spellman, Mabel R. (See Braxton, Elbert M., assignor.)
Sprague, George E., Cambria, Ill. Ratchet crank. No. 1,424,045; July 25.
Stafford, Frederick S., assignor to H. G. Seal, Chicago, Ill. Wheel. No. 1,423,694; July 25.
Stafford, J. B., et al. (See Macmanus, Augustus F. W., assignor.)
Staggers, William F., Mannington, W. Va. Antilock device for steering gears. No. 1,423,820; July 25.
Standard Coupler Company. (See Gallagher, Richard D., jr., assignor.)
Standard Oil Company. (See Jennings, James M., assignor.)
Standard Parts Company. (See Baker, Walter C., assignor.)
Standard Steel and Bearings Incorporated. (See Rockwell, Hugh M., assignor.)
Stanley Works, The. (See Parsons, Stuart W., assignor.)
Staples, Willard G., assignor of one-half to Timothy Harrington, Newburyport, Mass. Key holder. No. 1,424,121; July 25.
Starr, Charles E., Oakland, Calif., assignor to Perfecto Gear Differential Co., Seattle, Wash. Driving mechanism for motor vehicles. (Reissue.) No. 15,424; July 25.
St. Clair, Palmer, jr. (See Arnold, E. E., and St. Clair.)
St. Clair, Palmer, jr., Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I. Heat exchanger or condenser. No. 1,423,695; July 25.
Steel Wheel Corporation. (See Bellamore, D. H., and Boak, assignors.)
Stephens-Adamson Mfg. Co. (See Kendall, Myron A., assignor.)
Steps, Robert A., assignor to Sugar Machinery Company, Los Angeles, Calif. Method of and means for washing centrifugals. No. 1,423,583; July 25.
Sterling, Don L., Dallas, Tex. Bank check and stub. No. 1,423,744; July 25.
Stevens and Company. (See Stevens, Frederick A., assignor.) (Reissue.)
Stevens, Arthur L., Chicago, Ill. Apparatus for and process of purifying gas. No. 1,423,696; July 25.

Jennings, James M., Elizabeth, assignor to Standard Oil Company, Bayonne, N. J. Foam covering for preventing the evaporation of stored liquids. No. 1,423,720; July 25.

Jennings, James M., Elizabeth, assignor to Standard Oil Company, Bayonne, N. J. Foam covering for preventing the evaporation of stored liquids. No. 1,423,721; July 25.

Jester, Marvin H., Philadelphia, Pa. Plaster-board support. No. 1,423,939; July 25.

Jett, George C., Watertown, assignor, by mesne assignments, of two-fifths to W. H. Stiemke, Milwaukee, Wis. Differential transmission mechanism. No. 1,423,940; July 25.

Jett, George C., assignor, by mesne assignments, of two-fifths to W. H. Stiemke, Milwaukee, Wis. Differential mechanism. No. 1,423,941; July 25.

Jewett, Harold H., Puente, Calif. Camp utensil. No. 1,423,612; July 25.

Johns, George M., St. Louis, Mo., assignor, by mesne assignments, to The Industrial Process Engineering Company. Distillation of material carrying a percentage of volatile matter. No. 1,423,527; July 25.

Johns-Manville Incorporated. (See Carson, Clarence, assignor.)

Johns-Manville Incorporated. (See Craighead, Magruder, assignor.)

Johnson, Adolph A., assignor of one-fifth to S. B. Hanes and one-fifth to D. A. Ricks, Hanes, N. C. Attachment for cone-winding machines. No. 1,424,100; July 25.

Johnson, Carl, San Francisco, Calif. Resilient wheel. No. 1,424,101; July 25.

Johnson, George, Brier Hill, Pa. Agitating and dumping bucket. No. 1,424,102; July 25.

Johnson, Harold R., Edgewood, assignor to Oscar B. Johnson Company, Cranston, R. I. Lingerie clasp. No. 1,424,103; July 25.

Johnson, Morrison R., Braymer, Mo. Nonskid chain. No. 1,423,564; July 25.

Johnson, Neal M., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Cutting apparatus. No. 1,424,133; July 25.

Johnson, Omar, Laramie, Wyo. Locomotive-engineer's seat. No. 1,423,855; July 25.

Johnson, Oscar B., Company. (See Johnson, Harold R., assignor.)

Jones, Joseph H., Cleburne, Tex. Demountable tire rim. No. 1,423,942; July 25.

Jones, Thomas B., Turlock, Calif. Piston ring. No. 1,423,948; July 25.

Jones, William L., Gallipolis, Ohio. Can-filling apparatus. No. 1,423,944; July 25.

Jorgensen, Bernhardt, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Machine for working uppers over lasts. No. 1,423,613; July 25.

Joyce, Bryan P., Washington, D. C. Gun retracting mechanism. No. 1,424,105; July 25.

Joy, Bryon C. (See Blum, Hosmer, assignor.)

Joy, Marshall W., San Francisco, Calif. Visible fluid gauge. No. 1,424,104; July 25.

Jubilee Manufacturing Company. (See Gillet, Alexis F., assignor.)

Jungmarker, Axel A. (See Gustafson, G., Jungmarker, and Caspersson.)

Jupp, Alfred E., and R. S. Crooks, assignor to The Youngstown Sheet & Tube Company, Youngstown, Ohio. Delivery mechanism for rolling mills. No. 1,423,856; July 25.

Kampmann, George A., Brainerd, Minn. Waterproofing device. No. 1,423,857; July 25.

Karpen, S., & Bros. (See Carter, C. B., and Coxe, assignors.)

Kasper, Walter F., assignor to Fairmont Gas Engine & Railway Motor Car Company, Fairmont, Minn. Throttle valve. No. 1,423,858; July 25.

Kellogg Switchboard and Supply Company. (See Yanochowski, George A., assignor.)

Kemp, William, St. Louis, Mo. Pressure or draft gauge. No. 1,423,565; July 25.

Kempin, Richard A. (See Hoppe, Oscar, assignor.)

Kendall, Myron A., assignor to Stephens-Adamson Mfg. Co., Aurora, Ill. Self-training belt conveyer. No. 1,423,528; July 25.

Kimman, Henry J., Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, Chicago, Ill. Connecting rod for drills, etc. No. 1,423,614; July 25.

King, Charles B. (See King, George W. and C. S., Jacoby, Roush, and Holmes.)

King, George W., deceased, by S. King, executrix, C. B. King, B. Jacoby, H. E. Roush, Marion, Ohio, and G. Holmes, Danville, Ill., assignors to The Marion Steam Shovel Co., Marion, Ohio. Level indicator for platforms. No. 1,423,529; July 25.

King, Gustave A., Chicago, Ill. Toy. No. 1,423,566; July 25.

King, Sarah, executrix. (See King, George W. and C. S., Jacoby, Roush, and Holmes.)

Kister, Herman, Elisabeth, N. J. Piston. No. 1,423,615; July 25.

Kistner, Herman, Elizabeth, N. J. Piston. No. 1,423,616; July 25.

Klocke, William, Woodhaven, assignor to E. W. Bliss Company, Brooklyn, N. Y. Press. No. 1,423,617; July 25.

Klocke, William, New York, assignor to E. W. Bliss Company, Brooklyn, N. Y. Press. No. 1,423,769; July 25.

Konigsberg, Joseph, assignor to L. Konigsberg, New York, N. Y. Diestock. No. 1,423,945; July 25.

Konigsberg, Joseph, assignor to L. Konigsberg, New York, N. Y. Shock absorber. No. 1,423,946; July 25.

Konigsberg, Lena. (See Konigsberg, Joseph, assignor.)

Kontorowitz, Carl, Rochester, N. Y. Drawer attachment for beds. No. 1,423,804; July 25.

Kopplin, Walter H. (See Kramer, J., Kuehne, and Kopplin.)

Kramer, Fritz. (See Bauer, G., and Kramer.)

Kramer, Julius, F. O. Kuehne, jr., and W. H. Kopplin, assignors to Pullman Davenport and Upholstered Furniture Company, Chicago, Ill. Power truck. No. 1,423,947; July 25.

Krum, Gustav, Duisburg-Beeck, Germany. Time recorder. No. 1,423,805; July 25.

Kucharski, Stanislaus, Charlottenburg, near Berlin, assignor to R. A. Hansemann, Berlin, Germany. Cinematographic film. No. 1,423,770; July 25.

Kuehne, Fred O., jr. (See Kramer, J., Kuehne, and Kopplin.)

Kuhn, James B., Cameron, W. Va. Automatic stop for moving-picture machines. No. 1,423,948; July 25.

Kunkel, Bert, Hart, Mich. Battery cover. No. 1,424,144; July 25.

La Bombard, Leon E., Chelsea, and M. H. Sidebotham, Cliftondale, assignors to Specialty Automatic Machine Company, Chelsea, Mass. Top gluer. No. 1,423,567; July 25.

Lackey, Joseph C., Long Branch, N. J. Figure toy. No. 1,423,618; July 25.

Lacoste, Patrick, San Antonio, Tex. Sink strainer. No. 1,424,022; July 25.

La France, David J. (See De Witt, W. P., and La France.)

Lake, Fred O., Parke Lane, Va. Clothesline hanger. No. 1,423,530; July 25.

Lake, Harry M., and O. C. Betry, Los Angeles, Calif. Automobile theft signal. No. 1,424,106; July 25.

Lamb, Charles C., assignor of one-half to W. M. McEwen, Chicago, Ill. Driving mechanism for washing machines. No. 1,423,531; July 25.

Landgraf, Charley, and J. Hernacki, Chicago, Ill. Record wiper for phonographs. No. 1,424,023; July 25.

Langbaar, Louis, Cincinnati, Ohio. Ball bearing. No. 1,423,666; July 25.

Lansill, John S., assignor to Armstrong Cork Company, Lancaster, Pa. Heel gauge. No. 1,423,859; July 25.

Larkin, John J., St. Louis, Mo., and R. L. Gordon, assignors to Bell Pump Company, Bartlesville, Okla. Oil-well pump. No. 1,423,860; July 25.

Larsen, Berdie A., Pasadena, Calif. Envelope. No. 1,424,024; July 25.

Larson, Albert. (See Irons, G. C., and Larson.)

Lathrop, Harry D. (See Paulson, Walter H., assignor.)

Laughlin, Edward A., Port Arthur, Tex. Building construction. No. 1,423,949; July 25.

Lawson, John, Central Falls, R. I., assignor, by mesne assignments, to Hemphill Company. Automatic tension-controlling means for knitting machines. No. 1,424,025; July 25.

Lebzelter, William F., assignor, by mesne assignments, to E. M. Miller, Elizabethtown, Pa. Electric heating device. No. 1,423,806; July 25.

Lehr, Emmett S., Salt Creek, Wyo. Shock absorber. No. 1,423,667; July 25.

Leiken, Philip, Brooklyn, assignor to Peerless Smoking Jacket Company, New York, N. Y. Knickers. No. 1,423,668; July 25.

L'Enfant, Charles, New York, N. Y. Bill fold. No. 1,423,669; July 25.

Leon, Karl O., Stockholm, assignor to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden. Antifriction ball or roller bearing. No. 1,423,950; July 25.

Leonard, Charles H., assignor to Grand Rapids Refrigerator Company, Grand Rapids, Mich. Refrigerator. No. 1,423,532; July 25.

Levene, Albert H., Philadelphia, Pa. Locking mechanism for shelving and other articles. No. 1,423,861; July 25.

Levy, William, Paterson, N. J. Traction lug. No. 1,423,568; July 25.

Lewis, Lloyd Y., Edgewood Borough, assignor to The Union Swith & Signal Company, Swissvale, Pa. Railway-traffic-controlling system. No. 1,423,862; July 25.

Litchfield, Paul W., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Building tires of the solid type. No. 1,424,134; July 25.

Lockhart, James A., assignor to Fitho Plastic Board Company, Inc., Buffalo, N. Y. Wall board and plaster composition adapted thereto. No. 1,423,659; July 25.

Locomobile Company, The. (See Roos, Delmar G., assignor.)

Locomobile Company, The. (See Winblad, Niklas, assignor.)

Locomotive Stoker Company. (See Lower, Nathan M., assignor.)

Loman, John, Bristol, Conn. Watch-chain fastener. No. 1,424,139; July 25.

Loomis, Evarts G., Newark, N. J. Ball-winding machine. No. 1,423,807; July 25.

Loomis, Evarts G., Newark, assignor to The Okonite Company, Passaic, N. J. Loom. No. 1,423,619; July 25.

Loomis, Merton W. (See Newman, V. F., and Loomis.)

Lower, Nathan M., Pittsburgh, Pa., assignor to Locomotive Stoker Company. Locomotive stoker. No. 1,423,533; July 25.

Lowthorp, William M., Summertown, Tenn. Window lock. No. 1,424,107; July 25.

Lucabaugh, John W., near Hanover, Pa. Folding crate. No. 1,423,863; July 25.

Lucey Manufacturing Corporation. (See Zilen, Victor W., assignor.)

Lurtz, John, Chicago, Ill. Pedestal. No. 1,423,951; July 25.

Luthy, Joseph O., San Antonio, Tex. Hydrometer. No. 1,424,108; July 25.

Lyon, George A., Philadelphia, Pa. Resilient front buffer. No. 1,423,570; July 25.

Lyon, George A., Philadelphia, Pa. Automobile buffer. No. 1,423,571; July 25.

Lyon, George A., Philadelphia, Pa. Automobile buffer. No. 1,423,572; July 25.

Lyon, George A., Philadelphia, Pa. Resilient buffer. No. 1,423,573; July 25.

McBride, William S., Caldwell, Ohio. Drilling device. No. 1,424,109; July 25.

McCafferty, James E., Newark, N. J. Screw driver. No. 1,423,722; July 25.

McCloskey, Louis J. (See Phillips, R. F., and McCloskey.)

McClusky, Frank R., Canfield, Ohio. Manifolding sheet. No. 1,423,808; July 25.

McCracken, James D., Cincinnati, assignor to The United States Playing Card Company, Norwood, Ohio. Paper-conveying mechanism. No. 1,424,952; July 25.

McEwen, Willard M. (See Lamb, Charles C., assignor.)

McKean, John O., assignor to Foster Machine Company, Westfield, Mass. Combined yarn clearer and tension device. No. 1,423,864; July 25.

McLeod, Nelson W., New York, N. Y. Pneumatic-tire casing. No. 1,423,771; July 25.

Maakestad, Micheal J., Chicago, Ill. Belt. No. 1,424,110; July 25.

Macmanus, Augustus F. W., assignor of one-tenth to J. E. Greer and J. B. Stafford, San Antonio, Tex. Medicinal apparatus. No. 1,424,111; July 25.

Maday, Joseph F. (See Durbin, Frederick A., assignor.)

Magrady, Joseph J., Chicago, Ill. Automatic latch for scale beams. No. 1,423,772; July 25.

Mailhiot, Alexander, Thorold, Ontario, Canada. Vehicle wheel. No. 1,423,574; July 25.

Malby, Seth G., U. S. Army, assignor to Secretary of War, U. S. Army, trustee. Impact fuse. No. 1,424,112; July 25.

Malitch, Charles, Hamilton, Ohio. Rail chair. No. 1,423,534; July 25.

Malloy, James T. Lowell, assignor of one-half to J. J. Henderson, Dracut, and one-half to S. R. Haines, Brooklive, Mass. Bobbin stripper for automatic looms. No. 1,423,670; July 25.

Marks, Paul J. and W. O., Rochester, N. Y. Photographic-view finder. No. 1,423,809; July 25.

Marks, Walter O. (See Marks, Paul J. and W. O.)

Marion Steam Shovel Co., The. (See King, George W. and C. S., Jacoby, Roush, and Holmes, assignors.)

Marr, Alexander W., Canton, Ohio. Quick-action double-gear jack. No. 1,423,671; July 25.

Martin, Haakon A., Christiania, Norway, assignor to The National Cash Register Company, Dayton, Ohio. Credit-account register. No. 1,423,953; July 25.

Martin, William A., Commercial Cross, Prince Edward Island, Canada. Adjustable wrench. No. 1,423,723; July 25.

Mascetti & Holley. (See Mascetti, Joseph, assignor.)

Mascetti, Joseph, assignor to Mascetti & Holley, Torrington, Conn. Derrick attachment for road rollers. No. 1,423,724; July 25.

Mathews, Fred, Chicago, Ill. Fastening device for automobile hoods. No. 1,423,773; July 25.

Matsui, Chiyosaburo. (See Sato, R., and Matsui.)

Matthes, Samuel S., assignor to The Ohio Brass Company, Mansfield, Ohio. Trolley-aligning harp. No. 1,423,575; July 25.

Maussner, Frederick, Collingswood, N. J., assignor to Henry Wilhelm Company, Pittsburgh, Pa. Mattress. No. 1,423,954; July 25.

Mellott, Howard S., Morenci, Mich., assignor to The By-Products Recovery Co., Toledo, Ohio. Producing a condensed-milk product. No. 1,423,810; July 25.

Mesaros, John, Wheeling, W. Va. Tobacco pipe. No. 1,423,620; July 25.

Miller, Arthur, Columbus, Ohio. Garden tool. No. 1,423,865; July 25.

Miller, Benjamin F., Vienna, Va. Bag holder. No. 1,424,026; July 25.

Miller, Earl M. (See Lebzelter, William F., assignor.)

Miller, Frank E., New York, N. Y. Bone resector. No. 1,423,866; July 25.

Miller, Frank P., Meadville, Pa. Bracket. No. 1,423,535; July 25.

Miller, Henry L. (See Rush, Allan C., assignor.)

Miller, Stanley G., Chatham, Ontario, Canada. Automobile lock. No. 1,423,955; July 25.

Miller, Thomas S., South Orange, N. J. Towing vessel. No. 1,423,576; July 25.

Miller, William E., Savannah, Ga. Collapsible rim. No. 1,423,811; July 25.

Mills, Herbert S. (See Sandell, Henry K., assignor.)

Milton, John L., assignor, by mesne assignments, to The Teagle Company, Cleveland, Ohio. Magneto ignition system for internal-combustion engines. No. 1,423,672; July 25.

Mitchell, John E., and D. Parks, St. Louis, Mo. Heel-log-cutting machine. No. 1,423,621; July 25.

Mitchell, Loris E., and A. J. White, Cleveland, Ohio, assignors to General Electric Company. Tipless incandescent lamp and similar article. No. 1,423,956; July 25.

Mitchell, Loris E., and A. J. White, Cleveland, Ohio, assignors to General Electric Company. Stem-making machine. No. 1,423,957; July 25.

Mittag, Albert H., Schenectady, N. Y., assignor to General Electric Company. Dynamo-electric machine. No. 1,423,958; July 25.

Mittag, Albert H., Schenectady, N. Y., assignor to General Electric Company. Frequency changer. No. 1,423,959; July 25.

Mitts & Merrill. (See Mitts, P. S., and Winston, assignors.)

Mitts, Philip S., and W. J. Winston, assignors to Mitts & Merrill, Saginaw, Mich. Cutting machine. No. 1,423,867; July 25.

Mohnacs, Audrey I., Passaic, N. J. Vegetable cutter. No. 1,423,960; July 25.

Mohr, Carl J. and U. J., Dayton, Ohio. Ladder platform and roof jack. No. 1,423,725; July 25.

Mohr, Carl J. and U. J., Dayton, Ohio. Paint-bucket holder. No. 1,423,726; July 25.

Mohr, Urban J. (See Mohr, Carl J. and U. J.)

Monahan, Henry, Meriden, Conn. Line holder. No. 1,423,868; July 25.

Monmonier, Joseph C., Catonsville, Md. Attachment for tobacco pipes. No. 1,423,869; July 25.

Moody, John R., Los Angeles, Calif. Hinge. No. 1,423,812; July 25.

Moore, John J., Batavia, N. Y. Vise. No. 1,423,774; July 25.

Moran, William F., Frederick, Md. Danger signal. No. 1,423,727; July 25.

Morck, Arne. (See Nordstrom, O., and Morck.)

Morgan, Edmund C., Morgan Park, Ill. Mining machine. No. 1,424,113; July 25.

Morgan, Edmund C., Morgan Park, Ill. Mining machine. No. 1,424,114; July 25.

Morgenthau, Bernard, New York, N. Y. Lock. No. 1,424,136; July 25.

Morrison, Max, Trenton, N. J., assignor to The American Steel and Wire Company of New Jersey. Stranding machine. No. 1,423,776; July 25.

Morton, Frederic C., New Haven, Conn. Tire-making machine. No. 1,423,870; July 25.

Morton, Ira O., et al. (See Morton, William C., assignor.)

Morton, William C., assignor of one-third to J. P. Condon and one-third to I. O. Morton, Omaha, Nebr. Universal joint. No. 1,423,577; July 25.

Moser, Theodor, Berlin-Grunewald, Germany. Appliance for throwing mortar for the plastering of walls and the like. No. 1,423,536; July 25.

Mott, William P., Chicago, Ill. Spark-testing device for gasoline engines. No. 1,423,622; July 25.

Mount, Sidney C., Southall, England. Metal cask, drum, or the like. No. 1,423,673; July 25.

Müller, Gebhard, Munich, Germany. Urinal. No. 1,423,537; July 25.

Mulvey, Robert J., Chicago, Ill. Garment fastener. No. 1,423,813; July 25.

Mundt, Emil W., Bernardsville, N. J. Spade. No. 1,423,775; July 25.

Munson, Sweney, Fowler, Colo. Vehicle wheel. No. 1,423,674; July 25.

Murphy, Edwin J., Schenectady, N. Y., assignor to General Electric Company. Electromagnetic clutch and reversing mechanism. No. 1,424,027; July 25.

Murphy, William J., Philadelphia, Pa. Cooking utensil. No. 1,423,961; July 25.

National Biscuit Company. (See Taylor, George A., assignor.)

National Cash Register Company, The. (See Martin, Haakon A., assignor.)

Neal, Burton, St. Louis, and G. H. Hebebrand, Kinloch, Mo. Driving mechanism for producing gyratory motion. No. 1,423,871; July 25.

Neal, Enoch E., Malden, Mass. Coal chute. No. 1,423,872; July 25.

Neathammer, Joseph A., Alhambra, Ill. Gear housing. No. 1,423,675; July 25.

Neighbour, Arthur G. L. and H. C. W., Brighton, Victoria, Australia. Two-cycle internal-combustion engine. No. 1,423,578; July 25.

Neighbour, Harry C. W. (See Neighbour, Arthur G. L. and H. C. W.)

Nelson, Towal. (See Somerville, George W., assignor.)

New Jersey Silk Machinery Company. (See Hines, Robert E., assignor.)

Newcomb, Romie J., Baltimore, Md. Manure loader. No. 1,423,676; July 25.

Newman, Victor F., and M. W. Loomis, Red Cliff, Colo. Concentrating table and method. No. 1,423,777; July 25.

Ericson, Louis E., assignor to W. S. Rench, San Diego, Calif. Price-tag holder. No. 1,423,655; July 25.
Erik, Emil. (See Berman, Henry, assignor.)
Esbelman, Oliver D., and W. F. Boast, Casper, Wyo. Saw. No. 1,423,843; July 25.
Espenschied, Lloyd, Queens, N. Y., assignor to American Telephone and Telegraph Company. Frequency regulator. No. 1,423,518; July 25.
Etchebéhère, Jeanty, Biarritz, Basses-Pyrenees, France. Receiver and stench trap for sewers. No. 1,423,925; July 25.
Faccioli, Giuseppe, Pittsfield, Mass., assignor to General Electric Company. Voltage-regulating system. No. 1,423,926; July 25.
Fairchild, Walter L., New York, N. Y. Vulcanizing pneumatic tubes. No. 1,423,760; July 25.
Fairchild, Walter L., New York, N. Y. Mold for pneumatic tubes and similar articles. No. 1,423,761; July 25.
Fairmont Gas Engine & Railway Motor Car Company. (See Kasper, Walter F., assignor.)
Falk, Andrew, Pittsburgh, assignor of three-tenths to M. Pfaff, Homestead, Pa. Fitting for railways and the like. No. 1,423,927; July 25.
Falk, Hilbert L., New Orleans, La., assignor to L. D. Wood, Philadelphia, Pa. Composition for coating metals for the purpose of permitting electric currents to operate by the action of light. No. 1,424,088; July 25.
Fallon, Andrew J., Chicago, Ill. Lock. No. 1,423,656; July 25.
Farkas, Eugene J., Detroit, assignor to Ford Motor Company, Highland Park, Mich. Detachable tread for tractor wheels. No. 1,423,519; July 25.
Farmer, Clyde C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Pneumatic cut-out device. No. 1,424,007; July 25.
Faultless Caster Company. (See Noelting, William H., assignor.)
Fenelon, Martin J., Chicago, Ill. Vehicle washing machine. No. 1,423,844; July 25.
Field, Crosby, Washington, D. C., assignor to Chemical Machinery Corporation, New York, N. Y. Drying process and apparatus. No. 1,423,928; July 25.
Findura, John, assignor to Fort Pitt Bedding Company, Pittsburgh, Pa. Rail-fastening device for beds and the like. No. 1,424,089; July 25.
Firth, Carrodus V. (See Hill, W. E., and Firth.)
Fischer, Charles W. (See Bailey, G. C., Fischer, and Schulze.)
Fish, Alfred E., Chicago, Ill. Shipping tag. No. 1,423,557; July 25.
Fisk Rubber Company, The. (See Fording, William G., assignor.)
Fitz-Empire Double Pivot Last Company. (See Schelter, John C., assignor.)
Fleischer, Paul W., Weehawken, N. J. Washer. No. 1,424,008; July 25.
Flis, Alexander, Milwaukee, Wis. Vegetable-stem remover and crusher. No. 1,423,790; July 25.
Fogel, Martin. (See Thomas, H. M., and Fogel.)
Ford Motor Company. (See Farkas, Eugene J., assignor.)
Ford Motor Company. (See Galamb, Joseph, assignor.)
Fording, William G., Cleveland, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Method of and apparatus for forming a tire bead. No. 1,423,929; July 25.
Fort Pitt Bedding Company. (See Findura, John, assignor.)
Foss, Herbert D., Brookline, assignor to H. D. Foss & Company, Inc., Cambridge, Mass. Dispensing and display holder for confectionery. No. 1,423,845; July 25.
Foss, H. D., Company. (See Foss, Herbert D., assignor.)
Foster, Chester B., and F. H. Clement, deceased, Rochester, N. Y.; L. S. Clement, M. G. Clement, and B. H. Clement, executors; said executors assignors of the entire right of said F. H. Clement, deceased, to American Woodworking Machinery Company; said Foster assignor of his entire right to American Woodworking Machinery Company, Rochester, N. Y. Feeding chain for woodworking and other machines. No. 1,424,090; July 25.
Foster Machine Company. (See McKean, John O., assignor.)
Fountain, Claude R., Macon, Ga. Radioelectron oscillator. No. 1,424,091; July 25.
Fowler, George R., Marlboro, N. Y. Basket handle and lid fastener. No. 1,424,009; July 25.
Francisco, Cary, Porterville, Calif. Stitch clipper for scissors. No. 1,423,791; July 25.
Franzen, Charles F., Chaska, Minn. Clothesline support. No. 1,423,762; July 25.
Frederick, Bernhard O., Hibbing, Minn. Vehicle brake. No. 1,423,846; July 25.
Freedman, Benjamin H., New York, N. Y. Paper fastener. No. 1,423,520; July 25.
Freile, Bruce, Bogota, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone switchboard apparatus. No. 1,423,930; July 25.
French, Edward H., Columbus, Ohio. Making dry soluble lime-sulphur composition. No. 1,423,605; July 25.
Frost Manufacturing Company. (See Theleen, Oscar H., assignor.)
Fry, William P., Marble Falls, Tex. Milk or cream cabinet. No. 1,423,714; July 25.
Fuhrer, Daniel J., Leanna Township, Logan County, Ill. Truck attachment for automobiles. No. 1,423,931; July 25.
Fuller, Leonard F., Palo Alto, assignor to A. Taylor, San Francisco, Calif. Electrical oscillation generator. No. 1,424,141; July 25.
Gagg, Anton. (See Zoelly, H., and Gagg.)
Gains, Chester R., Colfax, assignor of one-half to S. A. Potts, Muscatine, Iowa. Call clock. No. 1,424,092; July 25.
Galamb, Joseph, Detroit, assignor to Ford Motor Company, Highland Park, Mich. Door buffer. No. 1,423,521; July 25.
Gallagher, Richard D., jr., Flatbush, assignor to Standard Coupler Company, New York, N. Y. Yielding resistance unit for car buffers. No. 1,423,522; July 25.
Garner, Perry I., Eureka, Kans. Corn planter. No. 1,423,932; July 25.
Gelnaw, John F., Cleveland, Ohio. Identification and coding system. No. 1,423,763; July 25.
General Automatic Scale Company, The. (See Schaper, Henry C., assignor.)
General Dental Mfg. Co. (See Sibley, A. H., and Van Allen, assignors.)
General Electric Company. (See Barringer, Laurence E., assignor.)
General Electric Company. (See Beman, Ralph, assignor.)
General Electric Company. (See Burnham, Joseph L., assignor.)
General Electric Company. (See Connely, Charles B., assignor.)
General Electric Company. (See Faccioli, Giuseppe, assignor.)
General Electric Company. (See Haworth, Lawrence A., assignor.)
General Electric Company. (See Mitchell, L. E., and White, assignors.)
General Electric Company. (See Mittag, Albert H., assignor.)
General Electric Company. (See Murphy, Edwin J., assignor.)
General Electric Company. (See Weintraub, Ezechiel, assignor.)
General Ordnance Corporation. (See Denning, Joseph M., assignor.) (Reissue.)
General Rubber Company. (See Hopkinson, Ernest, assignor.)
Gibbons, Sherwin, et al. (See Ziegler, George J., assignor.)
Gibson, Ralph E., and H. Nicoll, Liverpool, England. Discharge chute. No. 1,424,010; July 25.
Gilbert, A. C., Company, The. (See Gilbert, Alfred C., assignor.)
Gilbert, Alfred C., assignor to The A. C. Gilbert Company, New Haven, Conn. Sled. No. 1,424,011; July 25.
Gillet, Alexis F., assignor to Jubilee Manufacturing Company, Omaha, Nebr. Oil-level-indicating attachment for crank cases. No. 1,423,558; July 25.
Gilman, John A., American Lake, Wash. Excavator. No. 1,424,093; July 25.
Gordon, Robert L. (See Larkin, J. J., and Gordon.)
Goodyear Tire & Rubber Company, The. (See Darrow, Burgess, assignor.)
Goodrich, B. F., Company, The. (See Hennessy, James F., assignor.)
Goodyear Tire & Rubber Company, The. (See Johnson, Neal M., assignor.)
Goodyear Tire & Rubber Company, The. (See Litchfield, Paul W., assignor.)
Goodyear Tire & Rubber Company, The. (See Orr, Clifford B., assignor.)
Gowdy, Edward J., Buffalo, N. Y. Printing press. No. 1,423,792; July 25.
Grand Rapids Refrigerator Company. (See Leonard, Charles H., assignor.)
Greene, Herbert M., Portland, Oreg. Cooking grain and a product for effecting the same. No. 1,424,132; July 25.
Greenfield, Benjamin, Bartlesville, Okla., assignor, by mesne assignments, to Doherty Research Company. Oil-fired steam boiler. No. 1,424,764; July 25.
Green Engineering Company. (See Poppenhusen, Herman A., assignor.)
Green, Paul G., Marshall, Mich. Pipe wrench. No. 1,423,793; July 25.
Greer, J. E., et al. (See Macmanus, Augustus F. W., assignor.)
Gregory, Thomas, Cleveland, Ohio. Hairpin. No. 1,423,606; July 25.
Groat, Daniel F., Fort Dodge, Iowa. Tire operated multiple air pump. No. 1,423,607; July 25.
Grossmann, Robert, assignor to The Will & Baumer Candle Company, Syracuse, N. Y. Candle-making machine. No. 1,423,608; July 25.
Grotenhuis, William J. (See Pancoast, W. G., and Grotenhuis.)
Grove, Frank H., assignor to The Banner Machine Company, Columbiana, Ohio. Trimming device. No. 1,424,012; July 25.
Grow, Thomas S., Allentown, Pa. Brush for talking machines. No. 1,423,523; July 25.
Grubenmann, Max, Zurich, assignor to Aluminum-Schweisswerk A.-G., Schlieren, Switzerland. Heat-exchange device for treating milk, worts, and the like. No. 1,423,794; July 25.

Grudzinski, Stanislaw. (See Pierzikowski, W., and Grudzinski.)
Guerrlich, Frederick C., Stamford, Conn. Fluid-pump mechanism. No. 1,423,559; July 25.
Guggenbuehler, Carl, Newark, N. J. Tool for facilitating the adjustment of the driving shoes of locomotives. No. 1,423,795; July 25.
Guggenheim, Solomon D. (See Benjamin, D. H., and Curtis, assignors.)
Gunn, Robert W., and W. A. S. Thompson, Los Angeles, Calif. Valve seat. No. 1,424,094; July 25.
Gustafson, Gunnar, Avesta, A. A. Jungmarker, Stockholm, and K. A. Caspersson, Engelsberg, Sweden. Producing silicon-manganese-chrome steel. No. 1,423,847; July 25.
Haines, Charles B., Indianapolis, Ind. Water softener. No. 1,423,657; July 25.
Haines, Samuel R., et al. (See Malloy, James T., assignor.)
Haislip, Pliny L., Washington, D. C. Electric-lighting fixture. No. 1,424,095; July 25.
Hale, Methel F., Grover Hill, Ohio. Creeper bib. No. 1,424,013; July 25.
Hall, John G., Toronto, Ontario, Canada. Milk bottle. No. 1,423,560; July 25.
Hall, Orrin B., Oatville, Kans. Grain carrier. No. 1,423,609; July 25.
Hamann, Friedrich W. H., Hamburg, Germany. Car coupling. No. 1,423,796; July 25.
Hand, Louis H. B., Harvey, Ill. Spring guard for vehicles. No. 1,424,014; July 25.
Hanes, S. B., et al. (See Johnson, Adolph A., assignor.)
Hanlon, John H., Somerville, Mass. Drifting valve. No. 1,423,797; July 25.
Hansemann, Richard A. (See Kucharski, Stanislaus, assignor.)
Hansen, Charles E., Providence, R. I. Pencil attachment. No. 1,424,096; July 25.
Hansen, Sofus E., Seattle, Wash. Device for launching ring life buoys. No. 1,423,561; July 25.
Harder, Harry E. (See Newsom, J. N., and Harder.)
Harper, Joseph H., Springfield, Ohio. Comm. No. 1,423,848; July 25.
Hartman, Harry B., assignor to Electric Water Sterilizer and Ozone Company, Scottdale, Pa. Ozone generator. No. 1,423,658; July 25.
Harrington, Timothy. (See Staples, Willard G., assignor.)
Harrison Radiator Corporation. (See Wolfe, Arthur P., assignor.)
Hassel, Nels H., Los Angeles, Calif. Plant protector. No. 1,423,659; July 25.
Hastings, Charles B., New York, N. Y. Loading and unloading apparatus. No. 1,423,765; July 25.
Hastings, Herbert J., and C. S. Smith, East Twickenham, England. Mechanical toy operated by gramophones. No. 1,424,015; July 25.
Hawkesworth, Arthur L., Butte, Mont. Drill. No. 1,423,849; July 25.
Haworth, Lawrence A., Dalton, Mass., assignor to General Electric Company. Electrical apparatus. No. 1,424,016; July 25.
Hayes, John, Belle Vernon, Pa. Aeroplane. No. 1,423,610; July 25.
Hayes, John, Belle Vernon, Pa. Aeroplane. No. 1,423,611; July 25.
Heatile, William C., Beverly, Mass. Clamp. No. 1,423,933; July 25.
Hebebrand, George H. (See Neal, B., and Hebebrand.)
Hechenbleikner, Ingenuin, and T. C. Oliver, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y. Treating sludge acids. No. 1,423,766; July 25.
Hechenbleikner, Ingenuin, and T. C. Oliver, Charlotte, N. C., assignors to Chemical Construction Company, New York, N. Y. Treating sludge acids. No. 1,423,767; July 25.
Heckler, William P., Napoleon, Ohio. Fencepost. No. 1,423,934; July 25.
Hedberg, John A., assignor to The South Side Manufacturing Company, Denver, Colo. Animal trap. No. 1,423,715; July 25.
Hedges, Edward E., New York, N. Y. Distilling shale. No. 1,423,716; July 25.
Held, Christ, et al. (See Siegfried, Joseph, assignor.)
Held, Joseph, et al. (See Siegfried, Joseph, assignor.)
Hellstrom, Carl R., Minneapolis, Minn. Bag holder. No. 1,424,017; July 25.
Hem, Halvor O., assignor to Toledo Scale Company, Toledo, Ohio. Weighing scale. No. 1,423,660; July 25.
Hemphill Company. (See Bosworth, George P., assignor.)
Hemphill Company. (See Lawson, John, assignor.)
Henderson, George K., assignor to International Printing Company, Indianapolis, Ind. Carton sealer. No. 1,424,018; July 25.
Henderson, John J., et al. (See Malloy, James T., assignor.)
Henderson, Olive G., Detroit, Mich. Desk and chair. No. 1,423,661; July 25.
Henggi, Lewis O., Oakmont, Pa., assignor to The P. & M. Company, Chicago, Ill. Creep check. (Reissue.) No. 15,421; July 25.
Hennessy, James F., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Fabric-cutting apparatus. No. 1,423,798; July 25.
Hennessy, James J., New York, N. Y. Journal lubricator. No. 1,423,850; July 25.
Hennessy, James J., New York, N. Y. Journal lubricator. No. 1,423,851; July 25.
Henry Wilhelm Company. (See Mausener, Frederick, assignor.)
Herge, Frank. (See Cline, M. L., and Herge.)
Herman, John, Los Angeles, Calif. Water-cooled bearing. No. 1,424,097; July 25.
Herman, Karl, Chester, Pa. Pump. No. 1,423,852; July 25.
Hernackl, John. (See Landgraf, C., and Hernackl.)
Hetherington, Harry C., and J. M. Braham, Washington, D. C. Making dicyandiamide. No. 1,423,799; July 25.
Hewitt, Edward R., Midvale, N. J. Radiator for vehicles. No. 1,423,662; July 25.
Heywood-Wakefield Company. (See Brown, Charles A., assignor.)
Hibbard, Rhuel B., D. J. Watrous, and J. G. Bassette, assignors to Airdry Corporation, Groton, N. Y. Drying apparatus. No. 1,423,800; July 25.
Hicks, Elias S., Yakima, Wash. Current motor. No. 1,423,717; July 25.
Hill, Nikalai, Park Falls, Wis. Car-door lock. No. 1,423,562; July 25.
Hill, William E., Philadelphia, and C. V. Firth, Ashbourne, assignors to Porter Brothers Textile Company, Philadelphia, Pa. Woven tubular fabric. No. 1,423,524; July 25.
Hill, William H., Manati, P. R. Kerosene vaporiser. No. 1,424,142; July 25.
Hines, Robert E., New York, N. Y., assignor to New Jersey Silk Machinery Company, Paterson, N. J. Spinning, doubling, and twisting machine. No. 1,423,801; July 25.
Hively, Hal H., Tar River, Okla. Sectional tire rim. No. 1,424,019; July 25.
Hoe, R., and Co. (See Baker, James N., assignor.)
Hodgson, Carl W., Chicago, Ill. Mixing and conveying apparatus. No. 1,423,853; July 25.
Hofstatter, Ernest W., Nyack, N. Y. Ear trumpet for truck drivers. No. 1,423,802; July 25.
Holdaway, William S., Salt Lake City, Utah. Pump. No. 1,423,768; July 25.
Holmes, Grant. (See King, George W. and C. S., Jacoby, Roush, and Holmes.)
Hopkins, Richard F., and O. F. Devold, Bartlesville, Okla. Pump. No. 1,423,935; July 25.
Hopkinson, Ernest, New York, N. Y., assignor to General Rubber Company. Treating rubber-containing latex. No. 1,423,525; July 25.
Hopkinson, Ernest, New York, N. Y., assignor to General Rubber Company. Product obtained from rubber-containing latex. No. 1,423,526; July 25.
Hopkinson, Ernest, New York, N. Y. Production of fabrications of rubber and filamentary material and products obtained therefrom. No. 1,424,020; July 25.
Hoppe, Oscar, assignor to R. A. Kempin, Rorschach, Switzerland. Rigid milling machine. No. 1,423,563; July 25.
Hooker Electrochemical Company. (See Stuart, Kenneth E., assignor.)
Horne, James. (See Dawson, A. T., and Horne.)
Howard, Harry G., Greenwich, N. Y. Tractor wheel. No. 1,424,098; July 25.
Howard, Karl S., assignor to Commonwealth Steel Company, St. Louis, Mo. Sand feeder. No. 1,423,854; July 25.
Hubbard, James R., Duncan, Okla. Breast-actuating mechanism for cotton gins. No. 1,424,021; July 25.
Huff, Daland & Company. (See Post, George B., assignor.)
Huffman, Samuel C., Lincoln, Nebr. Storage file. No. 1,423,936; July 25.
Hunt, Nannie K., Adolphus, Ky. Collapsible shipping container. No. 1,424,099; July 25.
Hurst, William C., New York, N. Y. Steering wheel for aeroplanes. No. 1,424,143; July 25.
Hutchinson, Harmer D., et al. (See Craft, Clarence H., assignor.)
Ideal Rim Tool Co. (See Peterson, Peter R., assignor.)
Ilford Limited. (See Agnew, A. J., and Renwick, assignors.)
Illig, George D., Depew, N. Y. Wrench. No. 1,423,803; July 25.
Industrial Process Engineering Company, The. (See Johns, George M., assignor.)
Ingersoll-Rand Company. (See Bayles, Lewis C., assignor.)
International Printing Company. (See Henderson, George K., assignor.)
Irons, George C., McKittrick, and A. Larson, Bakersfield, Calif. Tubing bleeder. No. 1,423,937; July 25.
Isachson, Norman, Albion, Idaho. Internal-combustion engine. No. 1,423,718; July 25.
Izen, Alexander, assignor to Smith & Davis Mfg. Co., St. Louis, Mo. Crib. No. 1,423,663; July 25.
Izen, Alexander, assignor to Smith & Davis Mfg. Co., St. Louis, Mo. Bed corner. No. 1,423,664; July 25.
Izen, Alexander, assignor to Smith & Davis Mfg. Co., St. Louis, Mo. Bed corner. No. 1,422,665; July 25.
Jackson, Walter M., New York, N. Y. Slitting attachment for cigars. (Reissue.) No. 15,422; July 25.
Jacobs, Nicholas W., Stanton, Nebr. Number plate for motor-vehicle fuel tanks. No. 1,423,938; July 25.
Jacoby, Benjamin. (See King, George W., and C. S. Jacoby, Roush, and Holmes.)
Jenninga, James M., Elizabeth, assignor to Standard Oil Company, Bayonne, N. J. Stable foam for preventing the evaporation of stored liquids. No. 1,423,719; July 25.

Beutel, Frederick C., et al. (See Ziegler, George J., assignor.)
Bifiex Products Company. (See Pancoast, W. G., and Grotenhuis, assignors.)
Bingman, John, Mount Tabor, Wis. Attachment for hydrocarbon containers. No. 1,424,068; July 25.
Blackmar, Fred W., assignor of one-half to L. M. Blackmar, Providence, R. I. Wrench. No. 1,424,069; July 25.
Blackmar, Lewis M. (See Blackmar, Fred W., assignor.)
Blakemore, Arthur H., St. Louis, Mo. Folding crate. No. 1,423,596; July 25.
Blair, James B., deceased, Decatur, Ill.; O. M. Blair, administratrix. Automobile direction indicator. No. 1,424,070; July 25.
Blair, Ora M., administratrix. (See Blair, James B.)
Bliss, E. W., Company. (See Klocke, William, assignor.)
Blum, Hosmer, San Francisco, assignor of one-half to B. C. Joy, Los Angeles, Calif. Meter. No. 1,423,597; July 25.
Blyburg, Ogden F., St. Joseph, Mich. Shock absorber. No. 1,423,904; July 25.
Bonk, Thomas I. S. (See Bellamore, D. H., and Boak.)
Boast, William F. (See Eshelman, O. D., and Boast.)
Boerner, Arno, Scheveningen, Netherlands. System or method of feeding combustion engines for airships. No. 1,423,987; July 25.
Boever, Alexis. (See Dutoit, Paul, assignor.)
Boge, Adolf, Solingen, Germany. Lock. No. 1,423,553; July 25.
Bolleau, Walter K., Baltimore, Md., assignor to Pittsburgh Oil Refining Corporation. Transmission and motor oil. No. 1,423,512; July 25.
Booty, Stanley S., London, England. Box and the like. No. 1,424,071; July 25.
Bosworth, George P., Central Falls, assignor to Hemphill Company, Pawtucket, R. I. Glove and making same. No. 1,424,072; July 25.
Bowler, Elizabeth, Westport, S. Dak. Garment-supporting device. No. 1,423,749; July 25.
Bowles, John H., New York, N. Y. Collapsible tire rim. No. 1,424,073; July 25.
Boyce, Edward C., Washington, D. C. Vending apparatus. No. 1,424,074; July 25.
Boykin, Burwell, jr., Beaumont, Tex. Traveling block. No. 1,424,075; July 25.
Brautigam, Anthony F., assignor of one-half to A. M. Rudiger, Buffalo, N. Y. Carrier for bottles, etc. No. 1,424,076; July 25.
Braddy, Lewis P., San Francisco, Calif. Identification fender for vehicles. No. 1,423,905; July 25.
Braham, Joseph M. (See Hetherington, H. C., and Braham.)
Braxton, Elbert M., Fort Worth, assignor of one-half to M. R. Spellman, Dallas, Tex. Gas producer and process. No. 1,424,077; July 25.
Brediceanu, Calus. (See Vuia, Trajan, assignor.)
Brehmer, Herman C., Philadelphia, Pa., assignor to H. W. Butterworth and Son's Company. Valve device. No. 1,423,988; July 25.
Brehmer, Herman C., Philadelphia, Pa., assignor to H. W. Butterworth & Son's Co. Atomiser. No. 1,423,989; July 25.
Bremer, Alvin L. (See Bremer, Martin L. and A. L.)
Bremer, Martin L. and A. L., Elberon, Iowa. Bin-filling shut-off. No. 1,423,990; July 25.

Brink, Carl A. (See Adell, E., and Brink.)
Broadway, William, and T. C. Pledger, Oklahoma, Okla.; said Broadway assignor to said Pledger. Rim fastener. No. 1,424,078; July 25.
Brombacher, Julius, Los Angeles, Calif. Pilot-light burner. No. 1,423,750; July 25.
Brooks, George W., Topeka, Kans. Screed holder. No. 1,423,991; July 25.
Brown, Charles A., Gardner, assignor, by mesne assignments, to Heywood-Wakefield Company, Boston, Mass. Combined hinge and stop for desk lids and the like. No. 1,423,513; July 25.
Brown, Frederick S., Torrington, Conn. Soap-holding brush. No. 1,423,992; July 25.
Brown, William S., Wallace, Idaho. Ore-separating device. No. 1,423,751; July 25.
Bruun, Sigurd, Fredericksberg, Denmark. Mold for concrete beams. No. 1,423,708; July 25.
Buchan, George, sr., Mansfield, Ohio. Chute support. No. 1,423,643; July 25.
Buffalo Foundry & Machine Co. (See Engel, Godfrey, sr., assignor.)
Buitrago, Rafael D., New York, N. Y. Suction duster. No. 1,423,993; July 25.
Buley, Olga E., London, England. Hair slide. No. 1,423,644; July 25.
Bullinger, Frederic H., Yonkers, N. Y., assignor to Ward Leonard Electric Company. Electric controlling apparatus. No. 1,423,907; July 25.
Bunde, William, Rochester, N. Y. Scooter car. No. 1,423,994; July 25.
Bunnell, Horry C., Westport, N. Y. Convertible chair. No. 1,423,995; July 25.
Burchard, Edith R. C., Little Compton, R. I. Robe for children's gocarts and invalid chairs. No. 1,423,908; July 25.
Burford, Oliver L., and H. De Bardeleben, Ensley, Ala. Winding shaft and chain guard for dump cars. No. 1,423,752; July 25.
Burnham, Joseph L., Schenectady, N. Y., assignor to General Electric Company. Arc barrier for dynamo-electric machines. No. 1,423,996; July 25.
Burris, James N., deceased, by H. E. Voss, administrator, Davenport, Iowa. Nonskid attachment for vehicle tires. (Reissue.) No. 15,418; July 25.
Butler, Frank L., Chicago, Ill. Switch-supporting attachment for electric fixtures. No. 1,423,645; July 25.
Butler, Frank L., Chicago, Ill. Electric fixture. No. 1,423,646; July 25.
Butterfield, Maurice A., Lowell, Mass. Circle-cutting tool. No. 1,423,828; July 25.
Butterworth, H. W., and Son's Company. (See Brehmer, Herman C., assignor.)
Butusov, William P., Norfolk, Va. Power plant. No. 1,423,514; July 25.
Buxton, Incorporated. (See Buxton, Warner R., assignor.)
Buxton, Warner R., Longmeadow, assignor to Buxton, Incorporated, Springfield, Mass. Key case. No. 1,423,909; July 25.
By-Products Recovery Co., The. (See Mellott, Howard S., assignor.)
Callier, Felix J., Brush, Colo. Automatic focusing device for enlarging cameras. No. 1,423,997; July 25.
Camp, Arthur E., Binghamton, N. Y. Scaffold carrier. No. 1,423,998; July 25.
Campbell, Howard B., Erie, Pa. Letter sheet. No. 1,423,910; July 25.
Campbell, Philip A., Vancouver, British Columbia, Canada. Lawn mower. No. 1,423,999; July 25.
Canell, Charles E., Portland, Oreg., assignor of one-half to E. T. White, Everett, Wash. Poultry feeder. No. 1,424,079; July 25.
Cardwell, Allen D., Rockville Center, assignor to Western Electric Company, Incorporated, New York, N. Y. Portable electric lantern. No. 1,423,911; July 25.
Carlson, Julius, Brooklyn, N. Y. Cap. No. 1,423,829; July 25.
Carpenter, Charles C., assignor to The Samuel C. Tatum Company, Cincinnati, Ohio. Filing tray or drawer. No. 1,424,080; July 25.
Carson, Clarence, New Rochelle, N. Y., assignor to Johns-Manville Incorporated. Hub odometer. No. 1,424,000; July 25.
Carter, Carnie B., and A. E. Coxe, Pittsburgh, Pa., assignors, by mesne assignments, to S. Karpen & Bros. Producing active methylene bodies. No. 1,423,753; July 25.
Carter, Wallace E., Dover, England. Convertible perambulator and push chair. No. 1,423,912; July 25.
Carter, William C., St. Louis, Mo. Fuel-supply apparatus for internal-combustion engines. No. 1,423,913; July 25.
Caspersson, Karl A. (See Gustafson, G., Jungmarker, and Caspersson.)
Catterall, Albert B., Ottumwa, Iowa. Dust cap. No. 1,423,515; July 25.
Central Union Trust Company of New York. (See Radford, George S., assignor.)
Cerf, Lester, Brooklyn, N. Y. Heel fastener. No. 1,423,787; July 25.
Charter, James A., Chicago, Ill. Metal disk wheel. No. 1,423,598; July 25.
Chemical Construction Company. (See Hechenbleikner, I., and Oliver, assignors.)
Chemical Machinery Corporation. (See Field, Crosby, assignor.)
Chennour, John S. (See Schultz, John M., assignor.)
Chicago Car Seal Company. (See Rogers, Harry R., assignor.)
Chicago Pneumatic Tool Company. (See Kimman, Henry J., assignor.)
Chicago Railway Equipment Company. (See Williams, Charles H., assignor.)
Chisholm, Clifton, assignor, by mesne assignments, to The American Multigraph Company, Cleveland, Ohio. Envelope-feeding mechanism. (Reissue.) No. 15,419; July 25.
Christensen, Carl V. J., et al., executors. (See Wardwell, Simon W.)
Christensen Machine Company. (See Christensen, Martin, assignor.)
Christensen, Martin, assignor to Christensen Machine Company, Racine, Wis. Delivery mechanism for signature-stitching machines. No. 1,423,647; July 25.
Christensen, Sander I., Willows, Calif. Rice-preservation process. No. 1,423,830; July 25.
Christian, Bert W., Delavan, Wis. Tool. No. 1,424,001; July 25.
Christie, Lewis D., Nichols, Conn., assignor to A. Oppenheim, New York, N. Y. Hose-supporter button and making same. No. 1,423,599; July 25.
Churchward, Jack, New York, N. Y., assignor to Wilson Welder & Metals Company, Inc. Electrical arc welding. No. 1,423,914; July 25.
Clancy, John C., assignor to The Nitrogen Corporation, Providence, R. I. Desulphurizing oil. No. 1,423,710; July 25.
Clancy, John C., assignor to The Nitrogen Corporation, Providence, R. I. Desulphurizing oil. No. 1,423,712; July 25.
Clancy, John C., Niagara Falls, N. Y., assignor to The Nitrogen Corporation, Providence, R. I. Producing gasoline and the like. No. 1,423,709; July 25.
Clancy, John C., assignor to The Nitrogen Corporation, Providence, R. I. Obtaining sulphur compounds from mineral oils and the like. No. 1,423,711; July 25.

Clark, James, assignor to S. R. Dresser Manufacturing Company, Bradford, Pa. Divided ring for pipe couplings and the like. No. 1,423,754; July 25.
Clement, Benj. H., et al., executors. (See Foster, C. B., and Clement.)
Clement, Frank H. (See Foster, C. B., and Clement.)
Clement, Louisa S., et al., executors. (See Foster, C. B., and Clement.)
Clement, Mary G., et al., executors. (See Foster, C. B., and Clement.)
Cline, Martin L., and F. Herge, Malinta, Ohio. Clutch-lever retainer. No. 1,424,081; July 25.
Clopton, Mortimer L., Wichita Falls, Tex. Ring gauge. No. 1,424,082; July 25.
Cochrane, Charles H., New York, N. Y. Means for controlling the flow of fluids. No. 1,423,831; July 25.
Cole, Albert L., Auburndale, assignor of one-fourth to F. J. V. Dakin, Newtonville, and one-fourth to F. A. Tilton, South Braintree, Mass. Shut-off valve for air-brake pipes. No. 1,424,083; July 25.
Cole, Glaudel, Poughkeepsie, N. Y. Clothesline adjuster. No. 1,424,084; July 25.
Cole, John A., and L. J. Shorter, Coventry, England. Piston. No. 1,424,002; July 25.
Commonwealth Steel Company. (See Howard, Karl S., assignor.)
Condon, Joseph P., et al. (See Morton, William C., assignor.)
Connely, Charles B., Scotia, N. Y., assignor to General Electric Company. Control system. No. 1,424,003; July 25.
Cooley, Fred W., Minneapolis, Minn. Tone modifier for phonographs. No. 1,423,832; July 25.
Corn Products Refining Company. (See Spain, William, assignor.)
Coxe, Albert E. (See Carter, C. B., and Coxe.)
Craft, Clarence H., assignor of one-third to H. D. Hutchinson and one-third to J. Q. Adams, Uniontown, Pa. Electrically-lighted motor meter. No. 1,423,755; July 25.
Craighead, Magruder, Hartsdale, N. Y., assignor to Johns-Manville Incorporated. Fastening means and applying same. No. 1,423,833; July 25.
Crane, Adam L., Fort Mill, S. C. Cement tie and rail fastener. No. 1,423,600; July 25.
Crawford, Franklin E., Winchester, assignor to Bankers Electric Protective Association, Boston, Mass. Detector for alarm system. No. 1,423,601; July 25.
Crozan, Charles W., Bangor, Me. Latch release for tapes. No. 1,424,085; July 25.
Crosbaw, Ralph S., Grand Rapids, Mich. Tail light and number plate. No. 1,423,648; July 25.
Crooks, Roxie S. (See Jupp, A. E., and Crooks.)
Crum, John M., Johnstown, Pa. Electric power jack. No. 1,423,834; July 25.
Cummings, Andrew S., South Tacoma, Wash. Combined lock and alarm. No. 1,423,554; July 25.
Cummings, Everett C., Electra, Tex. Pump. No. 1,424,004; July 25.
Curtis, Arthur R. (See Benjamin, D. H., and Curtis.)
Dakin, Francis J. V., et al. (See Cole, Albert L., assignor.)
Daniel, David C., Apex, assignor of one-half to S. B. Shepherd, Raleigh, N. C. Fertilizer distributor. No. 1,423,649; July 25.
Danziger, Abraham, New York, N. Y. Auxiliary sheet gauge for platen presses. No. 1,423,825; July 25.
Darrow, Burgess, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Pneumatic-tire tread. No. 1,424,131; July 25.
David, Leoncio, Washington, D. C. Electric hair clipper. No. 1,423,756; July 25.
Davidson, Charles E. (See Norlander, Charles A., assignor.)
Davis, Arthur J., Cedar Rapids, Iowa. Stock feeder. No. 1,423,915; July 25.
Davis, James, Gananoque, Ontario, Canada. One-man automobile top. No. 1,423,916; July 25.
Dawson, Arthur T., Westminster, and J. Horne, Barrow-in-Furness, assignors to Vickers Limited, Westminster, England. Ordnance. No. 1,423,757; July 25.
De Bardeleben, Hubert. (See Burford, O. L., and De Bardeleben.)
De Borggrave, Felix, Chicago, Ill. Vehicle wheel and resilient tire therefor. No. 1,424,086; July 25.
Decker, Lemuel B., Kenogami, Quebec, Canada. Paper-stock regulator. No. 1,423,555; July 25.
Declave, Joseph, Liege, Belgium. Small arm comprising a striker sliding in a breech bolt. No. 1,423,836; July 25.
Decuir, Joseph O., Houston, Tex. Oil burner. No. 1,423,650; July 25.
Defiance Combination Auto Lock Corporation. (See Sokoloy, Jacob, assignor.)
De Gowin, Isaac, assignor to The Seamless Rubber Company, Inc., New Haven, Conn. Ball. No. 1,423,837; July 25.
De Gowin, Isaac, assignor to The Seamless Rubber Company, Inc., New Haven, Conn. Method and apparatus for covering balls. No. 1,423,838; July 25.
De Jaco, Charles A., Newport, Ky. Heating drum. No. 1,423,651; July 25.
Del'Marmol, Charles J., Frankford, Pa. Reproducer. No. 1,424,087; July 25.
Denning, Joseph M., Denver, Colo., assignor, by mesne assignments, to General Ordnance Corporation, New York, N. Y. Tractor. (Reissue.) No. 15,420; July 25.
Dentists' Supply Company. (See Duffy, Charles J., assignor.)
Des Roches, Hilton H., assignor of one-half to M. J. Scott, Butte, Mont. Detachable bit for drills. No. 1,423,713; July 25.
Detroit Vapor Stove Company. (See Sherman, Alvin G., assignor.)
De Voe, Albert H., Westfield, N. J., assignor to The Singer Manufacturing Company. Dress guard. No. 1,423,602; July 25.
Devold, Orian F. (See Hopkins, R. F., and Devold.)
De Witt-La France Co. (See De Witt, W. P., and La France, assignors.)
De Witt, William P., Somerville, and D. J. La France, assignors, by mesne assignments, to De Witt-La France Co., Cambridge, Mass. Pencil. No. 1,423,603; July 25.
Diamant, Sidney, New York, N. Y. Punch and die set. No. 1,423,917; July 25.
Dieckmann, Carl F., assignor to Eugene Dietzgen Company, Chicago, Ill. Tape reel. No. 1,423,516; July 25.
Dietzgen, Eugene, Company. (See Dieckmann, Carl F., assignor.)
Dick, Joseph C. F., Stockton, Calif. Driving mechanism for tractors. No. 1,423,758; July 25.
Dillingham Manufacturing Company. (See Barrows, Harry E., assignor.)
Doble, John A., assignor to Doble Laboratories, San Francisco, Calif. Apparatus for controlling the flow of water to boilers. No. 1,423,759; July 25.
Doble Laboratories. (See Doble, John A., assignor.)
Dodge Brothers. (See Dodge, John F., assignor.)
Dodge, John F., deceased, by M. R. Dodge, Detroit, and H. E. Dodge, Grosse Pointe, special administrators, assignors to Dodge Brothers, Detroit, Mich. Wheel and making the same. No. 1,423,556; July 25.
Dodge, Horace E., et al., administrators. (See Dodge, John F.)
Dodge, Matilda R., et al, administrators. (See Dodge, John F.)
Doherty Research Company. (See Greenfield, Benjamin, assignor.)
Doloukhanoff, Michel, Charlottenburg, Germany. Device for automatically controlling the output of electrical plants. No. 1,423,839; July 25.
Drefs, Edward, Milwaukie, Oreg. Bed-bottom fabric. No. 1,423,918; July 25.
Dreher, Frank A., Dover, Ohio. Connecting rod. No. 1,423,788; July 25.
Dresser, S. R., Manufacturing Company. (See Clark, James, assignor.)
Drum, Charles, California, Pa. Automatic gate mechanism for elevator and mine shafts. No. 1,423,919; July 25.
Drury, Frank, Aintree, Liverpool, assignor to G. H. Williamson & Sons, Limited, Worcester, England. Manufacture of blanks of sheet metal. No. 1,424,005; July 25.
Duff, Vern W., Moberly, Mo. Device for holding engineers' time tables. No. 1,423,920; July 25.
Duffy, Charles J., Yonkers, N. Y., assignor to Dentists' Supply Company. Mold guide for artificial teetb. No. 1,423,921; July 25.
Durbin, Frederick A., assignor of one-half to J. F. Mnday, Evansville, Ind. Permutation padlock. No. 1,423,840; July 25.
Dutoit, Paul, assignor of one-third to A. Boever, Lausanne, Switzerland. Manufacture of brass. No. 1,423,922; July 25.
Eastern Tool & Manufacturing Company. (See Anderson, Carl E., assignor.)
Eckert, James C., jr., Stamford, Conn. Diving apparatus. No. 1,423,923; July 25.
Edmondson, Ralph S., Elizabeth, N. J., assignor to American Abrasive Metals Company. Plate for resisting flame and cutting tools. No. 1,423,652; July 25.
Edwards, Edwin L., assignor to Edwards X-Ray Corporation, Indianapolis, Ind. Adjustable X-ray tube holder. No. 1,423,924; July 25.
Edwards, Karl B., Eltham, London, England. Manufacture of arsenical compounds. No. 1,424,006; July 25.
Edwards, William W., Los Angeles, Calif. Bumper-bar fender. No. 1,423,604; July 25.
Edwards X-Ray Corporation. (See Edwards, Edwin L., assignor.)
Eickoff, Henry J., Hamilton, Ontario, Canada. Envelope. No. 1,423,653; July 25.
Einsiedel, Stanley F. E. (See Robbins, G. A. H., and Einsiedel.)
Electric Water Sterilizer and Ozone Company. (See Hartman, Harry B., assignor.)
Elmendorf, Armin, Madison, Wis. Tearing tester. No. 1,423,841; July 25.
Elmendorf, Armin, Chicago, Ill. Tearing tester. No. 1,423,842; July 25.
Emerson Phonograph Company. (See Emerson, Victor H., assignor.)
Emerson, Victor H., New York, N. Y., assignor to Emerson Phonograph Company, Inc., Laminated talking-machine record. No. 1,423,517; July 25.
Engel, Godfrey, sr., Brooklyn, assignor to Buffalo Foundry & Machine Co., Buffalo, N. Y. Casting process. No. 1,423,654; July 25.
Erickson, Anton F., Phillipsburg, Pa. Attachment for aeroplanes. No. 1,423,789; July 25.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 25TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Ackerman, Frank E., St. Paul, Minn. Mechanical hoist. No. 1,423,638; July 25.
Adams, Harry E., New York, N. Y. Securing means for automobile top closures. No. 1,424,061; July 25.
Adams, John Q., et al. (See Craft, Clarence H., assignor.)
Adell, Edward, Orange, Mass., and C. A. Brink, Cranston, R. I., assignors to Universal Winding Company, Boston, Mass. Cop or bobbin holder. No. 1,423,824; July 25.
Adriance, Adrian D., Brooklyn, N. Y. Toy arrow. No. 1,423,551; July 25.
Agnew, Alexander J., and F. F. Renwick, assignors to Ilford Limited, Ilford, England. High-temperature development of photographic materials. No. 1,424,062; July 25.
Agutter, George, Forest Hills, N. Y. Tennis racket. No. 1,423,900; July 25.
Airdry Corporation. (See Hibbard, R. B., Watrous, and Bassette, assignors.)
Akins, Jefferson H., Lewistown, Mont. Shim. No. 1,424,063; July 25.
Allen, Louise, Hawarden, Iowa. Cigar rest. No. 1,423,507; July 25.
Allied Golf Company. (See White, James S., assignor.)
Aluminum-Schweisswerk A.-G. (See Grubenmann, Max, assignor.)
American Abrasive Metals Company. (See Edmondson, Ralph S., assignor.)
American Atomized Fuel Company. (See Whitaker, William H., assignor.)
American Gas Company of New Jersey. (See Warner, Arthur W., assignor.)
American Hard Rubber Co. (See Schelhammer, Herman, assignor.)
American Hard Rubber Co. (See Wing, C. E., and Schelhammer, assignors.)
American Hardware Corporation, The. (See Stone, Elmer B., assignor.)
American Multigraph Company, The. (See Chisholm, Clifton, assignor.) (Reissue.)
American Steel and Wire Company of New Jersey, The. (See Morrison, Max, assignor.)
American Telephone and Telegraph Company. (See Espenschied, Lloyd, assignor.)
American Woodworking Machinery Company. (See Foster, C. B., and Clement, assignors.)
American Zinc, Lead & Smelting Company. (See Rossman, William F., assignor.)
Anderson, Carl E., East Orange, assignor to Eastern Tool & Manufacturing Company, Bloomfield, N. J. Slide for the straps of garments. No. 1,423,639; July 25.
Anderson, John H., St. Paul, Minn. Wagon tongue. No. 1,424,064; July 25.
Anderson, William, Newark, N. J. Door lock and applying the same. No. 1,423,825; July 25.
Andrusyszyn, Frank, Revloc, Pa. Car-seat construction. No. 1,423,508; July 25.
Andrusyszyn, Frank, assignor of one-fourth to W. Klymko, Nanty Glo, and one-fourth to A. Senczak, Revloc, Pa. Sliding-door lock. No. 1,423,509; July 25.
Anstice, Josiah, & Company. (See Pickering, Theodore H., assignor.)
Arbeitblatt, Abraham, Los Angeles, Calif. Steering gear for trailers. No. 1,424,129; July 25.
Arbogast, Charles. (See Schaaf, John B., assignor.)
Armington, Arthur A., et al., executors. (See Wardwell, Simon W.)
Armitage, George H., Lincoln, assignor to United Lace & Braid Manufacturing Company, Auburn, Cranston, R. I. Machine for making shoe laces and the like. No. 1,423,984; July 25.
Armstrong Cork Company. (See Lansill, John S., assignor.)
Armstrong, Edwin H., Yonkers, N. Y. Signaling system. No. 1,424,065; July 25.
Arnold, Edward E., Coventry, and P. St. Clair, jr., Providence, assignors to The Nitrogen Corporation, Providence, R. I. Conducting the ammonia-soda process. No. 1,423,510; July 25.
Bach, Nells P., Millburn, N. J., assignor to Perfect Vacuum Canning Company, New York, N. Y. Apparatus for sealing containers. No. 1,423,591; July 25.
Bagnulo, Alberto, Turin, Italy. Internal-combustion and hot-air engine. No. 1,423,705; July 25.
Bahl, Errold G., Lincoln, Nebr. Aeroplane fuselage and building same. No. 1,424,066; July 25.
Bailey, George C., Woodcliffe-on-Hudson, C. W. Fischer, Grantwood, N. J., and J. F. W. Schulze, Edgewood, Md., assignors to The Barrett Company. Purification of substances by distillation with a solvent. No. 1,424,138; July 25.
Baker, James N., Brooklyn, assignor to R. Hoe and Co., New York, N. Y. Routing tool. No. 1,423,511; July 25.
Baker, Walter C., assignor to Standard Parts Company, Cleveland, Ohio. Brake mechanism. No. 1,423,901; July 25.
Baldwin, Frederic E., Philadelphia, Pa. Closure. No. 1,423,592; July 25.
Baldwin, Frederic E., Philadelphia, Pa. Holder for hot-water-bottle stoppers. No. 1,423,593; July 25.
Bankers Electric Protective Association. (See Crawford, Franklin E., assignor.)
Banks, George L., Walnut Park, Calif. Aeroplane. No. 1,424,130; July 25.
Banner Machine Company, The. (See Grove, Frank H., assignor.)
Bardsley, Willard W., et al., executors. (See Wardwell, Simon W.)
Barlow, Herndon O., Los Angeles, Calif. Automatic surf-breaking apparatus. No. 1,423,640; July 25.
Barney, Philip, Dollard, Manitoba, Canada. Animal poke. No. 1,423,706; July 25.
Barringer, Lawrence E., Schenectady, N. Y., assignor to General Electric Company. Cementing and protecting composition. No. 1,423,985; July 25.
Barrett Company, The. (See Bailey, G. C., Fischer, and Schulze, assignors.)
Barrett Company, The. (See Weisberg, L., and Potter, assignors.)
Barrett Company, The. (See Williams, Arthur G., assignor.)
Barrows, Harry E., assignor to Dillingham Manufacturing Company, Sheboygan, Wis. Folding chair. No. 1,423,594; July 25.
Bartlett, Harry D., Chicago, Ill. Coal-handling device. No. 1,423,986; July 25.
Bassette, John G. (See Hibbard, R. B., Watrous, and Bassette.)
Batchelor, Harold, Jersey City, N. J. Locking means for nuts, bolts, and the like. No. 1,423,746; July 25.
Bauer, Gustav, Hamburg, and F. Kramer, Blankenese-Dockenhnden, near Hamburg, Germany. Testing apparatus for indicating leaks. No. 1,423,902; July 25.
Bauman, Edward H., Baltimore, Md. Illuminated marker. No. 1,423,641; July 25.
Bayles, Lewis C., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Pin retainer for tool holders. No. 1,423,595; July 25.
Bayne, George G., Bushnell, Ill. Trough. No. 1,423,552; July 25.
Beal, Carroll N. and F. C., San Francisco, Calif. Tractor driving and mechanism therefor. No. 1,423,642; July 25.
Beal, Fay C. (See Beal, Carroll N. and F. C.)
Beccari, Giuseppe, assignor to Società Anonima Brevetti Beccari, Florence, Italy. Apparatus for working garbage and refuse of towns. (Reissue.) No. 15,417; July 25.
Bellamore, David H., and T. I. S. Boak, East Orange, N. J., assignor to Steel Wheel Corporation. Making pressed-steel vehicle wheels. No. 1,423,747; July 25.
Bell, John E., Brooklyn, N. Y. Waste-heat economizer. No. 1,423,826; July 25.
Bell Pump Company. (See Larkin, J. J., and Gordon, assignors.)
Beman, Ralph, Cleveland, Ohio, assignor to General Electric Company. Gauge for lamps. No. 1,424,067; July 25.
Benjamin, Dana H., Cleveland Heights, and A. R. Curtis, Cleveland, assignors to S. D. Guggenheim, Cleveland Heights, Ohio. Extractor. No. 1,423,827; July 25.
Benson, Emil T., Chicago, Ill. Marking machine. No. 1,423,903; July 25.
Berman, Henry, assignor of one-half to E. Erik, Ossining, N. Y. Sound box. No. 1,423,707; July 25.
Berman, Wolf, New York, N. Y. Sectional inner strip for automobile tires. No. 1,423,748; July 25.
Betry, Owen C. (See Lake, H. M., and Betry.)

Warning devices, Mechanically-operated. Compagnie Industrielle et Commerciale du Cycle et de l'Automobile. No. 142,005; July 18.
Watches and clocks. J. F. Mansfield. No. 157,379; July 18.
Watches and watch movements, watchcases, and parts thereof. R. A. Gsell. No. 144,617; July 18.
Water, Mineral. A. Velo y Filgueira. No. 140,085; July 18.
Waterproofed top and seat cover cloth of a textile nature. Golde-Patent Manufacturing Co. No. 156,156; July 18.
Wireless receiving sets, radio cabinets, etc., Complete loud-speaking. P. E. Edelman. No. 162,616; July 18.
Wireless transmitting and receiving apparatus. Loyd Wireless Telephone Corporation. No. 161,783; July 18.
Woolen piece goods. Glazier Mfg. Company. No. 160,758; July 18.

ALPHABETICAL LIST OF TRADE-MARK TITLES.

PUBLISHED FOR OPPOSITION.

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907.]

Alloys for use in the manufacture of jewelry and jewelers' goods. Marret, Bonnin, Lebel & Guieu. No. 161,329; July 18.
Analgesic tablets for headache, neuralgia, rheumatism, etc. P. Metadier. No. 161,633; July 18.
Antiseptic preparation. West-Laboratorium Gesellschaft mit beschränkter Haftung. No. 153,494; July 18.
Aprons and house dresses. H. S. Well Co. No. 152,528; July 18.
Balls, Golf. A. G. Spalding & Bros. No. 162,959; July 18.
Balls, Golf. Holmac, Inc. No. 165,080; July 18.
Balls, Golf. Holmac, Inc. Nos. 165,376–8; July 18.
Bandeaux. Chas. R. De Bevoise Co. No. 159,500; July 18.
Banks and safes, Small portable savings. Stronghart Company. No. 129,479; July 18.
Bath compound for skin diseases and rheumatic pains, Medicinal. W. Message. No. 159,276; July 18.
Bearing metal in pig form. Ackermite Company of America. No. 157,205; July 18.
Belt dressing. F. Ryan. No. 161,749; July 18.
Belting, Leather. J. Bachmann. No. 160,652; July 18.
Beverages sold as soft drinks and sirups for making same. California Bottling Co. No. 159,920; July 18.
Beverages sold as soft drinks and sirups for making same. Grain Juice Company. No. 163,442; July 18.
Bicycles. Worcester Electric Supply Co. No. 162,080; July 18.
Binders and bound blank books and indexes, Loose-leaf. National Blank Book Co. No. 162,260; July 18.
Bleaching and water-softening preparation. Joseph Crosfield & Sons. No. 160,907; July 18.
Blood purifier and nerve tonic. D. J. Gunter. No. 157,834; July 18.
Boards, panels of wood, etc. Fiat. No. 148,269; July 18.
Boiler fittings and furnishings, Steam. Reliance Gauge Column Company. No. 137,269; July 18.
Book covers. M. L. Stoughton. No. 159,222; July 18.
Boots and shoes. A. Freedman & Sons. No. 149,278; July 18.
Boring tools and machines, reamers, milling machines, etc. Storm Manufacturing Company. No. 143,839; July 18.
Bracelets. Cohn & Rosenberger, Inc. No. 164,494; July 18.
Brake and wood transmission linings, Wood. S. W. Akins. No. 159,914; July 18.
Brassières. Chas. R. De Bevoise Co. No. 159,307; July 18.
Brassières. Chas. R. De Bevoise Co. No. 159,744; July 18.
Brassières and corsets. Kabo Company. No. 159,468; July 18.
Bricks and paving blocks, Fire. Geo. S. Good Fire Brick Co. No. 113,560; July 18.
Brushes for painting, varnishing, cleaning, etc. John L. Whiting-J. J. Adams Company. No. 139,765; July 18.
Brushes for painting, varnishing, cleaning, etc. John L. Whiting-J. J. Adams Company. No. 139,830; July 18.
Brushes for painting, varnishing, cleaning, etc. John L. Whiting-J. J. Adams Company. No. 139,833; July 18.
Brushes for painting, varnishing, cleaning, etc. John L. Whiting-J. J. Adams Company. No. 140,420; July 18.
Burnishing compound. Mid-West Manufacturing Company. No. 162,840; July 18.
Cars and roller-bearing trucks, motor and horse drawn, and wheels and axles. Railway and Mine Supply Company. No. 160,975; July 18.
Cars, Motor. Duesenberg Automobile & Motors Co. No. 160,877; July 18.
Cement, Portland. Marquette Cement Manufacturing Company. No. 161,846; July 18.
Charcoal not specially prepared for decolorizing or deodorizing. Tennessee Eastman Corporation. No. 160,518; July 18.
Checks, check-book cases, and check-book covers, etc. William Mann Company. No. 163,280; July 18.
Chemical composition employed in stamping patterns. S. S. Bendick. No. 165,264; July 18.
Chemicals, medicines, and pharmaceutical preparations. Masco Drug Company. No. 151,186; July 18.
Chemicals or intermediates, rubber accelerators or catalyzers, rubber-compounding ingredients, etc., Coal-tar. National Aniline & Chemical Company. Nos. 161,635–9; July 18.
Chlorine-control apparatus, Chemical-control equipment for water purification, etc. Wallace & Tiernan Co. No. 149,878; July 18.
Chlorine-control apparatus, Chemical-control equipment for water purification, etc. Wallace & Tiernan. No. 149,880; July 18.
Cigars. Le Francis Cigar Company. No. 161,097; July 18.
Cleansing, sterilizing, and disinfecting compound. Eagle Chemical Company. No. 162,810; July 18.
Clocks, Alarm. Marshall Field & Company. No. 161,537; July 18.
Cloth, Artificial-silk. Turner & Stroock, Inc. No. 163,298; July 18.
Clothing. Wasserman & Goldsmith. No. 159,131; July 18.
Clothing for children. H. Fels. No. 158,302; July 18.
Clothespins. E. H. Miller. No. 147,886; July 18.
Coal. Reeves Coal and Dock Co. No. 164,789; July 18.
Coats and suits. E. J. Wile & Co. No. 156,874; July 18.
Coats and suits, Ladies'. Linder Bros. No. 151,879; July 18.
Coats, cloaks, wraps, capes, etc., Women's, children's, and infants'. Salt's Textile Manufacturing Company. No. 159,116; July 18.
Coats, suits, aprons, and dresses, bath robes, etc., Ladies'. Western Garment Mfg. Company. No. 159,737; July 18.
Coats, vests, trousers, and overcoats. Menter Co. No. 159,163; July 18.
Coffee. H. T. Lange Co. No. 156,392; July 18.
Colors, Coal-tar. Society of Chemical Industry in Basle. No. 157,961; July 18.
Compasses, banking indicators, air-distance recorders, etc. Pioneer Instrument Company. No. 138,851; July 18.
Cooking utensils, Aluminum. Wilson Utensil Company. No. 157,462; July 18.
Corsets, corset waists, brassières, bandeaux, etc. American Lady Corset Co. No. 159,456; July 18.
Cotton piece goods. New England Commercial Co. No. 161,505; July 18.
Cotton piece goods. Victor-Monaghan Company. No. 163,953; July 18.
Cotton, silk, and linen goods and mixtures of cotton and silk and linen and silk, all in the piece. Jacob Miller Sons & Co. Nos. 164,061–3; July 18.
Cotton waste. Geo. B. Carpenter & Co. No. 161,225; July 18.
Crackers, Soda. Item Biscuit Co. No. 164,251; July 18.
Cream, Face. M. E. Wilder. No. 162,225; July 18.
Crayons, Standard Oil Company of New York. No. 162,903; July 18.
Crayons, Wax and chalk. Standard Crayon Manufacturing Co. No. 161,803; July 18.
Crayons, Wax and chalk. Standard Crayon Manufacturing Co. No. 161,857; July 18.
Diapers. Utica Infant Wear Corp. No. 159,631; July 18.
Dolls. C. L. Scovil. No. 164,722; July 18.
Dresses, Children's and misses'. T. S. Cohen. No. 154,401; July 18.
Dresses, Misses' and children's. G. P. Van Lopik. No. 159,670; July 18.
Duck, Cotton. John Boyle & Company. No. 156,733; July 18.
Dyes, dyestuffs, and colors. National Aniline & Chemical Company. No. 148,509; July 18.
Dynamos, electromotors, converters, etc. Fiat. No. 148,270; July 18.
Electric conductors, wires, and cables. Boston Insulated Wire and Cable Co. No. 160,534; July 18.
Electric-light fixtures. J. W. Hancock. No. 162,405; July 18.
Electric-light sockets, switches, etc. N. W. Nutt. No. 154,612; July 18.
Electrical apparatus, more particularly tuning-coil sliders. Gehman & Weinert. No. 160,548; July 18.
Electrical generators. A. Jemielita. No. 159,871; July 18.
Electrical switches and pull sockets. Hart & Hegeman Manufacturing Company. Nos. 161,729–30; July 18.
Electrodes, Arc-welding metal. International Welding Engineering Corporation. No. 162,011; July 18.
Embalming fluid. Master Chemical Co. No. 162,187; July 18.
Engines, Fuel-feeding apparatus for internal-combustion. G. J. Burns. No. 159,779; July 18.
Fish hooks and flies. Meier & Frank Co. No. 165,401; July 18.
Fishing-fly books. F. W. Klinger and Langbein Co. No. 164,170; July 18.
Fishing line. Ashaway Line & Twine Manufacturing Company. No. 163,727; July 18.
Fishing lines. Cortland Line Co. No. 164,390; July 18.
Fishing lines, Braided cotton. Cortland Line Co. No. 164,361; July 18.
Fishing lines, Braided Japan-silk enameled. Cortland Line Co. No. 164,374; July 18.
Fishing lines, Enameled Japan-silk. Cortland Line Co. No. 164,368; July 18.

Skates. International Development Company. No. 156,882; July 18.
Suits and dresses, Children's. Gotham Novelty Co. No. 156,873; July 18.
Taffy or molasses candy. H. A. Bankes. No. 156,834; July 18.
Tire retreads. General Tire and Rubber Company. No. 156,869; July 18.
Tire-tube patches. F. H. Binninger. Nos. 156,838–9; July 18.
Tire-tube rubber patches, raincoats, overshoes, etc. F. H. Binninger. No. 156,840; July 18.
Toy, Flying. A. L. Salvo. No. 156,917; July 18.
Toy stoves, Cooking dishes for. George Borgfeldt & Co. No. 156,846; July 18.
Toys. Kelmet Corporation. No. 156,886; July 18.
Toys. Sachem Manufacturing Company. No. 156,916; July 18.
Umbrella and parasol ferrules and ties. Wangee Umbrella Co. No. 156,937; July 18.
Undershirts, drawers, union suits, waists, shirts, pyjamas, and night robes. I. Panitz. No. 156,906; July 18.
Underwear, shirtwaists, infants' underwear and dresses, Women's and girls'. Marshall Field & Company. No. 156,891; July 18.
Valves, Steam-trap air. T. S. Todd & Co. No. 156,931; July 18.
Water, Mineral. Isle of Wight Water Company. No. 156,883; July 18.
Water, Natural spring. Shell Rock Spring Water Co. No. 156,923; July 18.
Well tools and equipment, Oil-. Union Tool Company. No. 156,934; July 18.
Yeast. Northwestern Yeast Company. No. 156,965; July 18.

ALPHABETICAL LIST OF LABELS.

"A C T Chemical Products." (For Pieces of Paper or Other Material Which are to be Attached to Bottles, Boxes, or Packages Containing Chemical Articles of Manufacture.) A. C. Thayer. No. 24,738; July 18.
"Ajem Corn Paste." (For a Proprietary Medicine for the Removal of Corns and the Like.) M. A. Ajemian. No. 24,711; July 18.
"All-Season Veil." (For Veils.) A. A. West. No. 24,740; July 18.
"American 'E' Products Company." (For Powdered Soups.) American "E" Products Company. No. 24,712; July 18.
"Death-Blo Certainly Annihilates Pests." (For Packages Containing a Preparation for Destroying Insects.) D. F. Davenport. No. 24,718; July 18.
"De Luxe Vanity." (For Powder Puffs.) Hochschild Corporation. No. 24,724; July 18.
"Dexter's Mother's Bread." (For Bread.) E. A. Dexter. No. 24,719; July 18.
"G M C Metallic Grease." (For Lubricating Grease.) Genro Mfg. Co. No. 24,722; July 18.
"Grnino." (For Soap.) Kendall Products Corporation. No. 24,728; July 18.
"Grier's Grinding Compound." (For Compounds for Grinding in Bearings.) Grihurn Co. No. 24,723; July 18.
"Harry's Florida Pecan Roll." (For a Nut Confection.) H. Bernstein. No. 24,715; July 18.
"Holmes Honey Pops." (For Confectionery.) H. G. Holmes. No. 24,725; July 18.
"Jack's Bait Wiggle Tail." (For Containers for Fishing Bait.) J. R. Cunningham. No. 24,177; July 18.
"Jack's Fish Ferrets." (For Fishing Tackle.) J. R. Cunningham. No. 24,716; July 18.
"Kendene." (For Soap.) Kendall Products Corporation. No. 24,730; July 18.
"Kill-O-Pest." (For a Liquid Disinfectant for Destroying Ants, Moths, Flies.) Universal Products Co. No. 24,739; July 18.
"Korex." (For Soap.) Kendall Products Corporation. No. 24,729; July 18.
"Maltoid Milk-Bone Puppy Food." (For Dog Biscuits.) F. H. Bennett Biscuit Company. No. 24,714; July 18.
"Murray's Fragrant Cream Violet for Beautifying The Complexion." (For 25¢, 35¢, and 50¢ Size Bottles Containing a Preparation for Beautifying the Complexion.) E. L. Murray. No. 24,731; July 18.
"Old Virginia Brunswick Stew." (For Canned Old Virginia Brunswick Stew.) F. Sturdivant. No. 24,736; July 18.
"On the trail of a Good Tire." (For Vehicle Tires, Being Applied to the Boxes or Packages Containing the Same.) Ideal Tire and Rubber Company. No. 24,726; July 18.
"Pure Silk." (For Hosiery.) Non-Rip Silk Hosiery Mills Inc. No. 24,732; July 18.
"Ruggiero's Dentatura." (For Bottles or Cartons Containing a Mouth Wash.) A. Ruggiero. No. 24,734; July 18.
"Square D Safety Switch." (For Electric Switches.) Square D Co. No. 24,735; July 18.
"Style No. 2016, The Readi-Sew Package." (For an Envelope Containing Children's Ready-to-Sew Garments.) Readi-Sew Package Co. No. 24,733; July 18.
"Sunshine Macaroni." (For Macaroni.) Sunshine Macaroni Mfg. Co. No. 24,737; July 18.
"The World's Finest Fruit." (For Fruit Wrappers.) H. R. Williar. No. 24,741; July 18.
"Thor De Garcia & Co. Havana." (For Cigars, Cigarettes, and Tobacco.) Joseph A. Garcia & Company. No. 24,721; July 18.
"Varicosol." (For a Box Containing a Medical Preparation in Powder Form for the Treatment of Hardening of the Arteries, Varicocele, Varicose Veins, and Rheumatism.) P. T. Donovan. No. 24,720; July 18.
"Vitamine Tomatoes." (For Canned Tomatoes.) Kemp Bros. Packing Co. No. 24,727; July 18.
"Wheatsworth Whole Wheat Graham Crackers." (For Crackers.) F. H. Bennett Biscuit Company. No. 27,713; July 18.
"Ziegler's Aero Kisses." (For Candy Kisses.) Geo. Ziegler Co. No. 27,742; July 18.

ALPHABETICAL LIST OF PRINTS.

"Coals." (For Advertising Purposes for Coal.) F. A. Bassett. No. 6,211; July 18.
"Dandercide." (For Advertising Purposes for Hair Tonic.) L. J. Wantland. No. 6,222; July 18.
"Featuring The Non Rip Silk Hosiery." (For Advertising Purposes for Hosiery.) Non-Rip Silk Hosiery Mills Inc. No. 6,217; July 18.
"Leaping Bass No. 1." (For Advertising Purposes for Fishing Tackle.) Enterprise Manufacturing Company. No. 6,214; July 18.
"Leaping Bass No. 2." (For Advertising Purposes for Fishing Tackle.) Enterprise Manufacturing Company. No. 6,213; July 18.
"Made Mechanically Correct." (For Advertising Purposes for Steel Boats, Barges, Marine Engines, Boilers, and Equipment.) Marietta Manufacturing Company. No. 6,215; July 18.
"Scientific Control vs. Indiscriminate Feeding." (For Advertising Purposes for Mead's Infant Diet Materials.) Mead Johnson & Company. No. 6,216; July 18.
"Singer Electric Fans." (For Advertising Purposes for Electric Fans.) Singer Manufacturing Company. No. 6,221; July 18.
"Singer Portable Electric." (For Advertising Purposes for Portable Electric Sewing Machines.) Singer Manufacturing Company. No. 6,220; July 18.
"Singer Sewing Motor." (For Advertising Purposes for Sewing Motors.) Singer Manufacturing Company. No. 6,219; July 18.
"Sport Trousers." (For Advertising Purposes for White Duck Clothing.) James E. Richards Company. No. 6,218; July 18.
"The Winner's Cup." (For Advertising Purposes for Gold and Silver Ware.) Chrichton Bros. No. 6,212; July 18.

Hats, Ladies'. Harry Solomons & Son. No. 156,927; July 18.
Hats, Ladies' trimmed. Staadecker & Co. No. 156,929; July 18.
Hose, Men's, ladies', and children's cotton, silk, and woolen. L. C. Vaughan. No. 156,935; July 18.
Hosiery. Bestex Hosiery Co. No. 156,836; July 18.
Insect fluid. Emerson Pharmaceutical Laboratories. No. 156,863; July 18.
Kettles, Steam cooking. Curtis Manufacturing Company. No. 156,856; July 18.
Knitted underwear, Men's and boys'. Rogers Peet Company. No. 156,915; July 18.
Ladders. Rich Pump and Ladder Company. No. 156,961; July 18.
Lotion, Cosmetic. T. J. Newlyn. No. 156,897; July 18.
Malt extract for food purposes. Pabst Corporation. No. 156,902; July 18.
Marmalades, jams, conserves, etc., Fruit. Phoebe Green Company. No. 156,910; July 18.
Matches. Jönköpings Och Vulcans Tandsticksfabriksaktiebolag. No. 156,885; July 18.
Mayonnaise and Russian dressing. Chevy Chase Food Products Co. No. 156,853; July 18.
Medicinal preparation. Peruna Company. Nos. 156,968–7; July 18.
Medicinal preparations, Certain. M. S. Snow. No. 156,926; July 18.
Milk, Preparations for coagulating or curdling. Chr. Hansen's Laboratory, Inc. No. 156,854; July 18.
Mottoes, Snapping. B. Shackman & Co. Nos. 156,958–9; July 18.
Neckties, Bow. Hewes & Potter. No. 156,878; July 18.
Nuts, Pistachio. Zaloom Brothers. No. 156,945; July 18.
Oil compound. Bay Bee Oil Co. No. 156,835; July 18.
Oil stearin, Cottonseed-. Wyatt Bros. No. 156,973; July 18.
Pepper, allspice, cinnamon, turmeric, ginger, cloves, sage, etc. Worden Grocer Company. No. 156,944; July 18.
Piston rings. Piston Ring Company. No. 156,960; July 18.
Plush goods in the piece. Fred Pearson & Company. No. 156,908; July 18.
Preparation for the treatment of skin diseases. A. H. Tripi. No. 156,968; July 18.
Ribbons for making camisoles. Ernest & Herman Levy, Inc. No. 156,970; July 18.
Roofing, Felt. Stelwagon Manufacturing Co. Nos. 156,962–3; July 18.
Rug, Fabric known as a royal Turkish. W. T. Smith & Son, Inc. No. 156,925; July 18.
Salmon. Frederic Blank & Co. No. 156,842; July 18.
Sardines, Smoked. I. Epstein. No. 156,864; July 18.
Shirts and boys' blouses and play suits, Men's and boys' work. J. C. Penney Co. No. 156,909; July 18.
Silkworm gut leaders and leaders made of other material. Weber Lifelike Fly Co. No. 156,941; July 18.
Sirup, Table. American Molasses Company of New York. No. 156,831; July 18.
Sirup, Table. M. O. Dantzler. No. 156,859; July 18.
Sirup, Table. Croker Packing Co. No. 156,855; July 18.

ALPHABETICAL LIST OF DESIGNS.

Calendar mounting. D. M. Weston. No. 61,265; July 18.
Dish plate or similar article. G. L. Crowell, Jr. No. 61,222; July 18.
Flag for Ireland. P. D. Riordan. No. 61,253; July 18.
Glass dish. C. L. Reizenstein. Nos. 61,247–52; July 18.
Lace. J. Draycott. No. 61,223; July 18.
Lace. H. A. Philips. No. 61,246; July 18.
Lamp shade, globe, or similar article. H. D. McFaddin. No. 61,242; July 18.
Lighting fixtures, Pedestal for. F. Reottges. Nos. 61,258–63; July 18.
Lighting fixtures, Shade for. F. Reottges. Nos. 61,254–7; July 18.
Lighting fixtures, Shade for. F. Roettges. No. 61,264; July 18.
Lighting fixtures, Standard for. J. W. Gosling. No. 61,226; July 18.
Plate or similar article. T. Kotato. Nos. 61,227–41; July 18.
Tire. W. Carnal. No. 61,221; July 18.
Tire tread. H. D. Mitchell. Nos. 61,243–5; July 18.
Toy. M. P. Duryea and C. Ingraham. No. 61,224; July 18.
Tray. J. Gannon. No. 61,225; July 18.
Watch and knife, Combination. W. Ochse. No. 61,220; July 18.

Tabulating machines, Sector control for. W. W. Lasker. No. 1,423,439; July 18.
Talking-machine disk-record cabinet. H. H. Gerstner. No. 1,422,950; July 18.
Tanning drums, Driving means for. E. Roth. No. 1,423,028; July 18.
Temperature-controlling system. P. R. Owens. No. 1,422,886; July 18.
Temperature indicator. L. V. Aronson. No. 1,423,066; July 18.
Tent and bed. F. Ames. No. 1,423,171; July 18.
Theater seat. R. Brooks. No. 1,422,825; July 18.
Thermometer. E. Richardson. No. 1,423,257; July 18.
Threading machines, Cap-feeding device for. G. F. Anderson. No. 1,423,173; July 18.
Tie device. A. S. Mathers. No. 1,423,133; July 18.
Tie holder. W. H. Grainger. No. 1,422,849; July 18.
Tie retainer. W. J. Getsinger. No. 1,423,208; July 18.
Tightener. J. T. Simpson. No. 1,423,162; July 18.
Tile. B. P. Infantino. No. 1,423,117; July 18.
Timepieces, Balance staff for. W. H. H. Needy. No. 1,423,446; July 18.
Tire. W. R. Halfpenny. No. 1,422,851; July 18.
Tire. H. Lobel. No. 1,423,232; July 18.
Tire. D. L. Stouch. No. 1,422,899; July 18.
Tire, Airless. C. H. Braden. No. 1,423,074; July 18.
Tire and rim, Combination. C. O. Lambrement. No. 1,423,435; July 18.
Tire carrier, Spare-. A. D. Crossley. No. 1,422,932; July 18.
Tire chain. L. G. Stukenborg. No. 1,423,470; July 18.
Tire liner. C. F. Hicks. No. 1,423,423; July 18.
Tire, Pneumatic. G. E. and C. A. Stuart. No. 1,423,277; July 18.
Tire protector. H. H. Shannon. No. 1,423,036; July 18.
Tire, Resilient. S. P. Long. No. 1,422,996; July 18.
Tire-rim tool. N. A. Eubank. No. 1,422,948; July 18.
Tire, Vehicle. E. Bylund. No. 1,422,921; July 18.
Tires, Antiskid attachment for elastic. W. T. Rollins. No. 1,423,026; July 18.
Tomatoes, Machine for skinning and coring. H. R. Harding. No. 1,423,421; July 18.
Tongs, Electrically heated. F. O. Brown. No. 1,422,826; July 18.
Tonometer. A. Amsler. No. 1,423,293; July 18.
Tool, Advancing cutter-boring. E. F-G. Gibbs. No. 1,423,209; July 18.
Tool handle. C. A. Walters. No. 1,423,055; July 18.
Tool holder. J. R. Moore. No. 1,423,245; July 18.
Tooth, Artificial. J. E. Rose. No. 1,423,027; July 18.
Toothbrush and dentifrice holder, Combination. L. Dayeh. No. 1,423,405; July 18.
Torpedoes, Depth gear for. H. M. Branham. No. 1,423,179. July 18.
Tow and push bar, Combined. G. M. Colling. No. 1,422,928; July 18.
Toy. J. W. Carlson. No. 1,422,833; July 18.
Toy. E. G. Schreyer. No. 1,423,035; July 18.
Toy piano. G. E. Roberts. No. 1,423,024; July 18.
Toy sprinkler. E. G. Hofmann. No. 1,422,862; July 18.
Tractor. J. W. Lambert. No. 1,423,227; July 18.
Tractor, Farm. E. W. Taber. No. 1,423,046; July 18.
Tractor hitch. O. B. Skonnord. No. 1,423,164; July 18.
Tractor-track obliterator. R. H. Griswold and E. J. Powell. No. 1,422,967; July 18.
Tractor wheel. E. Fenillette. No. 1,422,952; July 18.
Tractor-wheel weight. J. B. Walker. No. 1,423,054; July 18.
Train-control device, Automatic. J. P. Angus. No. 1,423,385; July 18.
Train-speed-control device, Automatic. C. C. Farmer. No. 1,422,844; July 18.
Train-stopping means, Automatic. G. Chromy. No. 1,423,396; July 18.
Transfer reel. P. D. Frazer. No. 1,422,954; July 18.
Transfer mechanism. J. L. Ferguson. No. 1,423,096; July 18.
Transmission device. S. S. Morton. No. 1,423,008; July 18.
Transmission mechanism. R. J. Reiser. No. 1,423,454; July 18.
Transmitters and vacuum-tube amplifiers, Connecting. I. B. Crandall. No. 1,422,837; July 18.
Trap: *See*—
Animal trap.
Trough, Watering. R. Judy. No. 1,422,986; July 18.
Truck. J. T. Lynch. No. 1,423,234; July 18.
Truck coupling. J. H. Cotton and W. L. Burner. No. 1,423,084; July 18.
Trucks, Body for farm. E. R. Hewitt and J. H. Blake, Jr. No. 1,422,859; July 18.
Tube: *See*—
Compressor tube.
Tube compressor. F. S. Hyatt. No. 1,422,864; July 18.
Turbine, Geared. H. F. Schmidt. No. 1,423,459; July 18.
Turbine, Internal-combustion. T. J. Puplett. No. 1,423,453; July 18.
Type carrier. W. W. Lasker. No. 1,423,438; July 18.
Typewriters, Carriage-shifting mechanism for. R. A. Loomis. No. 1,423,443; July 18.
Typewriting machine. P. de Clamecy. No. 1,423,311; July 18.
Unloading apparatus. G. C. Chadwick. No. 1,422,926; July 18.
Vacuum apparatus, Apparatus for maintaining and removing liquid seal for. O. Minton. No. 1,423,242; July 18.
Vacuum jet and system of operating the same. T. L. Davenport. No. 1,423,198; July 18.
Valve. T. Brabson. No. 1,423,178; July 18.
Valve. T. W. Lees. No. 1,423,340; July 18.
Valve and gauge, Maximum-pressure inflating. S. B. Noé. No. 1,423,447; July 18.
Valve construction. G. E. Hazard. No. 1,423,323; July 18.
Valve mechanism. F. L. Hutchinson. No. 1,422,980; July 18.
Valve, Relief. A. R. Miller. No. 1,423,135; July 18.
Valve, Safety gas. E. H. Neviczky. No. 1,423,010; July 18.
Valve tool. C. D. Sevier and F. P. Eckroat. No. 1,422,800; July 18.
Vanity box. F. S. Hyatt. No. 1,422,981; July 18.
Vanity case. O. J. Cathcart. No. 1,423,079; July 18.
Vehicle, Electric motor. J. K. Delano. No. 1,423,090; July 18.
Vehicle fender. H. Caplan. No. 1,423,186; July 18.
Vehicle signal. H. A. Whitman. No. 1,423,285; July 18.
Vehicle spring. J. M. Gaar. No. 1,422,956; July 18.
Vehicle suspension, Equalizer for. W. E. Brobst, Jr. No. 1,423,180; July 18.
Vehicle top, Foldable. J. T. Wolfe. No. 1,423,061; July 18.
Vehicles, Stabilizing means for suspended. H. Mercier. No. 1,423,002; July 18.
Venereal disease, Treatment for. W. E. Craig. (Reissue.) No. 15,411; July 18.
Vermin exterminator. W. W. Camp. No. 1,422,831; July 18.
Violins and analogous string instruments, Attachment for. W. I. Brown. No. 1,422,827; July 18.
Wagon-gate construction. G. W. and C. E. Goss. No. 1,422,962; July 18.
Wall construction, Sheet-piling. C. S. Boardman and C. C. Conkling. No. 1,422,821; July 18.
Walls, making blocks, slabs, tiles, or briquettes, Mold for use in building. B. Scruby and G. K. Harkness. No. 1,423,461; July 18.
Washing machine. A. F. Anderson. No. 1,423,295; July 18.
Washing machine. C. W. Dunmire and S. C. Enck. No. 1,422,940; July 18.
Washing machines, Driving mechanism for. W. Erni. No. 1,422,843; July 18.
Watch-chain fastener. J. Loman. No. 1,422,872; July 18.
Watches, Shipping package for. H. C. Karr. No. 1,423,329; July 18.
Water alarm, Low-. C. A. Kothe. No. 1,422,870; July 18.
Water-cooling system, Automatic. O. A. Labus. No. 1,423,337; July 18.
Water for softening, sterilizing, and like purposes, Treatment of. H. J. Magrath. No. 1,423,132; July 18.
Water heater. G. L. Ebbenga. No. 1,422,941; July 18.
Water jet and suction apparatus and means for operating same, Combined. L. Larsen. No. 1,423,436; July 18.
Water-tube boiler. K. Värsmann. No. 1,423,372; July 18.
Wave-energy direction, Determination of. M. Mason. No. 1,422,876; July 18.
Wave motor. O. Hultberg. No. 1,423,115; July 18.
Wheel: *See*—
Car wheel.
Disk wheel.
Laminated composite wheel.
Metal wheel.
Steel cushion wheel.
Tractor wheel.
Wheel, Resilient. A. F. Batchelder. No. 1,423,299; July 18.
Wheels, Producing. J. L. Hellen. No. 1,423,109; July 18.
Wheelbarrow. W. E. Showalter. No. 1,422,893; July 18.
Window. B. Whibley. No. 1,423,057; July 18.
Window cleaner. A. Meconi. No. 1,423,239; July 18.
Window-mounting device. H. Faurot, Jr. No. 1,422,951; July 18.
Window-sash fastener. A. E. Davis. No. 1,423,310; July 18.
Window shield, Bank-. H. W. Huntress. No. 1,423,327; July 18.
Wire, Bundled. S. E. Cary. No. 1,423,478; July 18.
Wire-fence tightener. C. Gushwa. No. 1,423,211; July 18.
Woodworking machine. J. Hanson. No. 1,422,971; July 18.
Wrapping machine. F. Heath. No. 1,423,324; July 18.
Wrench. J. S. McKibbon. No. 1,423,499; July 18.
Wrench. J. Mumford. No. 1,423,247; July 18.
Wrench. R. H. Owens. No. 1,423,142; July 18.

Potassium compounds, Extraction of. W. Glaeser. No. 1,422,848; July 18.
Pottery kiln, Gas fired. A. M. Duckham. No. 1,423,408; July 18.
Power press for tile, mosaics, and the like. D. Crossley. No. 1,423,401; July 18.
Power transmission apparatus, Fluid. J. H. Bair. No. 1,423,386; July 18.
Power transmission mechanism. R. T. Cooke. No. 1,422,929; July 18.
Pressed steel wheel. J. Ledwinka. No. 1,423,229; July 18.
Presses, Automatic feeder for. P. W. Barker. No. 1,422,914; July 18.
Pressure generator. A. T. Kasley. No. 1,423,330; July 18.
Printing machine. J. Heberling. No. 1,423,325; July 18.
Printing plates, Securing means for. C. A. Meisel. No. 1,423,486; July 18.
Printometer bracket. C. E. Brown. No. 1,423,182; July 18.
Propeller blades, Machine for planing or machining. G. A. Clavey. No. 1,423,307; July 18.
Protector. M. G. Darling. No. 1,423,402; July 18.
Pulley. M. F. Williams. No. 1,423,476; July 18.
Pulley, Clutch. J. F. McNally and R. A. Bradley. No. 1,422,873; July 18.
Pump. L. H. Haney. No. 1,423,496; July 18.
Pump and pumping system. B. S. Aikman. No. 1,423,291; July 18.
Pump, Centrifugal. W. F. Trenary. No. 1,423,369; July 18.
Pump mechanism. E. B. Thompson. (Reissue.) No. 15,415; July 18.
Pump plunger. E. C. Critchlow. No. 1,423,197; July 18.
Pumps, Gear for well. H. W. Gerken. No. 1,423,102; July 18.
Pyrotechnic composition. W. T. Scheele. No. 1,423,264; July 18.
Radiator, Electric. C. F. Smith and G. E. Curtiss. No. 1,423,039; July 18.
Radiator pet-cock attachment. M. H. Bose. No. 1,422,919; July 18.
Radiator, Sectional. R. Oshkosh. No. 1,423,449; July 18.
Radio transmission. H. W. Nichols. No. 1,422,882; July 18.
Rails, Tie plate for. E. N. Johnson. No. 1,422,983; July 18.
Railway signaling device. O. Green. No. 1,423,318; July 18.
Railway switch. J. D. Cooper. No. 1,422,836; July 18.
Railway switch. J. T. Moore. No. 1,423,005; July 18.
Railway-switch lock. A. G. Grant and J. J. Fanning. No. 1,422,963; July 18.
Railroad-switch throw and lock, Automatic. F. H. Martin. No. 1,423,351; July 18.
Rain cape. L. H. Geis. No. 1,423,315; July 18.
Razor, Safety. O. L. Glaser. No. 1,423,414; July 18.
Receptacle holder. O. O. Sheline. No. 1,423,465; July 18.
Receptacles, Sput for metallic. H. S. Reynolds. (Reissue.) No. 15,413; July 18.
Recording instrument, Multiple. R. P. Brown and F. Wagner. No. 1,422,920; July 18.
Reel: *See*—
  Transfer reel.
Reenforcing bar, Deformed. J. T. Simpson. No. 1,423,163; July 18.
Refrigerating apparatus, Controlling mechanism for. C. C. Hansen. No. 1,422,853; July 18.
Register-operating mechanism. R. E. Kimball. No. 1,423,333; July 18.
Retort. F. J. Metzger. No. 1,422,878; July 18.
Rim, Demountable. W. E. Beeman. No. 1,423,176; July 18.

Shuttle attachment. H. L. Fonner. No. 1,423,099; July 18.
Sign carrier. J. D. Austin and T. Roberts. No. 1,422,911; July 18.
Signal: *See*—
  Vehicle signal.
Signaling machines, Reading ribbon in. W. Dougall. No. 1,422,842; July 18.
Signaling method and apparatus. D. G. McCaa. No. 1,423,345; July 18.
Silk, Composition for the treatment of artificial. C. A. Snyder. No. 1,423,041; July 18.
Silo fillers, Corn-snapping mechanism for. G. F. Norton and E. A. Ende. No. 1,423,138; July 18.
Soldering device. A. W. Bjorkman. No. 1,422,917; July 18.
Sole-softening machine, Leather-. J. L. Clevenger. No. 1,422,927; July 18.
Soles, Cutting device for leather. G. O. Ferry. No. 1,422,901; July 18.
Sound-box diaphragm. H. L. Tifft. No. 1,423,368; July 18.
Spark intensifier. M. J. Freeman. No. 1,423,204; July 18.
Spark plug. D. M. Hutchinson. No. 1,423,219; July 18.
Speedometer, Recording. M. W. Koski. No. 1,422,990; July 18.
Spring: *See*—
  Vehicle spring.
Spinning ring. C. A. Holt. No. 1,423,216; July 18.
Spring motor. L. Schmitt. No. 1,423,032; July 18.
Spring-motor-winding mechanism. O. C. Leger. No. 1,423,230; July 18.
Spring rings and manufacturing same, Bolt for. L. Lemaitre. No. 1,423,441; July 18.
Spring seat. L. Schreiber. No. 1,423,460; July 18.
Spring suspension. V. W. Pagé. No. 1,423,451; July 18.
Sprinkler: *See*—
  Toy sprinkler.
Sprinkler head. T. J. Madigan. No. 1,422,875; July 18.
Stable appliance. R. Minshull. No. 1,423,241; July 18.
Stair landing or platform. A. J. Hall. No. 1,423,481; July 18.
Stand: *See*—
  Display stand.
Starting and unloading device. F. B. Thomas. No. 1,422,902; July 18.
Steam boiler with forced-draft furnace. C. Kohler. No. 1,423,335; July 18.
Steel-cushion wheel. A. C. Hoof. No. 1,422,976; July 18.
Steel, Manufacture of open-hearth. H. C. Ryding and A. W. Allen. No. 1,423,031; July 18.
Stereotype-casting frame. J. W. Peckham. No. 1,423,146; July 18.
Stocking-machine, Circular. G. P. Bosworth. No. 1,423,177; July 18.
Stop motion. E. F. and J. F. Connell. No. 1,423,398; July 18.
Stove, Collapsible field. I. C. Popper. No. 1,423,252; July 18.
Stoves and ranges, Hinge for. S. W. Palmer. No. 1,423,012; July 18.
Stringing and making the same, Elastic metal. W. A. Larned. No. 1,422,993; July 18.
Superheater. E. H. Foster. No. 1,422,847; July 18.
Switch: *See*—
  Electric switch. Railway switch.
  Lamp switch.
Tableware, Display roll for flat metal. J. G. Ludium. No. 1,423,483; July 18.

Knitting machine. H. T. Ballard. No. 1,423,175; July 18.
Laminated composite wheel. H. N. Atwood and G. B. Bains, 3d. No. 1,422,813; July 18.
Lamp. A. A. Ketchem. No. 1,423,433; July 18.
Lamp shade. M. Greitzer. No. 1,423,319; July 18.
Lamp switch, Electric-. E. C. Leachman. No. 1,423,228; July 18.
Lamps, Holder for electric. J. F. King. No. 1,423,119; July 18.
Lathes, Demountable headstock for. A. L. Ligon. No. 1,422,994; July 18.
Laundry-tub cover. L. Hirschberg. No. 1,423,215; July 18.
Lay figure, model, or doll, Jointed. C. de Grasse, née Fould. No. 1,422,840; July 18.
Lead blocks, Spar-tree protector and fastening device for high-. W. R. Allen and T. K. McRea. No. 1,423,292; July 18.
Leaf-spring connection. J. J. Rath. No. 1,423,255; July 18.
Lighting fixture. K. Keller. No. 1,423,331; July 18.
Lime and sulphur stabilized with an aromatic compound, Compound of. M. S. Hopkins. No. 1,422,977; July 18.
Liquid-level indicator. S. W. Finch. No. 1,423,411; July 18.
Liquid measuring and dispensing apparatus. T. F. Callahan. No. 1,423,305; July 18.
Lithographic printing machine for direct or offset printing, Rotary. C. L. Stern. No. 1,423,165; July 18.
Lock: *See*—
  Automobile lock. Railway-switch lock.
  Combination lock.
Lock. A. Block. No. 1,422,820; July 18.
Lock. W. O. Coleman. No. 1,423,397; July 18.
Lock. A. G. Delph and R. C. Hemphill. No. 1,422,936; July 18.
Locking device. C. M. Corbett. No. 1,423,194; July 18.
Locomotive stoker. C. H. Jeffers. No. 1,423,221; July 18.
Locomotives, Valve cut-off and speed indicator for. V. Z. Caracristi and A. F. Wallbillich. No. 1,422,832; July 18.
Logging hook. G. Betcher. No. 1,423,301; July 18.
Loom, Automatic filling-replenishing. W. S. Southwick. No. 1,422,897; July 18.
Looms, Replenishing mechanism for multicolor. H. ter Kulle. No. 1,423,279; July 18.
Lubricator. L. E. Osborne. No. 1,423,011; July 18.
Lumber carrier. C. F. Gerlinger. No. 1,422,958; July 18.
Luminous article and making same. W. H. Dey. No. 1,422,841; July 18.
Lunette bracket. L. B. Craig. No. 1,423,196; July 18.
Magneto electric machine. C. Olivetti. No. 1,423,141; July 18.
Mail box in house walls. B. T. Pennig. No. 1,423,251; July 18.
Mast top. G. F. Watts. No. 1,423,377; July 18.
Mat. R. H. Phillips. No. 1,422,887; July 18.
Matrix-making machine. I. N. Zeller. No. 1,423,290; July 18.
Mattress. A. E. Gomes. No. 1,423,416; July 18.
Measuring machine for gauges. R. Hill. No. 1,423,214; July 18.
Mechanical connector. W. H. Michaelsen. No. 1,422,880; July 18.
Melting pot. J. B. McClain. No. 1,423,501; July 18.
Melting tank. G. C. Hellman. No. 1,422,858; July 18.
Metal bodies, Art and mechanism for drawing hollow cylindrical. C. B. Higgins. No. 1,422,974; July 18.
Metal wheel. J. H. Wagonhorst. No. 1,423,373; July 18.
Metals, Dissolving or recovering. H. Bardt. No. 1,423,069; July 18.
Metals from solutions, Precipitating. H. Bardt. No. 1,423,070; July 18.
Meter: *See*—

Dispensing apparatus. E. P. Baker. No. 1,422,913; July 18.
Dispensing device. A. Alexay. No. 1,423,063; July 18.
Display apparatus, Changing-view. H. M. Russell. No. 1,423,262; July 18.
Display panel. W. R. Minnick. No. 1,423,003; July 18.
Display rack. J. F. Gorman. No. 1,423,417; July 18.
Display stand. J. Kudner. No. 1,423,226; July 18.
Display device. G. M. Franks. No. 1,422,845; July 18.
Distillation, Low-temperature. A. C. Michie and E. G. Weeks. No. 1,423,134; July 18.
Doll, Hula. D. Zaiden. No. 1,423,383; July 18.
Doll, Shimmy. S. Haskell. No. 1,422,855; July 18.
Doll, Walking. D. Zaiden. No. 1,423,382; July 18.
Door-controlling device. H. W. Crane. No. 1,422,931; July 18.
Door, Grain. R. E. Smith. No. 1,423,040; July 18.
Door lock. H. B. McCarty. No. 1,423,484; July 18.
Doors, Lock for sliding. J. C. Fritts. No. 1,422,846; July 18.
Doors of self-discharging receptacles, Locking mechanism for the. P. Krüger. No. 1,423,120; July 18.
Doors, Self-closing and controlling means for. B. Spitzfaden. No. 1,423,467; July 18.
Dough-dividing machine. T. S. Vierow. No. 1,423,371; July 18.
Draft regulators, Mounting for. F. C. Kasch and G. F. Neff. No. 1,422,868; July 18.
Drier. E. B. Ayres and T. H. Rhoads. No. 1,423,298; July 18.
Drier or oven. F. Beers and H. L. Powell. No. 1,422,817; July 18.
Drive mechanism, Power control for. C. W. Anderson. No. 1,422,809; July 18.
Drive mechanism, Ratchet clutch for. C. W. Anderson. No. 1,423,172; July 18.
Duplicator. T. Danheiser and F. F. Fecher. No. 1,422,934; July 18.
Dyes, Cotton. H. Jordan. No. 1,422,866; July 18.
Egg-preserving compound. E. Victorine. No. 1,423,053; July 18.
Eggs, Apparatus for washing and cleaning. C. J. Williamson. No. 1,423,059; July 18.
Electric cables, Terminal box for. C. R. Young and H. N. Van Deusen. No. 1,422,910; July 18.
Electric connector. E. A. Knew. No. 1,422,992; July 18.
Electric controller. N. D. Levin. No. 1,423,126; July 18.
Electric coupling. C. H. Tomlinson. No. 1,422,965; July 18.
Electric heating appliances, Automatic switch for. B. G. C. Stephens. No. 1,422,898; July 18.
Electric switch. H. Catlin. No. 1,423,306; July 18.
Electric switch. C. C. Stirling. No. 1,423,274; July 18.
Electrical conduit system. E. H. Curtis. No. 1,423,309; July 18.

Electrical connector. E. Stranszky. No. 1,423,045; July 18.
Electrical generating system. H. A. Harrington. No. 1,423,107; July 18.
Electrically-heated apparatus. R. F. Wherland. No. 1,423,380; July 18.
Electrodes, Manufacturing. H. Bardt. No. 1,423,071; July 18.
Elevating device. F. Beers and H. L. Powell. No. 1,422,816; July 18.
Embroidery machines, Thread-changing device in. G. Sieber. No. 1,423,160; July 18.
Engine: *See*—
Internal-combustion engine.
Oil engine.
Engines, Fuel adapted for use in internal-combustion. M. C. Whitaker. No. 1,423,058; July 18.
Engines, Means for controlling the supply of combustible mixture to internal-combustion. G. Keith and W. A. Whatmough. No. 1,422,987; July 18.
Engines, Priming and decarbonizing device for internal-combustion. F. D. Maltby. No. 1,422,908; July 18.
Engines, Sparking plug for internal-combustion. S. Remus. No. 1,423,152; July 18.
Engines, Supplying a combustible mixture to internal-combustion. W. H. C. Higgins, Jr. No. 1,423,482; July 18.
Engraving machine. G. R. Worner. No. 1,423,289; July 18.
Envelope-making machines, Drying blower for. A. E. Augustine. No. 1,423,297; July 18.
Esters of dioxydiethyl sulphide and making same. G. Kränzelin and M. Corell. No. 1,422,869; July 18.
Exercising device. L. C. Reeves and M. A. Webb, Jr. No. 1,422,888; July 18.
Explosive material. C. J. S. Lundsgaard and K. T. Herbst. No. 1,423,233; July 18.
Facing tool. J. A. Sharpnack. No. 1,423,462; July 18.
Fan. F. L. McGahan. No. 1,423,348; July 18.
Fastening device. L. Ottinger. (Reissue.) No. 15,412; July 18.
Feeder and thrasher, Extension. C. C. Pfister. No. 1,423,149; July 18.
Fender: *See*—
Automobile fender.
Vehicle fender.
Fiber board. M. Chew. No. 1,423,081; July 18.
Fiber board, Apparatus for producing. M. Chew. No. 1,423,082; July 18.
Fiber board, Producing. M. Chew. No. 1,423,083; July 18
Fiber saver. A. Defela. No. 1,423,199; July 18.
Fibrous-plant-decorticating machine. F. O'Neill, Jr. No. 1,423,357; July 18.
Finger ring. E. C. Blaicher. No. 1,422,819; July 18.
Finger-training device. W. Schmitt-Marcel. No. 1,423,033; July 18.
Fire box. F. L. McGahan. Nos. 1,423,346–7; July 18.
Fire escapes, Extensible ladder for. R. Glasser. No. 1,423,104; July 18.
Firearm. J. D. Pedersen. No. 1,423,358; July 18.
Fish lures, Controller for. C. M. Rodgers and A. W. Wenger. No. 1,423,025; July 18.
Fish stringer. D. Fiske. No. 1,423,203; July 18.
Floor coverings and the like, Strip for. M. Patterson. No. 1,423,143; July 18.
Fluid gauge. J. G. Collison, J. W. Wright, H. M. Filbert, and W. Frank. No. 1,423,191; July 18.
Foldable carton. E. Steudel. No. 1,423,272; July 18.
Foot support. A. Roth. No. 1,423,456; July 18.
Forge clamp. P. A. Leach. No. 1,423,123; July 18.
Frame: *See*—
Beehive comb frame.
Sewing-machine frame.
Fruit-jar cover. W. R. Nipper. No. 1,422,883; July 18.
Fruit seeder and slicer. G. Vañades and J. Koukos. No. 1,423,490; July 18.
Fuel. B. R. Tunison. No. 1,423,048; July 18.
Fuel burner, Fluid. T. S. Derr. No. 1,423,312; July 18.
Fuel burner, Gaseous-. W. Ruff. No. 1,423,155; July 18.
Fuel, Liquid. B. R. Tunison. No. 1,423,050; July 18.
Fuel of liquid type. B. R. Tunison. No. 1,423,049; July 18.
Fuel, Treating pulverized. R. E. H. Pomeroy. No. 1,423,150; July 18.
Fuels, Carbureting liquid. O. P. Amend. No. 1,423,064; July 18.
Furnace: *See*—
Pipeless furnace.
Steam boiler with forced-draft furnace.
Furnace, W. F. Payne. No. 1,423,145; July 18.
Furnace. J. Van Brunt. No. 1,423,281; July 18.
Furnaces, Apparatus for feeding fuel to. V. Karycheff and P. E. Gagarine. No. 1,422,867; July 18.
Furnaces, Gas burner for. C. L. Sharp. No. 1,422,891; July 18.
Fuse emplacing and removing implement. H. B. Bush. No. 1,422,830; July 18.
Gas generating and heating apparatus, Safety device for. W. G. Chausse. No. 1,423,080; July 18.
Gas generator. P. Dorsey. No. 1,422,938; July 18.
Gas meter. T. Horton. No. 1,423,217; July 18.
Gasket, Screen. W. H. Betts. No. 1,422,916; July 18.
Gate: *See*—
Car safety gate.
Gate hinge. H. T. Hacker. No. 1,423,321; July 18.
Gauge: *See*—
Fluid gauge.
Screw gauge.
Gauges, formed bars, profile pieces, etc., Manufacturing counter pieces to. K. Rosak. No. 1,423,154; July 18.
Gear, Change-speed. A. Savary. No. 1,423,458; July 18.
Gear-cutting machine. I. H. Wright. No. 1,423,062; July 18.
Gear, Running. G. R. Richardson. No. 1,423,153; July 18.
Gearing. H. Sieben. No. 1,423,037; July 18.
Gearing, Magneto. C. B. Kitchen. No. 1,423,334; July 18.
Gearing, Variable-speed. M. F. L. A. Aymard. No. 1,423,067; July 18.
Generator: *See*—
Pressure generator.
Glass-drawing machine, Sheet-. O. M. Cox and C. C. Rose. No. 1,423,195; July 18.
Glass tanks, Means for controlling discharge from. E. S. Hutton. No. 1,423,220; July 18.
Glue mixing and preserving apparatus. E. B. Applegate and W. H. Yeomans. No. 1,422,811; July 18.
Glycerin, Recovering. J. A. Steffens. No. 1,423,042; July 18.
Golf clubs, Striker plate for. G. A. Lippincott. No. 1,423,341; July 18.
Grain-grinding machine. J. K. Strachan. No. 1,423,275; July 18.
Gramophones, Automatic stop for. O. O. Storle. No 1,423,044; July 18.
Grease cellar. W. F. Mitchell. No. 1,423,502; July 18.
Grease cups, Automatic filler for. S. Hough. No. 1,422,978; July 18.
Gun, Burglar. F. S. Jobson. No. 1,422,865; July 18.
Gun, Dust. J. F. Lemons. No. 1,423,125; July 18.
Gun sight, Luminous. J. S. Butler. No. 1,423,184; July 18.
Hair-cutting appliance. S. Severson. No. 1,423,363; July 18.
Handle: *See*—
Air-brake handle.
Tool handle.
Detachable handle.
Handle and crank, Combination. P. L. Streit. No. 1,423,460; July 18.
Hanger. W. L. Rivers and G. B. Dixon. No. 1,423,455; July 18.
Hay-rack lift. J. A. Johnson. No. 1,423,328; July 18.
Hay stacker. E. J. Cantwell. No. 1,422,924; July 18.
Headlight. T. W. Post. No. 1,423,253; July 18.
Headlight for vehicles, Dirigible. R. A. Perry. No. 1,423,148; July 18.
Heater: *See*—
Sand-pipe heater.
Water heater.
Heating system, Regulator for vapor. L. A. Cherry. No. 1,423,492; July 18.
Heel or lift, Double-cushioned shoe. M. G. Hart. No. 1,422,854; July 18.
Hinge. J. R. Moody. No. 1,423,004; July 18.
Hinge, Adjustable. W. B. McDonald. No. 1,423,350; July 18.
Hoisting apparatus. L. T. Tucker. No. 1,422,904; July 18.
Holder. M. Glass. No. 1,423,415; July 18.
Holes, Means for drilling polygonal. R. Bartholomäus. No. 1,423,072; July 18.
Homogenizer. L. J. Phelps. No. 1,423,488; July 18.
Homogenizer. E. M. White. No. 1,423,170; July 18.
Hoods to articles, Machine for applying. T. G. McGirr. No. 1,423,237; July 18.
Hook: *See*—
Corn-husking hook.
Logging hook.
Hopper-door mechanism. C. H. Williamson. No. 1,423,287; July 18.
Hose protector. V. H. Fairless. No. 1,423,409; July 18.
Humidifying air. P. de Clamecy. No. 1,422,839; July 18.
Humidor. F. Oakford. No. 1,423,356; July 18.
Hydrocarbon burner. C. E. Corado. No. 1,422,930; July 18.
Ice can. H. G. Tallerday. No. 1,423,278; July 18.
Ignition device, Make-and-break. M. Murray. No. 1,423,137; July 18.
Indicator: *See*—
Direction indicator.
Liquid-level indicator.
Ink and making same. E. S. Garvey. No. 1,422,957; July 18.
Ink, Invisible. C. F. Morse. No. 1,423,346; July 18.
Intermittent-grip device. S. S. Morton. No. 1,423,007; July 18.
Internal-combustion engine. W. D. Appel. No. 1,422,810; July 18.
Internal-combustion engine. F. Birchbauer. No. 1,423,477; July 18.
Internal-combustion engine. K. L. Crossley and W. L. Webb. Nos. 1,423,085–7; July 18.
Internal-combustion engine. P. Dougall. No. 1,423,407; July 18.
Internal-combustion motor. A. Behn and J. G. Schmitt. No. 1,423,073; July 18.
Ironing board, stepladder, and house truck, Combined. H. C. Snook. No. 1,423,366; July 18.
Ironing machine. W. E. Baker. No. 1,423,068; July 18.
Journal boxes and producing the same, Cooling compound for hot. J. Q. Gill. No. 1,423,103; July 18.
Key-carrying chain. B. Urich. No. 1,423,280; July 18.
Key holder. G. R. Perry. No. 1,423,147; July 18.
Kiln: *See*—
Pottery kiln.
Kiln and process, Drying. M. L. Mueller. No. 1,423,136; July 18.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 18TH DAY OF JULY, 1922.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abrasive elements. Staggered-tooth cutter for dressing. F. C. Brandenburg. No. 1,423,075; July 18.
Accelerator, Foot. H. V. Souders and J. M. Frost. No. 1,423,489; July 18.
Acid, Manufacture of 9.10-dibalogenanthracene-β-monosulphonic. K. Schirmacher. No. 1,422,889; July 18.
Addressing-machine impression mechanism. C. Chisholm. No. 1,423,189; July 18.
Aeroplane. C. D. McNamara. No. 1,423,131; July 18.
Air-brake handle. W. E. Cady. No. 1,423,185; July 18.
Air cleaner. H. H. Garner. No. 1,423,412; July 18.
Aircraft, Landing light or flare for attaching to. H. E. S. Holt. No. 1,423,326; July 18.
Airplane-landing director. B. S. Cameron. No. 1,429,922; July 18.
Alarm: *See*—
Water alarm.
Alloy and producing same. C. A. Laise. No. 1,423,338; July 18.
Aminoalcohols, Preparing optically active aromatic A. Gams and E. Wybert. No. 1,423,101; July 18.
Amusement device. E. U. Jaques. No. 1,423,428; July 18.
Angle bar and nut lock. J. J. Bowman. No. 1,423,394; July 18.
Angle of allowance in front on attacking a moving target, Telescopic device for determining the. H. Techel. No. 1,423,168; July 18.
Animal trap. C. C. Rockwell. No. 1,423,261; July 18.
Animal trap. A. Skubinski. No. 1,422,894; July 18.
Antiskid-chain-tightening device. P. E. Fellows. No. 1,423,202; July 18.
Arsenical compounds, Manufacture of. K. B. Edwards. No. 1,422,945; July 18.
Ash hopper. A. P. Strong. No. 1,422,900; July 18.
Ash pan. C. F. Milholen. No. 1,423,352; July 18.
Ash tray and receptacle. S. Meyer. No. 1,422,879; July 18.
Asbestos-cement product and forming the same. R. V. Mattison. No. 1,423,000; July 18.
Auto theft protection. A. Kendechy. No. 1,423,432; July 18.
Automobile and other wheels, Rim and tire for. I. Benjamins. No. 1,422,818; July 18.
Automobile direction signal. T. S. Opheim. No. 1,423,249; July 18.
Automobile direction signal. O. M. West. No. 1,423,379; July 18.
Automobile driver's seat, Ventilated. D. Benson and G. K. Bruce. No. 1,422,915; July 18.
Automobile fender. H. Caplan. No. 1,423,187; July 18.
Automobile frame. A. Melidona. No. 1,423,240; July 18.
Automobile, Gasoline-electric. F. G. Le Merle, M. J. Ullman, and J. E. Barry. No. 1,423,124; July 18.
Automobile intention-signaling device. E. T. Gibson. No. 1,422,960; July 18.
Automobile lock. D. C. Smith. No. 1,423,269; July 18.
Automobile side curtain. C. H. and L. Gillig. No. 1,423,210; July 18.
Automobile wheel rim. G. T. Nichols. No. 1,423,354; July 18.
Automobiles, Auxiliary gasoline tank for. D. Sewell. No. 1,423,158; July 18.
Automobiles, Transmission gear for. G. O. Howeth. No. 1,423,426; July 18.
Awning, Windshield. E. H. Hutcheson. No. 1,423,116; July 18.
Ax, Brush and chopping. O. E. Olesberg. No. 1,423,140; July 18.
Axis aileron, Transverse. J. P. Tarbox. No. 1,423,166; July 18.
Axis aileron, Vertical. J. P. Tarbox. No. 1,423,167; July 18.
Backband. R. W. Paul. No. 1,423,144; July 18.
Bar: *See*—
Tow and push bar. Reenforcing bar.
Barrel. J. R. Raible. No. 1,423,254; July 18.
Basket. C. Halaska. No. 1,423,419; July 18.
Batter, Mechanical. C. H. Muckenhirn. No. 1,423,009; July 18.
Battery filler. A. A. Boston. No. 1,423,393; July 18.
Bearing. P. A. E. Armstrong. No. 1,422,812; July 18.
Bearing construction for fans. L. Schwitzer. No. 1,423,265; July 18.
Bearing, Disk. J. C. Bohmker. No. 1,422,918; July 18.
Bearing, Roller. W. D. Burns. No. 1,423,304; July 18.
Bearing, Self-adjusting. H. Glass. No. 1,422,961; July 18
Bed bottom. S. L. Arnold. No. 1,423,065; July 18.
Beds, Attachment for. E. B. Down. No. 1,422,939; July 18.
Bedspring attachment. R. B. Gallagher and R. C. Young. No. 1,423,100; July 18.
Beehive comb frame. D. S. Hall. No. 1,423,212; July 18.
Beet topper. S. C. Warner. No. 1,423,374; July 18.
Belt and the like. K. Matheus. No. 1,422,999; July 18.
Belt, Sanitary. D. Morner. No. 1,423,353; July 18.
Binder. W. P. Pitt. No. 1,423,016; July 18.
Binder and stand therefor, Loose-leaf. C. R. Fargo and P. O. Unger. No. 1,422,950; July 18.
Binder, Temporary. F. D. Pitt and G. W. Newman. No. 1,423,015; July 18.
Blade shroud, Interlocking. J. E. Snyder. No. 1,423,466; July 18.
Blanks, Folder for prescription. R. B. and L. Taylor. No. 1,423,473; July 18.
Blast furnaces and the like, Sealing of cracks in the lining of. T. Kennan. No. 1,423,332; July 18.
Blower. G. Clements. No. 1,423,190; July 18.
Bobbin winder. P. F. Douglas. No. 1,423,313; July 18.
Body member, Artificial. R. F. Armstrong. No. 1,423,296; July 18.
Boiler: *See*—
Water-tube boiler.
Boilers, Apparatus for the liquid-fuel firing of steam. W. M. Burdon. No. 1,423,183; July 18.
Book and savings bank combined, Bank. E. D. Smith. No. 1,423,270; July 18.
Book-cover-attaching means. F. D. Pitt. No. 1,423,017; July 18.
Book, Savings and insurance account. E. J. House. No. 1,423,114; July 18.
Books, Cover-attaching means for. W. P. Pitt. No. 1,423,018; July 18.
Books, Stiffener for folding. W. O. Lynch. No. 1,423,129; July 18.
Boot and shoe. E. B. Hafertepen. No. 1,422,968; July 18.
Boot top. C. Tweedie. (Reissue.) No. 15,416; July 18.
Bottle cap. S. Hansen. Nos. 1,423,105–6; July 18.
Bottle cap. O. Kampfe. No. 1,423,431; July 18.
Bottle cap, Poison-. W. H. Armstrong. No. 1,423,174; July 18.
Bottle, Nursing. V. I. Sims. No. 1,423,038; July 18.
Bottle-washing apparatus, Label separator and remover for. C. H. Loew and J. R. Gruetter. No. 1,423,342; July 18.
Bottles, Portable hand tool for capping, sealing, and unsealing. O. A. Hanford. No. 1,422,970; July 18.
Bottles, Stopper for hot-water. A. B. Shaw. Nos. 1,423,463–4; July 18.
Box: *See*—
Collapsible box. Phonograph sound box.
Fire box. Vanity box.
Box and attachment therefor. E. C. J. Lloyd. No. 1,423,442; July 18.
Boxes, cans, and other articles, Machine for washing. G. S. Blakeslee. No. 1,423,300; July 18.
Boxes, Tool for closing wire-bound. J. H. Greenstreet. No. 1,422,965; July 18.
Bracket: *See*—
Lunette bracket. Printometer bracket.
Brake beam. C. F. Huntoon. No. 1,422,863; July 18.
Brake-rod adjuster. R. C. McArthur. No. 1,423,235; July 18.
Brick. J. E. Evans. No. 1,422,940; July 18.
Broiling and toasting food, Kitchen utensil for. A. Condy. No. 1,422,835; July 18.
Broom holder. F. H. Steinhelser. No. 1,423,043; July 18.
Brushes or brooms, Removable-handle mechanism for. W. and E. Prestwich. No. 1,423,151; July 18.

Roberts, Webster M. and P. D., St. Joseph, Mo. Machine for and method of making pastry cones. No. 1,423,260; July 18.
Robichaux, Sosthene. (See Salter, D. M., and Robichaux.)
Robins Conveying Belt Co. (See Uhlarik, Julius C., assignor.)
Rockbestos Products Corporation. (See Heany, John A., assignor.)
Rockwell, Albert F., Bristol, Conn., assignor to Marlin-Rockwell Corporation, New York, N. Y. Device for producing extruded sheet metal. No. 1,423,361; July 18.
Rockwell, Clifton C., Tucson, Ariz. Animal trap. No. 1,423,261; July 18.
Rodgers, Claude M., and A. W. Wenger, Warsaw, Ind. Controller for fish lures. No. 1,423,025; July 18.
Rogers, Frank. (See Burke, P. W., and Breeding, assignors.)
Rollins, William T., assignor to R. Codman, Jr., Boston, Mass. Antiskid attachment for elastic tires. No. 1,423,026; July 18.
Roope, Rufus P., et al. (See Brown, Edward W., assignor.)
Rosak, Karl, Berlin, Germany. Manufacturing counter pieces to gauges, formed bars, profile pieces, and the like. No. 1,423,154; July 18.
Rose, Connie C. (See Cox, O. M., and Rose.)
Rose, Joseph E., Portland, Oreg. Artificial tooth. No. 1,423,027; July 18.
Roth, Arpad, New York, N. Y. Foot support. No. 1,423,456; July 18.
Roth, Ernest, Philadelphia, Pa. Driving means for tanning drums. No. 1,423,028; July 18.
Rowden, George V., Hove, England. Daylight developing tank for photographic roll films. No. 1,423,457; July 18.
Ruff, William, New York, N. Y. Gaseous-fuel burner. No. 1,423,155; July 18.
Russell, Henry M., Wheeling, W. Va. Changing-view display apparatus. No. 1,423,262; July 18.
Russell, Joseph C., Pittsburgh, Pa. Card index. No. 1,423,029; July 18.
Russell, Joseph C., Pittsburgh, Pa. Card index. No. 1,423,030; July 18.
Ryding, Herbert C., and A. W. Allen, Birmingham, Ala. Manufacture of open-hearth steel. No. 1,423,031; July 18.
Salter, Dougle M., and S. Robichaux, Saratoga, Tex. Cable clamp. No. 1,423,263; July 18.
Savary, André, Paris, France. Change-speed gear. No. 1,423,458; July 18.
Scheele, Walter T., Hackensack, N. J., assignor to Government of the United States, represented by the Secretary of the Navy. Pyrotechnic composition. No. 1,423,264; July 18.
Schirmacher, Karl, Hochst-on-the-Main, Germany, assignor to H. A. Metz, New York, N. Y. Manufacture of 9.10-dihalogenanthracene-β-monosulphonic acid. No. 1,422,889; July 18.
Schmidt, Henry F., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co. Geared turbine. No. 1,423,459; July 18.
Schmitt, Eugene, Cincinnati, Ohio. Outgauge. No. 1,423,156; July 18.
Schmitt, John G. (See Behn, A., and Schmitt.)
Schmitt, Ludwig, Chicago, Ill. Spring motor. No. 1,423,032; July 18.
Schmitt-Marcel, William, Florence, Italy. Finger-training device. No. 1,423,033; July 18.
Schneider, Charlie F., Enid, Okla. Cattle poke. No. 1,423,362; July 18.
Scholl, Henry L., Spokane, Wash. Window-sash holder. No. 1,423,034; July 18.
Schreiber, Louis, Holland, Mich. Spring seat. No. 1,423,460; July 18.
Schreyer, Ernest G., Chicago, Ill. Toy. No. 1,423,035; July 18.
Schuls, M., Company. (See Gustafson, Adolph P., assignor.)
Schwank, James O. (See Madigan, Thomas J., assignor.)
Schwars, Gotthilf H., Newark, and M. Vintschger, Ridgewood, assignors to The Pole and Tube Works, Inc., Newark, N. J. Container with removable locking cover. No. 1,423,157; July 18.
Schwitzer, Louis, assignor to Automotive Parts Company, Indianapolis, Ind. Bearing construction for fans. No. 1,423,265; July 18.
Scruby, Basil, and G. K. Harkness, Harlow, England. Mold for use in building walls, making blocks, slabs, tiles or briquettes. No. 1,423,461; July 18.
Sears, Roebuck and Company. (See Bohmker, John C., assignor.)
Sears, Willard T., Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y. Shaping machine. No. 1,423,266; July 18.
Severance, Malvern W., Cleveland, Ohio. Cuff button. No. 1,423,267; July 18.
Severson, Samuel, Valders, Wis. Hair-cutting appliance. No. 1,423,363; July 18.
Sevier, Charles D., and F. P. Eckroat, Fort Collins, Colo. Valve tool. No. 1,422,890; July 18.
Sewell, Daniel, Edmonton, Alberta, Canada. Auxiliary gasoline tank for automobiles. No. 1,423,158; July 18.
Shannon, Howard H., Denver, Colo. Tire protector. No. 1,423,030; July 18.

Costa Rica and Honduras Give Notice of Withdrawal from the Convention.

Department of the Interior,
United States Patent Office,
Washington, D. C., July 24, 1922.

This Office has been officially informed that Costa Rica on September 30, 1921, and Honduras on February 17, 1922, denounced the Convention relating to Trade-Marks, signed at Buenos Aires August 29, 1910, in accordance with the provisions of Article XIX of said Convention (280 O. G., 195, 197).

THOMAS E. ROBERTSON,
Commissioner of Patents.

Nolan Act—Reciprocity of the Norwegian Laws Recognized.

(Order No. 2,770.)

Department of the Interior,
United States Patent Office,
Washington, D. C., July 17, 1922.

Notice is hereby given that the laws of Norway are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan act of March 3, 1921 (41 Stat. L., 1313), and that consequently the privileges specified in said act will be extended to citizens of Norway, subject to the limitation that extensions will not be granted to relieve defaults falling under section 2 of the act for a longer period than seven years and two months.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

Patent No. 1,326,788.

On June 24, 1922, a decision was rendered that Eugene Schneider was not the first inventor of the subject matter covered by claims 1, 2, and 3 of his Patent No. 1,326,788, subject, "Gun carriage for transport of railway trucks for firing from the railway," and no appeal having been taken within the time allowed such decision has become final.

Patent No. 1,358,463.

On May 3, 1922, a decision was rendered that James H. Rand, jr., was not the first inventor of the subject matter covered by claim 1 of his Patent No. 1,358,463, subject, "File, index, or the like," and no appeal having been taken within the time allowed such decision has become final.

Disclaimer.

828,242.—*Robert F. Phillips*, Carrick, Pa. Self-Oiling Car Wheel. Patent dated August 7, 1906. Disclaimer filed July 18, 1922, by the assignee, *The Phillips Mine & Mill Supply Company.*

Hereby disclaims from claim 2 any self-oiling car wheel in which the valve spring is inserted through a hole in the inner side wall of the hollow hub opposite the oil inlet;

Thereby limiting claim 2 to a self-oiling car wheel in which the valve spring is inserted otherwise than through a hole in the inner side wall of the hollow hub opposite the oil inlet.

Changes in Classification.

(Order No. 2,771.)

Department of the Interior,
United States Patent Office,
Washington, D. C., July 20, 1922.

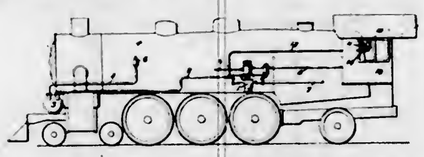
A new examining division, No. XLIX, is hereby established, with Examiner F. P. Edinburg in charge, and it is directed that the following classes be transferred thereto, this order to take effect July 26, 1922:

Class 44 from Division XXXI.
Class 53 from Division XIX.
Class 98 from Division II.
Class 194 from Division XL.
Class 286 and Class 288 from Division XXXIX.
Class 208 from Division VII.

THOMAS E. ROBERTSON,
Commissioner.

4713

Condition of Applications Under Examination at Close of Business July 22, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 67,789; Trade-Mark division, 8,408. Oldest new case, Apr 15, oldest amended, Apr. 28, 1921. The dates given are 1921. except where * indicates 1922.)

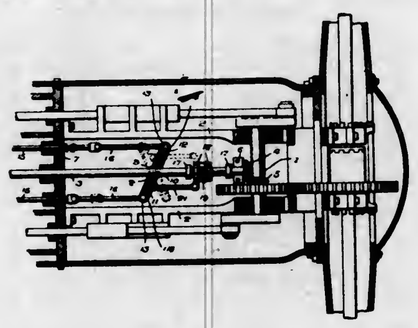
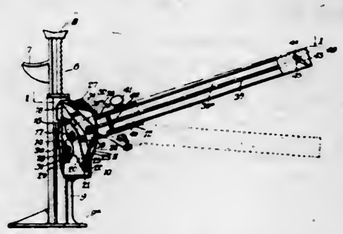
PATENTS



GRANTED AUGUST 1, 1922.

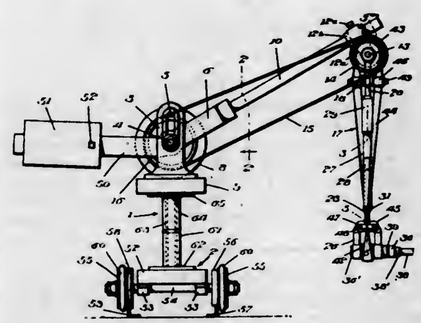
1,424,145. MEANS FOR PROTECTING PRESSURE GAUGES ON FLUCTUATING-PRESSURE WATER LINES. EARL A. AVERILL, Mount Vernon, N. Y., assignor to Locomotive Feed Water Heating Company, a Corporation of Delaware. Filed May 8, 1920. Serial No. 380,013. 1 Claim. (Cl. 73—31.)

The combination with a locomotive boiler feed pump of a pressure gauge connected to the discharge side of the pump and an air chamber associated with said gauge, said chamber opening into the connection which extends from the discharge side of the pump to said gauge whereby to prevent damage to the gauge.



1,424,146. VALVE GEAR. HARTLEY O. BAKER, Pueblo, Colo., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Filed Oct. 19, 1918. Serial No. 258,800. 2 Claims. (Cl. 74—14.)

1. A mechanical movement for a valve gear comprising a shaft, a cam wheel pivotally mounted on said shaft to be swung to different positions, means mounted on said shaft and connected to said wheel for swinging same to different positions, an annular shoe mounted on the periphery of said wheel, and comprising complementary arcuate sections disposed end to end, securing means fastening the adjacent ends of said sections together, and links connected to said securing means to be reciprocated.

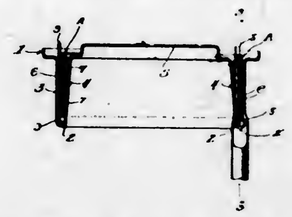


1,424,147. AUTOMOBILE AND CARRIAGE JACK. GEORGE R. BARKER, Joliet, Ill., assignor to William E. Pratt, Chicago, Ill. Filed July 26, 1920. Serial No. 399,137. 4 Claims. (Cl. 254—111.)

1. In a jack, a standard, a rack sliding therein, a support on the rack, a holding pawl, a hand lever, a traveling pawl on the hand lever, a link connecting the pawls, a spring engaging the link and normally exerting pressure thereon to force the pawls into engagement with the rack, means movable longitudinally of the handle for

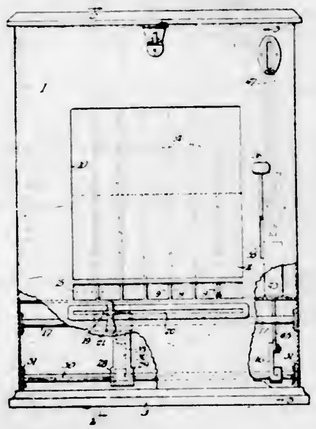
shifting the spring to exert pressure on the pawls tending to withdraw them from the rack, means for throwing the holding pawl against the rack when the handle is raised, and means for throwing the traveling pawl against the rack when the handle is lowered.

1,424,148. FLEXIBLE OPERATING MECHANISM. PERCY L. BILLINGSLEY, Orlando, Fla. Filed May 17, 1921. Serial No. 470,413. 12 Claims. (Cl. 74—21.)



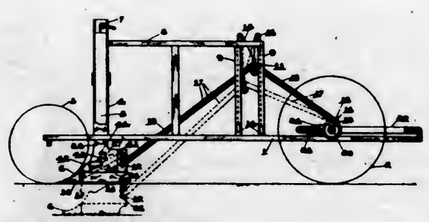
1. A mechanism of the character described comprising a motor, a support for the motor, a boom, operating means carried by the boom and connected to the motor, and means for pivotally supporting the boom and adjustable to bring the axis of the pivot into alinement with the axis of the motor.

1,424,149. BURNER. JOHN S. BRENNAN, Milwaukee, Wis. Filed July 13, 1920. Serial No. 395,851. 2 Claims. (Cl. 158—87.)



1. The combination of a ribbon wick adapted to be folded into circular shape, a reinforcing metallic strip having a plurality of legs extending therefrom to a point beyond the wick edges and spaced apart along the cir-

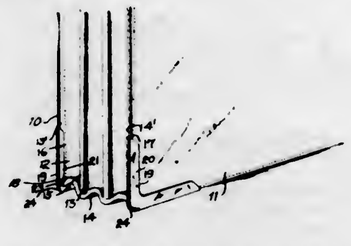
cumference, and a circular wick cup for the reception of the strip, the legs of said wick being adapted to rest



upon the bottom of the cup for holding the wick edge in suspension and permitting fuel to reach said edge and the sides of the wick.

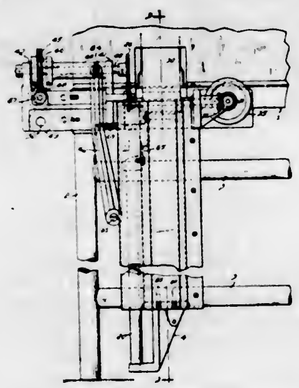
1,424,150. VENDING MACHINE. ROBERT CRAIG BURNHAM, Richland Center, Wis. Filed Jan. 5, 1921. Serial No. 435,125. 11 Claims. (Cl. 211—8.)

1. In a vending machine, the combination of a plurality of stationary magazines, each adapted to contain a number of articles superposed one above the other, ejecting means adapted to be selectively adjusted to a corresponding position adjacent the lower end of each magazine; and a coin controlled device for actuating said means to effect the removal of the article from the selected magazine.



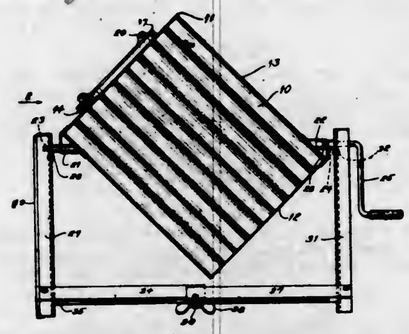
1,424,151. DITCHING MACHINE. ARDEN CAMERON, Norwich, Ontario, Canada. Filed July 29, 1920. Serial No. 399,727. 7 Claims. (Cl. 37—25.)

1. Ditching apparatus comprising a wheeled frame; a vertically adjustable digger supported by the frame; an elevator deck formed in two parts hinged together, the forward end of the forward part being hinged on the digger and the rearward end of the other part on the frame; yielding means tending to raise the elevator deck intermediate of its ends; and an endless conveyor carried by said deck.



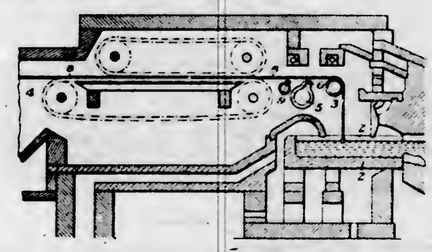
5. In a ditching machine, a digger provided with spaced landsides; a digger point with upwardly inclined upper surface; and a short endless conveyor located between the landsides, its upper side forming substantially an upward extension of said surface; an endless elevator conveyor, the lower end of which is supported between the landsides of the digger below the rear end of the short conveyor.

1,424,152. BRIEF CASE. BENJAMIN CHARSKY, New York, N. Y., assignor to Mochar Leather Goods Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1921. Serial No. 512,267. 5 Claims. (Cl. 150—30.)



1. A channel member adapted to be placed about a lower corner of a brief case comprising an L shaped channel member, substantially U shaped in cross section throughout, one leg of the U being narrower than the other and securing prongs on the outer edge of the shorter leg.

1,424,153. PLATE-RESTACKING MECHANISM FOR ADDRESSING MACHINES. CLIFTON CHISHOLM, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 22, 1920. Serial No. 418,762. 20 Claims. (Cl. 101—47.)

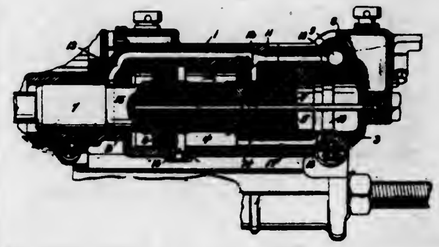


1. In a restacking mechanism for addressing machines, the combination with means for holding a drawer, of an elevator adapted to operate in the drawer, means for inserting plates in the drawer above the elevator, and means for automatically lowering the elevator for each plate inserted.

1,424,154. WASHING MACHINE. ALFRED A. CLARK, Baltimore, Md. Filed May 28, 1920. Serial No. 384,801. 4 Claims. (Cl. 68—18.)

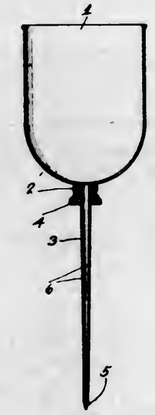
1. The combination with a container for washing machines comprising a bottom, a top, a conjoining wall, said top having an opening to provide access to the interior of said container, of a pintle and a pintle socket for revolubly supporting said container, said pintle being secured to said wall near said top and said socket being secured to said wall, near said bottom and terminating above the plane of said bottom, and a crank handle mounted in said socket.

1,424,155. MANUFACTURE OF SHEET GLASS. HENRY F. CLARK, Belle Vernon, Pa., assignor to Window Glass Machine Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Aug. 5, 1919. Serial No. 315,426. Renewed Dec. 26, 1921. Serial No. 524,814. 8 Claims. (Cl. 49—17.)



1. The method of drawing glass sheets, consisting in drawing a sheet upwardly in a generally vertical direction, bending it over a bending device and moving it in a generally horizontal direction, and subjecting the lower surface of the sheet after it passes the bending device to the action of a heated jet, substantially as described.

8. In apparatus for drawing glass sheets from a molten bath, a bending device, means for drawing a continuous sheet upwardly in a vertical direction and thence over a bending device in a generally horizontal direction, means for fire flashing the under side of the sheet after it passes the bending device, and means for cooling the fire flash surface, substantially as described.

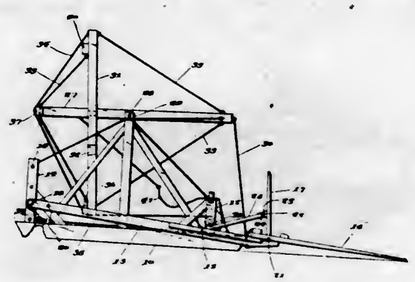


1,424,156. FLUID-OPERATED MOTOR. OMAR E. CLARK, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Mar. 26, 1918. Serial No. 224,742. 8 Claims. (Cl. 121—17.)

1. In a tool of the character set forth, the combination with a cylinder member having piston chambers of different diameters, of a piston having portions of different diameters faced in the same direction and respectively operating in the chambers, means formed in the cylinder member for delivering motive fluid first to the larger piston chamber, means in the cylinder member controlled by a

portion of the piston for afterwards delivering motive fluid to the smaller portion of the piston, means for permitting the fluid to escape from both chambers to a point outside the cylinder member, and other means directing motive fluid against an opposing portion of the piston to move the piston in an opposite direction.

1,424,157. PLANT WATERER. HARRY A. COOK, Dixon, Nebr. Filed Jan. 8, 1921. Serial No. 435,901. 2 Claims. (Cl. 61—13.)

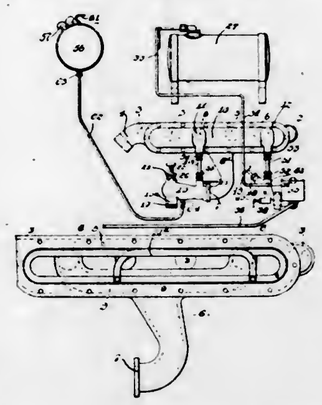


1. A plant waterer of the class described including a receptacle and a spout removably secured to said receptacle and extending downwardly therefrom said spout having its outer closed end pointed and the body apertured, said spout having its open end widened and threaded and screwed on the neck, a flange provided on the spout at its said widened end, said flange supporting the receptacle above the surface of the ground and preventing the spout from further penetrating the ground.

1,424,158. HAYSTACKER. CLAUDE COOLEY, Lucerne, Mo. Filed Mar. 10, 1921. Serial No. 451,270. 7 Claims. (Cl. 214—131.)

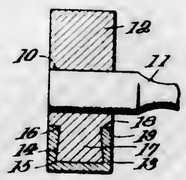
1. A hay-stacker comprising a supporting frame, a vertically swinging load-supporting fork carried by the frame, a lever carried by the frame and pivoted intermediate its ends, a connection between the fork and one arm of the

lever, lever-operating arms extending laterally from the other arm of the lever, and an operating line connected to



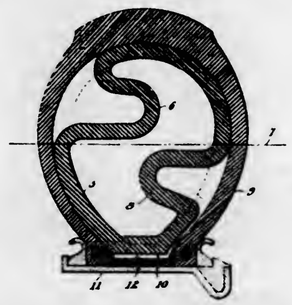
one of the lever-operating arms, and passing across the outer end of the second-mentioned lever arm and also across the outer end of the other lever-operating arm.

1,424,159. BOX. ERNEST DOBNEY, Toronto, Ontario, Canada, assignor of one-third to Francis E. Dennis and one-third to Cyril Dennis, both of Toronto, Ontario, Canada. Filed Dec. 8, 1920. Serial No. 429,080. 2 Claims. (Cl. 220—43.)



1. In a box, the combination with the body and cover having its flange loosely surrounding the body, of a removable ring arranged between the cover flange and the side wall of the body.

1,424,160. HYDROPNEUMATIC GAS GENERATOR. JOHN W. DUNTLEY, Chicago, Ill. Filed Oct. 10, 1917. Serial No. 195,870. 8 Claims. (Cl. 123—25.)



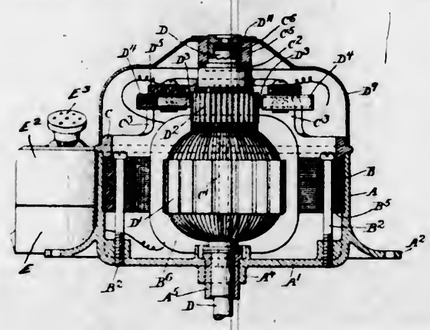
1. In a device of the class described, a combined exhaust and intake manifold, an atomizer, a carbureting chamber, a pipe affording communication between the atomizer and carbureting chamber, said pipe having a part thereof disposed in the manifold, means for supplying mixed air and water vapor to the atomizer, an automatic air valve for said carbureting chamber, and means for connecting the carbureting chamber with the intake manifold.

1,424,161. HAMMER. FRANK W. FOLEY, Dollar Bay, Mich. Filed Apr. 6, 1922. Serial No. 550,121. 2 Claims. (Cl. 145—29.)

1. A hammer comprising a head of relatively soft material carrying a hammer face and an eye for a handle and a hard face secured to said head enclosing one end thereof.

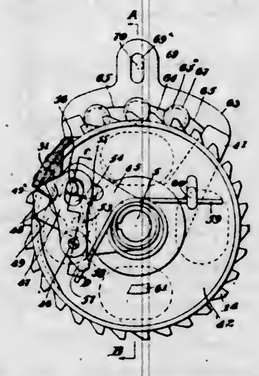
1,424,162. INNER TUBE. BERT G. GOBLE, Tulsa, Okla. Filed Nov. 12, 1921. Serial No. 514,710. 4 Claims. (Cl. 152—13.)

1. As an article of manufacture, an endless inner tube of the compression type molded of readily compressible material with a single annular depression or fold in each side thereof, the fold at one side of the tube being located outwardly of the other fold and said folds being substantially concentric and providing the tube with an external diameter greater than the internal diameter of the casing with which it is to be used.



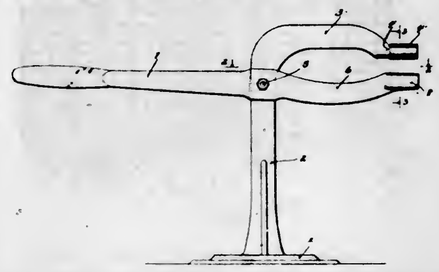
1,424,163. BLOWPIPE. JOHN HARRIS, Lakewood, Ohio, assignor of one-half to James R. Rose, of Edgeworth, Pa. Filed Aug. 26, 1918. Serial No. 251,409. 5 Claims. (Cl. 158—27.4.)

1. A tip for blowpipes comprising a core member having a bore therethrough and an external circumferential groove, the portion of said core at one side of said groove being frusto-pyramidal and the portion at the other side having cylindrical surfaces and longitudinal passageways



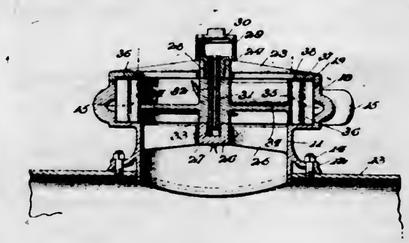
disconnected from said bore, in combination with a shell having a frusto-conical portion closely embracing the first mentioned portion of said core and a cylindrical portion closely embracing the second mentioned portion of said core.

1,424,164. ELECTRIC MOTOR. HOWARD EARL HOOVER, Chicago, Ill., assignor to The Hoover Suction Sweeper Company, North Canton, Ohio, a Corporation of Ohio. Filed Sept. 16, 1918. Serial No. 254,256. 10 Claims. (Cl. 172—36.)



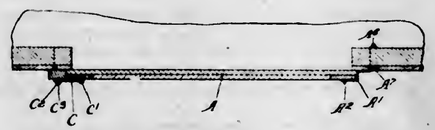
3. In a motor the combination with a cylindrical main frame of an annular ring adapted to engage one end thereof, means for holding the ring in position upon the frame, a bridge extending diametrically across the ring and across the frame and a motor bearing carried by said bridge, holding screws adapted to hold the ring in position on the frame, said screws being in line with the central axis of the bridge, the bridge being mounted on the frame by a pair of fingers or arms extending one on either side of each of the holding screws.

1,424,165. CLUTCH. JOSEPH B. HOWE, Worcester, Mass., assignor to George S. Harwood & Son, Boston, Mass., a Copartnership consisting of Sydney Harwood, Newton, Mass., and John H. Harwood, Brookline, Mass. Filed Dec. 13, 1920. Serial No. 430,568. 11 Claims. (Cl. 192—28.)



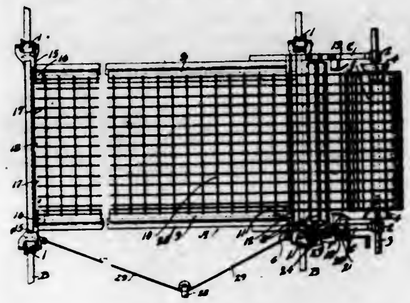
1. A driven shaft and a driving pulley and in combination therewith, a clutch device for connecting the pulley and shaft, said clutch device comprising a support fast on the shaft, a driving dog pivoted on said support, said dog having a tail projecting beyond its pivot, a spring element engaging the tail of the dog and constantly tending to swing said dog to inoperative position, and means constructed and arranged to render such spring element ineffective to swing the dog during the normal driving operation of the clutch, but in stopping to permit such spring to become effective for such purpose upon movement of the dog initiated by other means.

1,424,166. SHOE-COUNTER FLEXOR. WILLIAM J. KAPPEL, Milwaukee, Wis. Filed Mar. 8, 1921. Serial No. 450,731. 3 Claims. (Cl. 12—129.2.)



1. As a new article of manufacture, a base bracket having an overhanging arm terminating with a fixed cylindrical anvil, and a forked lever pivoted to the arm, the fork terminating with pressure fingers parallel the anvil and spaced apart equal distances from a vertical alignment through said anvil.

1,424,167. TURBINE. HENRY A. KING, Baltimore, Md. Filed Dec. 6, 1919. Serial No. 342,937. 10 Claims. (Cl. 253—56.)



1. A device of the character described including a stator, a rotor journaled thereon and provided with driving blades, means for introducing a motive fluid to the stator to act against said blades, and means carried by the rotor obstructing the path of discharge whereby the fluid may act between the stator and rotor for suspending the rotor.

1,424,168. FREIGHT-CAR LOCK. ALBERT KLINE, Chicago, Ill. Filed May 20, 1920. Serial No. 382,697. 9 Claims. (Cl. 292—205.)

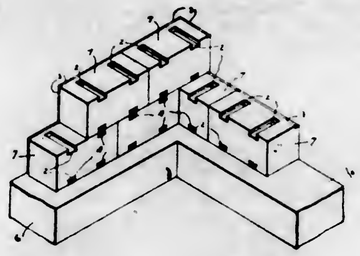
1. A lock plate for freight car doors consisting of a unitary plate comprising a plurality of perpendicular sections at right angles with each other and adapted to engage the several surfaces of the freight car door and the car body, one part of the lock plate slotted and adapted to penetrate a recess in the car body.

1,424,169. MACHINE FOR LAYING REENFORCING FOR CONCRETE PAVEMENT. PHILIP A. KOEHRING, Milwaukee, Wis., assignor, by meane assignments, to Koehring Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 13, 1921. Serial No. 469,297. 13 Claims. (Cl. 94—39.)

1. In a machine for mechanically placing sections of reenforcing upon concrete, in concrete road construction, the combination of a carrier adapted to operate over the subgrade, means for feeding the reenforcing from the machine over and upon laid concrete, and a strike-off carried by said machine to strike off the preliminary layer of concrete upon which the reenforcing is to be deposited.

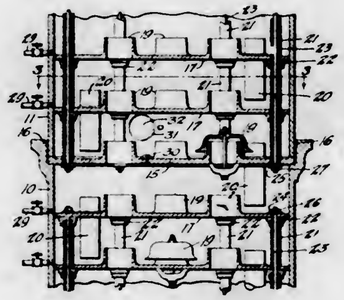
1,472,170. METHOD OF FORMING SOLDERED SEAMED TUBING. DWIGHT B. LEE, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 14, 1919, Serial No. 282,594. Renewed Feb. 23, 1922. Serial No. 538,796. 19 Claims. (Cl. 113—33.)

1. The method of forming soldered seamed tubing, comprising the continuous advancement of a metallic strip and the successive forming of the strip into a tube and immersing of said tube in a solder bath during the continuous advancement thereof.



1,424,171. MACHINE FOR MANUFACTURING TUBING. DWIGHT B. LEE, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 14, 1919, Serial No. 282,595. Renewed Feb. 23, 1922. Serial No. 538,797. 11 Claims. (Cl. 113—33.)

1. In a metallic tube forming machine, the combination of tube forming and closing mechanism, a solder bath, and means for continuously advancing a metallic strip successively through said tube forming and closing mechanism and immersing the formed tube in said solder bath.

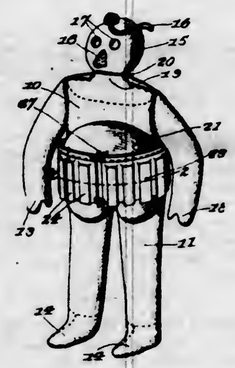


1,424,172. BUILDING CONSTRUCTION. SAMUEL SOLOMEN LEVY, Mattapan, Mass., assignor to Sarah Levy, Boston, Mass. Filed Oct. 30, 1920. Serial No. 420,587. 2 Claims. (Cl. 72—37.)

1. A building block of cement having on both the top and bottom faces two dovetail grooves extending transversely from the inner face part way only to the outer face, said grooves being placed so that the distance between the grooves on any face is twice that between each groove and the end of the block, whereby when the blocks are laid up in a wall with the blocks in adjacent courses breaking joint the two grooves in the top face of any

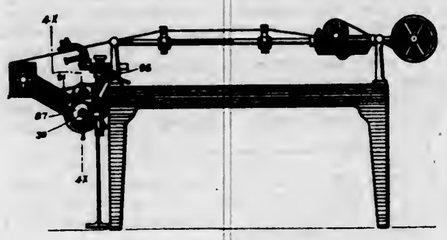
block in one course are in alignment with the grooves in the meeting ends of two blocks in the course above, all of the grooves being open at the inner face of the block so that the blocks may be laid up dry and subsequently mortar or cement may be forced into the aligned grooves to bond the blocks together.

1,424,173. DISTILLING COLUMN. FRANK E. LICHTENTHALER, Newton Highlands, Mass., assignor to The Walter E. Lummus Company, Boston, Mass., a Corporation of Massachusetts. Filed May 8, 1918. Serial No. 233,247. 3 Claims. (Cl. 195—13.)



1. A tower for distillation and similar processes having, in combination, an outer casing, a plurality of transverse decks adapted to divide the interior of the casing into compartments, means for supporting one of the decks, and means cooperating with the other decks and arranged so that the latter are supported by the first mentioned deck.

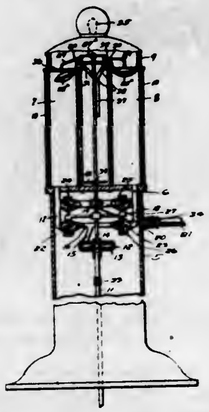
1,424,174. LIFE-SAVING SUIT. JAMES F. MOADICA, Philadelphia, Pa. Filed Apr. 8, 1921. Serial No. 459,553. 2 Claims. (Cl. 9—20.)



1. A life-saving suit comprising a one-piece body and nether garment having a tubular extension on the upper end through which the wearer enters the suit, said tubular extension having a puckering string in its upper end to close the extension over the head of the wearer to form

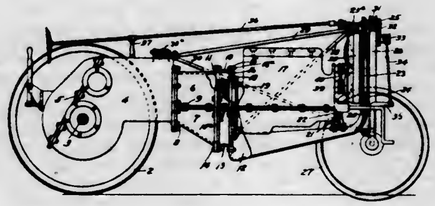
a mask, said extension having eye and nose elements and means on the body portion of the garment interchangeable

across the shoulders of the garment for drawing the lower portion of the tubular extension closely around the neck of the wearer.



1,424,175. PAPER-CUTTING MECHANISM. WILLIAM F. MORSE, Rochester, N. Y., assignor to Samuel R. Parry, Rochester, N. Y. Original application filed June 29, 1918, Serial No. 242,648. Divided and this application filed Sept. 28, 1920. Serial No. 413,400. 2 Claims. (Cl. 164—4.3.)

1. In a box covering machine, the combination of a shear having a cutting knife with the back thereof rounded off at the top, a ledger blade set at substantially right angles to the cutting knife, each of said knives having an inclined edge so as to give a moving point of contact with each other, and the ledger blade being mounted to swing rearwardly as the cutting blade moves in contact therewith.

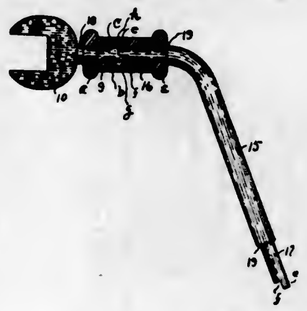


1,424,176. MULTIPLE-CHAMBER VISIBLE-FLOW OIL PUMP. GEORGE B. NICHOLSON, Pittsburgh, Pa. Filed July 26, 1921. Serial No. 487,583. 3 Claims. (Cl. 73—28.)

1. A device of the character described comprising a support, a pair of transparent containers thereon of predetermined capacity, a source of liquid under pressure, conduits leading from said source of liquid under pressure to the several containers, valves in said conduits, a fluid motor disposed in the path of the liquid flow, means actuated thereby for shifting said valves, and means for restraining said actuating means comprising float operated

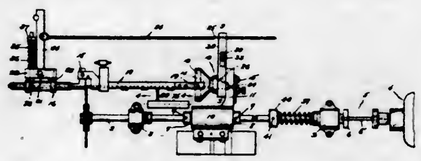
elements associated with the containers and adapted to be elevated by the liquid in the containers for releasing the restraining means.

1,424,177. TRACTOR. LEONARD NILSON, Wayzata, Minn. Filed July 21, 1919. Serial No. 312,357. 9 Claims. (Cl. 180—54.)



1. A traction machine comprising rear traction wheels and an axle, a transmission housing mounted on said axle, a clutch housing secured to the forward portion of said transmission housing, a frame section secured to said clutch housing and projecting forwardly therefrom and having an upwardly extending forward end, forward wheels and an axle wherein said upwardly projecting forward end is horizontally pivoted, and a source of motive power carried by said frame section below its horizontal pivot on said axle and having a driving connection with said rear axle through said clutch housing.

1,424,178. WRENCH. CHARLES H. NOYES, Mondamin, Iowa. Filed Nov. 1, 1920. Serial No. 420,968. 1 Claim. (Cl. 81—119.)



In combination, a wrench-head provided with a rectilinear shank having a recess opening on its end and side, a handle provided with a rectilinear part having a recess opening on its end and side, a coupling-block open at its ends to receive said shank and to receive said rectilinear part of the handle, said recess of said shank having a facet disposed in line with the longitudinal axis of the

shank, the recess of the rectalinear part of said handle having a facet disposed in line with the longitudinal axis of said rectilinear part, to permit engagement of said

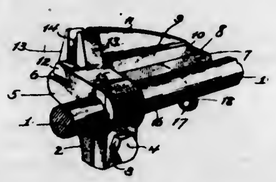
facets one with the other when the shank and handle are inserted in the coupling-block and moved in directions of each other.

1,424,179. TUBE-CUTTING MECHANISM. WILLIAM S. PRITCHARD, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed Oct. 27, 1919. Serial No. 333,796. 10 Claims. (Cl. 29—69.)

1. In a mechanism for cutting continuously moving tubing, the combination with a laterally movable guide through which the tubing is delivered, of a rotary severing device having a fixed axis of rotation, a gauge located in advance of said severing device, a member carried by said gauge and actuated by the forward end of the advancing tubing, and a second member for moving said guide laterally across the path of the severing device, said second member being actuated from said gauge and its movements being controlled by said first mentioned member.

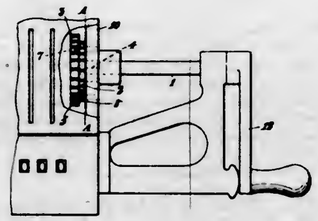
1,424,180. TUBE-CLOSING MECHANISM. WILLIAM S. PRITCHARD, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 14, 1919, Serial No. 282,593. Renewed Mar. 31, 1922. Serial No. 548,523. 11 Claims. (Cl. 153—54.)

2. The combination with mechanism for continuously advancing a tube, of means operating upon the advancing tube for simultaneously severing said tube and closing the end thereof.



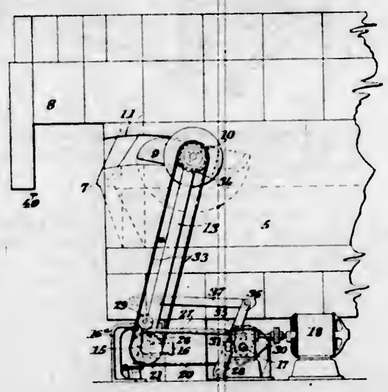
1,424,181. METHOD AND MACHINE FOR SOLDERING TUBING. WILLIAM S. PRITCHARD, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 24, 1919, Serial No. 284,744. Renewed Mar. 31, 1922. Serial No. 548,524. 14 Claims. (Cl. 11.3—33.)

1. The method of forming soldered seamed tubing, comprising the advancement of a metallic strip, forming and closing said strip into a tube during such advancement, closing the forward end of the tubing, depressing the advancing tubing beneath the surface of a solder bath, straightening the soldered tubing, and severing into predetermined lengths.



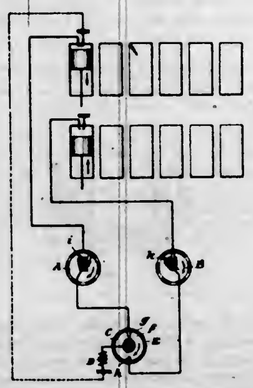
2. In a metallic tube-forming machine, a series of forming rolls and die for continuously advancing a metallic strip and forming the same into a closed tube, a soldering bath, means for deflecting and guiding the formed tubing through said soldering bath, and a series of rolls for straightening the soldered tubing, said rolls being driven at slightly greater surface speed than said forming rolls and cooperating therewith to advance the strip with cumulative force.

1,424,182. COMBINED TENSION DEVICE AND GUIDE FOR THREAD. HAL RIVIERE, Columbus, Ga. Filed Feb. 15, 1921. Serial No. 445,215. 2 Claims. (Cl. 28—71.)



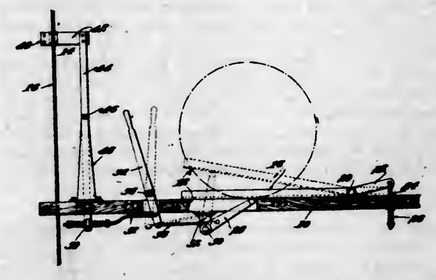
2. In a device of the character described, the combination with a bracket and means for supporting the same, of an arm or bar projecting from said bracket and constituting a lower tension member, ears projecting upwardly from said bracket and spaced apart, an upper tension member over and adapted normally to rest upon the lower tension member and freely movable relatively to the same, and a shank on said upper tension member passing between said ears and recessed in opposite sides to receive said ears, said shank being freely movable in a vertical direction between said ears.

1,424,183. FULL-STROKE MECHANISM FOR CALCULATING MACHINES. KARL VIKTOR RUDIN, Stockholm, Sweden. Filed Sept. 16, 1920. Serial No. 410,638. 2 Claims. (Cl. 235—129.)



1. In combination with the crank shaft of a calculating machine of the Trinks type, a reverse lock comprising a toothed disc having a segmental notch, said disc being arranged for rotation with said shaft, a spur gear revoluble with said disc; a shaft mounted for rotation, a second gear fast on said last named shaft and engaged with the first named spur gear, a locking element loosely mounted on said last-named shaft and arranged to engage the teeth of said disc, yieldable means to cause said locking element to turn by frictional contact with said second gear, and means to limit the extent of the turning movement of said locking element.

1,424,184. OBTAINING GLASS. JESSE M. SAID, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Feb. 9, 1921. Serial No. 443,663. 3 Claims. (Cl. 49—55).

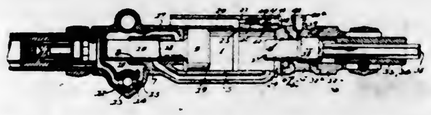


1. In apparatus for delivering molten glass, the combination of a ladle mounted on a horizontal axis over a pool of glass, means for imparting movement to said ladle on its axis to cause it to enter the glass and obtain a quantity thereof, means for swinging the axis of the ladle to cause the ladle to clear the pool, means for inverting the ladle so as to discharge a quantity of glass therefrom, and means for returning the ladle to its position over the pool.

1,424,185. DEVICE FOR SIMULTANEOUSLY STARTING A PLURALITY OF INTERNAL-COMBUSTION ENGINES. MAX SCHÄFER, Stuttgart, Germany, assignor to the Firm Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Dec. 12, 1919. Serial No. 344,477. 2 Claims. (Cl. 123—148.)

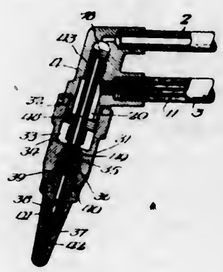
1. Groups of cylinders of an internal combustion engine or engines, each group having a separate normal ignition apparatus with a normal ignition current distributer, in combination with a starting ignition device comprising a starting-current distributing-member in each normal distributer, a single starting magneto generator for generating starting currents, and an auxiliary distributer for alternately transferring current impulses produced by the starting magneto generator to the said various distributing members in the normal distributers.

1,424,186. AUTOMOBILE ELEVATOR. PHILIP L. SCHUYLER, Scituate, and CLARENCE M. SNOW, Boston, Mass., assignors to the Trustees of The Massachusetts Automobile Club Trust. Filed Dec. 20, 1920. Serial No. 431,826. 2 Claims. (Cl. 187—97.)



1. An automobile carrier having a floor, a blocking bar arranged transversely of the path of the vehicle on to or off of the floor, a pair of levers secured to the floor and supporting the blocking bar, lifting levers pivoted to the floor, having ends which engage the blocking bar supporting levers, and a rock shaft on which said lifting levers are secured, operating when turned to lift the blocking bar into position to block the egress of the automobile from the carrier.

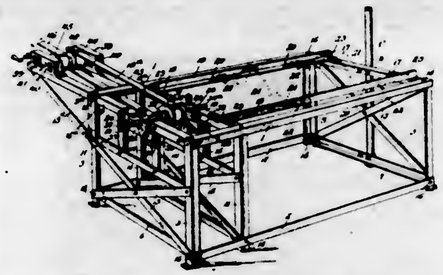
1,424,187. CONTAINER FOR FLUIDS FOR INJECTION PURPOSES. JOHN J. SEELMAN, Milwaukee, Wis. Filed Mar. 10, 1920. Serial No. 364,861. 2 Claims. (Cl. 215—79.)



1. In a container of the class described, the combination with a tube, of a self-sealing rubber dam at one end of the tube, and a stopper at the other end of the tube, said stopper being provided with means for introducing purified air into the interior of the tube while fluid is withdrawn therefrom.

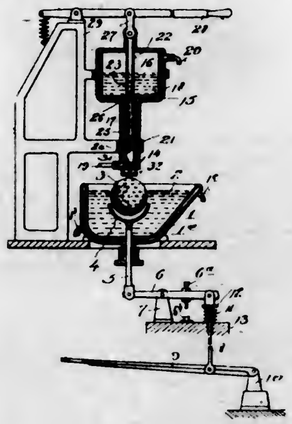
1,424,188. ROCK DRILL. WILLIAM A. SMITH, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Oct. 18, 1917. Serial No. 197,261. 7 Claims. (Cl.121—10.)

1. In apparatus of the character set forth, the combination with a motor having a barrel, a hammer and a drill receiving chuck, of an exposed collar interposed between the front end of the barrel and the rear end of the drill receiving chuck, a tappet in the collar for transmitting the blows of the hammer to a tool in the chuck and also directing cleansing fluid to such tool, side bolts connecting the chuck and motor for clamping the same against the interposed collar, the exposed portion of the collar having means projecting between the side bolts for supplying cleansing fluid to the blow-transmitting fluid and directing means, and packing interposed between the collar and the barrel and chuck and forced thereby against the tappet for preventing leakage around said tappet.



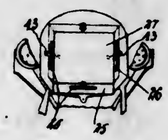
1,424,189. ACETYLENE TORCH. JOHN J. STROBOT, Chicago, Ill., assignor to Fidelity Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1919. Serial No. 288,727. 7 Claims. (Cl. 158—27.4.)

3. In a torch, a head having a threaded socket therein, an oxygen passage leading to said socket, a chamber in the lower portion of said head, an acetylene passage leading to said chamber, a member formed with a longitudinal bore and having its upper end screwed into said socket, a nozzle body screwed onto the lower portion of said head and formed inside with an extension of said chamber around said member and having a restricted bore and a shoulder around the upper end of said bore, the lower end of said member extending through said restricted bore with clearance for the passage of the acetylene downwardly through said bore, and a nozzle tip screw-connected with said nozzle body and provided with a bore leading from the lower end of said member, there being a mixing space formed between the lower end of said member and the upper end of said nozzle tip.



1,424,190. AUTOMOBILE REPAIR STAND. JOHN W. COLE and ALVIA E. JOHNSON, St. Francis, Kans. Filed Oct. 9, 1920. Serial No. 415,798. 8 Claims. (Cl. 29—89.)

1. An engine stand having a frame formed of longitudinal and cross bars and uprights joined together, certain of the cross bars being longitudinally slotted, and longitudinal angle bars supported upon and adjustably connected to the cross bars by way of the longitudinal slots thereof

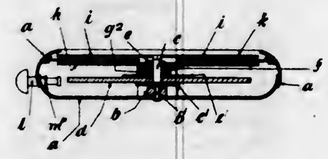


and spaced from said longitudinal bars and said longitudinal angle bars being longitudinally slotted for attachment of the engine thereto.

1,424,191. BALANCING BALLS. ROBERT FLEMING ARNOTT, Montclair, N. J. Filed Jan. 13, 1921. Serial No. 437,079. 14 Claims. (Cl. 154—17.)

1. The method of balancing a ball consisting in ascertaining the lighter side of the ball and injecting material into such side of the ball to add weight thereto.

1,424,192. AUTOMOBILE ENGINE-HOOD COVER. JOHN A. BALACTAS and KIRIL M. BALACTAS, Ford City, Canada. Filed July 6, 1921. Serial No. 482,691. 3 Claims. (Cl. 180—69.)



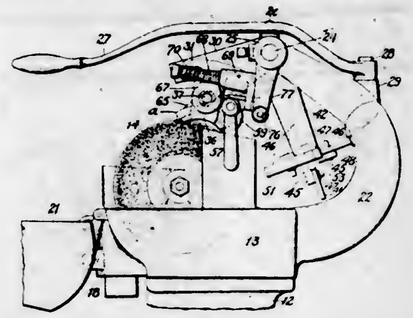
1. A covering for a vent in the engine hood of an automobile comprising a flexible water-proof member engaging over said vent, a metal element spaced outwardly from said member, bow spring elements connected to said metal element and bearing on said member, and a strap engaging said metal element to press the same toward the said member.

1,424,193. PROCESS OF MAKING PHOSPHOROUS OXYCHLORIDE. THOMAS LEES BARTLESON, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 21, 1920. Serial No. 418,574. 4 Claims. (Cl. 23—10.)

1. The process of producing phosphorous oxychloride which compriaes bringing phosgene into contact with a metal phosphate at a high temperature.

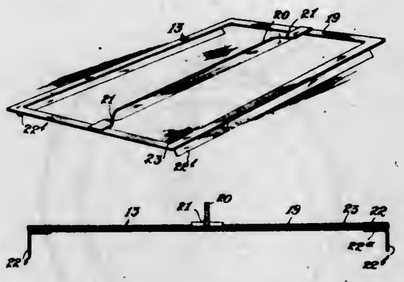
1,424,194. DEVICE FOR CALCULATING OR COMPUTING PURPOSES. HARRISON BROTHERTON, Brierfield, and FRANK BROTHERTON, Bowdon, England. Filed May 9, 1921. Serial No. 468,097. 1 Claim. (Cl. 235—120.)

In a device of the kind specified, a centrally mounted collar with a broad flange bearing against a pointer disc connection solely for forming connective frictional means whereby the motion of the one pointer disc is transmitted to a second one, when the braking operation is not introduced, and an externally operated button braking device capable of bearing peripherally against one of said pointer disc connection when required, substantially as herein set forth.



1,424,195. WATCH AND CLOCK. JOSEF DEMKO, Zabokreky, and PAUL GRESCHNER, Nemécký Pravno, Czechoslovakia. Filed June 2, 1921. Serial No. 474,534. 2 Claims. (Cl. 58—128.)

1. A watch having shifting hour figures, comprising a wheel mounted on the hour arbor, a movable dial having two notches, a pawl having a tooth engaging with one of the two notches in the movable dial, means for releasing said dial after a complete revolution of the hour hand, a spring, means for stressing the spring alternately in different directions, thereby causing the dial to rotate in one or the other direction.

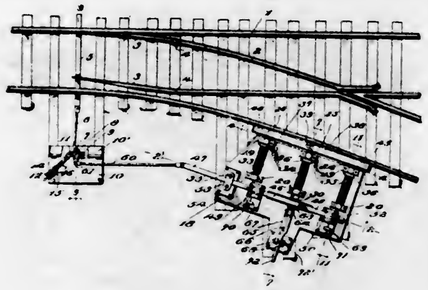


1,424,196. MACHINE FOR GRINDING CURVED TRIMMING BLADES. ALFRED B. FOWLER, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 22, 1919. Serial No. 319,181. 25 Claims. (Cl. 51—100.)

1. A machine for grinding trimming blades, having, in combination, a grinding wheel, a carriage, a fixed guideway, means for causing movement of the carriage along the guideway to grind the entire edge of the blade, means to rock the carriage to impart predetermined shape to the blade, and means for feeding the blade edgewise on the carriage toward the wheel.

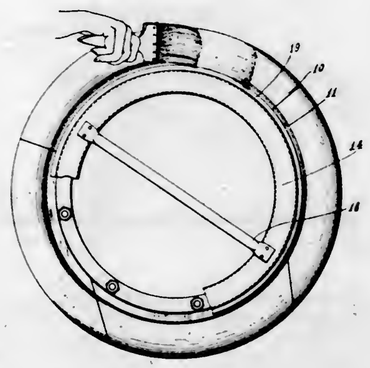
2. A machine for grinding trimming blades, having, in combination, a grinding element, a slideway, a carriage mounted to slide and rock on said slideway, mechanism for controlling rocking movement of the carriage, and means to feed the blade edgewise along the carriage toward the grinding element.

1,424,197. SCALE AND DIRT COLLECTOR. FRANK M. GEBHARD, Steele, N. Dak. Filed Feb. 23, 1921. Serial No. 447,124. 1 Claim. (Cl. 210—169.)



A screen for a filter of the class described, comprising a rectangular frame consisting of side and end bars, the end bars being flat, each side bar comprising an elongated section, which is U-shaped in cross section and an angular section engaging the U-shaped section and having a depending flange, a mesh screen carried by the frame and having its edges clamped within the U-shaped sections of said side bars, a brace extending longitudinally of said frame, said brace comprising a body portion having twisted ends, the ends resting evenly upon and being secured to the flat end bars of the frame, the body portion of the brace extending at right angles to said twisted ends, said bar engaging said mesh screen to reinforce the same as liquid flows therethrough, all as set forth.

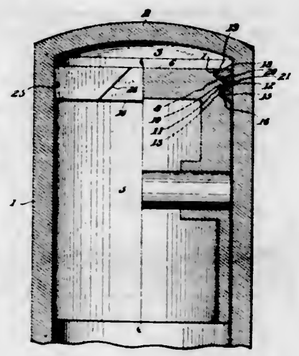
1,424,198. FLYING SWITCH. FRANK W. HENRIKSON, Mulberry, Kans. Filed Sept. 13, 1921. Serial No. 500,386. 10 Claims. (Cl. 246—351.)



1. In a device of the class described, in combination with a main track and its siding, a pair of switch points adapted to be shifted into either position, means comprising a single throwing block connected to said switch points and arranged adjacent said siding adapted to be depressed by a vehicle moving along said siding, said block being

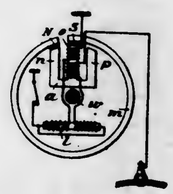
constructed and arranged to automatically throw said switch points in one direction when depressed by a ve-

hicle approaching from one direction and to automatically throw the switch points reversely when depressed by a vehicle approaching from the opposite direction.



1,424,199. CEMENT SHIELD FOR TIRE CORES. ROBERT J. HUMELBAU, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1920. Serial No. 406,336. 5 Claims. (Cl. 91—65.)

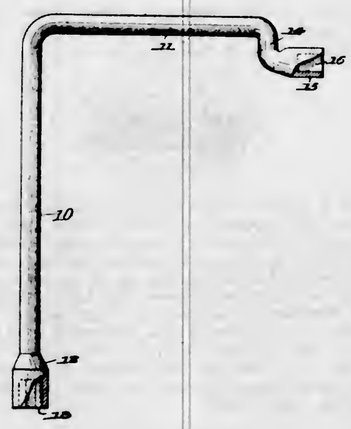
1. A cement shield for a tire core, said shield comprising an annular structure adapted to be presented to the side face of the tongue of a tire core to shield the latter and provided with a guiding surface adapted to position it with respect to said tongue.



1,424,200. PISTON AND PISTON RING. HARRY B. JOHNSTON, Seattle, Wash. Filed Dec. 5, 1919. Serial No. 342,823. 9 Claims. (Cl. 74—109.)

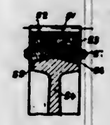
1. In combination, a piston having a ring groove formed at the intersection of the upper surface and side wall of the piston, an inclined wall in said groove extending outwardly and away from the working face of the piston, a ring mounted in the groove and having an inclined face corresponding to the inclined wall of the piston groove, coacting means between the walls of the groove and ring to hold the ring in the groove, said ring having an outer face exposed to the working pressure of the cylinder and lying wholly substantially in a plane and extending from the edge of the groove to the wall of the cylinder whereby the

action of the pressure on the whole outer surface of the ring will exert a force substantially parallel to the line of travel of the piston.



1,424,201. FLYWHEEL MAGNETO. AUGUST KAZENMAIER, Stuttgart, Germany, assignor to the Firm Robert Bosch Aktiengesellschaft, Stuttgart, Germany. Filed Mar. 13, 1920. Serial No. 365,685. 2 Claims. (Cl. 171—209.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A flywheel magneto comprising a shaft, the outer portion of the flywheel constituting the magnet, an armature positioned between the outer portion of said wheel and the shaft and having a primary and secondary winding, an auxiliary coil external to said armature and included within the periphery of said wheel, said coil having a primary and a secondary winding, connections uniting the primary portions and the secondary portions of said windings, respectively, in series, and means uniting said connected primary windings in parallel relation with said connected series windings.



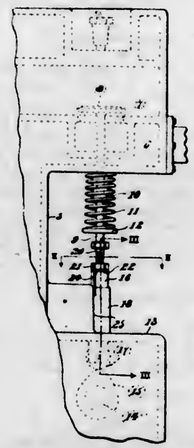
2. A flywheel magneto comprising a shaft, the outer portion of the flywheel constituting the magnet, an armature positioned between the outer portion of said wheel and the shaft and having a primary and secondary winding, an auxiliary coil external to said armature and positioned within the periphery of said wheel in such manner as to be shielded from the lines of force emanating from said magnet, said coil having primary and secondary windings in series, respectively, with the primary and secondary windings of said armature.

1,424,202. WRENCH. LEWIS WILKINS KEITH, Greenville, S. C. Filed July 16, 1921. Serial No. 485,200. 1 Claim. (Cl. 81—121.)

A wrench comprising a U-shaped bar having a long arm and a short arm, the long arm having a socket extending from its free end, and the short arm having a socket extending at right angles from its free end and in a direction away from the longer arm.

1,424,203. GEAR WHEEL. HOLDREICH KELLER, deceased, by Katharina Keller, administratrix, Zurich, Switzerland, assignor to the Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed Nov. 4, 1920. Serial No. 421,780. 5 Claims. (Cl. 74—29.)

1. A composite wheel, in combination, a toothed rim, a metallic ring, a ring consisting of a soft, elastic material inserted between said rim and said metallic ring, said three parts forming one composite ring the parts of which being secured to each other by radially acting shrinkage stresses, and a wheel body onto which said composite ring is pressed.

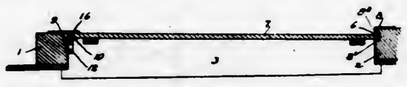


1,424,204. BLASTING CAP. ARTHUR LA MOTTE, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 29, 1920. Serial No. 413,548. 4 Claims. (Cl. 102—9.)

1. As a new article of manufacture, a blasting cap containing a secondary detonating compound and a priming charge at least partly enclosed by a reinforcing cap-sule provided at its upper end with a restricted opening, and a readily ignitible material comprising potassium

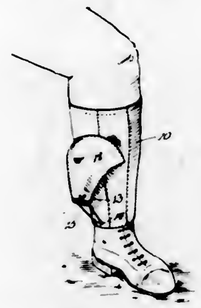
nitrate disposed over said opening and having an exposed surface larger than the area of said opening.

1,424,205. VALVE SILENCER. JOHN P. MCCALLUS, Weatherly, Pa. Filed Mar. 31, 1921. Serial No. 457,563. 1 Claim. (Cl. 123—90.)



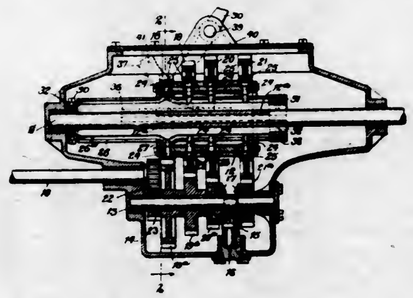
A valve silencing attachment for tappet rods comprising a piece of sheet metal including a plate portion with a central opening for reception of the abutment screw of the tappet rod whereby the device may be rigidly clamped against the upper end of the tappet rod by the jamb nut of said abutment screw, and depending resilient legs carried by said plate portion and disposed to frictionally engage the adjacent vertical face of the engine casing, said legs being of lesser length than said vertical face whereby the entire attachment may bodily move vertically with the tappet rod with only frictional resistance to such movement.

1,424,206. GRAIN DOOR. JOHN MCMURDO, Winnipeg, Manitoba, Canada. Filed Mar. 14, 1921. Serial No. 452,378. 3 Claims. (Cl. 20—30.)



3. In a door fastening, the combination with a door post presenting an abutment engageable with one side of the door, of a wing adapted for engagement with the

opposite side of the door, a vertical pivot rod connecting the wing to the post for swinging and endwise sliding movement, a plate at the lower end of the pivot rod

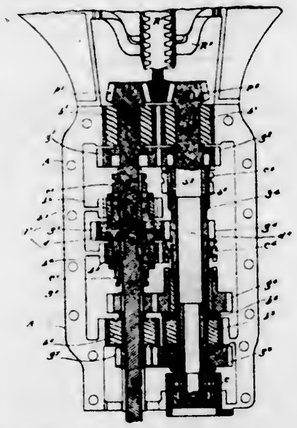


formed with angularly related slots with which the lower end of the wing is adapted to be engaged, whereby the wing may be immovably held either in operative or inoperative position.

1,424,207. LEGGING. WILLIAM P. MANNING, Los Angeles, Calif. Filed Jan. 28, 1921. Serial No. 440,735. 1 Claim. (Cl. 9—21.)

The combination with a legging, of a flap secured at one end to the side of the legging forming a pocket, the flap being tapered toward its opposite end, spaced eyelets carried by the smaller free end of the flap, spaced eyelets carried by the legging, and a lace threaded through all of said eyelets connecting the free end of the flap with the legging and having its ends tied together whereby the effective length of the lace may be varied for varying the movement of the free end of the flap away from the legging.

1,424,208. TRANSMISSION GEAR. LAWRENCE J. MORLEY and ARTHUR V. HAYS, Springfield, Mo. Filed Mar. 17, 1921. Serial No. 453,184. 2 Claims. (Cl. 74—59.)

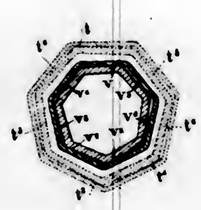


1. A transmission gear including a drive shaft having gear elements varying in size, a driven shaft, ring gears of varying size loose on the driven shaft and in constant mesh respectively with the corresponding gear elements on the drive shaft, pins radially disposed on the driven shaft and normally within the periphery thereof, the inner ends of the pins being bent laterally, and operating bars having grooved sides, the grooves being straight for their major portions and having an outwardly curved portion thereon at a given point, the bent ends of the pins being accommodated in the grooves of the bars.

1,424,209. CLOTH HOLDER. JOSEF PABST, Zurich, Switzerland. Filed Sept. 24, 1920. Serial No. 412,603. 5 Claims. (Cl. 24—243.)

1. In a holder for fabrics for use particularly with stockings, the combination of a rigid base plate and a rigid cover, the said cover in closed position resting over substantially its whole length on the base plate, and the said base plate overlapping one end of the cover thereby bending the fabric lying between the base plate and the cover into S-shape, at least one rigid pressing device fitted on the cover and between the ends thereof, and at least one rigid pressing device mounted on and between the ends of the base plate, both pressing devices when in closed position again bending the fabric interposed between the said devices.

1,424,210. TRANSMISSION-GEAR SYSTEM. WILLIAM FRANKLIN PENROD, Cincinnati, Ohio, assignor to Anthony J. Wissel, trustee. Filed Apr. 15, 1921. Serial No. 461,564. 11 Claims. (Cl. 74—57.)

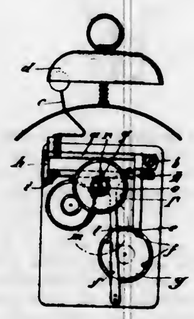


6. In a gear transmission of the character indicated, in combination with a main driving-shaft in two parts independently rotatable in tandem relations, and carried at the zone of their abutting contact within the axial orifice of a spur-gear carried in case bearings; a bearing washer or washers secured at the contiguous shaft-ends and constituting a thrust bearing.

1,424,211. ROTATIONAL DRIVING CONNECTION SUCH AS DETACHABLE WHEEL HUBS. JOHN V. PUGH, Coventry, England, assignor to Rudge-Whitworth Limited, Coventry, Warwick, England, a Company of Great Britain. Filed Jan. 27, 1921. Serial No. 440,534. 10 Claims. Cl. 201—9.)

1. A detachable hub for a vehicle wheel having an outer hub part forced upon an inner hub part by a nut

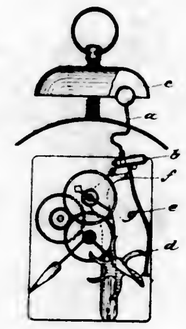
or other retaining means, in which said hub parts are provided with sets of complementary engaging means comprising regular polygonal surfaces having an odd number of faces, which under the force exerted by the



nut or other means are adapted to form a close contact in one rotational plane or zone for driving in one direction and a close contact in another plane or zone for driving in the other direction.

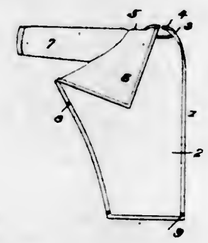
1,424,212. METHOD OF CONTROLLING THE STABILIZER CONTENT OF CELLULOSIC COLLOIDS. GEORGE ROCKER, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 17, 1920. Serial No. 431,396. 10 Claims. (Cl. 52—20.)

2. The method of controlling the stabilizer content of a cellulosic colloid which comprises washing the colloid with a solution containing the stabilizer, and then washing the colloid in a liquid in which the solvent of the stabilizer is miscible and the stabilizer is insoluble.



1,424,213. ALARM CLOCK WITH PRECEDING ALARM. OTTO RÖSEKE, Stuttgart, Germany. Filed June 11, 1919. Serial No. 303,493. 18 Claims. (Cl. 58—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

15. In an alarm clock, time mechanism; alarm mechanism; preliminary alarm mechanism; and a common controller for directly controlling the two said alarm mechanisms.

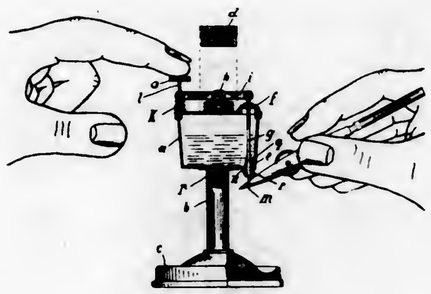


1,424,214. ALARM CLOCK. OTTO RÖSEKE, Stuttgart, Germany. Filed Feb. 13, 1920. Serial No. 358,490. 1 Claim. (Cl. 58—16.)

In an alarm clock, a preliminary alarm mechanism comprising an alarm operating arm, a hammer connected thereto, a head carried by said arm; time works comprising a gear-wheel; and a star wheel geared to said gear wheel and adapted to engage the head carried by

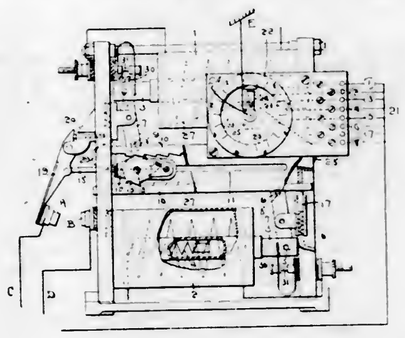
the alarm operating arm to move said arm in preparation to giving an alarm and to subsequently release said arm to cause the alarm to be given.

1,424,215. PROTECTIVE COVERING FOR AUTOMOBILE DRIVERS. MARVIN L. ROWE, Albany, N. Y. Filed July 18, 1921. Serial No. 485,508. 1 Claim. (Cl. 296—81.)



A protector for automobile drivers, including a fabric section having means along one edge whereby said edge may be secured to the side of the vehicle adjacent the driver and having means along one end whereby said end may be secured to the dash of the vehicle in front of the driver, said section having a width to overlie the front of the driver, and a shoulder portion to overlie the shoulder and a portion of the driver's back immediately below the shoulder, said section being provided with a single sleeve member, whereby that portion of the driver's body next to the exposed side of the vehicle and above the upper edge of that side is protected by a protector to remain more or less permanently connected to the vehicle.

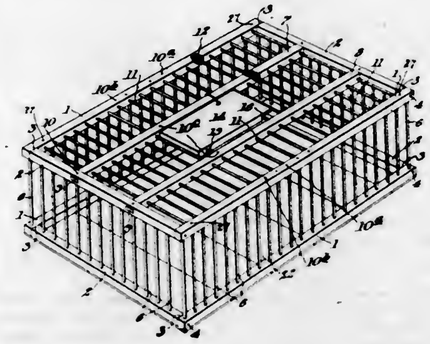
1,424,216. INKSTAND. ERNST SALZMANN, Solothurn, Switzerland. Filed Aug. 10, 1920. Serial No. 402,675. 1 Claim. (Cl. 126—57.)



In an inkstand comprising an air tight receptacle having a needle valve outlet operated by a hand lever

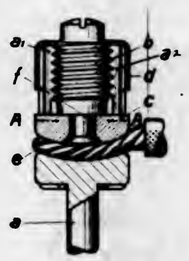
the combination with the conical outlet neck *n* of the valve, a valve rod *g* provided with a spherical swelling *r*

and a rubber hose *q* sleeved over said swelling for the purpose set forth and substantially as shown and described.



1,424,217. AUTOMATIC BLOCK APPARATUS FOR ELECTRIC TRAMWAYS AND RAILWAYS. DINO SAMAIA, Milan, Italy. Filed Dec. 30, 1919. Serial No. 348,426. 2 Claims. (Cl. 246—78.)

1. In automatic block apparatus for electric tramways and railways, the combination of a blocking solenoid, whereof the core is attracted each time a vehicle enters the block section, a de-blocking solenoid whereof the core is attracted each time a vehicle leaves said block section, a toothed wheel, racks meshing with said toothed wheel, rocking beams acting upon said racks, connections between said cores and said rocking beams, a support carrying said toothed wheel, slidable between said racks, a series of progressively numbered electric lamps, circuits supplying current to said lamps, a distributor controlling the supply circuits of said lamps, and means for energizing said solenoids, whereby each time a vehicle enters or leaves said block section, said support is actuated by the corresponding solenoid core to operate said distributor in such a manner as to light up or extinguish the lamp showing the number of the vehicles in said block section.

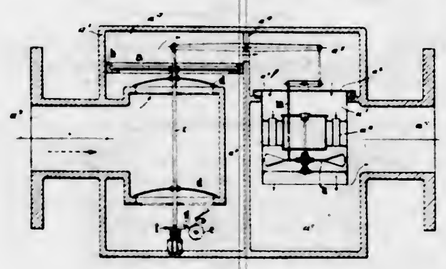


1,424,218. SHIPPING COOP. CHARLES T. SHERMAN, Sr., Goldvein, Va. Filed Sept. 16, 1921. Serial No. 501,114. 5 Claims. (Cl. 217—36.)

1. A shipping coop, having top and bottom frames composed of side and end bars butt-jointed, and connecting dowels socketed in said bars at the corners of the frames and along the sides and ends, the frames and their constituent bars and the dowels being connected by nails or

other fasteners driven through one set of bars into the other set and simultaneously through the corner dowels and the dowels next adjacent thereto.

1,424,219. WIRE-CLAMPING TERMINAL FOR LOW-VOLTAGE INSTALLATIONS. GOTTLIEB STEINER and JACQUES BOHLI, Solothurn, Switzerland, assignors to the Firm Scintilla, Solothurn, Switzerland. Filed July 6, 1921. Serial No. 482,809. 1 Claim. (Cl. 173—259.)



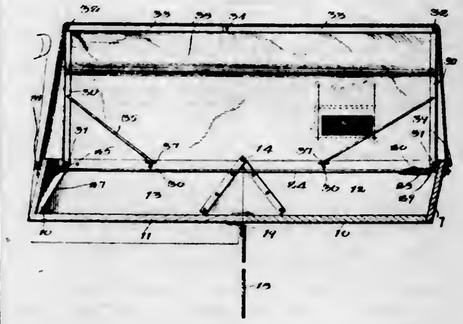
A wire clamping terminal for low voltage installations including a clamp body bifurcated at its outer end, said outer end being also internally screw-threaded, a screw engaging in said screw-threaded outer end, a pin attached to the inner end of said screw, a clamping jaw, slidable up and down in a slot between the bifurcated parts of said clamp body, and loosely attached in a swivellable manner to said pin and a cap whose outer end is perforated to permit access to the outer head of the screw, said cap being bifurcated at its inner part and having its inner edge turned over the clamp body.

1,424,220. GAS AND LIKE METER. FRANKLIN THORP and HARVEY THOMAS THORP, Whitefield, England. Filed June 11, 1918. Serial No. 239,417. 5 Claims. (Cl. 73—37.)

1. In gas and like meters of the type described, the combination with a rotor forming part of the measuring mechanism, of means for automatically cutting off the flow of fluid to the rotor when the rate of flow falls below a predetermined minimum, consisting in part of an element which is sustained by the fluid flowing past the element and to the rotor when the rate of flow

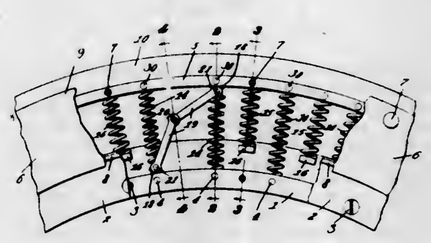
is equal to or above the said minimum, a support onto which said element descends when the rate of flow falls below the said minimum, and means having a control

element on the exterior of the meter for raising the element from said support to permit the resumption of flow of the fluid.



1,424,221. ICE PICK. GEORGE TRUMPETER, Alliance, Ohio. Filed Mar. 8, 1922. Serial No. 542,041. 4 Claims. (Cl. 83—62.)

1. An ice pick of the type described comprising a socketed handle, a tubular member secured therein, a sleeve slidable in said tubular member and extending outwardly of said handle, a pick point slidable in said tubular member and sleeve, a cushioned spring interposed between the inner end of the pick point and handle, and a cushioned spring surrounding the pick point and engaging at its opposite ends, the inner end of the pick point and the outer end of the sleeve.

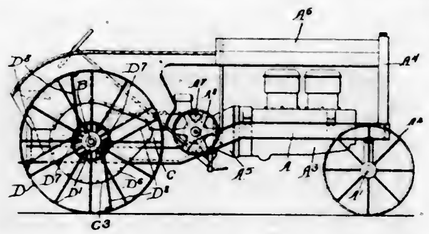


1,424,222. FOLDING TENT BED FOR AUTOMOBILES. EARL TUTTLE, Grand Island, Nebr. Filed Nov. 10, 1921. Serial No. 514,230. 2 Claims. (Cl. 5—72.)

2. A folding tent bed for automobiles, including hinged sections, each having side and end walls, a flexible supporting web within the sections having transverse rails at its opposite ends, inclined supporting members secured to the inner surfaces of the side walls of one section and having series of recesses to adjustably and detachably

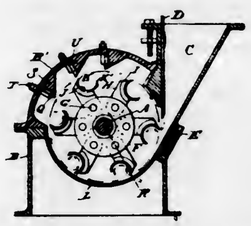
receive the ends of one of said cross rails, and means adjustable through the end wall of the other section to hold the other end rail.

1,424,223. TIRE. CHRISTIAN A. WAGNER, Fort Plain, N. Y. Filed Feb. 19, 1921. Serial No. 446,400. 1 Claim. (Cl. 152—38.)



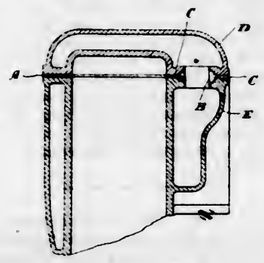
In a device of the class described, an inner ring, an outer ring, side plates carried by the respective rings, and overlapped slidably on each other, securing devices uniting the side plates with the rings, retainers removably mounted in the rings and held against endwise movement by the side plates, two series of coiled compression springs arranged between the rings, those of one series being longer than those of the other and attached at their ends to the respective rings, the shorter compression springs alternating with the longer and extended over and attached to the retainers of one ring and spaced from the other ring whereby the shorter springs operate to assist in supporting the load after a predetermined compression of the longer springs is obtained.

1,424,224. TRACTOR. JOHN C. WESTMONT, Sauk City, Wis., assignor to Wisconsin Farm Tractor Company, Sauk City, Wis., a Corporation of Wisconsin. Filed Jan. 23, 1920. Serial No. 353,509. 20 Claims. (Cl. 180—54.)



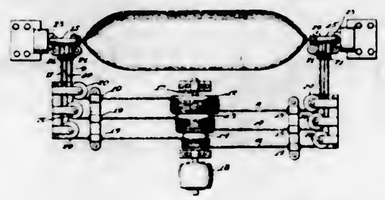
1. In a traction engine, a main frame, a cannon bearing extending thereacross, an axle mounted for rotation within said cannon bearing and extending outwardly on both

sides of the frame and brackets projecting from said cannon bearing and adjustably attached to the frame,



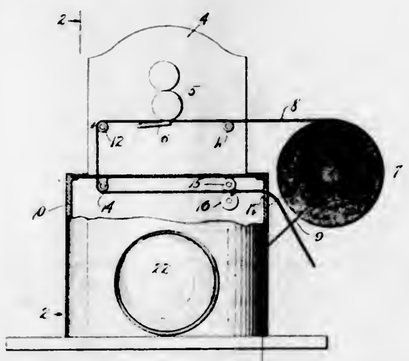
said brackets extending downwardly from the cannon bearing, the frame being suspended thereon below the axle.

1,424,225. COVED PIVOTED HAMMER. MILTON F. WILLIAMS, St. Louis, Mo., assignor to Williams Patent Crusher & Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 25, 1922. Serial No. 539,063. 3 Claims. (Cl. 83—11.)



1. A rotary pivoted hammer comprising shanks spaced apart and provided with holes at their inner ends for pivotal mounting, and a cross bar head connecting the outer ends of said shanks and curved concavely towards the front, and a similarly curved plate adjustably mounted on said concave head and having an operative lateral edge located substantially in the radial plane through the shanks and the pivotal axis, and means to adjust said plate laterally on said head and vary the distance of the operative edge from the pivotal axis and also from said radial plane.

1,424,226. INTERNAL-COMBUSTION E.....E. THOMAS DICK WISHART, Heaton Chapel, near Stockport, England, assignor of one-half to Crossley Motors Limited, Gorton, Manchester, England. Filed Sept. 11, 1920. Serial No. 409,541. 1 Claim. (Cl. 123—173.)



In an internal combustion engine, a cylinder, a detachable head secured to said cylinder, a gasket between said cylinder and head, said cylinder and head castings having openings for the passage of water between the cylinder and head, internally coned seats for a jointing member at said openings, a washer having conical projecting surfaces adapted to fit between said seats to seal the water passage independently of said gasket, and an annular passage to the air for the escape of leakage from the water joint.

1,424,227. BOAT-LAUNCHING APPARATUS. GEORGE WRIGHT, San Francisco, Calif. Filed June 22, 1920. Serial No. 390,935. 4 Claims. (Cl. 9—22.)

1. An apparatus as characterized comprising a plurality of boat handling davits; means disposed between said davits for supporting a group of boats in nested relation; a plurality of cables each attached to one of said boats; and a hoisting mechanism for operating said cables simultaneously at various fixed ratios to raise and lower said boats in groups.

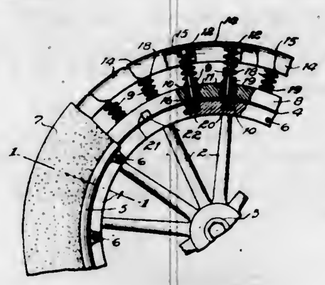
1,424,228. PROJECTOR COMBINED WITH PRINTING MECHANISM OF TICKERS OR OTHER INSTRUMENTS. RICHARD D. WYCKOFF, New York, N. Y. Filed July 24, 1919. Serial No. 312,976. 5 Claims. (Cl. 88—24.)

1. In combination with a ticker or the like, a hollow supporting base therefor, a projecting lens mounted in said hollow base, a reflector in the hollow base and disposed to cast an image into said lens, means for feeding and for supporting a length of the record printed by the ticker in the hollow base in position to be reflected by the reflector and a lamp in the hollow base disposed to illuminate the section of record supported within the hollow base.

1,424,229. LEVEL. CLYDE E. WYCKOFF, Kansas City, Mo., assignor of one-half to John Q. Moffat and one-half to George E. Whitten, both of Kansas City, Mo. Filed Sept. 28, 1920. Serial No. 413,261. 1 Claim. (Cl. 33—215.)

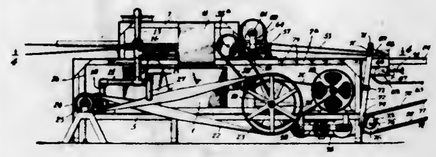
A device of the character described consisting of a stock having an opening therein, a one-piece dial rotatably

arranged in said opening and weighted to maintain the same relative position irrespective of the position in which the stock is placed, scales on the sides of said dial, there being a plurality of equally-spaced sight openings arranged in circles in the opposite sides of the stock



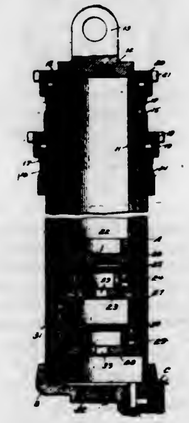
through which the scales may be viewed, and glass plates to close said sight openings, there being a peripheral scale on the dial, and oppositely-disposed sight openings in the stock through which said peripheral scale may be viewed, substantially as described.

1,424,230. MARCEL-WAVE DEVICE. HATTIE ZINN, Columbus, Ohio. Filed Feb. 16, 1922. Serial No. 536,958. 1 Claim. (Cl. 132—33.)



A device of the character described including an elongated stem having a handle at one end, and series of arms outstanding along opposite sides of said stem of which the arms at one side are staggered with respect to those of the opposite side, each of said arms having its axial line nearer to one of an opposed pair of arms than the other.

1,424,231. RESILIENT TIRE. EMIL BAUMANN, St. Louis, Mo. Filed June 7, 1922. Serial No. 566,475. 3 Claims. (Cl. 152—8.)

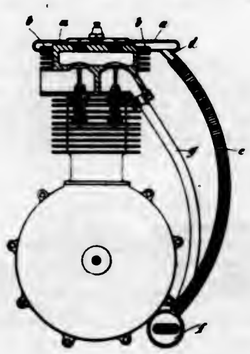


2. A mechanical substitute for the inner-tubes of pneumatic-tires, consisting of a base-ring adapted to be placed within the tire casing before the latter is mounted on the wheel-rim; a series of bearing-nuts, having radial bearings, and threaded into radial nut-openings in said base-ring; a series of plungers mounted to slide in said radial bearings, and project outwardly beyond the outer periphery of said base-ring; means carried by the outer ends of said plungers, for engaging the inner wall of the tire-casing, and supporting the latter; springs resting at their inner ends upon said bearing-nuts, and having their outer ends in engagement with said means for engaging the inner wall of the tire-casing; and means for preventing creeping of said base-ring upon the wheel-rim; whereby all of the parts above mentioned, may be bodily mounted upon and detached from the wheel-rim, by a lateral movement upon the latter.

1,424,232. APPARATUS FOR COATING CAKES, ETC. FREDERICK BEERS, New Rochelle, and HOWARD L. POWELL, New York, N. Y., assignors to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1920. Serial No. 406,448. 4 Claims. (Cl. 91—3.)

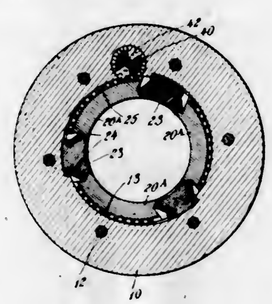
1. In cake coating apparatus, the combination of a conveyor of which coated articles are placed, and having a delivery point, means for continuously progressing trays to be filled beneath said conveyor to a position beneath said point and beyond the same, and means for automatically periodically moving said delivery point slowly a short distance forwards, and then quickly to the rear, as the rear end of a tray passes beneath the same, to position the same above the forward end of a following tray.

1,424,233. PACKING FOR HYDRAULIC JACKS. GEORGE W. BERRY, Erie, Pa. Filed Feb. 23, 1921. Serial No 447,299. 12 Claims. (Cl. 138—9.)



1. The combination with relatively movable parts, packing glands arranged exteriorly and interiorly of said parts, and means for adjusting the interiorly arranged glands from without said parts without separation of the latter.

1,424,234. COOLING DEVICE FOR AIR-COOLED ENGINES. JAMES BOWEN, Swansea, Wales. Filed Oct. 18, 1920. Serial No. 417,820. 2 Claims. (Cl. 123—171.)

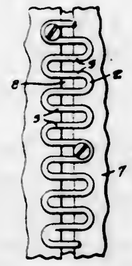


1. A cooling device for air cooled engines, comprising a perforated air chamber adapted to be fitted over the cylin-

der end around the top fin, means consisting of an ejector fitted on the end of the exhaust pipe of the engine, and connected to said air chamber by suitable piping, all in such manner that air is drawn from the air chamber at

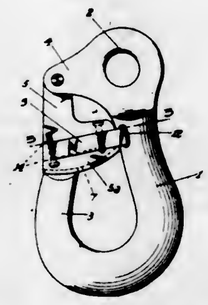
each exhaust stroke of the engine and is replaced by fresh air entering through the perforations in said air chamber, and a constant current of cool air is caused to flow over the cylinder end while the engine is working.

1,424,235. CHUCK. WILHELM B. BRONANDER, Montclair, N. J. Filed July 10, 1918. Serial No. 244,226. 2 Claims. (Cl. 279—73.)



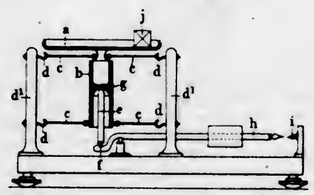
1. A chuck comprising a housing having a plurality of spaced eccentric cam surfaces, an actuating ring rotatively mounted in the housing, said ring being constructed with openings, gear teeth on the periphery of the ring, gripping jaws in said openings movable with the ring and over said cam surfaces, a spur-toothed pinion in mesh with said gear teeth, an actuating spindle for the pinion, means for locking the spindle against rotation, and a lost motion connection between the spindle and the pinion.

1,424,236. MANUFACTURE AND PRODUCTION OF BROMODIETHYLACETYLCARBOXYALKYL - UREA COMPOUNDS. JÜRGEN CALLSEN, Elberfeld, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne on the Rhine, Germany. Filed Aug. 8, 1921. Serial No. 490,738. 2 Claims. (Cl. 260—125.)



1. The herein described bromodiethylacetyl carboxyalkyl urea compounds being generally crystalline products soluble in the usual organic solvents, soluble with difficulty in water, being split up by treatment with hot caustic soda lye; and being valuable soporifics and sedatives, substantially as described.

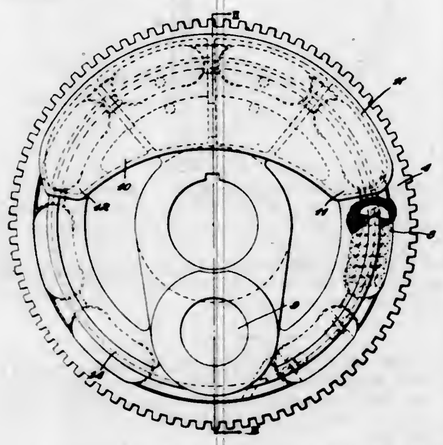
1,424,237. GEAR RACK. GORDON F. CANE, Oakland, Calif., assignor to American Automatic Lock and Lift Company, San Francisco, Calif., a Corporation of California. Filed Dec. 4, 1920. Serial No. 428,416. 4 Claims. (Cl. 74—27.)



1. In a rack for a gear, a base having a longitudinal opening, a continuous wire bent in substantially plaited convolutions secured to said base and overlying said opening whereby the teeth of said gear may engage in the straight sections of said wire and extend into said opening.

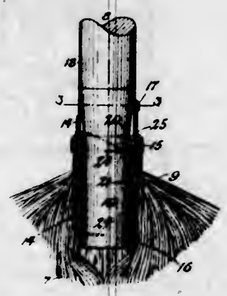
1,424,238. BUTT HOOK. EVA E. COCHRAN, Lodi, Calif. Filed Mar. 28, 1922. Serial No. 547,376. 6 Claims. (Cl. 24—241.)

1. A butt-hook including with a hook member, a closure member for the hook-opening movably mounted to the hook, and a pair of opposed and automatically acting catch members for latching the closure member to the hook in a closed position.



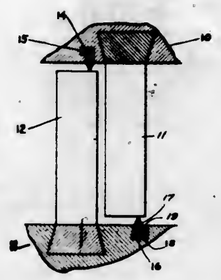
1,424,239. SUSPENSION FOR BALANCE PLATES. JAMES TIBUACE FELIX CONTI, Paris, France, assignor to Société Industrielle d'Instruments de Précision, Paris, France. Filed June 5, 1920. Serial No. 386,772. 1 Claim. (Cl. 265—27.)

In a balance, a balance plate, a suspension device therefor comprising a substantially vertical member extending



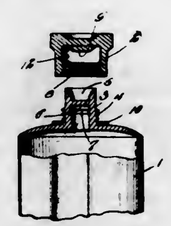
rigidly from the plate, a knife-edge suspension, a second vertical member supporting the first vertical member and thereby the plate on the knife-edge, and a plurality of flexible inextensible filaments stretched horizontally between fixed points of the balance and the first vertical member in such a manner as to permit only very slight vertical movements of the balance plate and to eliminate lateral pressure on the knife-edge.

1,424,240. GEAR WHEEL. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 6, 1921. Serial No. 435,323. 9 Claims. (Cl. 74—20.)



1. In combination, in a gear wheel, a gear rim having inwardly extending lugs, a gear center having outwardly extending lugs, resilient elements interposed between the lugs of the gear rim and those of the gear center, and a counter-balance integral with the gear center and extending radially beyond the resilient elements, the counterbalance being of a form which permits the passage of the gear rim thereover.

1,424,241. BROOM. JOHN EDWARD ELDRIDGE, Buffalo, N. Y. Filed Feb. 8, 1919. Serial No. 275,715. 1 Claim. (Cl. 306—30.)

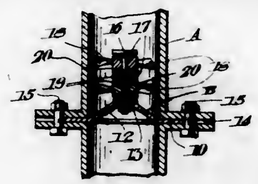


A broom and handle connection comprising an outer screw threaded ferrule connected to the broom, an inner screw threaded ferrule connected to the handle engaging with the inner side of said outer ferrule, and a handle having a reduced unthreaded lower part which engages with the inner ferrule and an enlarged upper part which engages with said outer ferrule, said reduced and enlarged parts being integral and both removable from said broom.

1,424,242. BLADING. WARREN B. FLANDERS, Essington, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 4, 1920. Serial No. 408,184. 5 Claims. (Cl. 253—77.)

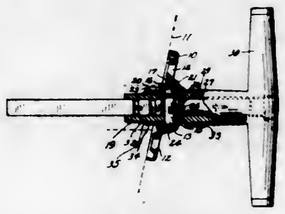
1. In an elastic-fluid turbine, the combination of rotor blades, a stator, renewable wearing strips secured to the stator in line with said rows and having sharp edges adjacent to the blade tips and substantially opposite the centers of the throats of the nozzles formed between adjacent blades.

1,424,243. DISPENSING TUBE AND CLOSURE THEREFOR, AND METHOD OF JOINING SAME. FREDERICK L. FOX, Washington, D. C. Filed Oct. 20, 1920. Serial No. 418,153. 16 Claims. (Cl. 221—60.)



1. The combination with an exteriorly threaded spout, of a closure, interiorly threaded near its open end and screwed on the spout and provided with a recessed side wall beyond the threaded portion and also provided with means to displace a portion of the spot and thereby effect attachment of the closure to the spout incident to the initial threaded connection of the closure to and on the spout.

1,424,244. ROTARY FUEL MIXER. FRANK FUNKE, Almonte, Ontario, Canada, assignor to The Canadian Vaporizer Company, Limited, Toronto, Ontario, Canada, a Corporation of Canada. Filed Aug. 20, 1921. Serial No. 493,965. 1 Claim. (Cl. 48—180.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



A fuel vaporizer of the character described comprising a plate having a central opening with a pair of radial arms therein terminating in a centre piece, the edges of the plate being formed with U-shaped recess designed to be engaged by bolts passing through the flanges of the pipes forming the intake manifold on an automobile engine, a screw-threaded spindle extending through the centre piece and having a plurality of spaced annular flanges thereon, a nut on the spindle bearing against the

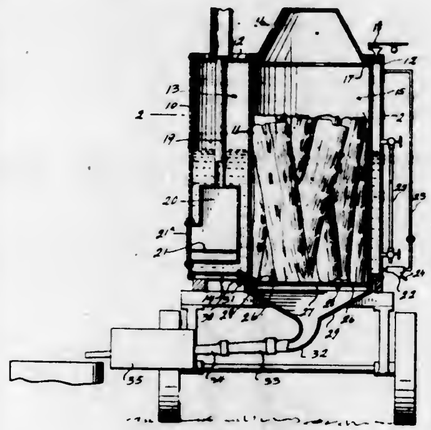
centre piece and designed to support the spindle in position above the same, a plurality of fans arranged between

the flanges, the hubs of the fans being recessed on the upper and lower walls to form ball races, and balls located in the said races.

1,424,245. LOCKING HANDLE. LOUIS W. GATES, New Haven, Conn., assignor to C. Cowles & Company, New Haven, Conn., a Corporation of Connecticut. Filed Dec. 27, 1921. Serial No. 524,822. 10 Claims. (Cl. 70—91.)

1. In combination, an escutcheon having an opening therethrough, a bearing mounted in said opening for angular adjustment relative to said escutcheon, means for preventing rotation of the bearing in the escutcheon, a lock spindle mounted to turn in said bearing, and means for locking the spindle to said bearing.

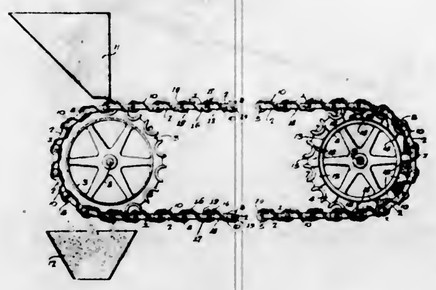
1,424,246. SAFETY-RAZOR HONE. WILLIAM F. GROGAN, Scranton, Pa. Filed Oct. 15, 1919. Serial No. 330,784. 1 Claim. (Cl. 51—214.)



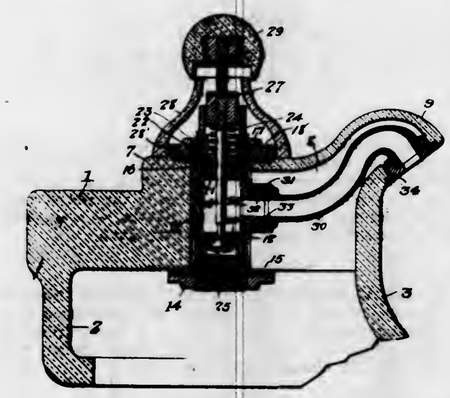
The combination with a holder comprising a cylinder, of a pair of semi-cylindrical abrasive members fitted therein and projecting therefrom at one end, the outer end portions of said members being beveled on their inner faces to define an acute angle between them.

1,424,247. CUSPIDOR. JOHN HAYES, Belle Vernon, Pa. Filed Jan. 23, 1922. Serial No. 531,261. 5 Claims. (Cl. 4—39.)

1. A cuspidor comprising, in combination, a base, an upstanding member carried by the base to provide a handle for transporting the cuspidor, a bowl supported by the base for swinging movement, a cover member for the bowl, and means for yieldingly supporting the cover member by the upstanding member, said means constantly urging the cover member toward the bowl when the bowl is underlying the cover member.



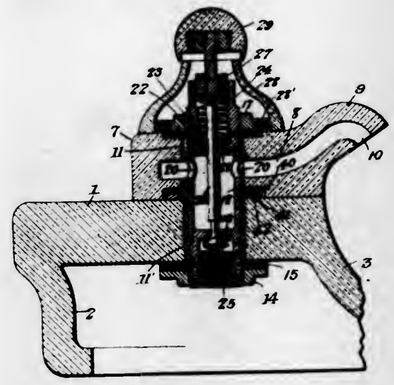
1,424,248. MEANS FOR EXTRACTING CRUDE SPIRITS AND ROSIN FROM YELLOW AND GREEN PINE STUMPS. JERRY M. JOHNSON, Crestview, Fla. Filed Jan. 10, 1921. Serial No. 436,202. 3 Claims. (Cl. 203—6.)



2. An extractor for sweating crude turpentine from wood comprising a body having an outer and inner wall to provide a steam and water space entirely surrounding the inner wall, the inner wall enclosing a retort chamber, a fire box forming part of the body and partially enclosed by the water space and having a flue extending upward through the water space, a removable cover for the retort chamber, means within the retort chamber for supporting wood therein but permitting the drainage of the extracted turpentine, and a bottom for the retort chamber having a fluid duct leading therefrom.

1,424,249. TRANSFER DRUMS FOR CONVEYERS. HOWARD E. KANTNER, Glenside, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 24, 1920. Serial No. 405,593. 4 Claims. (Cl. 198—140.)

1. The combination of an endless chain conveyer arranged to carry material on the upper and on the lower run; sprocket wheels around which the conveyer passes; and a transfer drum at the sprocket wheels for receiving the material from the upper run of the conveyer and transferring said material onto the lower run of the conveyer.



1,424,250. LAVATORY. JOHN F. KELLY, Trenton, N. J., assignor to Thomas Maddock's Sons Co., Trenton, N. J., a Corporation of New Jersey. Filed Mar. 29, 1922. Serial No. 547,705. 4 Claims. (Cl. 4—24.)

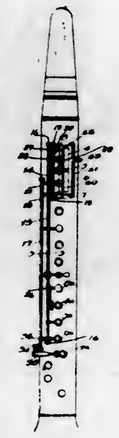
1. A drinking water supply for lavatories comprising a chamber within the slab including a spout-like extension having an outlet opening overhanging the bowl, a valve mounted in the chamber, and a discharge pipe connected to the valve casing extending through the chamber and extension and attached at its outer end within said outlet opening.

1,424,251. FAUCET ATTACHMENT FOR LAVATORIES. JOHN F. KELLY, Trenton, N. J., assignor to Thomas Maddock's Sons Co., Trenton, N. J., a Corporation of New Jersey. Filed Mar. 29, 1922. Serial No. 547,706. 1 Claim. (Cl. 251—156.)

An article of manufacture comprising a block of earthenware having substantially flat, parallel top and bottom faces, an arcuate extension at one end and above the plane of the top, a passageway through the block and

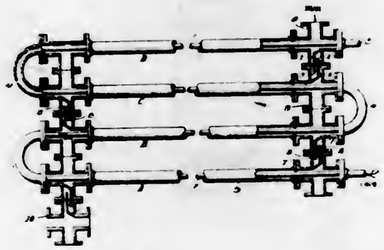
said arcuate extension, the arcuate extension constituting a curved spout overhanging one end of the block, and a vertical opening to receive a valve casing.

1,424,252. MULTIPLE-RIM RESILIENT WHEEL. HENRY MCDERMOTT, Leadville, Colo. Filed July 1, 1921. Serial No. 481,861. 3 Claims. (Cl. 301—5.)



1. A wheel having a hub, a plurality of spokes carried by the hub, certain of said spokes being relatively short and being positioned 90° apart, a rim connecting the spokes at their outer ends and formed at the points of its junction with the relatively short spokes to provide substantially semi-cylindrical bearing members, a crank for each bearing member, each crank comprising an axle journalled in the bearing member and formed with relatively offset crank disks projecting from opposite faces thereof, a bearing cap for each bearing member, an annular rim member carried by the crank disks projecting laterally of one side of the first named rim, and a similar annular rim member carried by the crank disks projecting laterally of the opposite side of the first named rim.

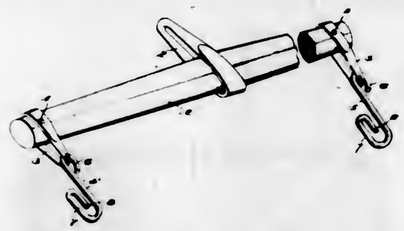
1,424,253. CLARINET. JAMES DEAN MACKEY, Columbia, S. C. Filed May 25, 1921. Serial No. 472,405. 3 Claims. (Cl. 84—382.)



1. A clarinet comprising means for obtaining the tones of the lower register, means operable by the last means

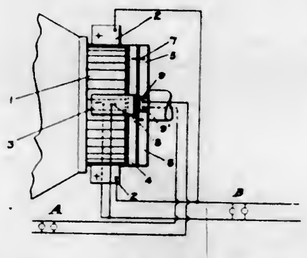
for obtaining the tones of the middle register, and manually operable means for controlling the last mentioned

means to render such means inactive or active by the first means.



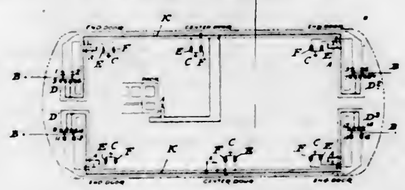
1,424,254. EVAPORATOR. RALPH MELLOR, Philadelphia, Pa., assignor to Kestner Evaporator Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 9, 1920. Serial No. 402,374. 5 Claims. (Cl. 257—247.)

1. In a countercurrent horizontal evaporator, a vertical series of horizontal liquor tubes each provided with a heating jacket, said heating jackets being arranged for flow of heating vapor therethrough in series between an inlet for vapor on the uppermost jacket and an outlet for vapor and condensate on the lowermost jacket, said jackets including trapped by-pass connections intercepting condensate at intervals and directing it towards said outlet.



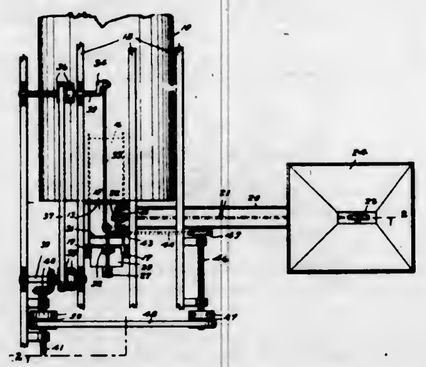
1,424,255. SINGLETREE. JOHN MICHEAL MOORE, Laurel, Miss. Filed June 9, 1920. Serial No. 387,770. 1 Claim. (Cl. 278—112.)

A single tree hook formed from a single length of round metal having a bend intermediate its ends to define a shank and an elongated bill arranged parallel to and in spaced relation to the shank, the terminal portion of said elongated bill being formed with a bend disposing the said terminal portion between and in spaced parallel relation to said shank and said elongated bill, whereby the said terminal portion is guarded, said guarded terminal portion being adjacent the first named bend to constitute a retaining means for a tug, one end portion



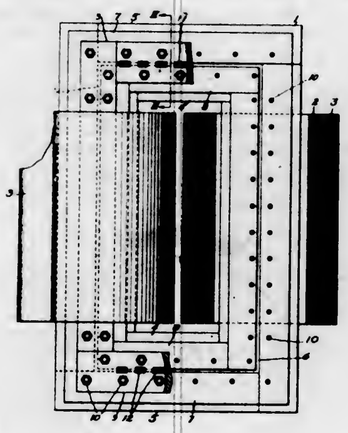
of said length of round metal being formed with an attaching eye disposed at right angles to the plane of said bill, the said guarded terminal portion, said bill and said shank being in the same plane.

1,424,256. ELECTRIC-CURRENT-CHANGING MEANS. CLYDE J. MYERS, Indianapolis, Ind., assignor to Swartz Electric Company, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 4, 1918. Serial No. 226,642. 5 Claims. (Cl. 175—364.)



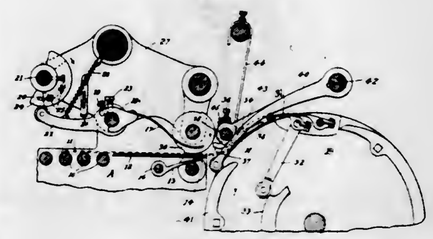
1. In combination, an armature, a continuous ring and a segmental ring on the armature shaft, a commutator for the armature having a brush contacting with the first ring and connections from a segment of the second ring to the first ring and from another segment to a segment of the commutator, substantially as set forth.

1,424,257. DOOR-ENGINE CONTROL CIRCUITS. GEORGE OAKLEY, Albany, N. Y., assignor to Consolidated Car Heating Company, Albany, N. Y., a Corporation of West Virginia. Filed Aug. 28, 1919. Serial No. 320,387. 10 Claims. (Cl. 105—341.)



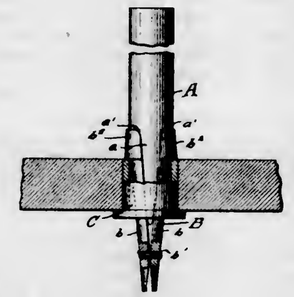
1. In a door operating system the combination with a door of a door closing circuit including a magnet, a switch for initiating the closing action of the door when the latter is open, and a supplemental circuit controlled by the door for energizing the same magnet while the door is closed.

1,424,258. FUEL-FEEDING APPARATUS. ELLIOTT M. OKINS, Auburn, Wash. Filed Nov. 18, 1920. Serial 424,839. 2 Claims. (Cl. 105—341.)



1. Apparatus for feeding fuel into a fire-box comprising a chute of channel-shaped cross-section arranged so that one end thereof projects into said fire-box, spaced guide members extending lengthwise of said chute about midway between the top and bottom thereof, a transverse partition plate extending cross-wise between the two sides of said chute above said guide members, a pusher member guided by said guide members and having a downturned forward end and means for reciprocating said pusher member.

1,424,259. COOLING SYSTEM. JOHN F. PETERS, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 30, 1920. Serial No. 400,281. 3 Claims. (Cl. 175—356.)

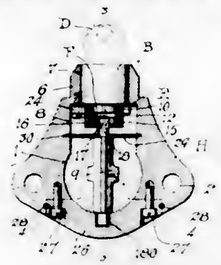


1. A transformer core comprising a plurality of elements disposed one within the other and in spaced relation, and side members secured to said elements and spanning the space therebetween to form a continuous passage in said core, said side members having apertures therefor adapted to communicate with said passage.

1,424,260. RELEASABLE FINGERS FOR OFFSET PRESSES. FRANK F. RICHARDS, St. Paul, Minn., assignor to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Apr. 1, 1921. Serial No. 457,635. 9 Claims. (Cl. 271—53.)

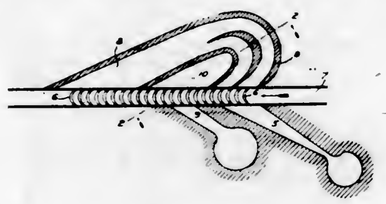
1. The combination of an offset press adapted to print different colors unto sheets from cylinders having a feeding table including a series of guide fingers associated with the stops on said feeding table and a series of guide fingers associated with the impression cylinder and means for automatically releasing said guide fingers out of the path of the sheets passing through said press to prevent streaking the printed side of the same.

1,424,261. BUSHING REMOVER. JOHN L. RUDOLPH, Delano, Minn. Filed Feb. 26, 1921. Serial No. 447,985. 1 Claim. (Cl. 29—88.2.)



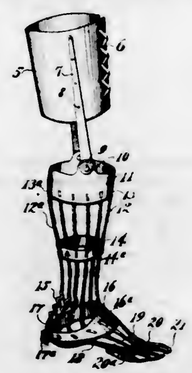
A bushing remover comprising opposed rockable members having semi-circular bearings for the interior walls of a bushing; shoulders semi-circular in cross-section formed on said rockable members; a drive shank having a tongue adapted to spread and hold said shoulders in engagement with the end of the bushing and said bearings in engagement with the adjacent inner walls thereof.

1,424,262. AUTOMOBILE LOCK. CHARLES H. RUST, Newark, N. J. Filed Apr. 13, 1921. Serial No. 461,170. 5 Claims. (Cl. 251—6.)



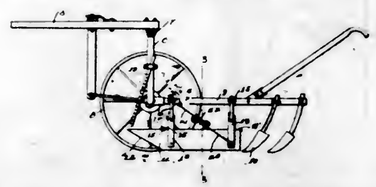
2. An actuating and locking mechanism of the character described including a casing having an opening therein, a lock mounted in said opening and having a rotatable part adapted to be connected to a member to be

rotated, a plate rigidly mounted axially of said rotatable part and having a seat on the edge thereof, and spring



means mounted on said casing and adapted to engage said plate to hold the said rotatable part against rotation.

1,424,263. TURBINE. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Co., a Corporation of Pennsylvania. Filed June 13, 1918. Serial No. 239,810. 6 Claims. (Cl. 253—66.)

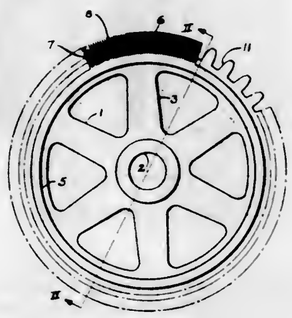


1. In a turbine, the combination, with a single row of moving impulse blades and means cooperating therewith whereby velocity energy of motive fluid is successively abstracted in two steps at separated peripheral portions of the turbine, of auxiliary means for impinging high velocity motive fluid against the blades between said separated portions for energy abstraction in a single step.

1,424,264. ARTIFICIAL LIMB. GEORGE HAMILTON SHRODES, Porterville, Calif. Filed Dec. 28, 1921. Serial No. 525,500. 3 Claims. (Cl. 3—7.)

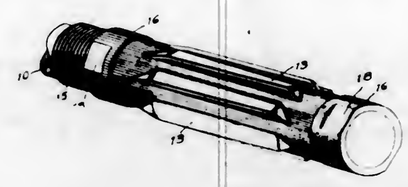
1. An artificial limb consisting of conventional upper construction and in combination therewith a plurality of wires forming the lower limb construction and foot, and a plurality of bands surrounding said wires and attached thereto in a manner to maintain a predetermined shape, all substantially as set forth.

1,424,265. BOLL-WEEVIL CATCHER. WILLIAM STANALAN, Garrison, Tex. Filed Oct. 19, 1920. Serial No. 417,963. 1 Claim. (Cl. 43—133.)



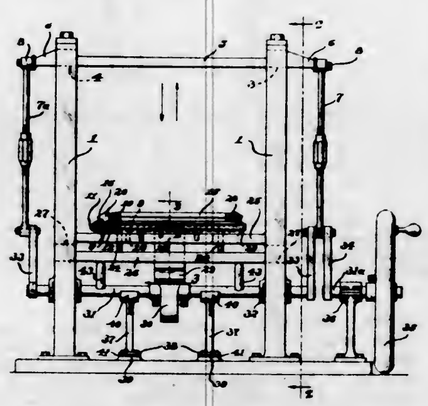
In combination with a cultivator and the beams thereof, containers adjustably supported on the beams, each container having an open portion, a flanged bar having openings, a plurality of bars having one of their respective ends disposed in the openings, a second bar having connection with the opposite ends of the bars, and said second bar being recessed to be fitted over the upper edge of one end of the container for securing the bars to the container.

1,424,266. KNIFE-BLADE SWITCH. ALEXANDER H. TRUMBULL, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 11, 1919. Serial No. 303,367. 22 Claims. (Cl. 200—162.)



5. In a knife blade switch, an insulating sleeve, a shaft mounted to turn therein, a switch blade mounted to turn about said sleeve, and means for operatively connecting said shaft with and insulating the same from said blade.

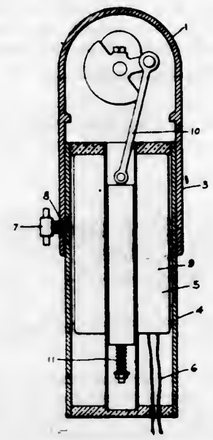
1,424,267. MOLDED GEAR. FRANK H. TUPPER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,557. 12 Claims. (Cl. 74—28.)



12. A composite gear comprising a metal center and a non-metallic working body portion of fibrous sheet material and a binder, said sheet material consisting of an elongated strip having its sides notched to form a dovetail shape by folding along the successive notches disposed around said metal center so that the laminations will be radial with respect to the center.

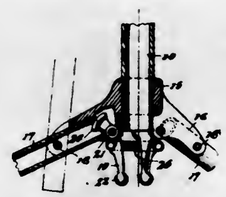
1,424,268. REAMER. ANTON M. VEDOE, Quincy, Mass. Filed Jan. 3, 1921. Serial No. 434,469. 9 Claims. (Cl. 77—76.)

1. A reamer comprising, in combination, a reamer body, a sleeve surrounding the body and formed of a sheet metal blank having portions struck-up transversely of the blank to form reamer cutting blades, the blank being bent lengthwise to convert it into a sleeve, and means for securing the sleeve upon the reamer body.



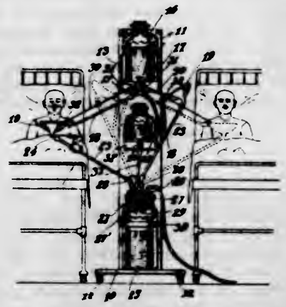
1,424,269. MACHINE FOR AFFIXING MATERIAL TO AND EMBELLISHING BOOK COVERS. MAX W. VOIGTMAN, St. Louis, Mo. Filed Sept. 23, 1920. Serial No. 412,300. 2 Claims. (Cl. 11—2.)

1. A machine of the character described comprising a bed adapted to support a book-cover, a plate beneath said bed having an upturned flange surrounding said bed, members hingedly connected with said flange, a frame enclosing said flange, means for lifting said frame against said members to position the latter against said cover, and mechanism for raising said bed subsequent to the operation of said means to position said members against said frame.



1,424,270. ADJUSTING DEVICE FOR THROTTLE GOVERNORS. OMER B. WHISENAND, Indianapolis, Ind., assignor to Swartz Electric Company, Indianapolis, Ind., a Corporation of Indiana. Filed Nov. 26, 1919. Serial No. 340,931. 4 Claims. (Cl. 137—140.)

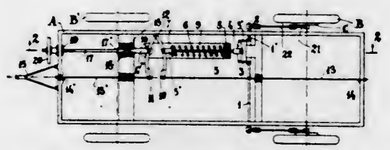
1. A throttle governor comprising a casing, throttle governing means including a plunger connected to said casing and to the throttle valve of an engine, a second casing slidably mounted in parts of the first casing, a solenoid mounted in the second casing, and means for



adjusting said second casing for regulating the position of said solenoid relatively to said plunger.

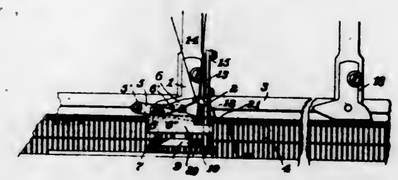
1,424,271. COLLAPSIBLE STAND. ROBERT D. H. ANDERSON, New York, N. Y. Filed Jan. 25, 1921, Serial No. 439,732. Renewed Dec. 21, 1921. Serial No. 524,012. 5 Claims. (Cl. 248—41.)

1. A device of the character described comprising a standard, legs pivoted thereto at points spaced from the inner ends of the legs, said inner ends being socketed, and spring held dogs mounted on the standard and adapted to enter the sockets to hold the legs against movement.



1,424,272. FLUSHING CUSPIDOR. ROY HORACE ASKENY, Morgantown, W. Va. Filed May 27, 1921. Serial No. 473,138. 4 Claims. (Cl. 4—40.)

1. A device of the class described comprising a support, a container for flushing fluid on said support, a cuspidor

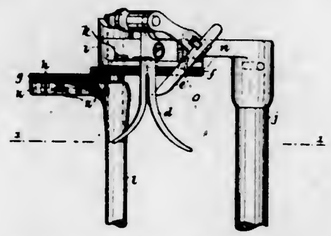


movable independently toward and away from the support, means for conducting fluid from said container to the cuspidor to flush the latter, a drain pipe for the cuspidor, a receiving chamber into which said drain pipe empties a disinfectant tank on said support, and means for supplying a disinfectant from said tank to said chamber.

1,424,273. TRAILER BRAKE. ACHILLE ARATO, Turin, Italy, assignor to Ferruccio Botta, Turin, Italy. Filed Apr. 27, 1921. Serial No. 465,014. 6 Claims. (Cl. 188—3.)

2. A brake gear for trailers comprising means for actuating the brakes, a support mounted on the trailer frame, a rod connected with the said brake actuating means and freely engaged in said support, a spring in said support acting on said rod to hold said brakes applied, an arm pivoted at an intermediate point in said support, a second arm engaging said rod at an intermediate point of the same arm and having one end pivoted to the first named arm, members each connected with the free end of one of said arms and adapted to be connected with a tractor part, each of said connecting members and associate arms cooperating to hold said brakes released as long as a pull acts on said connecting means.

1,424,274. KNITTING MACHINE. HERBERT T. BALLARD, Norristown, Pa. Filed Feb. 7, 1920. Serial No. 356,808. 6 Claims. (Cl. 66—12.)

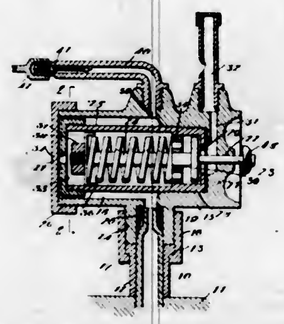


1. In combination with a main yarn guide eye of a knitting machine, repeatedly shifting supplemental guide means for two yarns to shift the yarns in respect to the main yarn guide eye, one shift varying in respect to the other to vary the feeding conditions, one yarn appearing on the surface at one shift at predetermined points to make a substantially straight edge change in the pattern and the other yarn at the other shift appearing on the surface of the fabric at indeterminate points to make an irregular edge to the pattern and means for repeatedly shifting the yarn guides during the knitting of each of a plurality of courses, substantially as described.

1,424,275. SCREW DRIVER. CLARENCE A. BATES and EDWIN FULTS, Canastota, N. Y. Filed May 23, 1921. Serial No. 472,018. 1 Claim. (Cl. 145—50.)

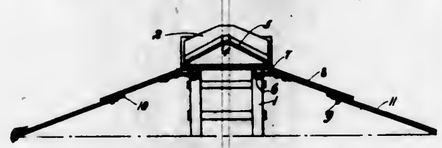
A screw driver including a handle having a shank provided at its outer end with a reduced ear, a member having an opening therein receiving the ear and being pivotally connected to the ear, said member having a reduced extension on the outer face thereof projecting in one direction from the opening therein, and having a sharpened end to provide a blade, said member at the end thereof opposite the blade being formed with a central extension arranged right angularly with respect to the first mentioned extension and also terminating in a blade, and a spring secured to the shank and having a bifurcated end designed to contact with the body of the member when the member is swung to bring the first mentioned blade over the shank and the second mentioned blade in longitudinal alignment with the shank, and to also contact with the shoulders provided between the member and the second mentioned blade when the member is swung right angularly with respect to the shank.

1,424,276. WARP TWISTING-IN MACHINE. JOHN H. BECKER, Brooklyn, N. Y., assignor to Warp Twisting-In Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,124. 2 Claims. (Cl. 289—1.)



1. A thread twisting means, including twisting members one of which is movable against and in wiping contact with the other, one of said members including a supporting device and a rocking pad carried by said device and affording the working face of said member and having a bearing, said device having a fulcrum for said bearing opposing greater resistance at said bearing to displacement of the pad from the other member than is opposed to such displacement elsewhere in the area of the pad.

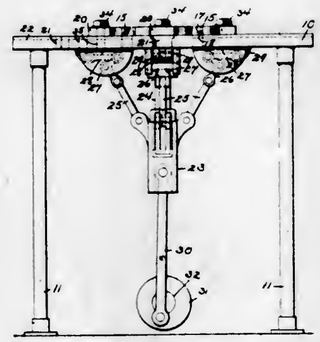
1,424,277. NUT LOCK. THEODORE H. BROWN, Minneapolis, Minn., assignor, by direct and mesne assignments, of one-third to Charles E. Ovenshire, one-third to John C. MacDonald, and one-third to Edward C. Ovenshire, all of Minneapolis, Minn. Filed June 23, 1921. Serial No. 479,788. 1 Claim. (Cl. 151—29.)



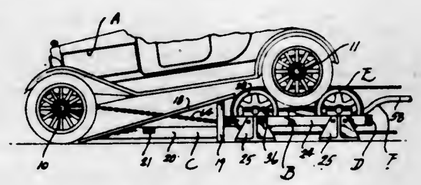
A nut lock comprising a cap and a two-part nut within said cap, said cap having walls that converge toward its open side and operate to press the nut sections against the threaded end of a bolt to which they are applied, the convergence of the wall of said cap being such that the nut sections will not accidentally fall out of the cap when removed from the bolt.

1,424,278. LOW-PRESSURE ALARM FOR PNEUMATIC TIRES. WALTER HENRY BROWN, Pasadena, Calif. Filed Oct. 25, 1919. Serial No. 333,163. 1 Claim. (Cl. 116—34.)

A low pressure alarm comprising a casing attachable to a source of pressure, an alarm member carried by the casing, a pair of valve members, a stem on which the valve members are carried, said casing having a pair of valve seats located at spaced points for the reception of said valve members, each controlling communication between the source of pressure and the said alarm member and toward one of which the respective valve member is shiftable when the other valve member is moved away from its seat, and a spring for shifting the valve stem to simultaneously move said valves, a pressure supply connection leading to the said casing, and means to close one of said valves against the tension of said spring, including an extension carried by the valve stem and projecting exteriorly of the casing, as described.



1,424,279. CAR-LOADING APPARATUS. DELONA L. CALAHAN, Fairfax, Wash. Filed Apr. 7, 1921. Serial No. 459,217. 3 Claims. (Cl. 193—29.)



1. Loading apparatus of the class described including a table having its top inclined downwardly toward the sides thereof and from an intermediate point to form a ridge inclined downwardly and forwardly, and upstanding means at the back of the table constituting an abutment for articles directed onto the table.

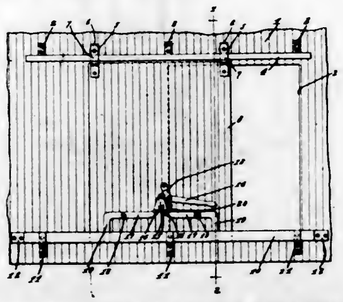
1,424,280. MACHINE FOR ALIGNING THE FLANGES OF TRAYLIKE ARTICLES. GEORGE W. CASE and JOHN WM. ROBERTS, Passaic, N. J. Filed Feb. 18, 1920. Serial No. 359,614. 2 Claims. (Cl. 93—36.)

1. A machine of the kind described comprising a table portion for supporting a flanged tray-like article, dies adapted to move substantially perpendicular to the edges of the article and constructed so as to bend said flanges inward between the corners of the article, said dies being constructed to bend said flanges more acutely closely adjacent to the base of the flanges.

1,424,281. POWER ATTACHMENT FOR AUTOMOBILES. THOMAS J. CHARON, Park River, N. Dak. Filed Sept. 20, 1921. Serial No. 501,992. 6 Claims. (Cl. 74—106.)

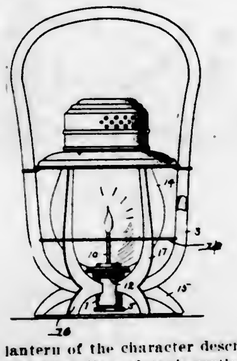
3. In a device of the class described, the combination of a frame, a shaft, means hingedly connecting said shaft on said frame, said shaft being rotatable with respect to said means, and a lever oscillatively mounted in said frame for oscillating said shaft.

1,424,282. VEHICLE-WINDOW DEVICE. HENRY CLAUSEN, San Francisco, Calif. Filed Sept. 28, 1921. Serial No. 503,814. 2 Claims. (Cl. 292—256.)



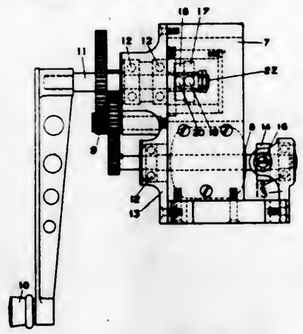
1. As an article of manufacture, a clamping device for a pair of windows comprising a body portion and a pair of angle clips, one adapted to clamp one and the other adapted to clamp the other of said windows, tracking means on said plate by which said clips are constrained to move parallel to each other and at right angles to said windows, a lower member pivoted at its center to said body plate and at each end pivoted to one of said angle clips, a screw

1,424,291. COMBINATION BROOM. DAVID WALTER FRANK, Bethlehem, Pa. Filed Jan. 29, 1920. Serial No. 354,997. 6 Claims. (Cl. 7—1.)



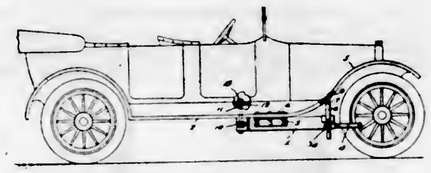
6. A device of the character described including a head, a handle therefor, a shovel pivotally connected to said head, a lever on said handle and a lift-bar pivoted at one end to the shovel and at the other end to said lever.

1,424,292. FREIGHT-CAR DOOR. LEON FRANKLIN, Evansville, Wis. Filed Apr. 27, 1921. Serial No. 464,966. 1 Claim. (Cl. 292—342.)



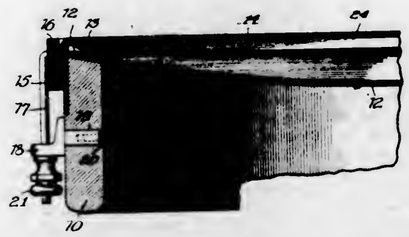
The combination with a car structure and a rail parallel therewith and spaced therefrom, the inner face of the rail being inclined downwardly and inwardly towards the car structure, of a sliding door supported between the rail and car structure, oppositely extending levers fulcrumed on the door, wedging members carried by and integral with the levers and normally projecting between the door and rail, an actuating lever supported by the door, link connections between said actuating lever and the oppositely extending levers, and a spring connected to one of the levers for holding the wedging members projected into frictional engagement with the rail and door.

1,424,293. LANTERN. JOHN C. FROSTEAD, Duluth, Minn. Filed Dec. 9, 1921. Serial No. 521,082. 3 Claims. (Cl. 240—38.)



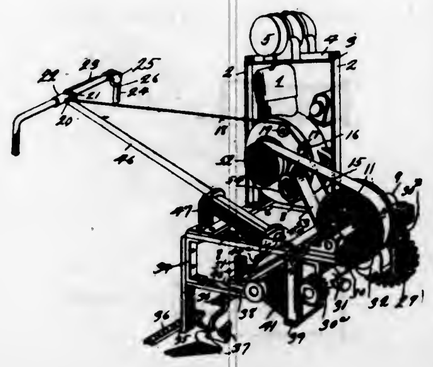
1. A signal lantern of the character described including a tubular combined handle and tank vertically surrounding the lantern.

1,424,294. SIGNALING UNIT FOR WIRELESS TELEGRAPHY. SYDNEY GEORGE FROST, Twickenham, England. Filed May 11, 1922. Serial No. 560,007. 5 Claims. (Cl. 250—17.)



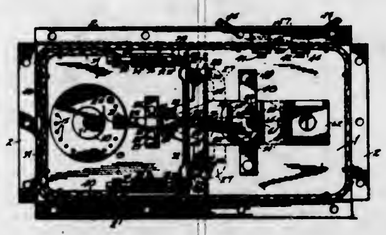
1. A signaling unit for wireless telegraphy or the like comprising in combination an electric generator, a rotor therein, means for rotating the rotor, connections for associating the rotor in a transmitting circuit, and means mechanically controlled by said first means and operating in conjunction with the rotor in said connections for transmitting telegraphic signals.

1,424,295. LOCK FOR MOTOR VEHICLES. DAVID GAGIN, Boston, Mass., assignor of one-fifth to Thomas J. Duggan, Boston, Mass., and one-fifth to James A. Alcardi, Jr., Dorchester, Mass. Filed May 28, 1921. Serial No. 473,224. 4 Claims. (Cl. 188—31.)



1. A lock of the class described comprising a member, means for connecting said member with a part of the vehicle, a yoke member for engaging a wheel of the vehicle and means for locking said yoke member to the first mentioned member.

1,424,296. BANJO. PAUL GARDIE, Chicago, Ill. Filed Apr. 21, 1921. Serial No. 463,379. 4 Claims. (Cl. 84—270.)

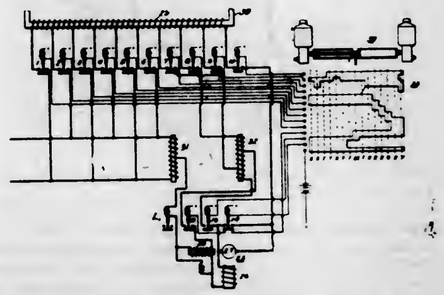


1. A banjo comprising a frame having an annular rim, a head stretched over said frame, an opening in said head, and a bowl supported between said head and rim and completely closing the space within said rim.

1,424,297. POWER CULTIVATOR. EDWIN W. GETZ, Loudonville, Ohio. Filed June 14, 1921. Serial No. 477,481. 8 Claims. (Cl. 180—19.)

1. A cultivator comprising a frame, brackets pivoted to said frame and movable in a horizontal plane, said brackets extending rearwardly and having their rear ends connected together, traction wheels pivoted on said brackets adjacent their rear ends, internal gearing carried by the traction wheels, a source of power carried by the frame, gear connections between the driving wheels and the source of power, said gear connections being located forwardly of the pivotal points of the rearwardly extending wheel supporting brackets.

1,424,298. LOCK FOR IGNITION CIRCUITS. MARVIN F. GIFFORD, Newaygo, Mich. Filed Aug. 12, 1920. Serial No. 403,034. 6 Claims. (Cl. 200—45.)



1. A locking device for an electrical circuit comprising a casing, a pair of conducting contact members disposed therein, a slidable carrying plate disposed in said casing, said carrying plate being formed with a detent at one end thereof, means for guiding said carrying plate in its slidable movement, a conducting connector carried by said carrying plate, a stem mounted in said casing for rotatable movement, a plurality of disks mounted on said stem, each of said disks being provided with a notch in its peripheral edge, tension means for normally holding said connector in contact with said members and said detent in the registering notches in said disk, means for occasioning movement of said carrying plate to move said connector out of contact with said contact members and to withdraw said detent from said registering notches, and means for operating said disks to lock said carrying plate in said last named position, wherefor re-closing of the circuit is prevented.

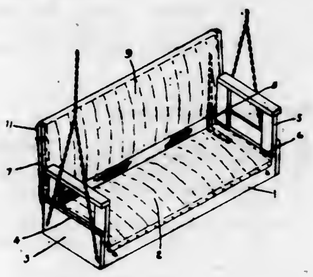
1,424,299. UNIVERSAL JOINT. RICHARD A. HARTMANN, Hartford, Conn., assignor to H. S. & S. Manufacturing Co., Hartford, Conn. Filed Mar. 10, 1921. Serial No. 451,085. 3 Claims. (Cl. 64—102.)

3. A joint of the class described comprising a pair of yoke members, trunnions carried thereby, each trunnion having a tapered portion and a screw threaded extremity, a ring member having openings therein through which the trunnions pass, bearing sleeves located in the openings and having tapered bores engaging the tapered portions of the trunnions, nuts on the extremities for adjusting the sleeves in the openings, said openings having elongated pockets in their walls, conduits connecting the pockets together and means for introducing lubricants into said pockets.

1,424,300. CONTROL SYSTEM FOR SINGLE-PHASE MOTORS. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 13, 1917. Serial No. 148,418. 2 Claims. (Cl. 172—274.)

1. The method of energizing a dynamo-electric machine of the commutator type provided with a cross-field winding, said machine being associated with a source of alternating-current, a reactor, and suitable switching means therebetween to establish a doubly-fed system of connections including an intermediate tap, which comprises, at times, employing said reactor as a preventive device, at other times employing said reactor solely as a current-limiting reactor, and, at still other times, employing said reactor as an auto-transformer in adjusting the voltage applied to said machine.

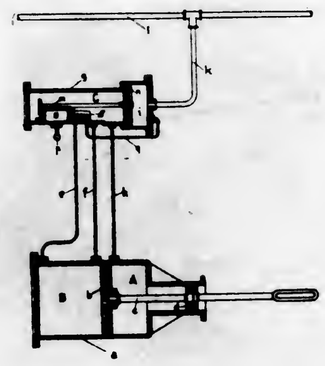
1,424,301. CLASP FOR GARTERS, ETC. ERASMUS HELM, Tuxedo Park, N. Y. Filed Sept. 7, 1921. Serial No. 499,075. 2 Claims. (Cl. 24—253.)



1. A garment supporter comprising a strip of elastic material, a clasp secured to one end of the elastic ma-

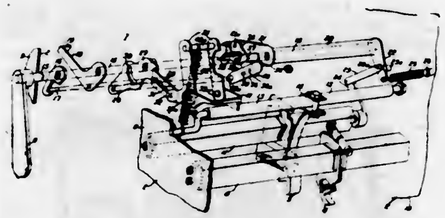
terial, and another clasp secured to the other end of the elastic material and consisting of a pair of substantially U-shaped members hingedly connected together to form a substantially hollow body, the jaws having inter-engag-

ing teeth and springs mounted within the hollow body and having engagement with the hinging connection of the jaws to maintain the teeth of the jaws normally in interengaging relation.



1,424,302. FOLDING SWING. CASSIUS B. HELMS, Indianapolis, Ind., assignor of forty per cent to Ivan M. Helms, Indianapolis, Ind. Filed Sept. 12, 1921. Serial No. 500,105. 1 Claim. (Cl. 155—68.)

A folding swing comprising a seat portion, arms hingedly secured to the seat portion and adapted to fold inwardly thereover, upwardly extending end sections secured to the seat portion against which said arms rest when in open position, a back hingedly secured to one edge of the seat and adapted to fold over the seat and the inwardly folded arms with its ends resting on the upper edges of said end sections, the outer upper corners of said end sections being tapered, a water proof covering attached to said back and one edge of the seat, and means for removably securing the opposite edge of the covering to the opposite edge of the seat.

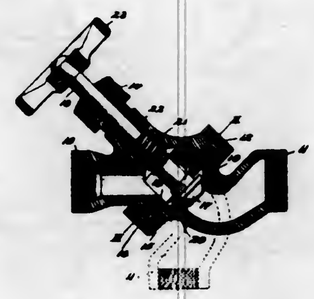


1,424,303. BRAKE APPARATUS FOR RAILWAY VEHICLES. WILHELM HILDEBRAND, Berlin, Germany, assignor to Knorr-Bremse Aktiengesellschaft, Lichtenberg, Berlin, Germany. Filed July 21, 1920. Serial No. 398,038. 3 Claims. (Cl. 303—32.)

1. In double chambered brake apparatus for railway vehicles, a brake cylinder of uniform working diameter, a piston movable therein dividing said cylinder into a working chamber and an idle chamber, a valve chamber, a valve movable in the said valve chamber, pressure equalizing communications on both sides of the piston opening into the said valve chamber, and an outlet to

atmosphere from the brake cylinder in front of the said piston, the said valve controlling the said pressure equalizing communication and also the said outlet.

1,424,304. CIRCUIT INTERRUPTER. CHARLES H. HODGKINS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 5, 1918. Serial No. 210,528. 15 Claims. (Cl. 200—70.)

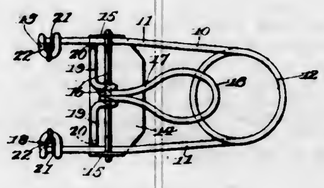


1. In a circuit interrupter, the combination with a movable contact member and an operating handle, of a movable member operatively connected to the movable contact member, a spring operatively connected to the movable member for operating the interrupter, a toggle device operatively connected between the handle and the movable member, and a spring co-operating with the toggle device for closing the interrupter and resetting the toggle device.

1,424,305. COMBINED VALVE AND PIPE UNION. JOHN OLOF HOFBERG, Philadelphia, Pa., assignor of one-half to Christian J. Steen, Philadelphia, Pa. Filed June 16, 1921. Serial No. 478,114. 4 Claims. (Cl. 251—157.)

2. A combined valve and pipe union, comprising two main members, one of said members providing a valve housing, the axis of said housing being set at an oblique angle to the main axis of the union, a valve spindle having suitable engagement in the housing for advancement and retraction, a cone-shaped head on the spindle, the second member being provided with a socket and the first member with a projection both having the

same taper as said head, a cone-shaped packing ring of the same taper as said head inserted in said socket

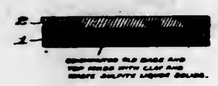


and forming a seat both for said projection and said valve head, and means for drawing the two members together to form a tight joint.

1,424,306. PAPER FILLER. WILLIAM HOSKINS, Chicago, Ill. Filed Mar. 31, 1921. Serial No. 457,503. 12 Claims. (Cl. 134—18.)

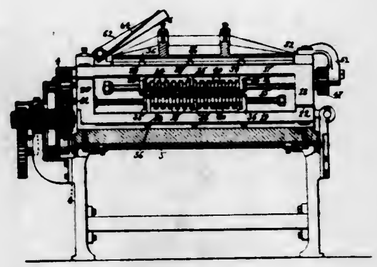
5. As an article of manufacture, powdered calcium sulfate provided with a superficial coating of calcium soap on its particles.

9. The process of preparing a filler material which comprises washing a pulverulent material having a slight solubility and capable of forming an insoluble soap with a soap solution, thereby forming a coating of insoluble soap upon its particles.



1,424,307. ANIMAL TRAP. HENRY JAMES HUGHEY, Jackman, Me. Filed June 7, 1921. Serial No. 475,670. 4 Claims. (Cl. 43—94.)

1. A trap comprising a plate having its ends upturned and apertured, a shaft supported in the upturned ends of the plate, a lever mounted on the shaft and having downwardly turned end portions, and a spring member including a pair of resilient arms connected at one end by spring coils formed integrally therewith, the other ends of the arms being angularly turned and outwardly bowed to provide gripping jaws, said arms being arranged to be engaged and held under tension by the downwardly turned portions of the lever.

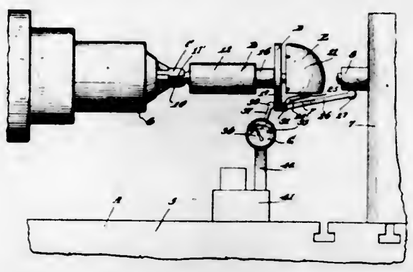


2. A trap comprising outwardly bowed spring jaws, means for holding the jaws in separated position at times, and means for attachment to each of the spring jaws at a position co-incident with the chord of the arc thereof to permit the jaws to grip a smaller animal therebetween.

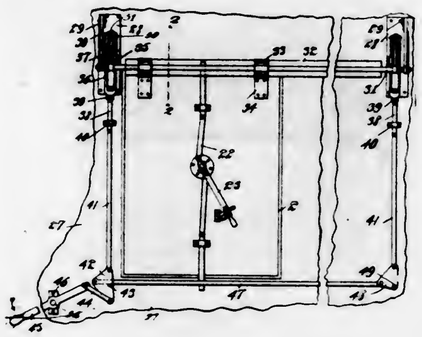
1,424,308. PROCESS OF MAKING ROADS. HENRY HICKS HUNT, Yonkers, N. Y., assignor to Robeson Process Company, New York, N. Y., a Corporation of New Jersey. Filed May 27, 1918. Serial No. 236,743. 4 Claims. (Cl. 94—23.)

1. The process of making roads which comprises regrinding old base and top of asphalt pavements to a sand-like fineness and forming a roadbed thereof with the aid of sulfite waste liquor.

1,424,309. MACHINE FOR CUTTING SHEETS OR LAYERS. CARL B. JOHNSON, Winchester, Mass., assignor to Lamb & Nash Company, Boston, Mass., a Corporation of Maine. Filed Jan. 16, 1919. Serial No. 271,479. 4 Claims. (Cl. 164—61.)



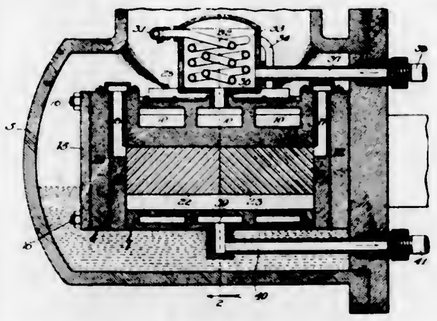
1. In a machine of the character described, in combination, a stationary framework, feeding rolls and drawing rolls spaced apart and supported by said framework, a cutter-carrying frame carried by said framework and located between said rolls and movable from between the same, and composed of members movable one with relation to the other, a rotatable shaft carried by one of said frame members, a second rotatable shaft carried by the other of said frame members, disk cutters mounted on said shafts, washers mounted on said shafts to space apart the disk cutters thereon, means for adjustably connecting the members of said frame to permit them to be moved as a unit and permit the said members to be moved toward and from each other to adjust the said cutters carried by one of said frame members toward and from the cutters carried by the other of said frame members, and means for rotating said shafts.



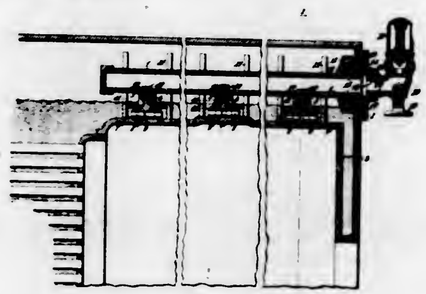
1,424,310. INDICATOR. HENRY J. KREBS, Dayton, Ohio. Filed Jan. 7, 1921. Serial No. 435,686. 9 Claims. (Cl. 33—172.)

1. The combination with a metal working machine including a bed, a chuck, and a work holder, of an indicator for the work and chuck including a gauge carried by the

bed, and operating and work engaging arms operatively connected together and carried by the chuck for engaging the work, and means carried by the chuck and actuated by said arms for operating the gauge.



1,424,311. DOOR HANGER. CHARLES A. KUNZ, Dubuque, Iowa. Filed Sept. 1, 1917, Serial No. 189,391. Renewed June 26, 1922. Serial No. 570,937. 1 Claim. (Cl. 20—24.)

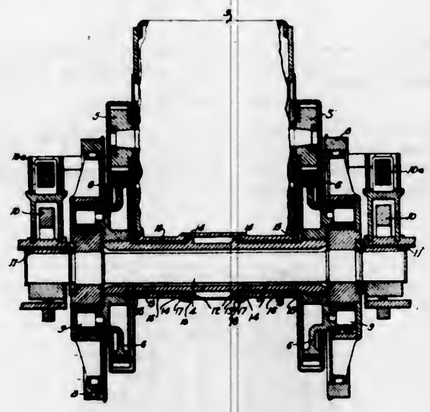


The combination with a casing having a door way, and a door cooperating with the door way, of hangers having their upper ends pivoted to the casing; a track carried by the lower ends of the hangers, the door being slidably mounted on the track; brackets on the casing; yokes slidable in the brackets; arms pivoted at their upper ends to the upper ends of the yokes and pivoted at their lower ends to the track; means for connecting the yokes; and mechanism for operating said means.

1,424,312. COMPRESSOR. GEORGE I. LEONARD, Chicago, Ill. Filed May 5, 1920. Serial No. 379,042. 4 Claims. (Cl. 230—6.)

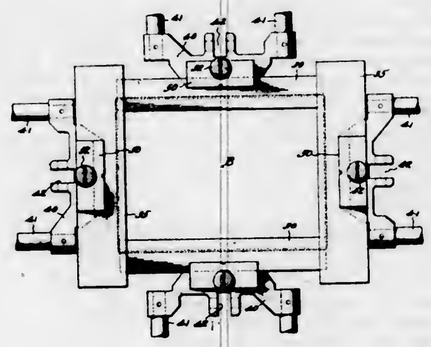
1. A rotary compressor comprising, in combination, a chamber for receiving a bath of sealing liquid, a gear case extending into said bath and containing an inlet and an outlet, intermeshing gears rotatable in said gear case and operating to compress the gas entering the case through said inlet and discharge it through said outlet, the liquid in said chamber being subjected to the pressure of the gas compressed by said gears, a water jacket for said gear case and extending into said bath, and means for conducting liquid from the body thereof in said chamber, into said gear case, said means being subjected to the cooling action of water in said jacket and cooling the liquid.

1,424,313. SAFETY SIGNAL DEVICE FOR BOILERS. JULIUS C. LUEDKE, Cedar Rapids, Iowa. Filed Jan. 13, 1921. Serial No. 436,978. 3 Claims. (Cl. 122—504.1.)



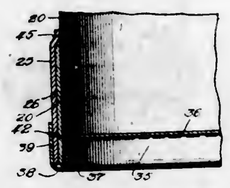
3. In a safety signal means of the character described, the combination with the boiler having a head sheet and a crown sheet, of a pipe, fusible signal buttons carried by said pipe to lie in proximity to the top of the crown sheet and extending radially from the pipe, said head sheet having an opening of a diameter large enough to permit introduction of said pipe and the fusible signal buttons carried thereby and removable means for sealing said pipe in said opening.

1,424,314. VEHICLE WHEEL. CHARLES A. MARIEN, St. Louis, Mo. Filed Oct. 3, 1921. Serial No. 504,882. 1 Claim. (Cl. 301—39.)



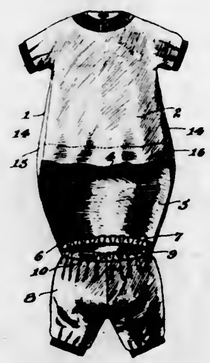
A vehicle wheel provided with a flanged detachable split rim, a pneumatic tire on said rim, and a solid band positioned over the rim between one flange thereof and the tire, the tire being inflated against the band said band having a tread projecting laterally therefrom and means for holding the band against movement when the tire becomes deflated.

1,424,315. BEARING. BENJAMIN S. MOORE, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 23, 1920. Serial No. 353,502. 7 Claims. (Cl. 105—136.)



1. In a vehicle, an axle member provided with axle and thrust-bearing surfaces, axle and thrust bearing members engaging said surfaces, and cover means completely enclosing all of said bearing surfaces.

1,424,316. TURN-IN FINGER FOR BOX-COVERING MACHINES. ALFRED J. MORRISON, Denver, Colo., assignor to Stokes and Smith Company, Summerdale, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1920. Serial No. 427,737. 10 Claims. (Cl. 93—54.)

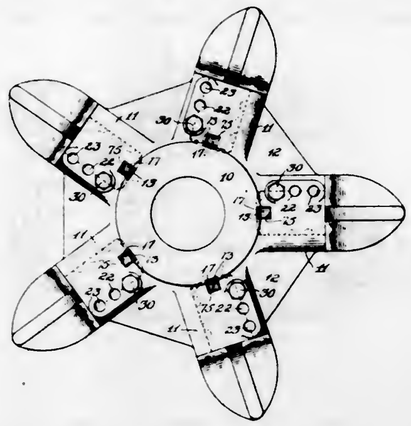


1. In a box covering mechanism, a first pair of oppositely-acting tuck-in-fingers adapted to overlap and cooperate with a second pair of fingers throughout a substantial range of variations in the spacing of said second pair.

1,424,317. GOLF BAG. NICHOLAS NESSER, Chicago, Ill., assignor to Nesser & Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 24, 1921. Serial No. 510,066. 3 Claims. (Cl. 150—1.5.)

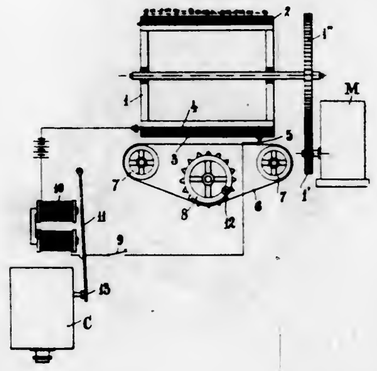
1. A golf bag comprising an integral raw hide bottom formed of a disk of said material having downwardly turned edges, the material of said edges being upwardly turned parallel with said downwardly turned portions to provide an annular channel, said upwardly turned portions rising above the plane of said disc, material forming the body of the bag extending into said channel and stitching passing through both walls of said channel and said body material closely adjacent the plane of said disc.

1,424,318. CHILD'S CLOTHING. ELLEN DENWOODY NESTER, Gardner, Mass. Filed Feb. 23, 1922. Serial No. 538,586. 3 Claims. (Cl. 2—145.)



2. A one piece buttonless suit comprising a blouse member and a pair of trouser members, the blouse member provided with an extension permanently connecting the trouser members therewith which is folded to form a portion of the lower edge of the blouse when the trouser members are in use on the wearer, and said trouser members provided with a waist belt adapted to hold them in place, substantially as described.

1,424,319. KEY BOLT. JOHN P. NORTHEY, Toronto, Ontario, Canada. Filed Nov. 2, 1920. Serial No. 421,360. 1 Claim. (Cl. 85—8.)



A washer for a slotted key bolt having a key seat formed in one face and an extension from the same face divided from the seat to its outer end and adapted to be against the stem of the bolt in alinement with the slot to resist springing and bending of the stem of the

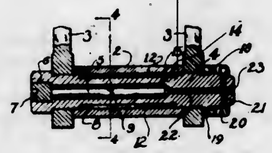
shank adapted to fit into such sockets, a plurality of holes drilled transversely through each of such sockets,

and notches on the shank of the tooth adapted to successively register with such holes as the shank is moved inwardly and outwardly in the socket.

1,424,328. CONTROLLING DEVICE FOR ELECTRIC CIRCUITS. CARLO VERRANDO, Turin, Italy. Filed June 1, 1920. Serial No. 385,873. 1 Claim. (Cl. 200—46.)

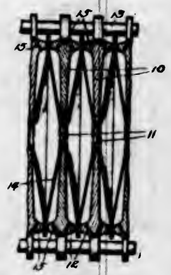
A device for controlling an electric circuit at regular and adjustable intervals of time comprising a rotary member, having an insulating portion, means for driving said member with constant speed, a common conducting part, a plurality of rows of contact parts inserted in said insulating portion and all connected with said common conducting part, said contact parts being spaced at regular distances from each other in each row, a contact finger adapted to engage said contact parts and an endless band carrying said finger and mounted in front of and across said rows of contact parts for shifting said contact finger, the electric circuit in which this controlling device is inserted having one pole connected with said common conducting part and the opposite pole connected with said contact finger.

1,424,329. ADJUSTABLE ELASTIC SHOULDER UNDERWEAR SUPPORTER. ALABAMA G. WALSH, Mobile, Ala. Filed Nov. 7, 1921. Serial No. 513,408. 2 Claims. (Cl. 241—12.)



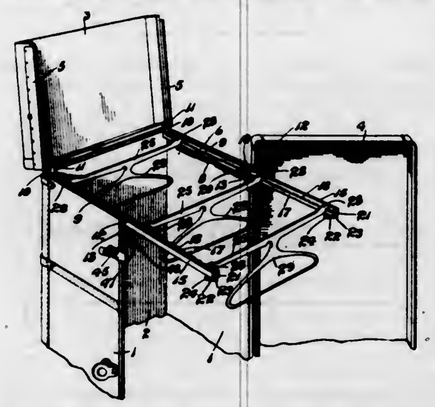
1. A lady's adjustable elastic shoulder underwear supporter comprising an elastic member, fastening means at each end thereof, and an inelastic member covering such elastic member and secured adjacent its ends thereto, with portions extended to cover said fastening means, said inelastic member being of greater width than the elastic member.

1,424,330. LOG BUNK. WILLIAM G. WHITE, Hoquiam, Wash. Filed Dec. 27, 1920. Serial No. 433,255. 6 Claims. (Cl. 105—384.)



1. In a log bunk, the combination within an oblong hollow frame, of a pivoted chock hung horizontally therein and substantially filling the space between the sides of said frame, a supporter, also pivoted to the frame within reach of the sweep of the chock, and manipulative means adapted to sustain or release the supporter at will.

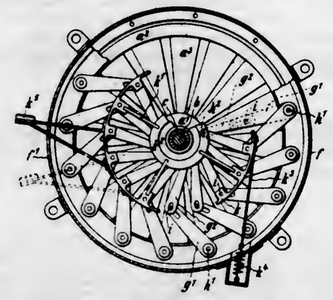
1,424,331. SPRING BOLT. THOMAS E. ADKINS, Canton, Ohio. Filed Jan. 24, 1921. Serial No. 439,567. 6 Claims. (Cl. 64—27.)



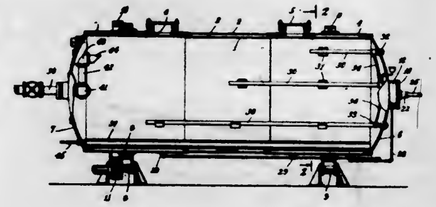
1. A journal bolt having a bearing portion and shouldered portions at the extremities of the bearing portion and a removable bushing formed of longitudinal sections surrounding the bearing portion of the bolt.

1,424,332. PROCESS OF PRODUCING A REPAIR IN FABRICS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed May 12, 1920. Serial No. 380,827. 7 Claims. (Cl. 18—59.)

1. The method of repairing fabric of filter press sacks or other articles which comprises the insertion of vulcanizable material in the portion of the fabric to be repaired, and curing said material to cause it to adhere to said fabric and form a continuation of the body thereof.



1,424,333. TRUNK GARMENT-HOLDING RACK. JOHN THOMAS BATTS, Grand Rapids, Mich. Filed May 7, 1921. Serial No. 467,625. 9 Claims. (Cl. 211—16.)



8. In combination with a trunk having a movable top, a rack for holding garment hangers mounted in the trunk below the top and including a relatively stationary rack bar and a second rack bar pivotally connected thereto at its outer end for movement from a folded position above the first rack bar to a position in alinement therewith, means on the rack bars for slidably carrying garment hangers when the same are in alinement, and interengaging means at the free ends of the bars for releasably locking the same in folded position.

1,424,334. DEVICE FOR TEMPORARILY CONVERTING A CONTINUOUS RAY PENCIL INTO AN INTERMITTENT ONE. PAUL BECKER, Jena, Germany, assignor to the Firm of Carl Zeiss, Jena, Germany. Filed Aug. 8, 1921. Serial No. 490,722. 2 Claims. (Cl. 116—22.)

1. In a device for temporarily converting a continuous pencil of rays of light into an intermittent one, a circular disc of a substance impervious to light rotatable about its axis and provided with a number of segments, consecutive in the direction of its circumference, a number of arms disposed parallel to the said rotatable disc and rotatably so connected to the pedestal body of the said disc that they may be brought into two different terminal positions, in one of which, on the disc being rotated, they cover a part as invariable as possible of the said segments, whilst in the other one, on the disc being rotated, they alternately cover the segments completely and leave them quite free.

1,424,335. ROTARY EXTRACTING APPARATUS. JOHN W. BODMAN, Western Springs, Ill., assignor to William Garrigue & Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 13, 1921. Serial No. 437,015. 3 Claims. (Cl. 87—13.)

1. In extracting apparatus, the combination of a horizontal rotary drum having a head at one end with an enclosed pocket therein, a jacket surrounding said drum, connecting pipe means leading from said pocket to said jacket, a valve comprising a rotary and a stationary member and having an interior space, at the inner side of said head, spaced steam delivery pipes secured within said drum, connected to said valve to open into said space only when they occupy the lower portion of the drum, during the rotation thereof, an axial pipe leading through the outer portion of said head into said pocket, and a pipe of smaller diameter extending through said first pipe and into said space within said valve.

1,424,336. CLEANER FOR TUBES OF CONDENSERS, BOILERS, ETC. MARK K. BOWMAN, New York, N. Y., assignor to M. K. Bowman-Edson Company, New York, N. Y., a Corporation of New York. Filed Jan. 12, 1921. Serial No. 436,677. 10 Claims. (Cl. 15—104.06.)

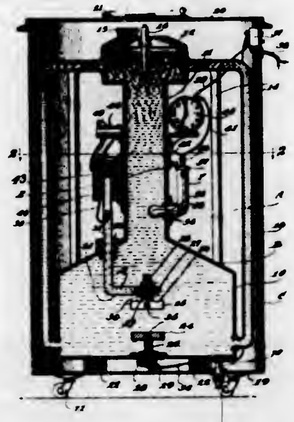
1. A tube cleaning projectile of the class described, comprising in combination, a rod, a series of similar

scraper elements rigidly held at an angle with respect to said rod, the ends of successive scraper elements being staggered with respect to each other circumferentially of the rod, the length of said elements extending free of said rod from said second end in a direction circumferentially of said rod, the scraper elements being spaced from each other longitudinally of the rod, the entire length of each scraper element being intermediate the adjacent scraper elements at opposite sides thereof.

1,424,337. CURTAIN FIXTURE. JAMES H. BOYE, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 456,384. 8 Claims. (Cl. 156—19)

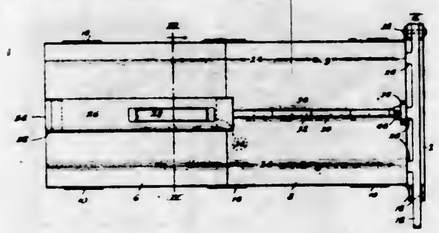
6. In a curtain fixture, the combination with a hollow flat curtain rod, of a coupling strip for a locking member mounted in one end of said rod, said coupling strip having a laterally offset tongue clampingly engaged with the end portion of a side wall of said rod, and a transversely elastic wire spring anchored to said coupling member and adapted to interlockingly engage with a socket of a rod-supporting bracket.

1,424,338. INDEX TAB. CARL F. BRENNE, Yakima, Wash., assignor to Universal Index Tab Company, Seattle, Wash. Filed Dec. 9, 1920. Serial No. 429,436. 5 Claims. (Cl. 40—23.)



2. An index tab comprising a transparent sheath forming a pocket, an inner member carried by said sheath and projecting into said pocket to form lateral spaces and a connecting space beneath the sheath of a depth not less than the width of the lateral spaces, and adhesives means for affixing the sheath to a card.

1,424,339. MINERAL-CLASSIFYING DEVICE. JAMES H. BURGESS, Port Angeles, Wash., assignor of one-half to Clara M. Clayton, Seattle, Wash. Filed June 2, 1919. Serial No. 301,192. Renewed Dec. 5, 1921. Serial No. 520,173. 4 Claims. (Cl. 83—56.)



2. The method of classifying materials which consists in supplying the material to the higher end of an inclined floor having a collecting and holding surface which is partially submerged and subjecting it to water having a wave action in the direction of the upward inclination of the floor.

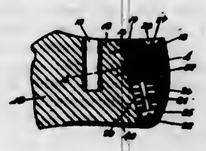
1,424,340. ELECTRIC HEATING APPARATUS. JOHN C. CAVITT, Weirton, W. Va. Filed Apr. 27, 1921. Serial No. 464,969. 12 Claims. (Cl. 219—38.)

1. An electric heater for liquids comprising a liquid container, an electric circuit, a pair of electrodes interposed in the circuit and arranged in the liquid in the container, and means for initially adjusting the position of the electrodes in relation to each other.

1,424,341. CORE MACHINE. GEORGE WILLIAM COMBS, Leavenworth, Kans. Filed Oct. 27, 1919. Serial No. 333,747. 7 Claims. (Cl. 22—11.)

1. In a machine of the character described, a tubular core die adapted to be slipped off of the enclosed core, an element fitting within said die and abutting one end of the core to prevent longitudinal movement of the latter during removal of the die, a rod extending outwardly from said element, a second element to support the outer end of the rod, means to prevent longitudinal movement of said rod, and a support for the die and the core.

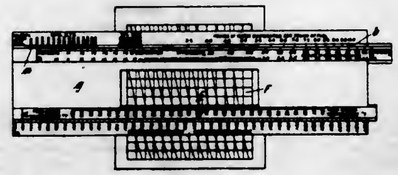
1,424,342. COLLAPSIBLE ARCH FORM. GLENN A. COMPTON, Minneapolis, Minn., assignor to Northfield Iron Company, Northfield, Minn., a Corporation of Minnesota. Filed Aug. 28, 1920. Serial No. 406,079. 14 Claims. (Cl. 25—131.5.)



3. A collapsible form for use in the construction of arches including longitudinally spaced bearing brackets arranged in laterally spaced pairs, each of said bearing brackets having a stop surface and an inclined cam surface, an arch bar supported on the cam surfaces of each laterally spaced pair of bearing brackets, said arch bars being held in upright positions on the upper extremities of the cam surfaces by the stop shoulders and having interlocking engagement with the bearing brackets to hold the arch bars against tipping movement toward the stop surfaces, the laterally spaced bearing brackets being turned in opposite directions with their cam surfaces facing outward, and a coupling rod connecting the arch bars for holding the same against tipping movement away from the stop surfaces.

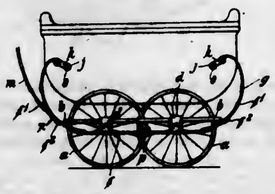
9. A collapsible form for use in the construction of arches including longitudinally spaced outer and intermediate bearing brackets arranged in laterally spaced pairs, an arch bar supported on each laterally spaced pair of bearing brackets for compound downward and outward swinging movements, an intermediate coupling rod connecting the two intermediate arch bars, and end coupling rods connecting the end arch bars with the intermediate arch bars.

11. A collapsible form for use in the construction of arches having in combination, an arch bar, spaced bearing brackets supporting the ends thereof, said brackets having inclined cam surfaces on which said bars are normally supported, said brackets having means engaging the sides of said arch bar to hold the same against tipping movement on said brackets.



1,424,343. ADJUSTABLE LAST. HARVEY F. CRAWFORD, Brockton, Mass.; Linda M. Jackson executrix of said Harvey F. Crawford, deceased. Filed May 29, 1920. Serial No. 385,206. 2 Claims. (Cl. 12—135.)

1. A last comprising a body which is reduced at its rear end to form an incomplete heel portion, and is provided with a spindle socket adjacent to said rear end; and a movable heel section formed to complete said heel portion, and provided with means for engaging a pulling device, the last body and heel section being provided with complemental interengaged guide members arranged to permit variations of the operative length of the last by movements of the heel section, and with means for limiting the last-lengthening movement of the heel section, the last body and heel section being engageable respectively with a jack spindle and with a pulling device, so that the last may be shortened by a tipping movement thereof.

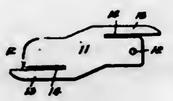


1,424,344. CALCULATING DEVICE. JAMES CROMPTON, London, and WILLIAM GALLAGHER, Manchester, England. Filed Mar. 8, 1920. Serial No. 364,328. 1 Claim. (Cl. 235—70.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

Computing apparatus comprising in combination, a frame provided with a fixed scale representing factors of evaporation corrected for superheat, a sliding scale on said frame having a pointer moving along a fixed scale and scaled to represent temperature of feed water, a chart slidably mounted in the frame at right angles to the sliding scale and coacting with the same, said chart having steam curves thereon representing the point of saturation and total heat of superheated steam, and scales representing the boiler pressure and temperature

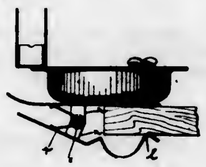
of saturated steam, the arrangement being such that given the temperature of the feed water and steam together with the boiler pressure, the factor of evaporation can be obtained, substantially as described.

1,424,345. UNDERCARRIAGE FOR VEHICLES. WILLIAM HENRY DUNKLEY, Birmingham, England. Filed June 15, 1920. Serial No. 389,228. 10 Claims. (Cl. 280—47.)



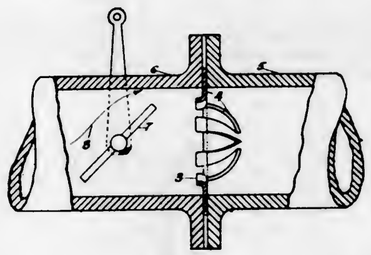
1. In a perambulator vehicle, a pair of axles, wheels on said axles, longitudinally disposed chassis members, means connecting said axles to said longitudinal chassis members, a body, body supporting members, the upper ends of said members being spaced apart in a transverse direction more widely than the lower parts of said members.

1,424,346. RELAY. JOHN ERICKSON, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 14, 1919. Serial No. 282,544. 7 Claims. (Cl. 175—337.)



3. In a relay having a magnet and a heel piece, an armature for the magnet having a roller which is attracted by the core of said magnet to close a circuit, said armature mounted on said heel piece by means of a flexible spring, said spring reinforced by a lug on the armature and another lug on the heel piece.

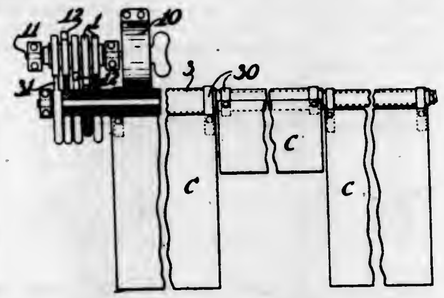
1,424,347. ANTISKID DEVICE. JOHN H. EVANS, North Carrollton, Miss. Filed Oct. 31, 1917. Serial No. 199,535. 2 Claims. (Cl. 113—116.)



1. A blank for forming a connector between a chain link or the like and a cable, consisting of a plate having apertures adjacent its ends, and fingers integral with opposite edge portions of the plate and extending toward opposite ends of the latter.

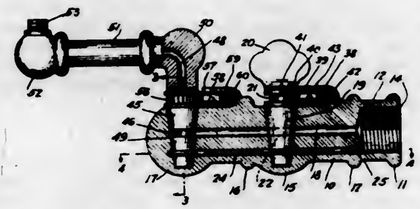
1,424,348. ASH TRAY AND SIMILAR RECEPTACLE. SIMON W. FARBER, Brooklyn, N. Y. Filed Aug. 7, 1920. Serial No. 401,904. 3 Claims. (Cl. 131—51.)

2. An article of manufacture comprising an ash tray and a clip on the under surface thereof, said clip comprising a pivoted member having such area relative to the tray as to provide a stable base therefor when the clip is in closed position and the bottom resting on a horizontal supporting surface, said clip being shaped to engage the projecting edge of a support with the tray on the upper surface thereof and the free end of the lower member of the clip in secure engagement with the under surface of said support.



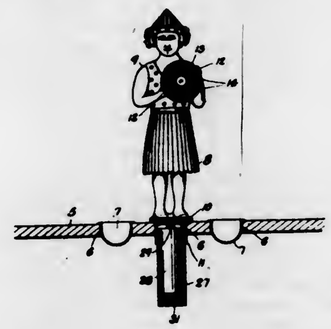
1,424,349. MIXING DEVICE. ROLLO B. FRYETT, Bremerton, Wash. Filed June 13, 1921. Serial No. 477,222. 1 Claim. (Cl. 48—180.)

An auxiliary carbureting device comprising a flat ring having a plurality of inwardly projecting radially converging surfaces, said surfaces being out of the plane of said ring, said ring having on its opposite side a plurality of short projections between the bases of said converging surfaces.



1,424,350. DISPLAY APPARATUS. EDGAR L. GALE, Bremerton, Wash. Filed June 22, 1921. Serial No. 479,564. 9 Claims. (Cl. 40—139.)

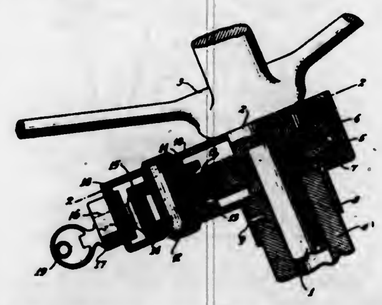
1. A display device including a rotatable cam cylinder having axially spaced thereon a plurality of cams, levers each having an arm positioned to be engaged by its respective cam, and a plurality of telescoped tubes each connecting at one end with its respective lever to be



oscillated thereby, and having means at its opposite end for supporting an article to be displayed.

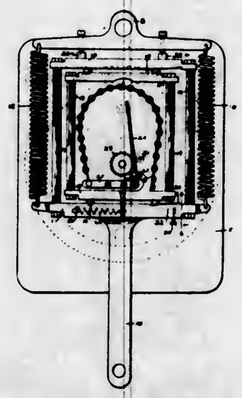
1,424,351. GAS FIXTURE. JOSEPH GENTILE, Brooklyn, N. Y. Filed June 18, 1921. Serial No. 478,548. 6 Claims. (Cl. 240—74.)

1. A gas fixture comprising a body having means for attachment to a gas pipe, said body containing a longitudinal passage, a tapered plug set transversely in said body, said plug having a transverse opening registrable with the mentioned passage, a rod engaged in said body parallel to the passage therein, said plug containing a recess extending partially therearound through which said rod passes, and means for automatically locking said plug when in adjusted position.



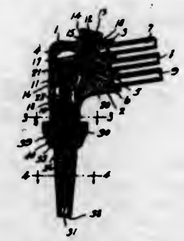
1,424,352. ILLUMINATING DEVICE FOR REPRODUCING MACHINES. ROBERT F. GOOD, New York, N. Y. Filed June 24, 1921. Serial No. 480,077. 4 Claims. (Cl. 240—2.)

1. The combination with a sound reproducing machine of the class described, of a suitable statuette, an electric



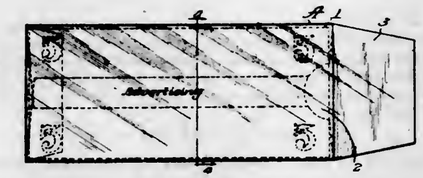
light bulb socket mounted in said statuette, said statuete being provided with a base adapted to be passed downwardly through an aperture in the top board of the machine, means for supporting a battery in connection with said base, and means for placing said battery in electric circuit with said socket.

1,424,353. STEERING-WHEEL LOCK FOR MOTOR VEHICLES. CHARLES M. GREY, East Orange, N. J. Filed Nov. 22, 1920. Serial No. 425,639. 14 Claims. (Cl. 70—129.)



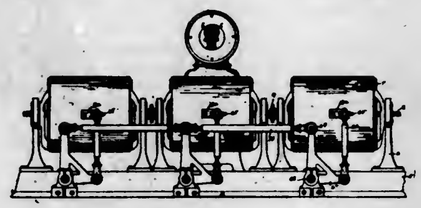
1. A lock embodying a rotatable member provided with a smooth, circular periphery, means cooperable with the smooth, circular periphery of said member for locking it against rotation in both directions, and means for positively precluding inadvertent operation of the locking means.

1,424,354. SPRING SCALE. CLARENCE H. HAPGOOD, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 7, 1918. Serial No. 257,087. 18 Claims. (Cl. 265—69.)



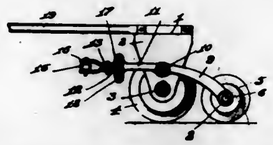
1. In a weighing scale, in combination, load-counterbalancing mechanism, including springs, an indicator, motion-transmitting means to cause movement of the indicator proportional to the distortion of the springs under load, a thermostatic device for changing the ratio of movement of said indicator as compared with the distortion of the springs to compensate for the effect of changes of temperature on said springs, and means so connecting said thermostatic device to said motion-transmitting means as to maintain the ratio of movement of said indicator as compared with the distortion of the springs substantially constant throughout the capacity of the scale.

1,424,355. BLOWPIPE. JOHN HARRIS, Lakewood, Ohio, assignor to Carbo Oxygen Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 10, 1920. Serial No. 395,289. 3 Claims. (Cl. 158—27.4.)



1. A blow pipe of the character described comprising a head, a tip carried by said head and comprising an inner member having a central passageway for cutting oxygen, the said member having intermediate the ends thereof an enlargement provided with one or more passageways for preheating oxygen and a combustible gas, an outer tip member surrounding the inner member and engaging the said enlargement, there being a keyway provided between such enlargement and the outer member and a key in said keyway securing said members together, and means for supplying cutting oxygen to the first mentioned passageway and a mixture of preheating oxygen and a combustible gas to the second passageway or passageways.

1,424,356. CONTAINER FOR HOLDING BANK BILLS. COLUMBUS HEALY, Chicago, Ill. Filed Jan. 11, 1922. Serial No. 528,472. 2 Claims. (Cl. 206—46.)

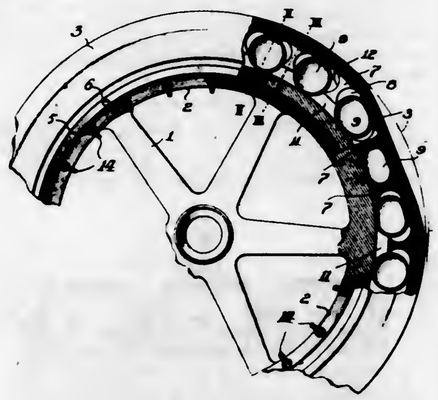


1. A package comprising a bill container containing a bill and made at least in part of transparent material to permit the bill to be seen through it and provided with advertising matter associated with said transparent material so that the sight of the bill will attract the eye to the advertising material.

1,424,357. DYNAMOMETER. HALVOR O. HEM, Toledo, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Aug. 15, 1918. Serial No. 249,970. 25 Claims. (Cl. 265—24.)

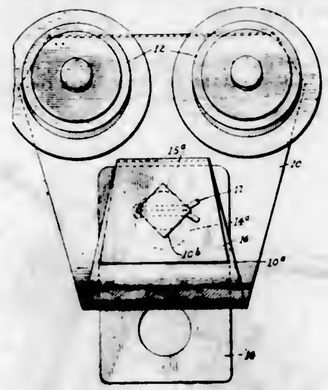
1. In a dynamometer, in combination, a plurality of torque resisting elements, and a lever system capable of receiving force separately from certain of said elements and transmitting such force to another of said elements.

1,424,358. PULVERIZER. LYNN I. HOKE and JOHN I. HOKE, South Bend, Ind. Filed June 4, 1921. Serial No. 474,885. 7 Claims. (Cl. 55—21.)



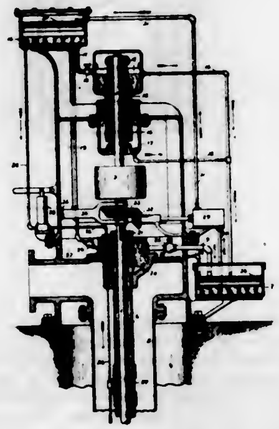
1. The combination with a land roller, of an auxiliary roller trailed thereby, said auxiliary roller being pivotally mounted to the rear ends of arms extending forwardly of the land roller, said forwardly extending arms being pivotally mounted to the land roller at points intermediate their lengths, and means whereby draft means may be connected to the forward ends of said arms and utilized for propelling the roller and exerting a downward pressure on the auxiliary roller.

1,424,359. BUMPER BAR. WALTER V. ISGRIG, Milwaukee, Wis., assignor to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Sept. 15, 1919. Serial No. 323,902. 6 Claims. (Cl. 293—55.)



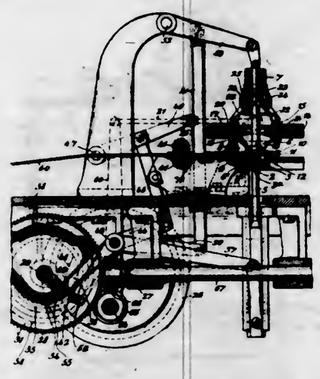
2. A bumper bar comprising a seamless hollow body, and ears formed on the ends of and integral with said body, said ears being bent at substantially right angles to the axis of the bumper bar and joined by molecular adhesion to prevent ingress of moisture to the interior of the bar.

1,424,360. TIRE. GEORGE JACOBS, Detroit, Mich. Filed Oct. 4, 1920. Serial No. 414,407. 3 Claims. (Cl. 152—22.)



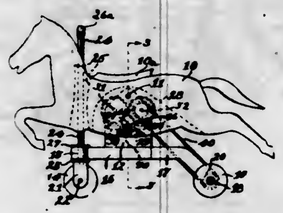
1. In a vehicle wheel, a rim, an outer casing, cushion members on said rim, and secondary cushion members carried by said outer casing between said cushion members on said rim and normally adapted to engage said rim.

1,424,361. TROLLEY. WILLIAM P. KRAUSE, Chicago, Ill., assignor to Hanna Engineering Works, Chicago, Ill., a Corporation of Illinois. Filed Nov. 22, 1919. Serial No. 339,851. 4 Claims. (Cl. 105—154.)



1. A trolley comprising side plates having their ends bent upwardly and inwardly and provided with non-circular apertures, a load shaft having non-circular portions extending through said apertures, a cylindrical portion intermediate said non-circular portions and removable spacing members carried by said load shaft intermediate said side plates to permit adjustment thereof longitudinally of said shaft.

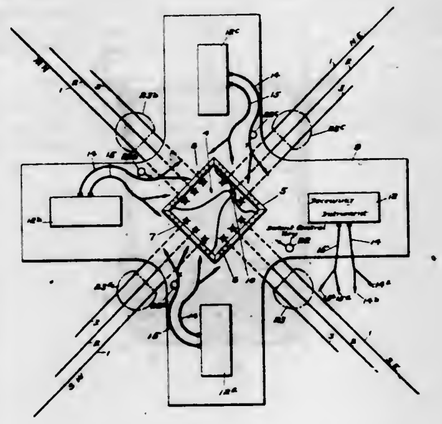
1,424,362. LUBRICATING SYSTEM FOR DEEP-WELL PUMPS. FERDINAND W. KROGH, San Francisco, Calif.; Mary L. Krogh, Fannie J. Clarke, C. A. Krogh, and Oscar Poulsen, legatees by court order of distribution of the estate of said Ferdinand W. Krogh, deceased, assignors to Krogh Pump and Machinery Company, San Francisco, Calif., a Corporation of California. Filed May 28, 1918. Serial No. 237,356. 6 Claims. (Cl. 184—6.)



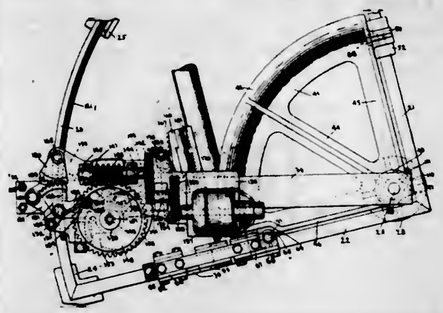
3. A lubricating system for vertical shaft bearings of a deep well pump, comprising a supply tank, means for feeding lubricant from said tank to said bearings, a cup secured to said shaft and rotatable therewith adapted to receive waste lubricant from said bearings, an annular stationary receptacle surrounding said cup for said waste lubricant, a tank adapted to receive said waste lubricant and means for carrying said waste lubricant from said tank to said supply tank.

1,424,363. PROCESS OF WRAPPING AND MACHINE THEREFOR. RICHARD LEUMANN, Chailly-sur-Lausanne, Switzerland. Filed Mar. 31, 1921. Serial No. 457,484. 18 Claims. (Cl. 93—5.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

18. In a process for wrapping sweetmeats and the like, feeding a wrapper between the article to be wrapped and a membrane, causing the membrane to press the wrapper snugly into the article except on one side, and thereafter causing the wrapper to lie snugly against the side not yet wrapped.



1,424,364. HOBBYHORSE. CHARLES H. LISTER, North St. Paul, Minn. Filed Oct. 27, 1920. Serial No. 419,861. 6 Claims. (Cl. 208—42.)

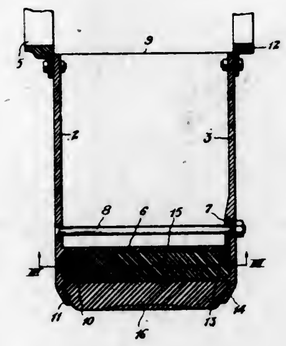


1. In a hobby horse, a frame, a driving wheel journalled in said frame, a standard mounted on said frame, a hollow body tiltably supported on said standard, a pair of shafts journalled in said standard within said hollow body, a pair of meshing gears and ratchets mounted on said shafts, pawls arranged within said body to severally engage said ratchets and a chain operatively connecting one of said shafts with said driving wheel.

1,424,365. RADIOSIGNALING. EDWARD H. LOFTIN, Washington, D. C., and HENRY H. LYON, Hyattsville, Md. Filed Apr. 5, 1920. Serial No. 371,558. 8 Claims. (Cl. 250—33.)

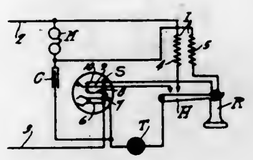
7. In a system of radio signaling a receiving station employing grouped components of different lengths from which antenna combinations may be selected, and a plurality of similar control panels to all of which each of the components is connected.

1,424,366. BENDING PRESS. FRED W. MCARDLE, Boston, Mass. Filed Oct. 29, 1920. Serial No. 420,520. 14 Claims. (Cl. 153—46.)



1. In a bending press, the combination of a rigid former; a shoe adapted to coact therewith; a lever swiveled at one end to the shoe and at the other rotatable on a fixed axis; a link, hinged at one end to the shoe, and at its other end to a lever rotatable about a fixed axis; a rotatable cam, adapted to engage the hinge connecting the lever and link, for the purpose of rotating the lever, and thereby, through the link, causing the shoe to coact with the former; and means for rotating the cam, as and for the purpose described.

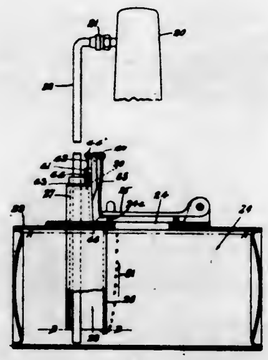
1,424,367. WHEEL FOR POWER-PROPELLED VEHICLES. JAMES R. MCFALL, Cleveland, Ohio. Filed May 16, 1919. Serial No. 297,581. 7 Claims. (Cl. 152—9.)



1. A wheel comprising the combination of a hub, a rim, a structure connecting said hub and rim, and a tire including inner and outer tires about said rim, said inner

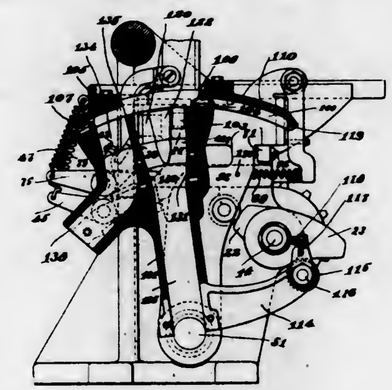
tire being composed of a series of circumferentially arranged sections, and distinct flanges carried by said rim

for holding said tires in place, one pair of said flanges being interposed between said tires, said inner tire sections being oblique to the wheel axis.



1,424,368. SUBSTATION TELEPHONE CIRCUITS. TALBOT G. MARTIN, Chicago, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1921. Serial No. 438,987. 3 Claims. (Cl. 179—81.)

2. In a substation circuit arrangement for telephone exchange systems, a receiver, a transmitter, normally open circuits for said receiver and transmitter, means for closing said circuits, an impulse sending device, a pair of contact springs actuated by said device for transmitting impulses, means actuated during the operation of said sending device for opening the receiver circuit and shunting the transmitter circuit, a ringer, a condenser, and a circuit for said ringer including said condenser and the said pair of contact springs.

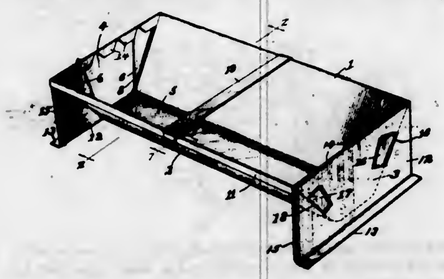


1,424,369. FUEL TANK. THOMAS MIDGLEY, JR., Dayton, Ohio, assignor, by mesne assignments, to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed July 5, 1918. Serial No. 243,316. 12 Claims. (Cl. 158—36.)

1. In a fuel supply tank for internal-combustion engines, the combination with a normally sealed fuel chamber, of an auxiliary chamber located above the bottom of the fuel chamber open to atmosphere and communicating at the bottom with the fuel chamber; and a pipe leading to the engine intake from a level near the bottom

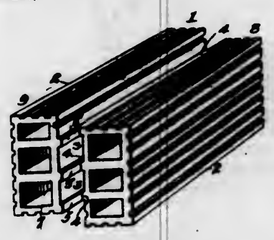
level of the fuel chamber, said fuel chamber being located below the level of the engine intake.

1,424,370. APPARATUS FOR SORTING MACHINE ELEMENTS. CHESTER T. MORBY, Providence, R. I. Filed July 19, 1921. Serial No. 485,993. 55 Claims. (Cl. 83—92.)



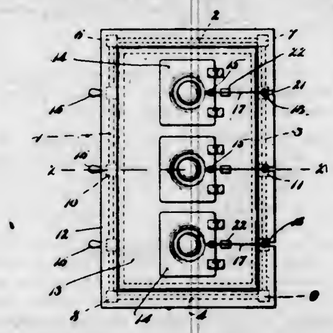
1. A nut blank sorting and positioning machine, comprising means for rejecting imperfect blanks, and means for similarly orienting properly perforated blanks.

1,424,371. TROUGH. CARL G. NAYLOR and GEORGE F. HAUF, Chicago, Ill., assignors to Robertson Brothers Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1919. Serial No. 281,022. 18 Claims. (Cl. 119—61.)



1. A feed trough made of a single piece of sheet metal having outwardly flaring side walls, and end walls interfolded to provide outwardly open spaces between

adjacent folds and end pieces, to provide bases for the trough, having inwardly extending ears for insertion



within said spaces and having a part to fold over the upper edge of the end wall of the trough when the end pieces are in place.

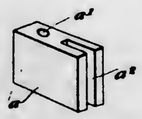
1,424,372. SUPERLOCKING HOLLOW TILE. OTIS V. NEESE, ELO L. NEESE, and EARL C. NEESE, Round Top, Tex. Filed Oct. 19, 1921. Serial No. 508,788. 1 Claim. (Cl. 72—41.)

As a new article of manufacture, a superlocking hollow tile block comprising a pair of equal sized hollow sections, one section extending beyond one end and the side adjoining that end of the remaining section, said sections having interposed thickened walls for spacing said sections apart, and said walls extending and being reduced beyond the overlapped portions of the two sections, the reduced portions of said walls being integral with the opposite sections at opposite ends of the block, as set forth.

1,424,373. ICE-CREAM CABINET. CARL J. NILSSON, Cambridge, Mass. Filed June 24, 1921. Serial No. 480,197. 8 Claims. (Cl. 217—60.)

1. An icecream cabinet comprising a chest having an opening for an icecream container in the top thereof in spaced relation to the sides thereof, a cover for said opening, and means for opening said cover including a pedal at the front of the chest and a connection extending from the pedal to the cover along two sides of the chest, said connection being entirely within the outlines of the chest so as not to interfere with cleaning around and beneath the chest.

1,424,374. AUTOMOBILE SIGNAL. CHARLES H. NOBLE, Bad Axe, Mich. Filed Nov. 9, 1921. Serial No. 514,030. 5 Claims. (Cl. 116—43.)

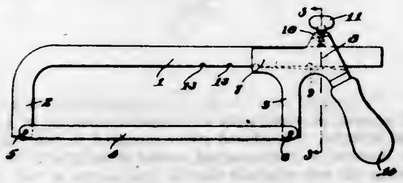


1. In a signal as set forth, the combination with a tubular housing provided with an elongated opening, of a support therefor, a tensioned roller mounted in bearings, of the housing, a pliable signal wound about the roller and having one end attached thereto, and means at the other end of the signal adapted to contact with the wall of the housing when the signal is automatically rewound, thereby limiting the signal in its rewinding movement and closing said opening, thereby precluding foreign matter.

1,424,375. RELEASING HANDLE FOR VESTIBULE CURTAINS. WALTER E. PALT, Chicago, Ill., assignor to Curtain Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1921. Serial No. 500,785. 14 Claims. (Cl. 105—24.)

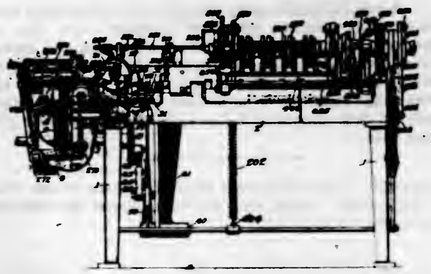
1. A curtain handle comprising two complementary handle-forming members pivotally mounted with two of their ends normally in approximate abutment, and spring means acting on the members to offer yielding resistance to pivotal movement of the members upon a force being applied to the ends thereof mentioned in a direction substantially at right angles to a line passing through their pivoting axes.

1,424,376. TOY BUILDING BLOCK. HUGH PURDY, Belfast, Ireland. Filed Mar. 13, 1920. Serial No. 365,575. 1 Claim. (Cl. 46—35.)



As a new article of manufacture a toy building corner-block comprising a parallel-piped slotted at one end and having a hole therethrough in the same plane as the slot located a distance from the end equal to half the width of the block whereby the block is made available for any corner position in erecting a toy building.

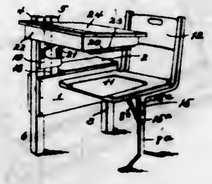
1,424,377. PACKING RING. FREDERICK RAY, Greenwich, Conn. Filed July 14, 1921. Serial No. 484,586. 15 Claims. (Cl. 74—109.)



1. A piston ring consisting of two or more split rings each of which exerts uniform outward radial pressure when compressed to their normal diameter, and means extending around the rings to equalize the bending moments in the rings, whereby the rings will exert uniform radial pressure when their diameter becomes greater than normal.

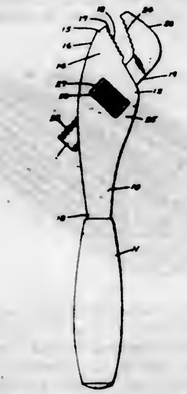
1,424,378. HACK SAW. ALFRED M. REMINGTON, Fitchburg, Mass., assignor to Simonds Manufacturing Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1921. Serial No. 461,776. 6 Claims. (Cl. 145—34.)

6. A hack saw frame comprising a longitudinal bar, a transverse blade-supporting arm on said bar, said arm having an elongate portion recessed to receive said bar and having a bridge spanning the recess, a screw threaded through said bridge to engage said bar whereby said arm is caused to swing upon one end of said elongate portion as a pivot for tensioning the blade, and a handle on said elongate portion for operating the frame.



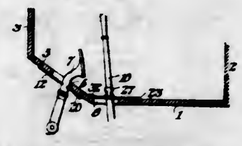
1,424,379. WIRE-LINK-FABRIC MACHINE. ANTHONY RHENSTROM, Kenosha, Wis., and ORLA H. WATKINS, Marshalltown, Iowa, assignors to Henry Richardson, Chicago, Ill. Filed Apr. 6, 1917. Serial No. 160,155. 115 Claims. (Cl. 140—7.)

1. In a wire link fabric machine, the combination of chain-forming mechanism operative to form and directly interloop identical two-ply links, and mechanism serving to simultaneously interloop a plurality of links of one chain with a plurality of links of an adjacent chain.



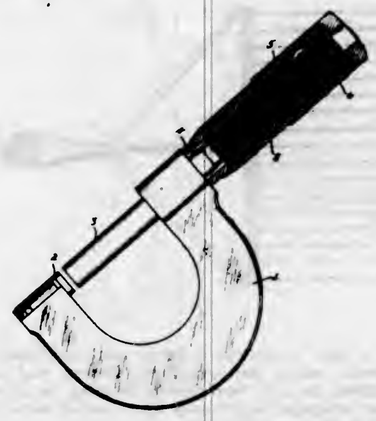
1,424,380. COMBINED DESK AND CHAIR. JOHN PARKER RICHARDS, Tulsa, Okla. Filed Nov. 11, 1920. Serial No. 423,326. 2 Claims. (Cl. 155—12.)

1. The combination with a side member having a plurality of sockets, and an upright secured to said side member, of a bracket secured to said side member and having a leg portion, a chair seat disposed over said bracket and provided with a pin to enter any of said sockets, an arm de-



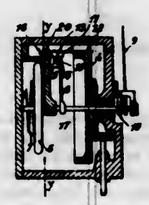
pending from said chair seat and adjustably connected with the leg portion of said bracket, and a desk supported by said upright.

1,424,381. PIPE WRENCH. JOHN RUDY, New Britain, Conn. Filed July 30, 1921. Serial No. 488,525. 1 Claim. (Cl. 81—101.)



In a pipe wrench, a fixed member having a handle shank, a body, and a jaw arranged in order along an axial line and with the tip of said jaw at one end of said line, a moving member having a jaw for cooperating with the jaw on the fixed member and a stem that is operatively supported by said body and is positioned diagonally across said line, and said members being constructed and arranged so that said axial line is substantially rectilinear and the pipe receiving opening that is defined by said jaws is entirely on one side of said line, with the mouth or entrance portion adjacent said line.

1,424,382. AUTOMOBILE ACCESSORY. THOMAS EDWARD SANDERSON, Woodbury, N. J. Filed June 18, 1921. Serial No. 478,742. 7 Claims. (Cl. 74—81.)

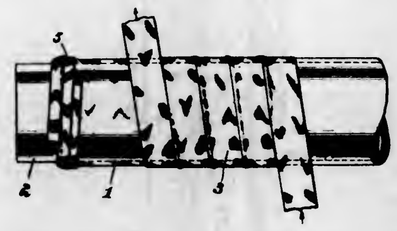


4. A closure for a controlling member opening in a vehicle floor, comprising a shield independent of said floor, and carried by the controlling member extending through said opening.

1,424,383. MICROMETER GAUGE. JOHN A. SCHLEICHER, Saginaw, Mich., assignor to The Lufkin Rule Company, Saginaw, Mich., a Corporation of Michigan. Filed Nov. 21, 1921. Serial No. 516,571. 5 Claims. Cl. 33—164.)

1. In a micrometer gauge, the combination with a frame and a barrel secured thereto, of a spindle extending through said barrel and threadedly engaged to the same, a thimble secured to said spindle and rotatable to longitudinally adjust the same in said barrel and frame, and a sleeve threadedly engaged to said thimble to be normally rotatable therewith but adapted to be rotatably adjusted relative thereto, said sleeve being threadedly engaged to said thimble with the same pitch of thread as the threaded spindle with the barrel.

1,424,384. APPARATUS FOR MEASURING SPEED. AUGUSTIN SEGUIN, Paris, France. Filed May 25, 1920. Serial No. 384,101. 3 Claims. (Cl. 264—21.)

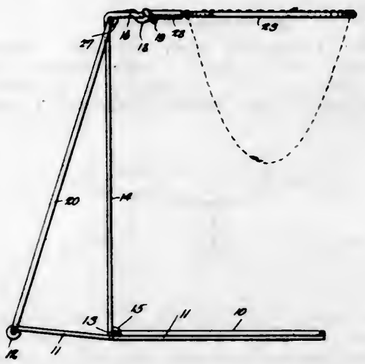


1. An apparatus for the measurement of speeds, comprising a driving movable member (4), means for rotating said driving movable member in a positive direction at a speed in a known ratio to that which it is desired to measure, an antagonistic movable member constituted by a balance wheel, a spiral spring driving directly said antagonistic member in a negative direction at the variable speed determined by the law of free expansion of said spring, a receptive member, indicating means connected to said receptive member, means on the driving member adapted to couple said driving member with the receptive member for rotation in the positive direction, means adapted to connect said driving member with the antagonistic member for driving the latter in a positive direction, means on the antagonistic member for driving the receptive member in a negative direction, means on the antagonistic member for disengaging the receptive member from the driving member, and fixed means for disengaging the antagonistic member from the driving member.

1,424,385. ARTIFICIAL BAIT. WILLIAM A. STOLLEY, Dowagiac, Mich., assignor to James Heddon's Sons, Inc., Dowagiac, Mich., a Corporation of Michigan. Filed Jan. 17, 1921. Serial No. 437,981. 4 Claims. (Cl. 43—46.)

1. An artificial bait comprising an elongated body, a rear hook, and means for so securing said rear hook to said body that the shank of the hook will be prevented from becoming entangled with the securing means, comprising a metallic fastener having a U-shaped portion lying substantially in a vertical plane through the body and located underneath and at the rear end of said body, the rear part of said U-shaped portion being at such an angle that the hook can swing to a position in which the shank is parallel to the axis of the body, the fastening being located so near the rear end of the body that the points of the hook will clear the rear end when the shank of the hook is parallel to the axis of the body.

1,424,386. PROCESS OF FORMING TUBES. ARTHUR WELLINGTON STONER, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 28, 1919. Serial No. 285,740. 15 Claims. (Cl. 18—53.)

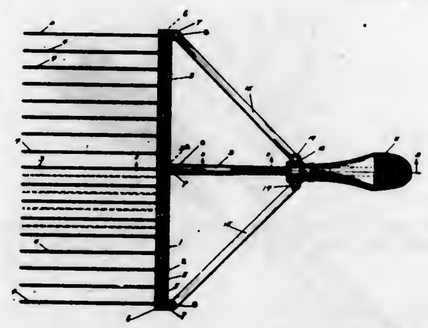


1. The hereindescribed method of manufacturing tubes of vulcanizable material which consists in shaping the tube upon a suitable mandrel, wrapping the same helically with a strip of covering material under tension, removing the wrapping and thereafter vulcanizing the tubes.

1,424,387. COLLAPSIBLE BAG HOLDER. WALTER BRUCE WILLS, Baltimore, Md. Filed Mar. 21, 1922. Serial No. 545,447. 2 Claims. (Cl. 83—26.)

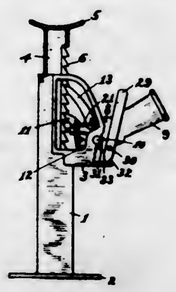
1. A bag-holder comprising a base; a standard composed of a pair of laterally spaced side rods connected by a cross bar at one end and having their other ends pivotally connected to the base, a bag-supporting member having a shank consisting of a forward portion carrying the member and a rear portion consisting of laterally spaced side members having inward bends at their forward ends whereby they are connected to the forward portion of the shank, said side members being pivotally supported by the aforesaid cross bar, and a prop con-

sisting of laterally spaced side rods pivotally connected at one end to the base and having their other ends connected by a cross bar on which the aforesaid forward portion of the shank is adapted to seat to maintain the



operative position of the said prop having portions thereof near its ends engageable by the aforesaid inward bends of the shank for maintaining the upright position of the standard and the prop.

1,424,388. OVERALLS. ALLAN A. L. WINDERMAN and ROBERT RACHMIL, New York, N. Y. Filed Nov. 22, 1921. Serial No. 516,938. 5 Claims. (Cl. 2—144.)

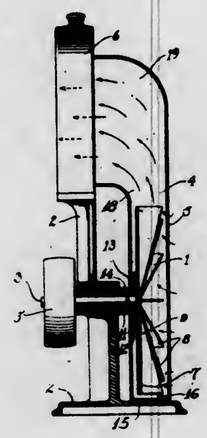


1. In a garment comprising coat and trousers, a pair of similar sections each having a front edge straight throughout the length thereof, a substantially vertical rear edge in the coat portion thereof, a short, substantially horizontal edge at the lower end of said rear vertical edge, and a rear edge in the trouser portion of said section beginning at the end of said horizontal edge and inclined away from said horizontal edge, a seam joining all but the lowermost portions of the rear vertical edges of said sections together, a triangular insert having side edges joined to said lowermost portions of said rear vertical edges, and a lower edge longer than the distance between the lower extremities of said vertical edges, said insert being adapted to extend laterally between the legs of the wearer in the operative position thereof independently of said front edges for providing a loose fit at the crotch of the wearer.

1,424,389. ONE-LICK BREAD CUTTER AND CAKE CUTTER. JOHN WESLEY WYATT, Los Angeles, Calif. Filed June 16, 1921. Serial No. 478,162. 3 Claims. (Cl. 146—12.)

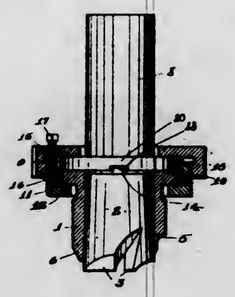
1. A slicer comprising a flexible head, a plurality of adjustably spaced knives mounted thereon, and means for flexing the said head thereby adapting the slicer to cut an elongated article such as a loaf of bread or a round article, such as a cake.

1,424,390. LIFTING JACK. WILLIAM C. YARMOLAITIS, Cleveland, Ohio. Filed July 24, 1920. Serial No. 398,614. 4 Claims. (Cl. 254—111.)



1. In a lifting jack, the combination of a standard, a lift bar movably supported in the standard, a holding pawl pivoted to the standard, an operating lever pivoted to the standard, a working pawl pivoted to the operating lever, springs tending to force the holding pawl and working pawl into engagement with the lift bar, means for forcing the holding pawl and the working pawl alternately out of engagement with the lift bar as the operating lever is moved, and means for moving said means out of action including a lever having a cam adapted to engage said standard for holding said lever in a set position, substantially as described.

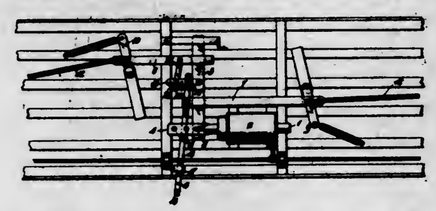
1,424,391. FAN. JAMES C. ARMSTRONG, Beloit, Wis. Filed Feb. 3, 1920. Serial No. 356,086. 4 Claims. (Cl. 230—11.)



4. A large-capacity, high-speed, low-pressure ventilating fan of small size comprising a housing, in combination with a centrifugal paddle wheel of narrow shape having triangular blades disposed radially and pointing toward the fan axis, said housing including a rim part

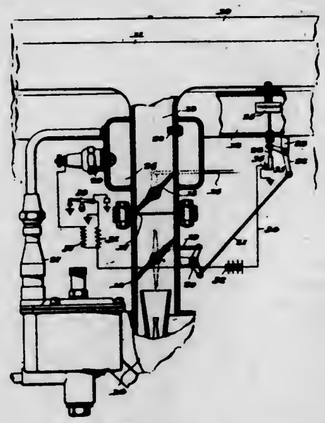
and a pair of plates spaced sufficiently to clear said wheel, one of said plates having an axial inlet aperture

nearly equal to the size of said wheel and said rim part having a discharge aperture corresponding substantially therewith in effective size.



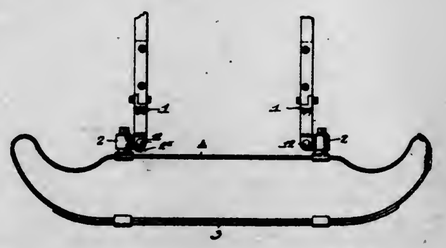
1,424,392. TOOL AND HOLDER THEREFOR. WALTER W. BAKER and FREDERICK W. FRANKLIN, Syracuse, N. Y. Filed May 16, 1919. Serial No. 297,602. 2 Claims. (Cl. 29—103.)

1. The combination of a tool holder comprising a sleeve, and a tool fitting the sleeve and insertable therein from the outer end of the sleeve, the sleeve enclosing the tool and extending to near the lower end thereof, the tool having cutting teeth at its end, and the sleeve terminating near and short of the ends of the cutting teeth, and actuating means coacting with the upper end of the holder, substantially as and for the purpose described.



1,424,393. RAILWAY BRAKE. JOHN P. CARLSON, The Dalles, Oreg. Filed July 19, 1921. Serial No. 485,886. 9 Claims. (Cl. 188—197.)

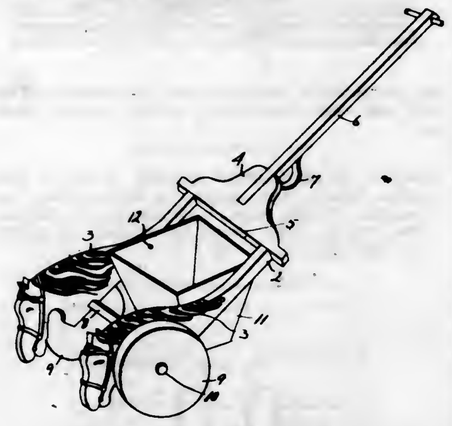
5. In a railway brake, the combination with a brake lever, means for operating the same pivotally connected with the lever intermediate its ends, brake operating arms adapted to be shifted by said lever, and means for adjusting said brake operating arms on said lever to



vary the throw of said arms upon the actuation of the lever, said means comprising a manually operated member.

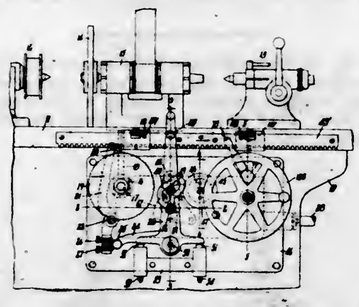
1,424,394. HYDROCARBON MOTOR. HENRY P. DOOLITTLE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 16, 1920. Serial No. 359,026. 10 Claims. (Cl. 123—122.)

1. In a hydrocarbon motor, the combination with a motor having an exhaust conduit, of a combustion chamber adapted to discharge burnt gas through the motor into said conduit, and means acted upon by the heat of said conduit for controlling combustion in said chamber.



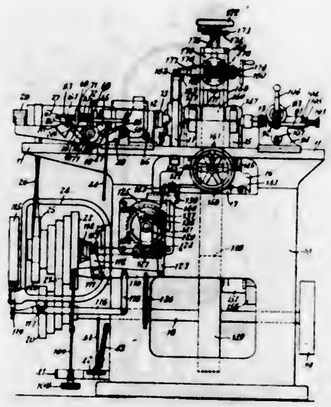
1,424,395. BUMPER-SUPPORTING BRACKET. HARRY C. EVELYN, Chicago, Ill., assignor, by mesne assignments, to Bliss Products Company, a Corporation of Delaware. Filed Nov. 30, 1921. Serial No. 518,777. 6 Claims. (Cl. 293—55.)

2. In a bumper supporting bracket, the combination of an arm adapted for attachment to the frame member



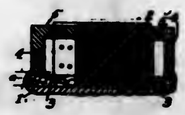
of an automobile, a bumper engaging member pivotally mounted at the free end of said arm, and comprising a body member offset from the pivotal axis, and clips carried by said body member.

1,424,396. WHEELED TOY. MAXIMILIAN N. FAULK, Philadelphia, Pa. Filed Dec. 17, 1920. Serial No. 431,317. 1 Claim. (Cl. 46—48.)



A toy comprising a yoke consisting of side pieces, a brace secured to said side pieces adjacent their outer ends and a cross piece at the opposite ends thereof, the inner edge of said cross piece acting as a hand hold, a handle fixed to said cross piece, a rest attached to said handle, wheels, axles for said wheels carried by the side pieces, said wheels being so positioned relative to the outer ends of the side pieces that said side pieces will engage the surface on which the wheels rest and act as supports when the yoke is in an upright position, a receptacle, means for pivoting said receptacle between the side pieces of the yoke above the center of gravity of said receptacle.

1,424,397. MECHANICAL MOVEMENT. WARREN F. FRASER, Westboro, Mass. Filed Sept. 25, 1919. Serial No. 326,272. 29 Claims. (Cl. 51—232.)

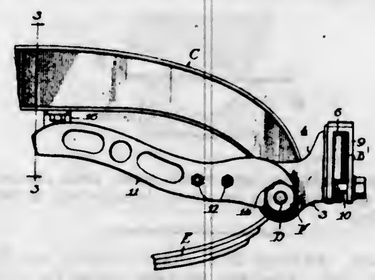


1. An apparatus of the class described having, in combination, a rotary driving member, a reciprocatory driven member co-acting with said driving member and driven thereby, a pin upon which said driving member is mounted, means to impart a rotary motion to said driving member and means to impart a lateral movement to said pin, whereby the reciprocatory movement of said driven member may be controlled.

1,424,398. GRINDER. WARREN F. FRASER, Westboro, Mass. Filed May 8, 1920. Serial No. 379,843. 24 Claims. (Cl. 51—105.)

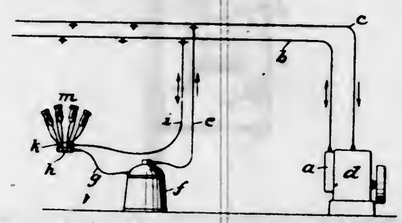
1. A grinder having, in combination, means to support work, means to rotate said work, a grinding wheel, means to support said grinding wheel, means to bring said work and said grinding wheel into operative engagement with each other, a manually operable member and means connected to said manually operable member adapted to successively prevent the rotation of said work and release the work from operative engagement with its support.

1,424,399. BEATER ENGINE. CHARLES E. GREENE, Bangor, Me. Filed Mar. 5, 1921. Serial No. 449,060. 5 Claims. (Cl. 92—22.)



1. Bed plate construction for beater engines comprising a channeled bed and a bed plate, a pair of spaced position defining members of reducible thickness lodged within said bed upon either side of said bed plate and defining the position of said bed plate, and a pair of spaced bed plate fasteners having their outer surfaces normally disposed in the plane of the outer surface of the bed plate and supported upon said position defining members whereby to adjust themselves to new levels of the bed plate as the thickness of said position defining members is reduced, said fastener of a non-wearing material so as to prevent discoloration of the stock.

1,424,400. BUMPER BRACKET. WILLIAM J. GROTENHUIS, Chicago, Ill., assignor, by mesne assignments, to Biflex Products Company, a Corporation of Delaware. Filed Nov. 9, 1921. Serial No. 513,945. 8 Claims. (Cl. 293—55.)

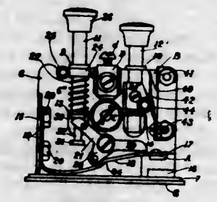


2. An automobile bumper attaching bracket comprising a plate adapted to be clamped to one side of an automobile

frame member by means of the spring bolt thereof, and an arm having detachable connection with said plate.

and said frame member, and provided with a wrench-like extremity adapted to fit the nut of said spring bolt.

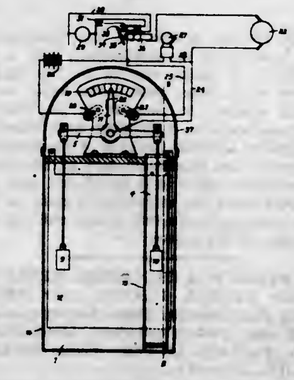
1,424,401. MASTER-PULSATOR MECHANISM FOR MILKING MACHINES. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 31, 1921. Serial No. 457,325. 4 Claims. (Cl. 31—99.)



1. In a milking machine, the combination with a milking machine unit comprising teat cups and a secondary pneumatic pulsator adapted to transmit pulsations to the teat cups, a pulsation air pipe line, a primary pneumatic pulsator adapted to transmit pulsations through said air pipe line and thereby control the operation of the secondary pulsator, a source of vacuum, a valve seat provided with a port connected with the pulsation pipe line and opening on the valve seat, a rotary valve turnable on the valve seat and provided with a plurality of ports adapted, in the rotation of the valve, to register successively with the first named ports, and means affording communication between said valve passages and the source of vacuum and a source of pressure respectively, two at least of said ports being each of substantial length so as to maintain the pulsation pipe line in communication with both pressure and vacuum for substantial time intervals.

2. In a milking machine, the combination with a source of vacuum and a pulsation pipe line, of a valve seat member provided with passages connected respectively with the pulsation pipe line and with the source of vacuum, a rotary valve turnable on the valve seat, said passages having ports opening on the valve seat at different distances from the axis of the valve; the valve having an arcuate passage adapted to register with the vacuum port in the valve seat, and a plurality of arcuate passages adapted to register successively with the pulsation port in the valve seat, one of the last named arcuate passages being connected with the first named arcuate passage, and the third arcuate passage being connected with a source of pressure, whereby in the rotation of the valve the pulsation pipe line will be connected alternately with pressure and vacuum.

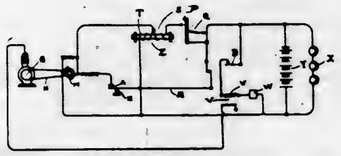
3. In a milking machine, the combination with a source of vacuum and a pulsation pipe line, of a valve seat member provided with passages connected respectively with the pulsation pipe line and with the source of vacuum, a rotary valve turnable on the valve seat, the valve having a plurality of passages adapted, in the rotation of the valve, to register successively with the pulsation port, there being a third passage in the valve affording communication between one of the first named two passages in the valve and the vacuum port in the valve seat member, the valve having a port connecting the other of the first named two passages in the valve with a source of pressure acting against the exterior of the valve, whereby the absolute pressure on the exterior of the valve tending to hold it on its seat continuously exceeds the absolute pressure to which the working face of the valve is exposed.



4. A master pulsator for a milking system having a pulsation pipe line and a suction pipe line, comprising a pump connected to the suction pipe line, a valve, driving means connecting the pump and valve for continuously rotating the valve, a flat valve seat for the valve, a port through the seat communicating with the pulsation pipe line, a second port through the valve seat communicating with the pump, arcuate passages of substantial length in the inner face of the valve arranged to successively register with the first port, one of said passages being open to atmosphere when in register with said port, the other passage being in register with the second port when in register with the first port.

1,424,402. CIRCUIT-CONTROLLING MECHANISM. FRANK O. HARTMAN, Mansfield, Ohio, assignor to The Hartman Electrical Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Filed Aug. 19, 1918. Serial No. 250,502. 6 Claims. (Cl. 200—5.)

6. In combination, a first switch, a second switch, common means for operating both said switches, separate restoring means for each of said switches, one of the said restoring means being under the control of said common switch operating means, and means associated with said last named switch restoring means adapted to accelerate the rate at which its associated switch is restored.



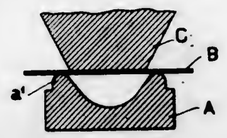
1,424,403. SPECIFIC-GRAVITY DEVICE. FRANK O. HARTMAN and CLARK T. ANDERSON, Mansfield, Ohio. Filed May 24, 1920. Serial No. 383,986. 9 Claims. (Cl. 265—44.)

1. In a specific gravity device for a liquid, a beam pivoted between its ends, a weight attached to one end

of the beam and extending into said liquid, a tube in said liquid containing a second liquid having substantially the same coefficient of expansion as the other liquid, a weight suspended in the second-mentioned liquid and attached to the other end of said beam, whereby changes in buoyancy of the first-mentioned liquid, due to temperature variations, are compensated by changes in buoyancy in the second-mentioned liquid.

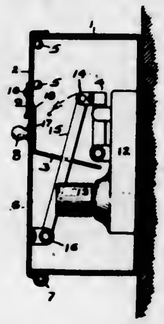
1,424,404. POWER SYSTEM. FRANK O. HARTMAN, Mansfield, Ohio, assignor to The Hartman Electrical Manufacturing Company, Mansfield, Ohio, a Corporation of Ohio. Original application filed Aug. 19, 1918, Serial No. 250,502. Divided and this application filed Jan. 6, 1921. Serial No. 435,343. 5 Claims. (Cl. 290—35.)

3. In combination, a gas engine, a motor adapted to crank the gas engine, an ignition circuit for the said engine, a switch controlling the said ignition circuit, a second switch controlling the said motor, common means for operating both said switches, separate restoring means for each of said switches, the motor circuit switch restoring means being under the control of said common switch operating means, and means associated with said last named switch restoring means adapted to accelerate the rate at which its associated switch is restored.



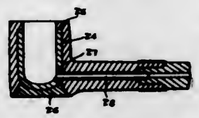
1,424,405. BACK-VIEWING MIRROR FOR AUTOMOBILES. JAMES HAUGHTON, Vancouver, British Columbia, Canada. Filed Apr. 22, 1921. Serial No. 463,461. 2 Claims. (Cl. 45—97.)

1. A back viewing mirror for the windshield of an automobile, comprising the combination with a relatively narrow mirror, of hooks secured to the back thereof adjacent the upper edge, said hooks being downwardly directed and adapted to pass on to the frame of the wind-shield and exercise a resilient hold thereof, and a screw adjustment between the back of the mirror and the adjacent face of the windshield said mirror being of an area to completely cover said hooks and said adjusting means whereby when the mirror is in place on the windshield said hooks and adjusting means will not be visible from the front of the mirror.



1,424,406. STAMP FOR THIN SHEET-METAL PLATES, SUCH AS DENTAL PLATES AND THE LIKE. FRIEDRICH HAUPTMEYER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Feb. 14, 1921. Serial No. 444,980. 1 Claim. (Cl. 113—44.)

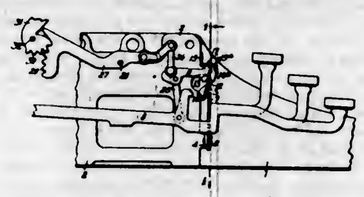
A press for thin plates comprising in combination a concave die member having a raised rim and a ductile stamp tapering towards its front end and having on its front end a cross-sectional area smaller than the area



limited by said rim, said ductile stamp being adapted to freely expand around its whole circumference in lateral direction.

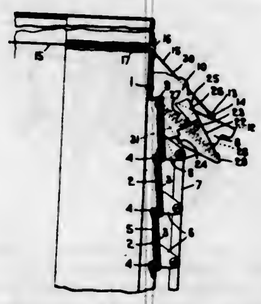
1,424,407. SWITCH BOX. TAAVI HELSKE, San Francisco, Calif. Filed May 28, 1918. Serial No. 237,357. 1 Claim. (Cl. 200—50.)

A switch box containing a switch, a cover for said box, comprising a removable portion and a hinged portion, a guard projecting from said removable portion forming thereby an inclosure for said switch, said hinged portion being connected to said switch and adapted to operate the same, frictional means adapted to secure said removable portion to said box and means to lock said hinged portion to said removable portion.



1,424,408. TOBACCO PIPE. WILLIAM W. HESSON, Toronto, Ontario, Canada. Filed July 5, 1919. Serial No. 308,693. 1 Claim. (Cl. 131—12.)

A tobacco pipe, comprising, an outer bowl member formed of two separable portions one of which has a shoulder, threaded together, a removable bowl lining of absorbent material adapted to fit snugly within the outer bowl and to be clamped between the shoulder portion and the other portion of the outer bowl, a mouth piece, and a tubular extension from said mouth piece entering the side wall of said lining at the bottom.

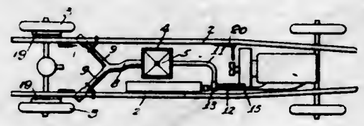


1,424,409. TYPEWRITING MACHINE. JOSEPH B. HOLDEN, Syracuse, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Jan. 25, 1922. Serial No. 531,649. 12 Claims. (Cl. 197—186.)

1. In a typewriting or like machine, the combination of key controlled levers, a fulcrum member on which said levers are fulcrumed and detachably mounted, a separately detachable keeper plate co-operative with said levers to prevent their detachment from the fulcrum

member, and means substantially mid-way in the length of said keeper plate for rigidly though detachably connecting it to said fulcrum member.

1,424,410. REMOTE-CONTROL MECHANISM. CHARLES F. HOPEWELL, Watertown, Mass., assignor to Hopewell Brothers, Watertown, Mass., a Copartnership composed of Charles F. Hopewell and Helen C. Hopewell. Filed Sept. 8, 1920. Serial No. 408,962. 9 Claims. (Cl. 268—10.)



1. A remote control mechanism for a device under tension comprising a stationary ratchet, an actuator, a pawl carried by said actuator, engaging said ratchet, operable by the movement of said actuator in one direction to lock said device at successive steps throughout a predetermined range of movement and means operable upon movement therebeyond to release and to withhold said actuator from engagement with said ratchet and permit the device to return toward original position and means for restoring said pawl into engagement with said ratchet during the final portion of said returning movement.

1,424,411. METHOD FOR RECOVERING WASTE PAPER. THOMAS JESPERSEN, Neenah, Wis., assignor, by mesne assignments, to Lincoln Trust Company, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1916, Serial No. 137,131. Renewed Dec. 22, 1921. Serial No. 524,296. 2 Claims. (Cl. 92—3.)

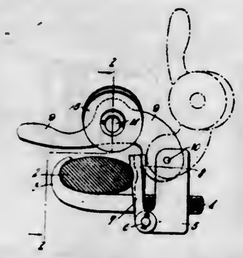
1. The process of removing printer's ink containing a mineral oil vehicle from waste paper stock which comprises the step of treating said stock with sodium silicate solution, substantially as and for the purpose described.

1,424,412. AUTOMOBILE. FRANK E. JOHNSON, Chicago, Ill. Filed Oct. 24, 1914, Serial No. 868,378. Renewed Dec. 13, 1920. Serial No. 430,557. 4 Claims. (Cl. 291—19.)

1. The combination with an automobile of a controlling device comprising a sand receptacle, a discharge therefor, a drying chamber into which said discharge projects, the end of said discharge being open and being located intermediate the top and bottom of said drying receptacle so that as the sand is discharged into the drying receptacle, the angle of repose thereof limits the amount of sand entering the drying receptacle to an amount that only partially fills the chamber so that there is an air space in said chamber, pipes leading from said drying

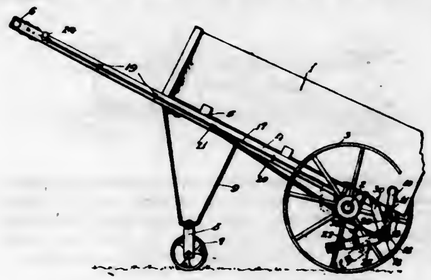
chamber to the driving wheels of the automobile, and a connection between said drying chamber and the exhaust pipe of the engine and means for controlling said latter connection whereby the sand may be dried and forced under the wheels by the exhaust gases from the engine.

1,424,413. FAN-BELT PULLEY FOR INTERNAL-COMBUSTION MOTORS. ALBERT W. JONES, Wichita, Kans. Filed Sept. 6, 1921. Serial No. 498,629. 2 Claims. (Cl. 64—18.)



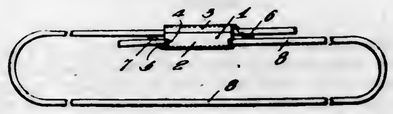
1. The combination, with a regular pulley, of a split, annular pulley provided with an external thread and with a groove for a round belt; and an internally threaded clamp-ring embracing the threaded periphery of said split pulley.

1,424,414. PAINT COMPOSITION. KARL BARRE LAMB, New York, N. Y., assignor to The American Cotton Oil Company, a Corporation of New Jersey. Filed Feb. 2, 1922. Serial No. 538,554. 6 Claims. (Cl. 134—60.)



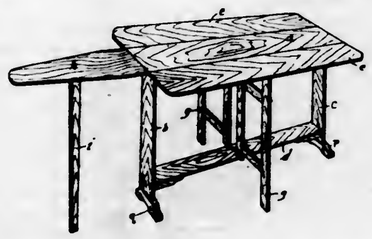
4. A paint composition comprising a paint vehicle, a composite black pigment resulting from the carbonization of spent fuller's earth under conditions to develop an intense black color, other black pigments, and a drier.

1,424,415. UNDERCUTTING-SAW SUPPORT. ROBERT LARSON, Vancouver Island, British Columbia, Canada. Filed Oct. 27, 1921. Serial No. 510,860. 6 Claims. (Cl. 143—163.)



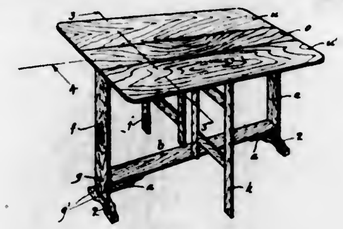
1. A log undercutting saw support, comprising a clamp adapted for removable attachment to the handle of an axe, a lever mounted on the clamp member and by which it is secured on the axe handle, a stud secured to and projecting from the lever, and a small grooved sheave rotatably mounted on the stud.

1,424,416. STREET MARKER. AUGUST LIPAN and JOSEPH MANGIARACINA, New Orleans, La. Filed July 27, 1921. Serial No. 487,949. 10 Claims. (Cl. 91—30.)



1. In a machine of the class described, a reservoir supported for travel, a liquid applying medium supported for movement into and out of operative relation to the surface over which the machine is propelled, and means for conducting liquid from the reservoir to the said medium.

1,424,417. BELT BUCKLE. ANTON MAN, New Haven, Conn. Filed Aug. 4, 1921. Serial No. 489,814. 2 Claims. (Cl. 24—186.)

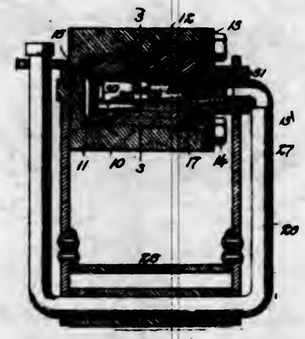


1. A buckle comprising a comparatively flat open-ended sheet metal sleeve adapted to receive overlapping strap ends, one end of the back wall of said sleeve and the other end of the front wall thereof each having an integral tongue, said tongues being adapted for reception in openings in the strap ends and being extended obliquely inward from said walls with their free ends spaced outwardly in a longitudinal direction from the ends of the sleeve.

1,424,418. COMBINED KITCHEN AND IRONING TABLE. JAMES A. MALARKEY, Portland, Oreg. Filed Feb. 14, 1921. Serial No. 444,691. 1 Claim. (Cl. 45—17.)

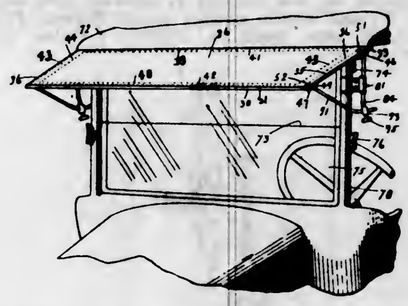
In a combined table and ironing board, the combination of a central portion comprising end standards, one of which is provided at its upper end with a recess, a brace connecting the lower portion of the standards, a top of greater transverse width than the transverse width of the standards to provide overhanging portions, spaced cleats on the underside of the top adjacent the recess, the space formed between the cleats communicating with and forming a continuation of the recess, a leaf hinged to each overhanging portion, foldable legs pivotally mounted between the brace and the top to support the leaves when extended, an ironing board having one end equal in width to the width of the top and hinged to the latter adjacent the standard having the recess, a leg having a horizontal extension at its upper end, said extension fitting in the recess and spaced between the cleats and adapted to be withdrawn for the leg to support the ironing board when in use, said leg being housed in the space formed by the ironing board when the latter is not in use, the table top and the adjacent standard, and a pin in the extension to limit the outward movement of the leg, whereby when the leaves are folded the central portion of the table and the ironing board form a continuous operating surface of substantially the same width, or when said leaves are supported by their legs the operating surface beyond the ironing board is of greater width than the latter.

1,424,419. KNOCKDOWN FOLDING TABLE. JAMES A. MALARKEY, Portland, Oreg. Filed Feb. 14, 1921. Serial No. 444,692. 1 Claim. (Cl. 45—116.)



In a folding table, the combination of a central portion comprising end standards formed on their inner surfaces near the bottom with transverse grooves with intersecting perforations, a brace having intermediate oppositely disposed openings near the edges, said brace being equal in width to the width of the standards and fitted in the transverse grooves, fastening elements extending through the perforations and into the ends of the brace, parallel cleats secured to the under side of and at the corners of the brace, fastening means extending through the standards and engaging the ends of the cleats, the cleats being elongated and extended inwardly toward the center of the brace, a top extending across the upper ends of the standards and of greater transverse width than the latter to provide overhanging portions, said top having oppositely disposed openings in its under side in alignment with the openings in the brace, a leaf hinged to each of the overhanging portions, frames for supporting the leaves, each frame comprising an outer vertical leg equal in length to the length of the standards, an inner leg equal in length to the distance between the under side of the top and the top surface of the brace, braces connecting the legs of each frame, and studs extending from the top and bottom of the short leg to engage the openings in the top and brace, whereby when the leaves are in folded position the frames are adapted to be folded in the spaces formed by the overhanging portions of the top and said leaves.

1,424,420. VALVE MECHANISM FOR AUTOMATIC TRAIN-CONTROL APPARATUS. ROBERT L. MILLER, Spokane, Wash. Filed Mar. 16, 1922. Serial No. 544,146. 11 Claims. (Cl. 246—190.)

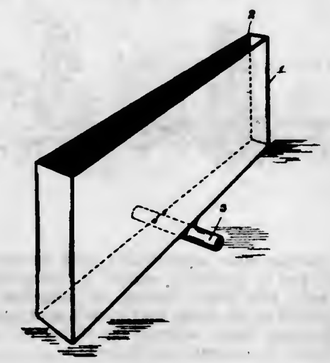


1. In automatic train control apparatus, a valve mechanism adapted to be located in the train line between the usual brake actuating means and the ordinary engineer's valve for automatically effecting a reduction in train line pressure, said mechanism including a rotatable valve directly operable to control the flow of fluid

in the train line, an angularly movable shoe including a hollow member subject to train line pressure and operable to rotate said valve, and means operable in all angular

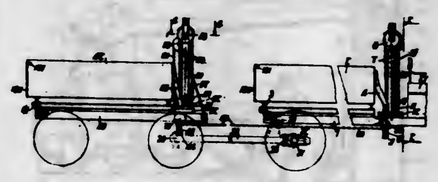
positions of said shoe when fluid pressure is exhausted therefrom to automatically cut off communication between the fluid pressure pipe and the train line.

1,424,421. CANOPY FOR AUTOMOBILES. ARTHUR W. MUELLER, Cincinnati, Ohio. Filed Apr. 5, 1920. Serial No. 371,425. 4 Claims. (Cl. 296—95.)



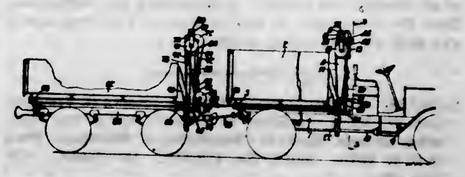
1. In a canopy for automobiles, the combination of an upper rod, a lower rod, a cross-bar at each end of said rods adjustable lengthwise of said rods for adjustably connecting said rods, each of said cross-bars provided with bearing-portions in which said rods are received, a cover provided with channels in which said rods and said cross-bars are located, and clamps outside said channels, said clamps provided with bearing-portions complemental to said first-named bearing-portions for clamping said cross-bars at selective points lengthwise of said rods to the ends of said rods.

1,424,422. FLOOR STRUCTURE. VALSY E. ROWLAND, Indianapolis, Ind. Filed Jan. 3, 1922. Serial No. 526,650. 2 Claims. (Cl. 72—66.)



1. A floor structure comprising blocks laid in rows and spaced at their ends, a layer of plastic material on said blocks, said material also filling the spaces between the ends of the blocks to form floor joists, and spacing elements between the blocks at the bottom thereof, the ends of the blocks having transverse grooves in which the ends of said elements seat and are supported, and said block ends having other transverse grooves entered by the material forming the joists, said ends of the spacing elements filling only portions of the first mentioned grooves to permit the joist material to enter said grooves above said ends of the spacing elements.

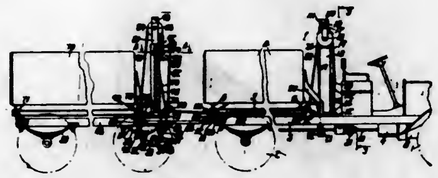
1,424,423. DEVELOPING TANK. PLINY W. SMITH, Rochester, N. Y. Filed June 20, 1921. Serial No. 478,917. 2 Claims. (Cl. 259—56.)



1. A relatively long and narrow developing tank having a rectangular bottom, a rocker attached to said bottom beneath and centrally thereof and transversely thereto, said rocker being adapted to rest on a plane surface and support the tank in an upright position while it rocks thereon.

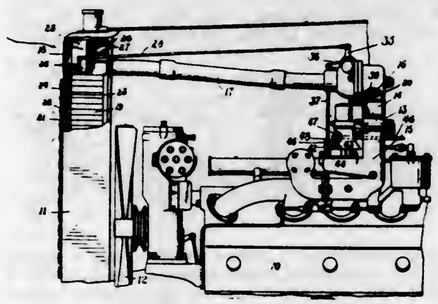
1,424,424. TRAILER-DUMPING MECHANISM. LOUIS M. SPENCER, Highland Park, Mich. Filed Dec. 15, 1916. Serial No. 137,093. 38 Claims. (Cl. 298—22.)

1. In combination, a pulling vehicle having a tiltable body and a propelling engine, a pulled vehicle having a tiltable body, and means whereby the propelling engine may be utilized to tilt either body at will.



1,424,425. CABLE-HAULING AND BODY-DUMPING MECHANISM. LOUIS M. SPENCER, Highland Park, Mich. Filed Aug. 29, 1918. Serial No. 251,907. 24 Claims. (Cl. 298—22.)

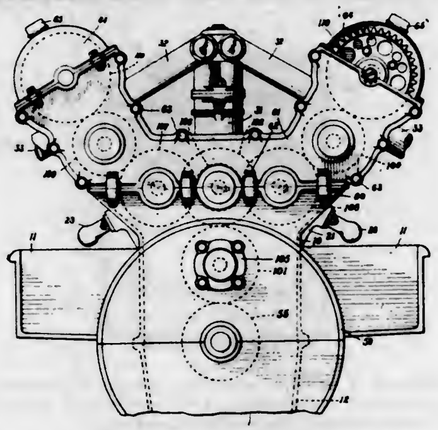
1. In mechanism of the class described, a guide, a member reciprocable therein, supporting means, a pull-



ing element adapted to be actuated by the reciprocable member and also adapted to rest on the supporting means, said supporting means being shiftable to connect the pulling element to the reciprocable member and to disconnect it therefrom at will.

1,424,426. TRAILER-DUMPING MECHANISM. LOUIS M. SPENCER, Highland Park, Mich. Filed June 25, 1917, Serial No. 176,648. Renewed May 18, 1922. Serial No. 562,038. 20 Claims. (Cl. 298—22.)

1. A roadway train comprising a truck having a tiltable body and a propelling engine, a trailer having a tiltable body, and means whereby the propelling engine may be utilized to tilt either body at will, said last named means including means whereby the tilting of the body of the trailer is automatically limited.



1,424,427. MOTOR VEHICLE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 17, 1916. Serial No. 109,854. 7 Claims. Cl. 123—178.)

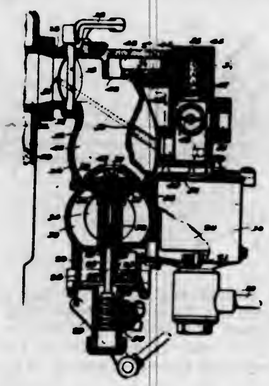
1. In a motor vehicle, in combination, a motor, a carburetor having means for adjusting the richness of the mixture, a radiator, water connections from the motor to the radiator, means for controlling the flow of air through the radiator, a thermostat, and connections from the thermostat to said carburetor adjusting means and said air controlling means.

1,424,428. HYDROCARBON MOTOR. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 4, 1916. Serial No. 123,716. 13 Claims. (Cl. 123—55.)

1. In a hydrocarbon motor, in combination, a crank case, cylinder blocks mounted thereon in V relation, a gear casing at one end of the crank case extending upwardly to adjacent the top of both sets of said cylin-

ders, and a cam shaft casing mounted on top of each of said cylinder blocks and connected to the gear casing.

1,424,429. MEASURING APPARATUS. CONSTANTIN WAGNER, Jr., and GODFREY P. SCHMIDT, New York, N. Y.; said Schmidt assignor to said Wagner. Filed Oct. 23, 1919. Serial No. 332,582. 1 Claim. (Cl. 73—51.)

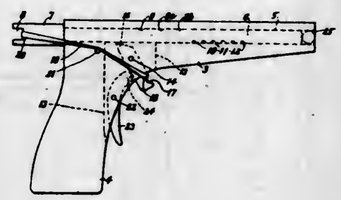


In an apparatus of the class described, a standard with a vertically adjustable table supported thereby, a fixed indicator upon said standard, and another indicator adjustable thereupon, said standard comprising a channel with perforations through the yoke thereof, and said adjustable indicator and a table each being provided with a housing, and a rotatable sprocket in each housing for engaging said perforations for raising and lowering said table and adjustable indicator.

1,424,430. HYDROCARBON MOTOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 29, 1919. Serial No. 348,053. 13 Claims. (Cl. 123—122.)

1. In a hydrocarbon motor, the combination with the motor cylinder, of a carburetor and heater device com-

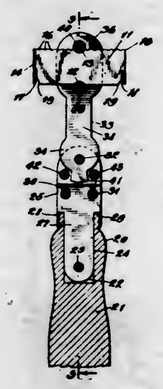
prising an elbow having a substantially horizontal part for connection to the motor cylinder and a substantially vertical part for connection to the carburetor, a car-



buretor connected to said vertical part of the elbow, a throttle valve arranged in the horizontal part of the elbow, and a combustion heater having its inlet opening arranged at the bend in the elbow.

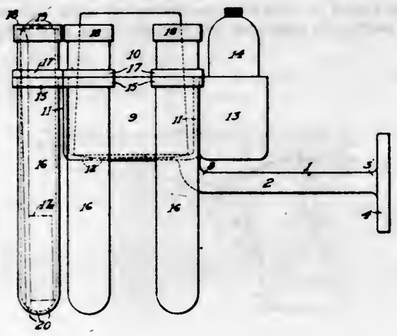
1,424,431. WINDOW-SCREEN HANGER. CHARLEY D. ADAMS, Dallas, Tex. Filed Jan. 28, 1922. Serial No. 531,152. 4 Claims. (Cl. 156—14.)

4. The combination of a window frame having a blind stop, a screen frame fitting in the window frame and contacting with the blind stop, the upper inner edge of said screen frame being rounded to provide a hinge bearing surface, hooks depending from the blind stop at each side of the top of the window frame, a pair of coiled extension openings each having its upper end engaged with one of the stop hooks, screen eyes mounted in the screen frame, screen hooks pivoted to the lower ends of the springs and engaging the screw eyes, and keepers straddling the upper ends of the springs and fastened to the screen frame for holding the upper end of the screen frame in contact with the blind stop, when the screen is closed.



1,424,432. TOY PISTOL. OLIN G. AMLEE, St. Paul, Minn. Filed Oct. 31, 1921. Serial No. 511,576. 2 Claims. (Cl. 124—14.)

1. In a toy gun, a barrel having a stock at one end and a bore throughout its entire length, a downward mortise in the stock registering with the bore, an ejector rod slidable in the bore and having a notched head at its rear end and the under side of its front portion provided with a series of notches, an inclined trip lever fulcrumed in the mortise and having its upper end arranged to engage the notched under side of the ejector rod, the lower end of the trip lever projecting out below the barrel and having its projecting end engaged by an elastic band,

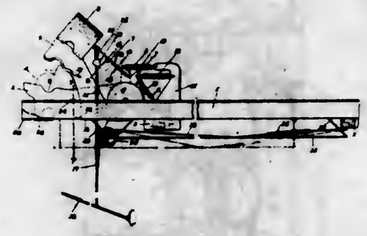


said band being passed rearwardly from the trip lever to engage the notched head of the ejector rod and being always in tension tending to keep the trip lever engaged and to push the ejector rod forward simultaneously, said ejector rod having in its upper side notches becoming visible rearward of the barrel when the rod is more or less retracted, and a trigger arranged to disengage the trip lever from the ejector rod, substantially as shown and described.

1,424,433. TIRE TRIMMER. JOSEPH M. ANGELETTI, New York, N. Y. Filed Oct. 10, 1919, Serial No. 329,653. Renewed Dec. 19, 1921. Serial No. 523,589. 4 Claims. (Cl. 30—20.)

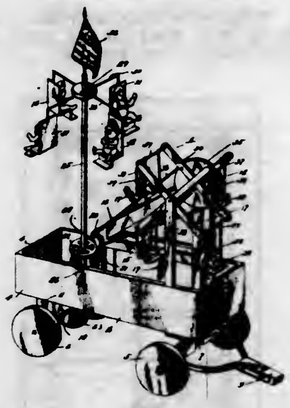
1. In a tire trimmer, the combination with a holder having a forked head with a handle, of two detachably connected clamping plates pivoted between the forks of the head for being swung to angular positions, and a blade having a substantially rectangular body part removably mounted between the clamping plates, said blade having oppositely disposed angularly bent ends with substantially V-shaped notches having cutting edges at the intersection of the body part with the bent ends of the blade.

1,424,434. HOLDER FOR TOOTH-CLEANING ARTICLES. HERMAN AUBUDEL, New York, N. Y. Filed Mar. 22, 1919. Serial No. 284,247. 2 Claims. (Cl. 248—63.)



1. A holder for tooth cleaning articles having the combination of a bracket, tumbler retaining means carried by said bracket including an annular wall adapted to surround the side of the tumbler with means for supporting the tumbler at the lower end of said wall, a plurality of rings depending from said wall being adapted for the retention of individual completely enclosing tooth brush receptacles, and individual tooth brush receptacles having means to engage said rings and being removable from said means.

1,424,435. PITMAN END. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, Coalinga, Calif., a Corporation of California. Filed Apr. 21, 1920. Serial No. 375,422. 5 Claims. (Cl. 287—93.)

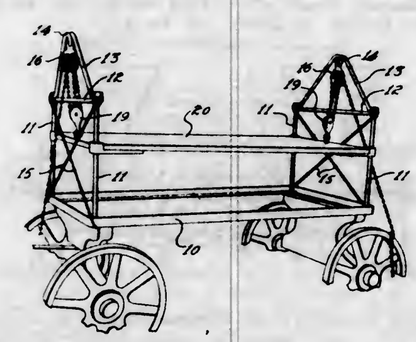


1. A bearing structure comprising a bearing block having a bearing seat therein; guides extending from each side of said seat; a follower block slidably positioned between said guides and forming a bearing cap for the crank pin seat in the bearing block; a lock bolt journaled in the bearing block and having a cam portion extending within the follower adapted to retain the bearing cap and the bearing seat in a desired relative position or instantly separate them.

1,424,436. FRUIT-PITTING MACHINE. LEWIS R. BARNES, Fresno, Calif. Filed Aug. 1, 1921. Serial No. 488,778. 16 Claims. (Cl. 146—6.)

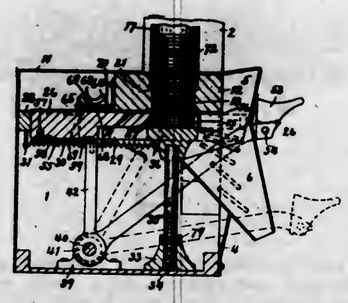
1. A fruit cutting and pitting machine including a pair of co-operating knives, the fruit being placed between said knives, channels on each side of the knives adapted to receive the cut fruit thereon, and means for causing the cut halves to rest cut side up on said channels.

1,424,437. FIGURE WHEELED TOY. JOHN W. BARNHART, Columbus, Ohio. Filed July 18, 1921. Serial No. 485,504. 2 Claims. (Cl. 46—45.)



1. A toy comprising a body, supporting wheels, an axle rotatable with said wheels, a triangular diving frame carried by said body, and having one of its sides arranged perpendicular with respect to the bottom of the body, rollers journaled at the corners of said frame, an endless belt movable around said rollers, a driving connection between one of said shafts and said rollers whereby the belt will be operated upon movement on the part of the vehicle, and a plurality of figures hinged to said belt and capable of extending parallel therewith when the belt is moving along the perpendicular side of the frame and to extend at right angles to said belt when the latter is moving in an angular upward direction.

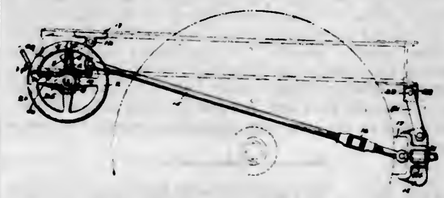
1,424,438. TRUCK. JAMES B. BAUM, Grand Junction, Colo. Filed Feb. 19, 1921. Serial No. 446,318. 1 Claim. (Cl. 254—4.)



In a truck, a frame, standards rising from the corners of the frame, cross pieces connecting the standards at each end of the frame, said cross pieces being apertured to receive said standards, a floor slidably mounted on said standards, a wire frame substantially of inverted V-shaped formation, reposing upon each of said cross pieces, each

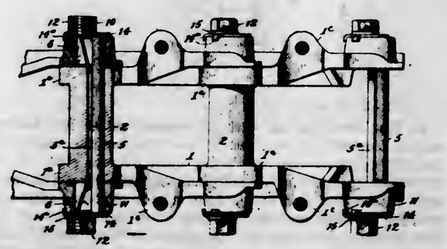
frame terminating to provide eyes receiving the upper ends of said standards, an intermediate loop formed at the apex of each frame, a pulley suspended from each

loop, and flexible elements trained over said pulleys and connected with said floor, whereby the latter may be moved toward and away from the frame.



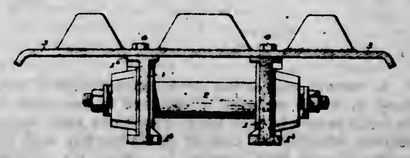
1,424,439. CHANGE-MAKING MACHINE. SAMUEL J. BELL, Springfield, Mass. Filed Sept. 15, 1920. Serial No. 410,462. 13 Claims. (Cl. 133—4.)

1. In a change-making machine, magazines for columns of coins, delivery means for coins from one of said magazines, delivery means for coins from the others of said magazines, the points of discharge of such delivery means being remote from each other, movable means in operative relation to each of said magazines, actuating means for the means associated with certain of said magazines, the movable means associated with one of said magazines being without actuating means, and connecting means between said movable means whereby, when any of said actuating means are operated, coins are discharged from one of the magazines the movable means associated with which are provided with actuating means, and the magazine the movable means for which are not provided with actuating means, simultaneously, said coins from said two magazines being delivered at remote points.



1,424,440. BRAKE MECHANISM. ALEXANDER M. BELLONY, U. S. Army. Filed May 7, 1919. Serial No. 295,466. 2 Claims. (Cl. 74—119.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A control mechanism comprising a rotatable member including a circular hand-grip, and an auxiliary grip pivoted to the hand-grip, said auxiliary grip being operable to positions coincident with or at right angles to the



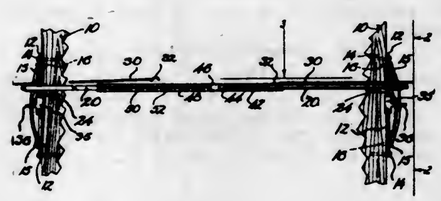
plane of said rotatable member, and spring clips attached to said member and engageable with the auxiliary grip to secure the latter in either of its positions.

1,424,441. SPROCKET CHAIN. CLARENCE LEO BEST, Elmhurst, Calif., assignor to C. L. Best Gas Traction Company, San Leandro, Calif., a Corporation of California. Filed July 16, 1920. Serial No. 396,818. 12 Claims. (Cl. 74—32.)

1. In a sprocket chain, link members, means for hinging adjacent link members together comprising a pair of cooperating transversely extending bearing members, one on each link, the bearing member of one link being formed as a separate part and provided at one end with a flat side face, and the link having a socket opening in which said end portion of the bearing member seats, the wall of the socket opening having an inclined face portion, a wedge member extending into the socket opening between the wall thereof and the flat face of the end portion of the bearing member, said wedge member having an inclined face to cooperate with the inclined face portion in the wall of the socket, and adjusting means for said wedge member.

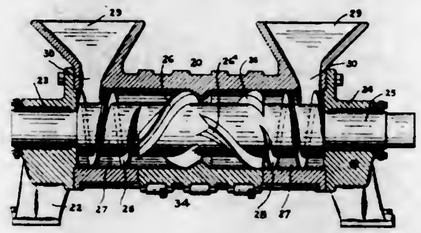
1,424,442. SPROCKET CHAIN. CLARENCE LEO BEST, Elmhurst, Calif., assignor to C. L. Best Gas Traction Company, San Leandro, Calif., a Corporation of California. Filed July 16, 1920. Serial No. 396,819. 4 Claims. (Cl. 74—32.)

3. In a sprocket chain, link members, means for hinging adjacent link members together comprising a pair of



cooperating transversely extending bearing members, one on each link, the bearing member of one link being formed as a separate part, and the link having a socket opening in which an end portion of the bearing member seats, a wedge member extending transversely of the link member in the socket opening between a wall thereof and a wall of the bearing member for adjustment longitudinally thereof, and means for adjusting the wedge member including a threaded socket in one end of the bearing member, a threaded stem part adjustably seated in said socket, and a nut on the stem part adapted to engage the wedge member.

1,424,443. EXTENSION FOR CONDUIT OUTLET BOXES. CARL H. BISSELL, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed June 21, 1918. Serial No. 241,223. 3 Claims. (Cl. 247—31.)



1. The combination with a conduit outlet box having means formed with a passage for receiving the end of an electric conduit, the box being open at one side, of an extension comprising a section mountable upon the open side of the box and being open at its opposite side and another section mountable upon such open side of the first-mentioned section, the extension having a curved neck portion extending at an angle to the axis of the conduit connection of the box and the plane of division between the sections extending through the curved neck portion where it joins the extension, means for securing the first mentioned section to the box, and means for securing the sections together, substantially as and for the purpose described.

1,424,444. ADJUSTABLE CURTAIN ROD. ISRAEL BLOOM, Denver, Colo. Filed Feb. 21, 1921. Serial No. 446,559. 5 Claims. (Cl. 156—19.)

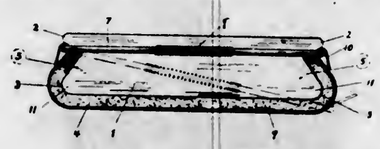
4. A curtain supporting device comprising a rod, a bracket in which each end of said rod is journaled, said ends being reversely bent where they enter said brackets, a ratchet mounted on each of said reversely bent ends, a spring dog on each bracket to engage the respective ratchet, and a spring mounted upon each reversely bent end and engaging said rod and the respective bracket to urge the ratchet against the dog.

1,424,445. MACHINE FOR MIXING OR MASTICATING RUBBER AND LIKE MATERIALS. DAVID REES BOWEN, Ansonia, and CARL FREDERIC SCHNUCK, New Haven, Conn., assignors to Farrel Foundry & Machine Company, Ansonia, Conn. Filed Oct. 29, 1920. Serial No. 420,390. 21 Claims. (Cl. 18—2.)

1. In a machine of the character described, a working chamber, a rotor therein for working the material back and forth, and means for forcing the material positively into the working chamber at the respective ends.

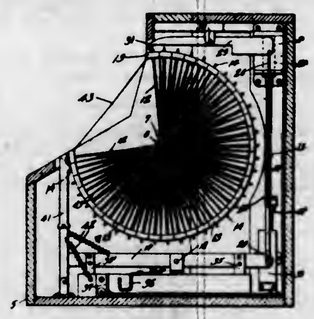
1,424,446. EPICYCLIC-POWER TRANSMISSION. LAWRENCE R. BUCKENDALE, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Oct. 14, 1919. Serial No. 330,675. 1 Claim. (Cl. 74—34.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

A power transmission having a drive shaft, a primary driven shaft and secondary driven shafts, means for driving the primary driven shaft in either direction, and plural epicyclic transmission mechanisms, one having its orbit gear mounted for rotation with the primary driven shaft, and the other having its sun pinion mounted for operation with the primary driven shaft, and brakes associated with said mechanism operable to hold parts of the mechanism stationary to transfer variable speeds from the primary to the secondary driven shaft.



1,424,447. PROCESS OF RECOVERING VALUABLE COMPONENTS IN A LIQUID PHASE. GEORGE B. BURNHAM, Glendale, Calif. Filed Jan. 8, 1920. Serial No. 350,158. 6 Claims. (Cl. 23—22.)

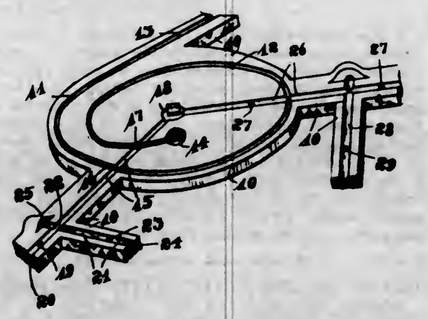
5. The process of recovering borax and another salt saturated in a liquid containing the same, which consists in causing a state of supersaturation with the borax and causing a deposit of the other salt; removing the liquid from deposited salt, and causing the borax to be deposited from the removed liquid.



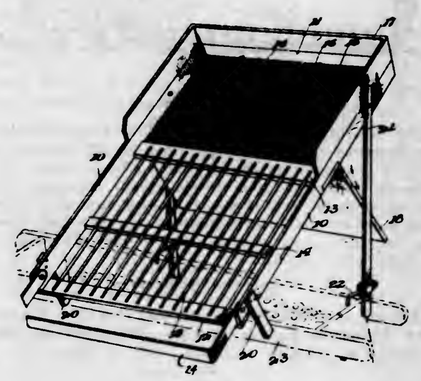
1,424,448. POLISHER. GEORGE G. BUSH, Bristol, Conn. Filed May 20, 1921. Serial No. 471,063. 3 Claims. (Cl. 15—231.)

1. In a polisher or the like, a base, a removable rubbing element thereon, and a clamp having end portions

clamping said rubbing element to said base, said end portions being connected by coiled springs which extend along the sides of said base in an exposed position, whereby said springs afford roughened surfaces which can be grasped by the hand of the user when using said polisher; substantially as described.



1,424,449. ROTARY ADVERTISING DEVICE. LUCIUS H. CAMMACK and HENRY A. BROWN, Huntington, W. Va. Filed Jan. 4, 1922. Serial No. 526,906. 3 Claims. (Cl. 40—54.)



1. In a device of the character described, a housing, a shaft supported in the housing, a plurality of card supporting frames movable on the shaft, each of said frames including a pair of legs, a bar supported by the legs and carrying a keeper, pivoted fingers having connections with the keepers to release the frames at predetermined intervals, electrically controlled means for operating the fingers, and cards carried by the frames.

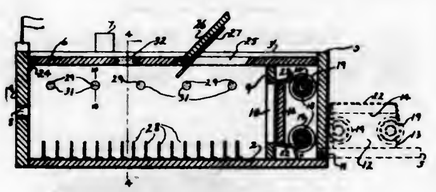
1,424,450. TOY. IRENE M. CHILDS, Los Angeles, Calif., assignor of one-half to Ella M. Shute, Los Angeles, Calif. Filed June 13, 1921. Serial No. 477,156. 4 Claims. (Cl. 46—61.)

1. In a toy, in combination with traveling members, a base member forming guiding means for the said traveling members, a certain portion of the guiding means being of a continuous form terminating in a certain goal, another portion of the guiding means intersecting the first-named portion at a point before the goal, and extending to a point distant and separate from the first-named portion and goal, and another portion of the guiding means intersecting the second-named portion at a point before the intersection of the first two portions and extending to a point distinct from the other portions.

1,424,451. COMBINED SAND AND GRAVEL SCREEN. ORLANDO C. CRANDALL, Stanwood, Mich. Filed Feb. 3, 1920. Serial No. 355,936. 1 Claim. (Cl. 83—56.)

A screening device comprising a frame having a screening surface, stationary legs at the lower end of the frame for supporting the same, legs pivoted to the upper portion of the frame at the opposite sides thereof and swingingly adjustable with relation thereto, and support clamping members longitudinally slidably adjustable upon the lower ends of said last-mentioned legs, and hook-engaging members carried by said support clamping members and projecting at an angle to the respective legs.

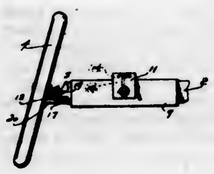
1,424,452. SELF-BAILING SCOW. HARRIS T. DUNBAR, Buffalo, N. Y. Filed May 14, 1921. Serial No. 469,431. 10 Claims. (Cl. 114—183.)



1. A scow comprising a hollow hull provided at one end with a trap which is elevated above the bottom of the hull while its other end is provided with a lower chamber extending down to the bottom of the hull, and a valved conduit leading from said lower chamber to said elevated trap.

1,424,453. TOY. JOSEPH FARR, St. Catharines, Ontario, Canada. Filed Apr. 18, 1921. Serial No. 462,140. 5 Claims. (Cl. 46—40.)

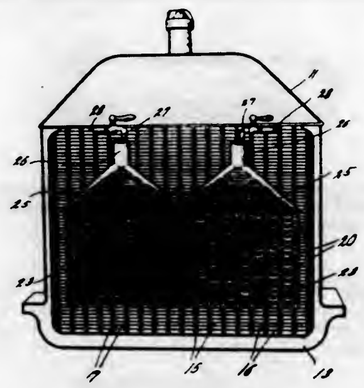
1. A toy of the class described comprising an enclosed rectangular box, having a peep hole in the front end thereof, and a removable rear end, an inwardly



extending bracket carried by the rear end, a pair of transversely disposed rollers journalled in the bracket and situated adjacent to the top and bottom of the box, a flexible curtain having its ends connected respectively to the upper and lower rollers, the inner face of the bracket forming a guide over which the portion of the curtain extending between the rollers passes, the box having orifices which register with the ends of the rollers

when the rear end of the box is in the normal position, an operating key adapted to extend through said orifices and to engage either of the rollers whereby said rollers may be rotated and the curtain wound from one roller to the other, the roof of the box having an orifice therein and a reflector adjustably mounted in said orifice whereby the light from outside may be reflected onto the curtain within the box

---



1,424,454. AUTOMOBILE LOCKING DEVICE. WILLIAM P. FAULKNER, Kansas City, Mo. Filed Sept. 27, 1920. Serial No. 413,044. 1 Claim. (Cl. 70—90.)

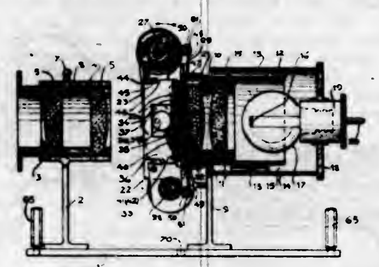
The combination with the front axle, the steering knuckle, and the front bearing wheel of an automobile, of a stop member demountably secured on the axle and arranged thereon to hold the bearing wheel deflected, said stop member comprising a channel plate having its vertical side inset longitudinally to thereby form a boss adapted for occupying the channel in the axle and permit the upper and lower sides of the channel plate to receive between them and the boss the axle, the outer end of the boss having an extension extending to and against the bearing wheel when the latter is deflected, the outer end of the upper side of the channel plate having a horizontally extending hook adapted for catching the pivot on the steering knuckle, a locking device mounted on the upper side of the channel plate and projecting therefrom, and a locking bar pivotally mounted on the lower side of the channel plate and having a hole in its free end portion adapted for receiving the bolt of the locking device.

1,424,455. AUTOMOBILE RADIATOR. EDMUND J. FEENY, Muncie, Ind. Filed Sept. 24, 1917. Serial No. 192,846. 9 Claims. (Cl. 251—125.)

3. A cooling radiator for internal combustion engines, said radiator having water passages which carry the cooling water of the engine and air passages which have metallic heat-radiating surfaces receiving heat from the water passages, in combination with wicks located in the air passages of said radiator but smaller than such air

passages so as to leave room for the passage of air, and means for supplying water to said wicks.

1,424,456. SCREW DRIVER. THOMAS J. FEOLEY and WALTER S. SNYDER, Philadelphia, Pa., assignors to North Bro's. M'f'g. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 25, 1920. Serial No. 384,074. 3 Claims. (Cl. 145—53.)



3. The combination in a screw driver, of a cylindrical section having an internal spiral groove; a ferrule screwed into one end of the section, the other end of the section being notched; a slotted locking plate having projections adapted to the notches in the cylindrical section; a handle driven onto the end of the cylindrical section; a spindle having a pin; a sleeve loosely mounted on the spindle and having threads adapted to the groove in the cylindrical section and notched at its outer end to engage the pin on the spindle; a second pin on the spindle beyond the nut; a washer; and a spring between the washer and the locking plate.

1,424,457. SCIOPTICON APPARATUS. ERNST FEGRAEUS, Partillo, Gottenborg, Sweden. Filed Nov. 10, 1921. Serial No. 514,350. 18 Claims. (Cl. 88—28.)

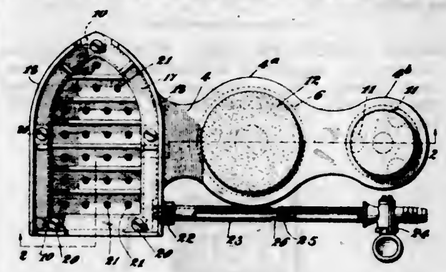
1. In a sciopticon apparatus, the combination of a lens system, a source of light disposed on the rear side of said lens system, and a support provided with a plurality

of rotatable parallel rollers for transferring a film, said support being mounted within said system and being

pivotally supported by an axis disposed substantially parallel to and arranged between the axes of said rollers.

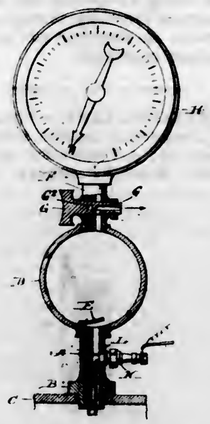
1,424,458. UTILIZATION OF HOSIERY MILL WASTE. HORACE T. FLEISHER, Elkins Park, Pa. Filed Mar. 15, 1921. Serial No. 452,570. 4 Claims. (Cl. 28—1.)

1. The method of utilizing looper rounds cut from hosiery comprising looping a series of these endless rounds to each other to form a strand of sufficient length for use in the manufacture of fabric.



1,424,459. ROOFING ELEMENT. SILAS M. FORD, St. Paul, Minn. Filed Nov. 26, 1919. Serial No. 340,794. 7 Claims. (Cl. 108—7.)

3. A prepared roofing element comprising weather and covered portions of flexible laminated sheet material with integral vertical flanges comprising all the layers of the said laminated sheet material extending along each of the side edges of the said weather portion.

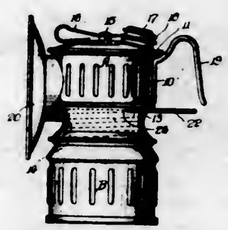


1,424,460. GAS HEATER FOR SADIRONS. OTTO H. FRANK, Brooklyn, N. Y. Filed Apr. 6, 1921. Serial No. 458,878. 5 Claims. (Cl. 126—230.)

3. A device of the character described comprising a hollow casting having the general proximate form of a sad iron, a casting provided with a number of pan-like members integral with each other, said second-mentioned casting being detachably mounted upon first-mentioned casting and having a general contour analogous to that

of a sad iron, said second-mentioned casting being provided with a plurality of burner nipples extending from said pan-like members, said second-mentioned casting being further provided with upwardly extending flanges for supporting a sad iron.

1,424,461. PRESSURE INDICATOR FOR INTERNAL-COMBUSTION ENGINES. GEORGE B. FRANKFORTER, U. S. Army. Filed Sept. 2, 1919. Serial No. 321,228. 1 Claim. (Cl. 73—31.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



A pressure indicator for internal combustion engines, including a tubular connection formed at one end for threaded engagement with the head of the engine cylinder, the interior diameter of the connection being sufficient to allow free passage of fluid therethrough, a spark plug carried by the connection, a reservoir secured to the upper end of the connection, a check valve controlling the communication between the tubular connection and reservoir, a gauge connected to the reservoir and a three-way valve controlling communication between the reservoir and gauge, whereby the communication is established between the reservoir and gauge when the valve is in one position and between the reservoir and the atmosphere when the valve is turned to a position at right angles to the first mentioned position.

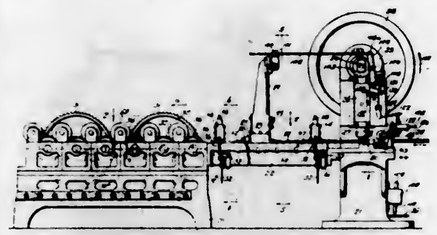
1,424,462. PROCESS FOR THE MANUFACTURE OF DETONATING CAPS FOR MINING AND MILITARY PURPOSES. WALTER FRIEDRICH, Troisdorf, near Cologne, Germany. Filed Dec. 15, 1920. Serial No. 431,046. 2 Claims. (Cl. 52—4.)

1. The process for the manufacture of detonating caps and the like for mining and military purposes which

consists in priming the ordinary main charge with lead azide and then placing lead trinitroresorcinate on said lead azide.

1,424,463. ACETYLENE LAMP. WILLIAM J. FRISBIE, Chicago, Ill. assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 11, 1921. Serial No. 468,546. 5 Claims. (Cl. 240—1.)

1. In a miner's acetylene lamp, the combination with the water container bo[illegible], of a bottom member therefor, a supporting structure extending from said container body, said body having an opening, the inner end of said supporting structure extending through said opening to be received between the body wall and said bottom structure to be thus held in position.

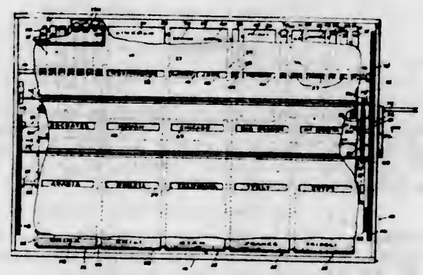


1,424,464. ACETYLENE LAMP. WILLIAM J. FRISBIE, Chicago, Ill., assignor to Justrite Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 29, 1921. Serial No. 496,544. 6 Claims. (Cl. 240—1.)

1. The combination with a lamp body having a gas orifice, of a spacer frame intimately engaging with and secured to the lamp body concentric with said orifice, a reflector having a central opening, a reenforcing wall surrounding said opening and extending rearwardly from the reflector, said wall being adapted for detachable threaded engagement wtih said spacing frame whereby said reflector may be secured to and seated against the front edge of said frame to bring the reflector opening in registration with said gas orifice.

1,424,465. BAR CUTTING AND STRAIGHTENING APPARATUS. JOHN F. GAIL, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed July 22, 1918. Serial No. 246,044. 18 Claims. (Cl. 153—2.)

4. The combination of constantly running straightener rolls, cut-off mechanism, propelling rolls interposed between the cut-off mechanism and the straightener rolls, means for constantly operating said propelling rolls, means for periodically operating said cut-off mechanism, and means for temporarily rendering the propelling mech-



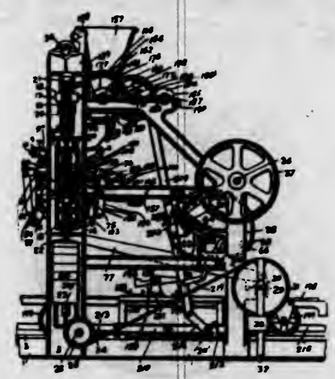
anism ineffective during the operation of the cut-off mechanism.

1,424,466. CASTER SOCKET. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Dec. 27, 1920. Serial No. 433,137. 5 Claims. (Cl. 16—39.)

1. In combination, a hollow post, a roller, a vertical swivel-spindle extending upwardly into the bottom of the post, a bracket on the lower end of the spindle and on which the roller is pivotally mounted on a horizontal axis offset from the spindle axis, means at the bottom of the post in which the lower end of the spindle is rotatably supported, and a socket body in said post in which the upper end of the spindle can rotate, and supported by the extremity of the spindle, said socket comprising a unitary stamped sheet metal strip folded to provide depending legs widely spaced at their lower ends to fit the interior of the post and contracted portions at their upper ends substantially fitting the upper end of the spindle, and to provide pairs of fins constituting lateral extensions of said contracted leg portions.

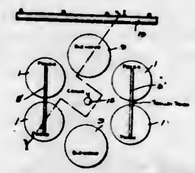
1,424,467. EDUCATIONAL AND AMUSEMENT DEVICE. JOSEPH GALLRAZZI, San Francisco, Calif. Filed May 9, 1921. Serial No. 468,154. 8 Claims. (Cl. 35—12.)

1. An educational and amusement device embodying in its construction a casing, one wall of which is provided



with an opening, a plurality of rotary members within the casing having indicia thereon arranged to be presented to view at said opening, a plurality of stop members on said rotary member, stop members within the casing adapted to be moved into and out of position to engage the first named stop members, means for rotating said rotary members, means operated automatically to move said last named stop members into engagement with the first named stop members after the predetermined rotation of said rotary members, whereby said rotary members are held against rotation and means operably associated with certain of said rotary members providing for holding said certain rotary members against rotation, independent of said first named stop means.

1,424,468. RESILIENT TIRE. DAVID A. GARDEN, St. Louis, Mo. Filed Nov. 12, 1921. Serial No. 514,665. 15 Claims. (Cl. 152—8.)

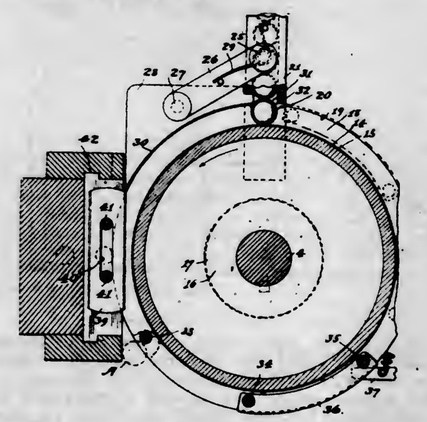


6. A spring tire, comprising coiled springs projecting radially from a rim, a tread portion composed of a number of substantially segmental-shaped members arranged in overlapping relation, pivotal connections between said tread members and said springs, means that extend circumferentially of the tire which holds said tread members in operative relationship with each other, and a resilient band arranged between said rim and tread members and having openings through which said springs are threaded.

1,424,469. CEMENT-TILE-MAKING MACHINE. WILLIAM GILLARD, Stratford, Ontario, Canada. Filed Apr. 2, 1921. Serial No. 457,843. 34 Claims. (Cl. 25—36.)

1. In a cement tile making machine, the combination with a mould carrier and moulds, means for guiding the mould carrier freely vertically, formers operating within the moulds to force the carrier downward as the tile is built up and counter weights opposing the downward pressure exerted on the mould frame, of normally vertical counterweighted lever bars mounted upon a swingable support, and means operated by the upward travel of the counter weights for drawing the counter weighted lever bars from the vertical to the horisontal position.

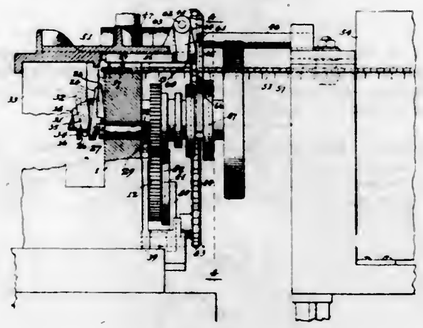
1,424,470. METHOD AND APPARATUS FOR MANIPULATING VULCANIZING DEVICES. HENRY R. GILSON, New Rochelle, N. Y., and GEORGE F. FISHER, Providence, R. I., assignors to Revere Rubber Company, a Corporation of Rhode Island. Filed June 24, 1920. Serial No. 391,354. 9 Claims. (Cl. 18—8.)



1. A vulcanizing unit comprising a polygonal arrangement of presses and elevators having vertically movable platforms, and means for shifting the molds to and from the presses and elevators.

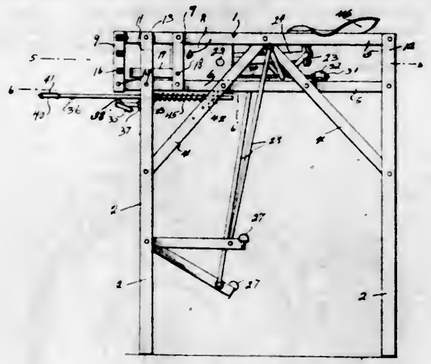
1,424,471. HAIRPIN BOX. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to The Hump Hairpin Manufacturing Company, Chicago, Ill., a Corporation of West Virginia. Filed Apr. 16, 1917. Serial No. 162,268. 2 Claims. (Cl. 229—11.)

1. A hairpin box, consisting of an outer container, formed of a single sheet of paper, said container being closed at each end by movable flaps, the flaps at the lower end being cut away to form a finger aperture, and an inner container, similarly formed of a single sheet of paper, and having a closed lower end and slidably fitted within the outer container and adapted to hold compartments and be raised by inserting the finger through said aperture in the outer container.



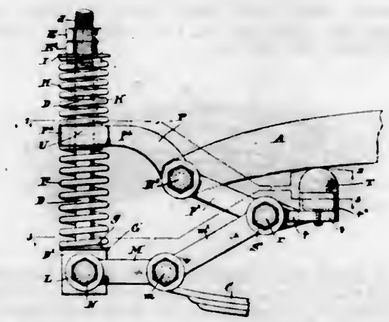
1,424,472. TUBE-CUTTING MECHANISM. SOLOMON H. GOLDBERG, Chicago, Ill., assignor to The Hump Hairpin Manufacturing Company, Chicago, Ill., a Corporation of West Virginia. Filed Dec. 14, 1918, Serial No. 266,670. Renewed Jan. 11, 1922. Serial No. 528,563. 4 Claims. (Cl. 164—68.)

1. In a machine for cutting tubes, into bands, the combination with a frame member, of a revolving roller, a



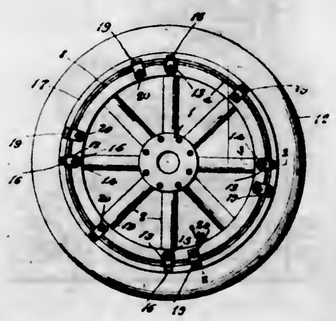
carrier loosely mounted relative to the roller and provided with a tube supporting portion, cutting knives, means for forcing the carrier into frictional engagement with the roller to carry the tubes past the knives and means for returning the carrier to normal position.

1,424,473. MACHINE FOR MAKING HAIRPINS OR SIMILAR ARTICLES. SOLOMON H. GOLDBERG, Chicago, Ill. Filed Feb. 10, 1919, Serial No. 276,010. Renewed Jan. 23, 1922. Serial No. 531,311. 4 Claims. (Cl. 140—87.)



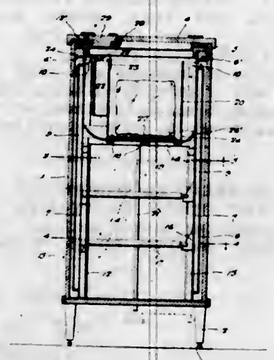
1. In a machine for forming hairpins or similar articles the combination with a continuously driven pin forming machine, of a continuously advancing conveyor chain, means for holding the pins on the chain and means whereby the chain is caused to be flexed to receive the hairpins.

1,424,474. POTATO CUTTER. HARRY J. HANSON, Amenia, N. Dak. Filed June 8, 1921. Serial No. 475,983. 4 Claims. (Cl. 146—7.)



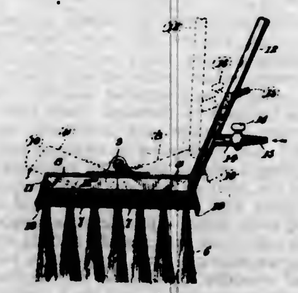
1. In a seed potato cutter, a frame having channels constituting guides, the discharge ends of the guides provided with intersecting vertical and transverse cutting knives, resilient jaws mounted in said guides with their resilient terminals immediately adjacent the knives, constituting yieldable abutments, against which the potato bears prior to being cut by the knives, a pair of plungers mounted to reciprocate in the guides and having their forward faces provided with intersecting transverse and vertical grooves corresponding to the intersections of the knives, so that the forward faces of the plungers may protrude partially between the knives, independently revoluble crank shafts operatively connecting with the plungers for reciprocating them, means for operating the crank shafts, and means operatively connecting said plungers, to insure alternate movement of the plungers.

1,424,475. SHOCK ABSORBER FOR VEHICLES. RALPH E. HASEMEIER, Kokomo, Ind. Filed Aug. 24, 1921. Serial No. 495,067. 13 Claims. (Cl. 267—17.)



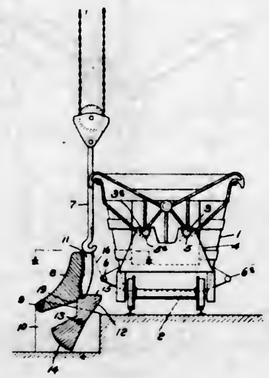
3. A shock absorber for vehicles comprising a spring carrying post, a plurality of springs thereon, a lever having an end interposed between the springs, another lever having an end arranged at the end of one of the springs, pivotal connections between the two levers, pivotal connections between said levers the vehicle frame and the spring with which the absorber is associated, and a buffer for limiting the movement of the levers.

1,424,476. SECTIONAL TIRE RIM. HAL H. HIVELY, Tar River, Okla. Filed Apr. 6, 1917. Serial No. 160,205. 1 Claim. (Cl. 301—11.)



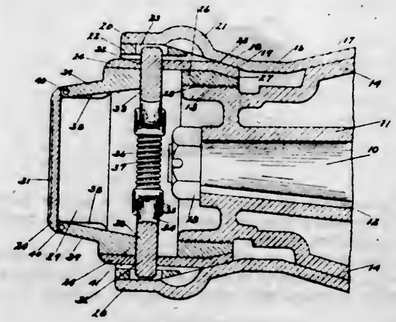
A means for fastening demountable rims to the felly of a wheel comprising a pair of annular members adapted to grip the beads of a tire and movable relative to each other, one of the members extending in a plurality of ears inwardly along the side of the felly and carrying clips adapted to retain the said members in a predetermined relative position to each other, and clips adapted to be placed upon the felly between the said ears and to perform the dual function of cooperating with said first clips to retain the said members together and also to retain the said members to the rim and adapted to be turned upon an axis to allow of the removal from the felly of the said demountable rim members.

1,424,477. ICE CONSERVER. GEORGE L. HOLLAND, St. Petersburg, Fla. Filed Aug. 9, 1921. Serial No. 491,000. 2 Claims. (Cl. 62—31.)



1. A refrigerator of the class described comprising a casing, detachable sheets of lining therein and spaced therefrom, a removable supporting frame in the lower part of the refrigerator and food trays carried thereby, an ice container supported on said frame, some of said sheets having flanges for engaging the other sheets to detachably hold said sheets in position and water receptacles connected to the outer faces of said sheets, a movable cover for the refrigerator and a door in said cover for access to the water receptacle.

1,424,478. FOUNTAIN SCRUBBING BRUSH. JOSEPH HORVATH, Cleveland, Ohio. Filed Dec. 22, 1921. Serial No. 524,073. 3 Claims. (Cl. 15—128.)

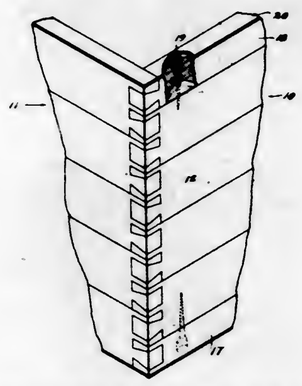


1. A fountain scrubbing brush of the class described comprising a brush head having bristles and provided with transverse openings, and a cup-shaped holder having its marginal rim engaging the edge of said brush head, with the body of the holder spaced therefrom to provide a chamber, said holder comprising a pair of longitudinal half sections hinged together and normally spring pressed into engagement with said head, one of said sections being provided with means through which fluid may be introduced into the chamber.

1,424,479. HOOK POSITIONER. WILLIS T. HURST, Pittsburgh, Pa., assignor to Slag Rock Machine Company, a Corporation of Pennsylvania. Filed Mar. 31, 1920. Serial No. 370,207. 11 Claims. (Cl. 214—64.)

1. The combination with a suspended vertically and laterally movable crane-hook, of means brought into action by descent of the crane hook to move the hook laterally into engagement with an object to be lifted.

1,424,480. HUB-CAP-LOCKING DEVICE. EMIL IBACH, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 16, 1919. Serial No. 304,518. 9 Claims. (Cl. 301—9.)



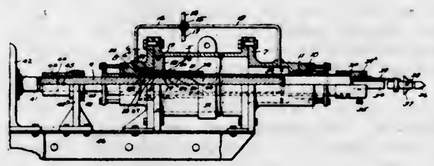
1. In a wheel, the combination of an inner hub, an outer hub removably and non-rotatably mounted thereon, said outer hub having an internal conical surface near its outer end, a nut screwed on the inner hub and having a conical nose engaging the conical surface of said outer hub, a reciprocable locking pin carried by said nut and movable radially with reference to the axis thereof and locking means on one of said hubs in position to be engaged by said locking pin.

1,424,481. MORTISE JOINT. PETER ISOARDI, McCloud, Calif. Filed May 4, 1920. Serial No. 378,788. 1 Claim. (Cl. 20—92.)

A box structure comprising a side wall formed of superposed boards of equal width and another side wall complementary thereto having boards equal in width with the first-named boards, with the exception of the edge boards which are of half the width of the remaining

boards, thus causing the joints between the boards of adjacent sides to be in staggered relation to each other, mortise and tenon elements formed at the opposite ends of said boards whereby each board, with the exception of the narrow edge boards, will interlock with the ends

of two adjacent boards of the adjoining wall, fastening means counterset in the narrow boards to engage the abutting board of the same wall, and cover strips extending along the edges of the walls to conceal the fastening means.

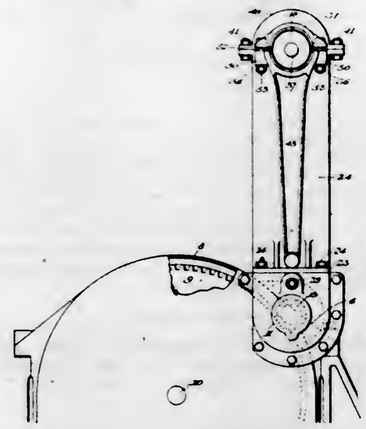


1,424,482. WIRE-INSULATING STRIPPER. WILLIAM JANNELL, West Park, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 26, 1921. Serial No. 448,277. 24 Claims. (Cl. 15—21.)

1. In a device of the class described, a carrier having a wire spreading face, and means for retaining a portion of an armature therein.

5. The method of stripping insulating wires, which comprises arranging said wires on a bearing surface, and thereafter brushing said wires along said surface.

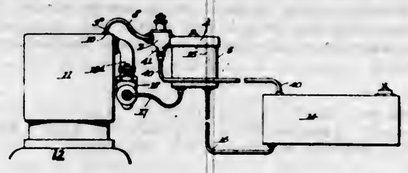
1,424,483. DRILLING MACHINE FOR TAPPING OUT THE HOT METAL OF FURNACES AND CUPOLAS. JOSEPH E. JUDY, McKeesport, Pa. Filed Apr. 8, 1921. Serial No. 459,628. 3 Claims. (Cl. 77—32.)



1. A device of the character described comprising as a bodily portable unit, a base, a pressure cylinder mounted upon said base, a piston in said cylinder, a piston rod mounted to rotate with respect to the piston, an electric motor upon the base outside of the cylinder and serving to impart rotation to the piston rod, a drill carried by the piston rod, means for admitting pressure fluid to the cylinder to actuate the piston and the piston rod to advance and retract the drill and a suspension element through which the entire unit may be suspended in such manner as to support the drill in a substantially horizontal position while said unit is being swung to and from the tapping hole of a furnace.

1,424,484. PRESERVED EGG AND PROCESS OF PRODUCING THE SAME. MORRIS KASSER, San Francisco, Calif. Filed Apr. 22, 1918. Serial No. 230,146. 6 Claims. (Cl. 99—8.)

5. The process of preserving eggs which consists in providing a bath of vegetable oil having hot and cold zones, submerging the egg in a cold zone and moving the submerged egg through the hot zone into a cold zone.



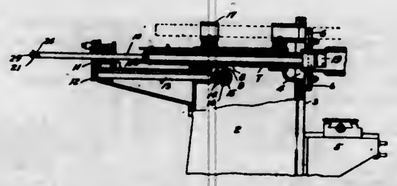
1,424,485. CRANKING MECHANISM FOR TRACTOR, TRUCK, AND OTHER HEAVY-DUTY ENGINES. PHILLIP ALEXANDER KINZIE, Littleton, Colo. Filed Dec. 16, 1920. Serial No. 431,239. 9 Claims. (Cl. 74—7.)

1. A cranking mechanism for engines, provided with a fly wheel, a crank provided with means including an adjustable friction gripping and a cooperating ratchet and pawl mechanism, means connected and driven by said crank for engaging and spinning said fly wheel, said crank being arranged to disengage itself from said fly wheel, a shaft on which said crank and its friction gripping and pawl mechanism is mounted, said ratchet member forming a part of said crank and being arranged to surround the pawl on said shaft, whereby said crank adjustably grips with frictional pressure said drum and rotates said shaft within said ratchet, a sprocket wheel mounted on said crank driven shaft, said fly wheel spinning means comprising a shaft arranged to move reciprocally, and rotatably mounted on said sprocket wheel, a sprocket chain connected to said crank shaft's sprocket wheel and to said reciprocating shaft's sprocket wheel, and arranged to intermittently reciprocate and rotate said fly wheel spinning shaft.

1,424,486. FUEL-FEEDING APPARATUS. PHILLIP ALEXANDER KINZIE, Littleton, Colo. Filed June 10, 1921. Serial No. 476,597. 15 Claims. (Cl. 158—36.)

1. A pressure feeding apparatus for internal combustion engines, comprising a casing having an apertured member connected to the cylinders of said engine at its fuel explosion end, and provided with an air compressing chamber, a valve seat in said chamber at the passage

leading to said cylinder, and means including a piston reciprocally mounted in said chamber and bearing against said valve seat for controlling said passage.



1,424,487. FUSE FOR BLASTING WITH A LIQUEFIED GAS AND METHOD OF PRODUCING THE SAME. AMBROSE KOWASTCH, Berlin-Charlottenburg, Germany. Filed July 19, 1920. Serial No. 397,557. 5 Claims. (Cl. 52—1.)

1. In a fuse for blasting with a liquefied gas, the combination with substances adapted to absorb liquefied gases, of ready made explosive of high initial power, the said elements being intimately mixed together.

1,424,488. CARTRIDGE FOR BLASTING WITH LIQUID AIR AND PROCESS OF PRODUCING THE SAME. AMBROSE KOWASTCH, Berlin-Charlottenburg, Germany. Filed July 19, 1920. Serial No. 397,559. 8 Claims. (Cl. 52—1.)

1. In a cartridge for blasting with a liquefied gas, the combination of peat with the usual components of the cartridge.

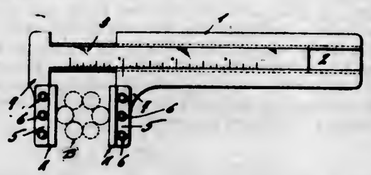
1,424,489. ATTACHMENT FOR BORING AND MILLING MACHINES. GUSTAVE F. KRIEGEL, Minneapolis, Minn., assignor, by mesne assignments, to Esther V. Safstrom, Minneapolis, Minn. Filed Apr. 28, 1919. Serial No. 293,172. 16 Claims. (Cl. 77—3.)

1. The combination, with a frame, of a hollow shaft mounted therein, means for revolving and feeding said shaft, a head mounted on said shaft, blocks mounted for radial movement in said head, a device mounted in said head for both projecting and withdrawing said blocks, and a rod within said hollow shaft having an operating means at one end and engaging said projecting and retracting means at the other end.

1,424,490. METAL WHEEL AND METHOD OF MAKING SAME. MAURICE LACHMAN, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1920. Serial No. 372,134. 5 Claims. (Cl. 29—159.)

1. The herein described method of constructing a metal wheel with rim and spoke or body part integral, consisting in providing a T beam having a depression in its

head over the web part, dividing the web, and forming the head into circular shape to form the rim and bring

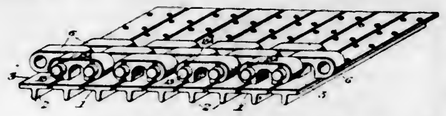


the parts of the web into proper relation for the body or spoke part.

1,424,491. AIRCRAFT. ORPHEZ LANGEVIN, New York, N. Y. Filed Nov. 3, 1919. Serial No. 335,365. 15 Claims. (Cl. 244—5.)

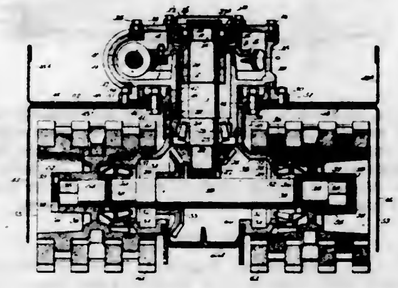
1. In an aircraft, the combination of a streamline dirigible having a cambered under surface flat transversely and curved longitudinally with convex front and rear portions and a concave intermediae portion providing a plane having a positive angle of incidence, and an aeroplane suspended therefrom, substantially as set forth.

1,424,492. CALIPERS. HARRY J. LESCHEN, Webster Groves, Mo., assignor to A. Leschen & Sons Rope Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 3, 1921. Serial No. 442,216. 2 Claims. (Cl. 33—143.)



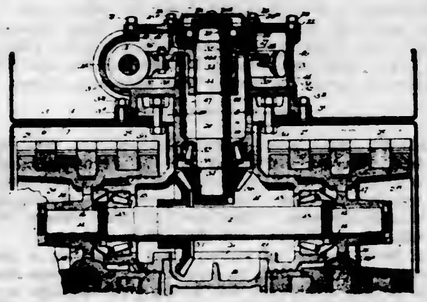
1. In a device for measuring the external diameters of wire rope, a pair of calipers comprising a guidebar, a graduated beam slidably mounted in said guidebar, jaw holders extending laterally from said beam and guidebar, a pair of oppositely disposed jaws extending laterally from the respective jaw holders, each of said jaws being in the form of a broad, deep plate having a flat inner face which is broad enough to span the helical recess in the rope, the outer face of each plate being provided with a pair of lugs between which one of said jaw holders is located, and rivets passing through said lugs and jaw holders to secure the jaws to their respective holders.

1,424,493. TRACTOR. JOHN GEORGE LEYNER, deceased, late of Littleton, Colo., by Lina M. Leyner, administratrix, Littleton, Colo., assignor to The Leyner Tractor and Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Nov. 11, 1920. Serial No. 423,434. 4 Claims. (Cl. 305—10.)



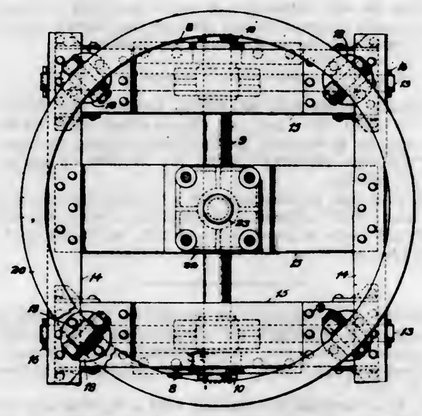
1. In a tractor, an endless track comprising a plurality of series of links in substantially contiguous relation to each other, each link having pivot openings near its opposite ends, the links in alternate series being offset relatively to each other, pivot rods extending trans-

versely through the links of all the series and shoes extending across all the series and connected to links in



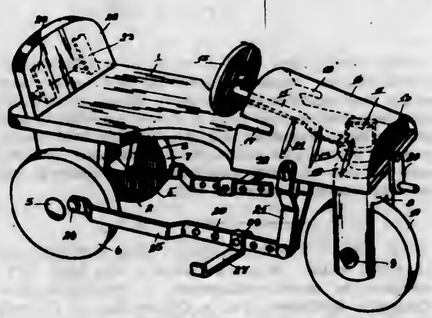
alternate series, the lateral edges of each shoe being in close proximity to the edges of the adjacent shoes.

1,424,494. DRIVING MECHANISM FOR THE GROUND-TREADING MEMBERS OF TRACTION ENGINES. JOHN GEORGE LEYNER, deceased, late of Littleton, Colo., by Lina M. Leyner, administratrix, Littleton, Colo., assignor to The Leyner Tractor and Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed Nov. 11, 1920. Serial No. 423,437. 5 Claims. (Cl. 74—101.)



1. In a tractor, the combination of a horizontal shaft carrying on its center portion a bevel gear, a vertical shaft, a bevel gear at its lower end in mesh with said bevel gear, a gear mounted near the upper end of the vertical shaft, a shaft carrying a pinion in mesh with the gear, a housing surrounding the vertical shaft and gear mechanism connected therewith and a housing surrounding the horizontal shaft, the second housing having a vertical portion surrounding a part of the first housing and having a sliding fit therewith.

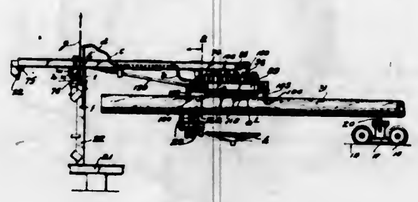
1,424,495. AUTOMATICALLY-OPERATING OILING MECHANISM FOR THE INTERIOR MOTOR-DRIVEN PARTS OF TRACTORS. JOHN GEORGE LEYNER, deceased, late of Littleton, Colo., by Lina M. Leyner, administratrix, Littleton, Colo., assignor to The Leyner Tractor and Manufacturing Company, Denver, Colo., a Corporation of Colorado. Filed June 10, 1921. Serial No. 476,548. 6 Claims. (Cl. 74—101.)



1. An oiling mechanism for tractors, comprising open topped cups and oil wells formed as integral parts of or attached to the several members of said tractor, a casing surrounding the upper parts of said mechanism, a vertical shaft, the upper end of which extends into said casing, a journal bearing arranged to rotatively support the upper end of said shaft in said casing, said casing being provided with an oil entrance hole to said shaft's journal bearing.

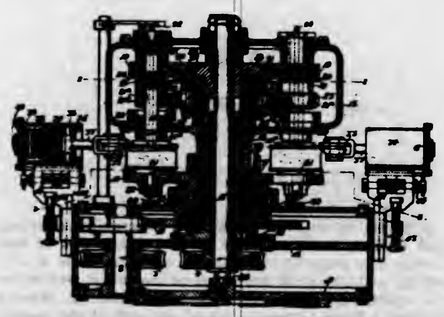
1,424,496. TRAILER CONNECTION. SAMUEL E. LIEDABRAND, Springfield, Ill. Filed June 21, 1920. Serial No. 390,468. 2 Claims. (Cl. 280—33.1.)

1. In mechanism of the character set forth, the combination with a lower pivot member, of mounting means therefor, an angular tiltable lower turntable member carried by the pivot member, rollers journaled on the corner portions of the lower member, and an upper turntable member journaled on the lower member and having a track portion that rides on the rollers.



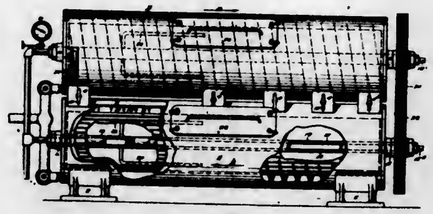
1,424,497. CHILD'S VEHICLE. JOHN LO VERDE and ANTHONY TURIOLO, Rochester, N. Y., assignors of one-seventh to Charles J. Mondo, Rochester, N. Y. Filed Sept. 18, 1920. Serial No. 411,262. 3 Claims. (Cl. 208—33.)

1. A vehicle having a spindle supported at the rear end thereof, wheels mounted to turn on said spindle, a crank



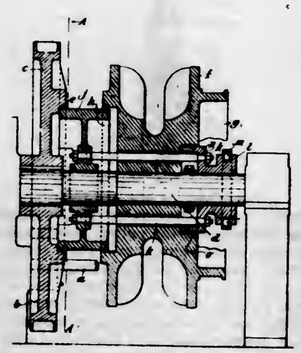
pin on each of said wheels, a connecting rod on each of said crank pins and extending forwardly therefrom, a long link and a short link connected to the forward end of said connecting rod and mounted to swing on the same center, the upper end of said long link swinging from a shifting center, the upper end of the long link being slotted to permit it to move up and down on its center.

1,424,498. POLE-PUNCTURING MACHINE. JAMES E. LYNCH, Minneapolis, Minn., assignor to Page & Hill Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 2, 1922. Serial No. 540,634. 4 Claims. (Cl. 144—2.)



1. The combination with a machine comprising means for supporting and rotating a pole, an overlying beam, a floating frame supported from said beam and power-driven punches mounted on said floating frame in combination with a moistening device applied to said floating frame and arranged to deliver moisture onto that zone of the pole that is to be punctured, immediately in advance of the puncturing operation.

1,424,499. DOUBLE-SEAMING MACHINE. SAMUEL MCCULLOCH, San Francisco, Calif., assignor to Charles A. Mullen, San Francisco, Calif. Filed Jan. 10, 1918. Serial No. 211,118. 34 Claims. (Cl. 113—23.)

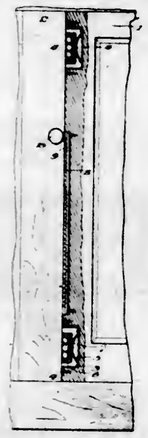


1. In a seaming machine the combination with a spindle adapted to receive and revolve a can, of a floating seaming member adapted to engage the flange on the can to seam the same and adapted to move radially with relation thereto, said radial movement of the seaming member being imparted thereto by the periphery of the can, means for maintaining a predetermined spacing between the seaming member and the can, and means for maintaining a predetermined and constant pressure on the seaming member regardless of the positions assumed during its radial movement.

1,424,500. COOKER. SAMUEL MCCULLOCH, San Francisco, Calif., assignor to Charles A. Mullen, San Francisco, Calif. Filed May 8, 1919. Serial No. 295,612. 20 Claims. (Cl. 126—272.)

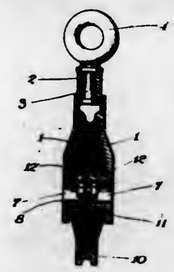
20. A cooker comprising a cylindrical shaped casing having a can-way therein, a rotatable member for advancing cans along the can-way, a jacket exterior of the casing, and means for circulating steam through the jacket to heat the can-way.

1,424,501. CLUTCH FOR WINDLASSES. STEWART MCINTOSH, Monkseaton, and JOHN SPENCE GUILD, Newcastle-upon-Tyne, England. Filed June 25, 1920. Serial No. 391,665. 3 Claims. (Cl. 192—67.)



1. In a windlass, the combination with a shaft, a cable lifter thereon having a polygonal recess in one of its side faces, a main driving gear wheel on said shaft having a polygonal recess in its side face, and a polygonal clutch member interposed between said lifter and gear wheel loose on the said shaft and means for operating said clutch member to couple or uncouple said lifter and gear wheel thereby.

1,424,502. BALL-BEARING CAR SASH. OLIVER P. MCLENDON and HARRY G. SMITH, Kingsville, Tex.; said Smith assignor to said McLendon. Filed May 17, 1921. Serial No. 470,445. 5 Claims. (Cl. 20—52.)

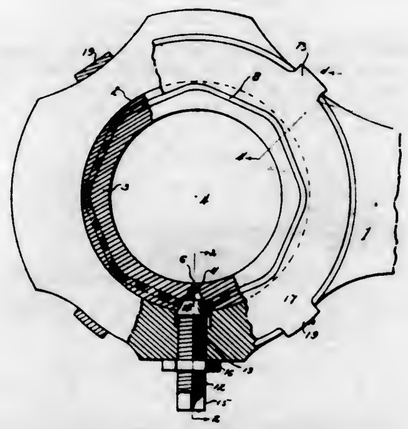


1. A car window sash provided with recesses adjacent the top and bottom thereof, bearings mounted in said

recesses, each of said bearings including a clip, balls mounted therein, and a spring pressing said clip and balls

outwardly against the window frame in substantially the direction of the plane of the sash.

1,424,503. SHEAVE BLOCK. DUFF G. MANGES, Maryville, Tenn., assignor to D. G. Manges & Company, Vose, Tenn., a Corporation of Tennessee. Filed Dec. 27, 1920. Serial No. 433,391. 7 Claims. (Cl. 254—192.)



1. A sheave block, comprising in combination with the housing sections and the pulley, each housing section having a hollow shaft section, said shaft section abutting at their inner ends, and having transverse webs fitting one against the other, a bolt traversing the webs for securing them together, the wheel being journaled on the shaft sections, and a bushing arranged between the wheel and the shaft sections, means in connection with the bushing and the housing sections for preventing movement of the bushing with the wheel, said means comprising dowel pins between the bushing and the housing sections.

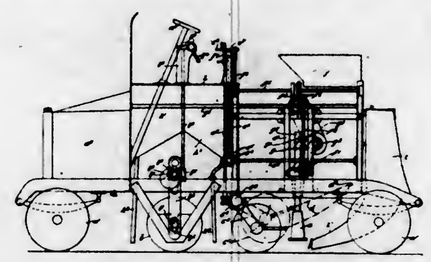
1,424,504. LUBRICATING GUN. CHARLES W. MANZEL, Buffalo, N. Y. Filed Sept. 18, 1920. Serial No. 411,160. 3 Claims. (Cl. 221—78.)

1. A lubricating gun, comprising a pump-barrel, a lubricant magazine removably arranged in the barrel and having a reinforcing tube in its rear portion, and a cap secured to the rear end of said magazine and removably applied to the adjacent end of the pump barrel.

1,424,505. BUSHING TIGHTENER FOR LOCOMOTIVE CONNECTING RODS. HAROLD G. MARTIN, Philadelphia, Pa., and MICHAEL H. NEWGIRG, Baltimore, Md. Filed Apr. 26, 1921. Serial No. 464,641. 6 Claims. (Cl. 64—10.)

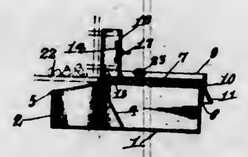
1. The combination with a connecting rod and a bushing arranged in an opening threof, the bushing having a portion projecting beyond the face of the connecting rod, of means for tightening the bushing in the opening in said rod, and means fastened to the connecting rod having interlocking connection with the portion projecting beyond the face of connecting rod for locking the bushing against turning.

1,424,506. CUE-TIP CUTTER. JOHN D. MARTIN, Rock Island, Ill. Filed Nov. 21, 1921. Serial No. 516,530. 1 Claim. Cl. 145—27.)



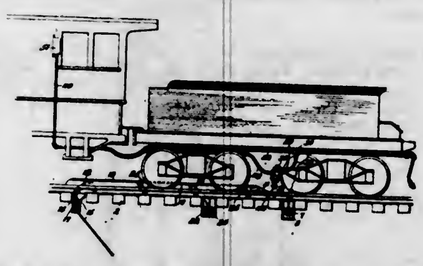
A device of the class described, comprising a casing, open at both ends; a cutter pivoted at one end of said casing, in a plane at right angles with the walls of said casing; a thumb-screw supported on the end of said casing and operatively connected with said cutter, to cause a movement thereof transversely of the end of the casing; a guide for the free end of said knife, fixed on the end of said casing; a clamp-block held within said casing, so as to be movable therein, transversely of the casing; and means for transverse adjustment of said block.

1,424,507. APPARATUS FOR USE IN THE REPAIR OF ROADS AND THE LIKE. EDWARD MELDAL, London, England. Filed Oct. 5, 1920. Serial No. 414,797. 9 Claims. Cl. 94—44.)



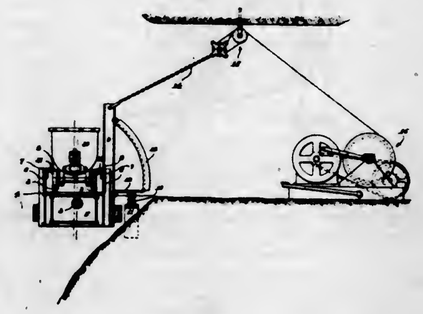
1. An apparatus for use in road repairs comprising in combination a vehicular frame carrying a main heavy roller, means for raising and lowering said roller from

and to the ground, and means by which part of the weight of the vehicle may be thrown onto the roller when in



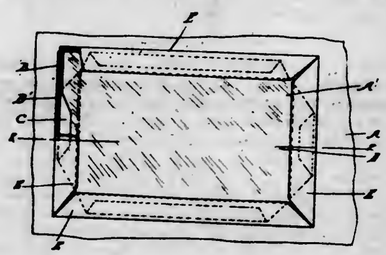
action whilst retaining pressure on the running wheels of the vehicular frame sufficient for their proper function.

1,424,508. ASH PAN. WILLIE CASPARUS METZGER, Mobile, Ala. Filed Feb. 8, 1922. Serial No. 534,983. 3 Claims. (Cl. 126—243.)



1. An ash pan including a body member, an extending portion formed integral therewith, a removable cover normally arranged to cover the top of the body, an upstanding guard plate removably mounted upon said cover and arranged at one side of the extension and draft regulators carried by said guard plate and cover plate.

1,424,509. RAILWAY SIGNAL DEVICE. CHARLES J. MILLER, Moselle, Miss. Filed Jan. 3, 1921. Serial No. 434,671. 1 Claim. (Cl. 246—174.)

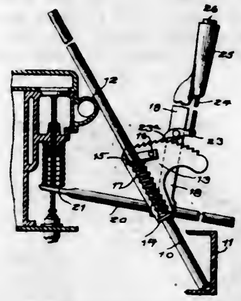


In an automatic signal device, the combination of a railway track, a trip fulcrumed adjacent the inside of one rail thereof and normally resting above the rail, an auxiliary rail normally resting below the level of the track and movable upwardly and downwardly with respect to the track and being arranged in the same plane as the trip and in advance thereof with respect to the direction of travel of a train, a valve secured to the train for controlling passage of air to the main signal line of a train, a visual indicator arranged on the train, an arm secured to the valve and depending therefrom, and a signal arm arranged adjacent the track and connected with the auxiliary rail for elevating the same above the track to cause contact of the arm of the valve with the auxiliary rail to actuate said valve.

1,424,510. ROTARY CAR DUMP. JAMES P. MOSIER, St. Francois, Mo., assignor, by mesne assignments, of one-fourth to himself, one-eighth to Ernist R. Campbell, and one-eighth to John A. Green, both of Desloge, Mo., and one-half to National Lead Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 19, 1920. Serial No. 404,636. 7 Claims. (Cl. 214—52.)

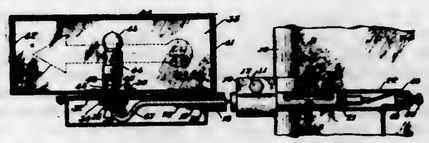
1. A car dump comprising a trackway, a frame pivotally mounted to rotate on an axis substantially parallel with the trackway and having a separate section of trackway mounted thereon, guard hangers on said frame in position to overlap the wheels of a car thereon, and means for normally holding said frame with its trackway section in operative relation to the main trackway, said means comprising a resilient member in the path of one side of the frame adapted to aid in initiating the dumping movement thereof and in checking the movement to normal position.

1,424,511. CURTAIN-WINDOW LIGHT. NICHOLAS MURPHY, Detroit, Mich. Filed Jan. 23, 1920. Serial No. 353,499. 10 Claims. (Cl. 296—145.)



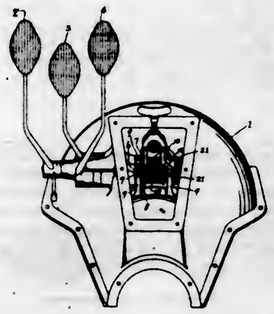
1. In a device of the character described, the combination with a curtain having a window opening, of a transparent member covering said opening, portions of the curtain engaging the edges and opposite sides of said member, and a plurality of quick detachable resilient clamping members of substantially U-shape in cross section frictionally securing said portions to said member.

1,424,512. VALVE-SPRING COMPRESSOR. MARK MUSGRAVE, Pittsburg, Kans. Filed Feb. 19, 1921. Serial No. 446,325. 13 Claims. (Cl. 29—86.3.)



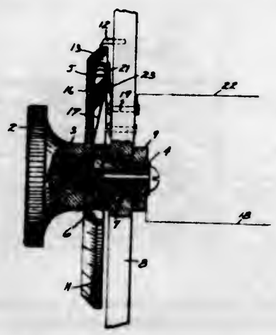
1. A valve spring compressor comprising a bar, a plate adjustable upon the bar, a lever pivoted upon the plate and

a member associated with the lever to be shifted thereby, said member being adjustable transversely of the lever and



being provided at one end with a head adapted to engage beneath a spring seat.

1,424,513. DIRECTION INDICATOR. SEIHACHIRO NAKASOBA, Niles, Calif. Filed Nov. 11, 1920. Serial No. 423,367. 6 Claims. (Cl. 116—46.)

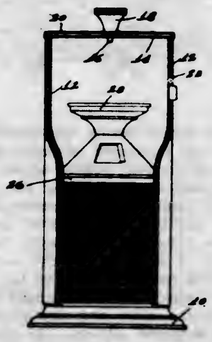


1. A direction indicator comprising an outer fixed sleeve, an inner sleeve rotatable relative to the outer sleeve, and held against longitudinal movement, a mounting plate secured to the end of said inner sleeve and normally operated in a horizontal plane, a semaphore box pivotally disposed upon said mounting plate adapted to rotate horizontally, means extending through said inner sleeve for producing horizontal rotation of the semaphore box, and an operating means by which the horizontal rotation of the semaphore box will be brought about, or the vertical rotation of the inner sleeve and the box.

1,424,514. AUTOMOBILE TOOL. WILBUR J. NUSBAUM, Washington, D. C., assignor of one-third to George W. Nusbaum, Takoma Park, Md., and one-third to Robert L. Baxter, Washington, D. C. Filed Nov. 20, 1920. Serial No. 425,511. 11 Claims. (Cl. 29—87.1.)

1. In a tool of the character described, a body, a stationary jaw, opposed leaves movably connected to the body, and means supported by the body for shifting the leaves toward each other at one end and relative to the jaw.

1,424,515. RHEOSTAT. JOHN PARKIN, Jr., San Rafael, Calif. Filed Apr. 25, 1921. Serial No. 464,142. 8 Claims. (Cl. 219—55.)

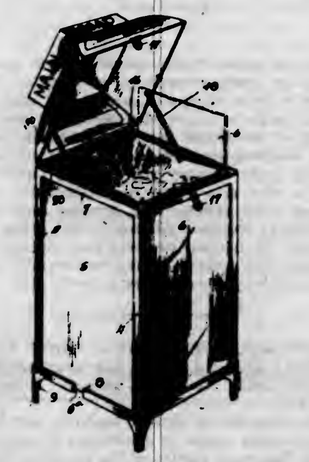


1. A variable resistance device comprising a rotatably mounted graduated disk, a variable resistance element circularly disposed about said disk and fixed for rotation therewith, and a knob for the digital control of said disk.

1,424,516. SPEAKING CLOCK. VINCENT PINTO and JOSEPH PINTO, Philadelphia, Pa. Filed July 27, 1920. Serial No. 399,371. 21 Claims. (Cl. 58—14.)

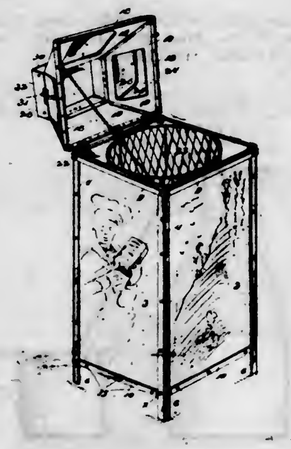
1. In a speaking clock, a clock, a phonograph, a motor for operating the phonograph, contacts for closing the motor circuit, clock-operated means for closing the contacts and motor-operated means for maintaining the contacts in closed position independently of the clock-operated closing means.

1,424,517. SANITARY SUNDAE-CUP HOLDER AND DISPENSER. PETER T. POTTS, Chicago, Ill., assignor to The Vortex Mfg. Co., a Corporation of Illinois. Filed Feb. 28, 1921. Serial No. 448,324. 10 Claims. (Cl. 211—29.)



1. A container and dispenser for paper cups including a pair of cylinders concentrically mounted, one of said cylinders being relatively fixed and the other adapted to rotate about their common axis, and openings in said cylinders through which a cup is adapted to be withdrawn, together with means for alining said openings.

1,424,518. REGISTER DIAL. PAUL F. QUINLAN, Jr., Elkins Park, Pa. Filed Apr. 29, 1921. Serial No. 465,376. 1 Claim. (Cl. 235—113.)

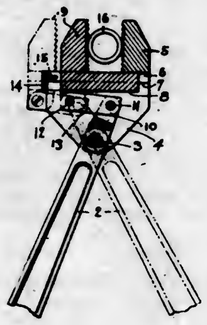


In a meter dial comprising two or more numbered rotating disks and a dial plate having sight openings formed through it for the display of the numbers in certain positions of the disks, the improvement which consists in forming the sight opening in the dial of such a length as to display two members on a disk in one position of the disk, providing on each disk a series of shutter actuating cams corresponding in number to the numbers on the disk and combining therewith a pair of shutters for each disk plate, said shutters moving on a common pivot and having a cam contacting portion acted on by the cams on the numbered disks in connection with which the shutters operate as described and so that one shutter covers a number moving into registry with the sight hole until it has passed fully into said sight hole, the other shutter during this period being retracted from the sight hole, and after the said number has so fully registered with the sight hole the cam rapidly shifts the shutters so that the one uncovers the advancing number and the other covers the receding number.

1,424,519. COMBINED TRASH RECEPTACLE AND ADVERTISING CARRIER. GEORGE J. RICHARDSON, Petersburg, Va., assignor to American Spotless Street System, Inc., Petersburg, Va., a Corporation of Virginia. Filed June 30, 1920. Serial No. 392,968. 1 Claim. (Cl. 220—32.)

A combined trash and advertising medium comprising a receptacle, a skeleton frame spaced from the walls of and surrounding the receptacle to form panel guideways, panels fitted in the guideways, a cover hinged to the top of the frame outside the vertical plane of the guideways, whereby to permit of removal of the panels when the cover is in open position or when closed to hold said panels against movement, said cover having upwardly and inwardly curved walls terminating in a square dome having vertical side walls to receive advertising data, one of the upwardly and inwardly curved walls having an opening, the uppermost wall of which is spaced from the adjacent vertical wall of the dome, a closure hinged to said upper wall and curved in cross-section to substantially correspond to the curvature of the curved wall in which the opening is formed, whereby when the closure is thrown open it will be supported in an inclined position against the dome and a substantially curved chute is formed to direct trash into the opening.

1,424,520. COMBINED TRASH RECEPTACLE AND ADVERTISING CARRIER. GEORGE J. RICHARDSON and WALTER SACHS, Petersburg, Va., assignors to American Spotless Street System, Inc., Petersburg, Va., a Corporation of Virginia. Filed Nov. 8, 1920. Serial No. 422,647. 8 Claims. (Cl. 220—32.)



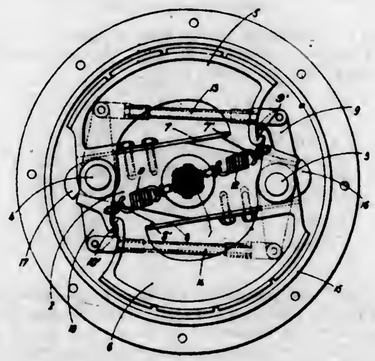
6. A combined trash receptacle and advertising medium having side and end walls, a bottom, a frame including vertical and horizontal bars to which the side, end walls and bottom are attached, the upper bars of the frame terminating at or about the top of the side and end walls and are secured on the outside of the upper portions of the vertical bars of said frame whereby to form spaces for the reception of advertising panels, a cover for the receptacle, said cover having upwardly inclined walls at the top of which is an opening, a flat top portion fitted over the opening and having its edges secured to the upper edges of the inclined walls of the cover, and hinges secured on the outside of the rear upper bar of the frame and to the rear lower edge of the cover, whereby when the cover is in open position an advertising panel may be vertically inserted at the rear of the receptacle.

1,424,521. WRENCH. HARLEY E. RUTTER, Pittsburgh, Pa. Filed Sept. 24, 1921. Serial No. 502,971. 2 Claims. (Cl. 81—126.)

1. In a wrench, the combination of a member carrying a stationary jaw and having a guideway, a movable jaw having an extension engaging said guideway, a handle pivotally connected to said member, a link pivotally con-

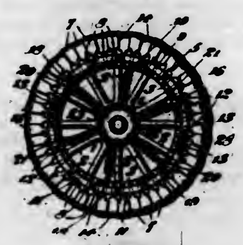
nected to the upper end of said handle and to a lug formed at the outer lower end of said movable jaw, and a remov-

able stop plate secured to said member for limiting the movement of said movable jaw away from said fixed jaw.



1,424,522. LIQUID SEPARATOR. CORA A. SANBORN, Brooklyn, N. Y. Filed Aug. 11, 1919. Serial No. 316,821. 5 Claims. (Cl. 137—20.)

1. A liquid separator comprising an annular supporting member adapted to fit within the neck of a receptacle, a diaphragm provided with a cylindrical shell and an annular cap, said diaphragm being adapted to slide through said supporting member and cooperating therewith to form a closure for retention of air, and a siphon tube having one leg thereof in frictional engagement with said cap.

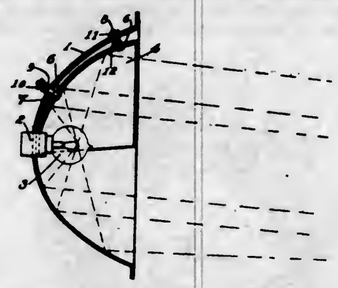


1,424,523. SPEED-LIMITING MECHANISM FOR VEHICLES. LÉON SAIVRE, Billancourt, France, assignor to Louis Renault, Billancourt, Seine, France. Filed Nov. 11, 1920. Serial No. 423,323. 2 Claims. (Cl. 188—181.)

2. In a speed limiting mechanism, the combination with a rotary member and a stationary member, of an actuating member carried by said rotary member, brake segments pivoted to the opposite ends of said actuating member, centrifugally controlled levers also pivoted in the outer ends of said actuating member, means carried by said levers for gripping said segments and normally maintaining them out of engagement with the stationary member but permitting their release when the rotary member attains a predetermined maximum speed, means for connecting the centrifugally controlled levers together so that the same will act in unison, springs for automatically returning said braking segments to normal or in-

operative position and springs for automatically returning the said levers to again grip the brake segments upon the reduction of speed of the rotary member.

1,424,524. ARMORED WHEEL TREAD. ELMER S. SEAVEY, Johnstown, Pa. Filed July 14, 1920. Serial No. 396,256. 20 Claims. (Cl. 152—16.)

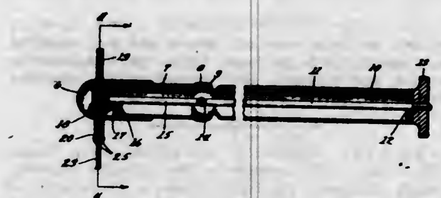


20. In an armored tire, comprising an elastic tire, a plurality of friction members surrounding the elastic tire, every other friction member being made of softer material than the intervening section, a ring-holder on each side of the elastic tire for holding the ends of the friction members, each ring-holder being composed of an inner and outer annular ring attached together, a joint formed on each side of the ring-holder, the ends of the inner and outer annular ring, forming each ring-holder, being made in staggered relation to each other, means for preventing the friction members from falling out of the ring-holder, and resilient means for normally holding the friction members in contact with elastic tire.

1,424,525. REFLECTING ATTACHMENT FOR HEADLIGHTS. HARRY J. SHELY, Los Angeles, Calif. Filed Aug. 30, 1921. Serial No. 496,813. 2 Claims. (Cl. 240—44.)

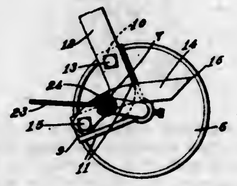
1. The combination with a headlight reflector having lamp supporting means, of a reflecting attachment insertable into the upper portion of the headlight reflector and straddling the lamp supporting means, said attachment covering the upper portion of the reflecting surface of the headlight reflector, yielding means upon the headlight reflector for drawing the lower portion of the member

against said reflector, and yielding means interposed between said headlight reflector and the attachment for



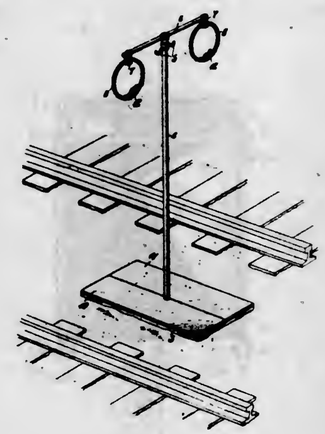
pressing the upper portion of said attachment away from the headlight reflector.

1,424,526. SPARK-PLUG CORE. HARRY J. SHELY, Los Angeles, Calif. Filed Nov. 7, 1921. Serial No. 513,358. 3 Claims. (Cl. 123—169.)



1. In a spark plug, a shell including opposed sections, a core supported within the shell, an electrode extending through the core, said core having an opening formed in the side thereof, an electrode having one end terminating at a point adjacent to one end of the opening, the opposite end of the last mentioned electrode being disposed in proximity to the first mentioned electrode to provide sparking points, a gasket disposed between the core and shell and disposed over the opening, and a coiled spring within the opening and contacting with the gasket and electrode, terminating adjacent the opening.

1,424,527. DENTAL CROWN REMOVER. LOUIS R. SIEGEL, Cleveland, Ohio. Filed Oct. 18, 1921. Serial No. 508,526. 5 Claims. (Cl. 32—10.)



1. A crown remover comprising a head provided with jaws to grip a crown, a nonrotatable screw carried by the head and adapted to rest against the tooth, a nut rotatable on the screw, within the head, and an operating device for rotating the nut, said device extending at an angle to the axis of the screw, and including a shaft with a universal joint.

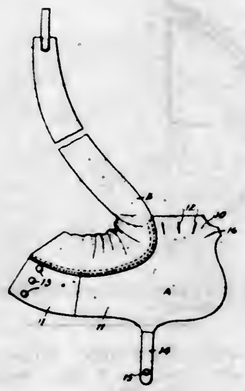
1,424,528. TRUCK. GAYLE L. SQUIRE, Hastings, Fla. Filed Sept. 26, 1921. Serial No. 503,225. 2 Claims. (Cl. 280—56.)

1. A hand truck, comprising an axle, wheels supported by the axle, a frame supported by the axle, a handle having connection with the frame, spikes supported above the axle and adapted to engage an article carried by the truck, a pivoted arm supported by the frame and adapted to engage over the upper edge of an article supported by the truck, and means for normally urging the arm into engagement with the article supported by the truck.

1,424,529. RAILWAY-DISPATCH-ORDER SUPPORT. LOUIS H. STRAN, Shafter, Nev. Filed June 18, 1921. Serial No. 478,631. 7 Claims. (Cl. 258—23.)

1. A train dispatch order holding device comprising an upstanding part adapted to be placed beneath a road surface, a standard slidably connected therewith, a cross arm carried by said standard, a train dispatch order holding device supported by the cross arm, and means for maintaining said standard in a raised position, said means permitting the standard to be rotated to move the cross arm to a position at right angles to the track or parallel therewith.

1,424,530. SPOKE TIGHTENER. EMMITT M. TUCKER and JESSE D. TUCKER, Sacramento, Calif., assignors to Tucker Brothers Manufacturing Company, Sacramento, Calif., a Corporation. Filed Dec. 7, 1921. Serial No. 520,552. 2 Claims. (Cl. 301—75.)



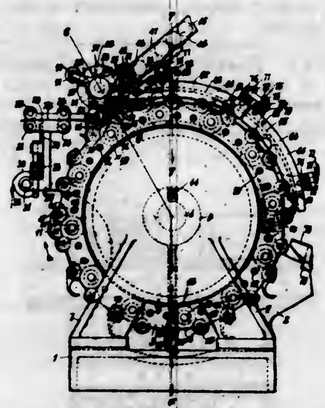
1. A spoke tightener comprising a shim member provided with an orifice to receive the tenon of a spoke, said shim being cut through from the outer edge to the orifice, and from the opposite side of the orifice to a point short of the adjacent outer edge; the shim before placement being spread apart at the cut-through edges to allow the tenon to pass therethrough; the opposite incision then spreading to form a V whose sides are in alinement with the first named edges, whereby on pinching the spread portions together the V-shaped incision will close proportionately with the closing of the cut-through edges.

1,424,531. KITCHEN CABINET. DE KALB TURRENTINE, Roanoke, Ala. Filed July 22, 1921. Serial No. 486,785. 7 Claims. (Cl. 45—16.)

7. A bin comprising upstanding side walls defining a pair of compartments, transversely extending rods extending through said compartments, bins arranged in said compartment and having bottom walls provided with transversely extending recesses receiving said rods, a top connecting said side walls and having depending stop elements extending into said bin and engaging the walls of the same to limit the movement of the bin, the side walls of said bins being provided with notches and a cover having pins adapted to engage said notches to lock the bins in closed position.

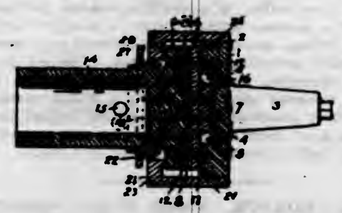
1,424,532. COMBINED SPAT AND PUTTEE. CHARLES TWEEDIE, Jefferson City, Mo. Filed July 11, 1921. Serial No. 483,812. 6 Claims. (Cl. 36—2.)

1. A combined spat and puttee comprising a foot portion and an elongated flexible leg portion secured at the end to the upper part of said foot portion and extending therefrom in a substantially horizontal direction to enable it to be wrapped around the leg without considerable puckering.



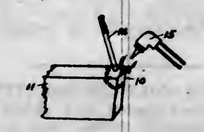
1,424,533. LOCKING DEVICE FOR LOCKER DOORS. WALTER N. VANCE, Chicago Heights, Ill., assignor to Durand Steel Locker Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1917. Serial No. 198,407. 7 Claims. (Cl. 70—14.)

1. In a locker, the combination of a door having a rim lock receiving aperture, and a pad lock receiving device adapted to be positioned in the rim lock receiving aperture, and having a part protruding from the door and a locking part disposed behind the door.



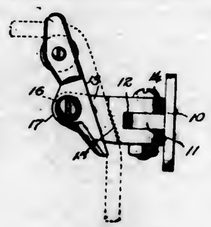
1,424,534. WRAPPING MACHINE. PAUL VARGA, Cincinnati, Ohio, assignor to The Aromint Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Nov. 7, 1918. Serial No. 261,474. 31 Claims. (Cl. 93—7.)

1. In a wrapping machine, traveling wrapping means to rotatably support an article to be wrapped, and comprising rotary means juxtaposed to said article in an axial direction therefrom to crimp a wrapper projecting axially from said article during rotation of said article,



means for feeding said article to said wrapping means, and means for supplying a wrapper between said article and said wrapping means.

1,424,535. FLOATING TOOL CHUCK. HARRY J. WATTS, Turtle Creek, Pa. Filed Dec. 5, 1919. Serial No. 342,779. 2 Claims. (Cl. 279—16.)

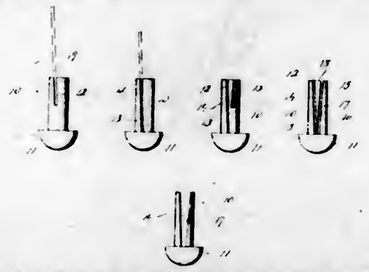


1. A floating tool chuck comprising a shank carrying element, a shiftable element carrying a socket-forming-member for the reception of a tool, a shiftable coupling element interposed between and intervengaging with the other of said elements, said shank carrying element of greater diameter than the other of said elements, and a casing secured to the periphery of the shank carrying element and enclosing the other of said elements, said casing formed at its lower end with an inwardly extending flange disposed at right angles with respect to the body of the casing and through which extends said member, said flange formed with an upwardly extending supporting rib for the shiftable element carrying the socket forming member and of less diameter than said member.

1,424,536. HIGH-SPEED TOOL. EDGAR I. WENGER, Glenellyn, Ill. Filed Mar. 20, 1920. Serial No. 367,481. 2 Claims. (Cl. 29—95.)

1. A cutting tool having a metal shank with its cutting edge modified by the interpenetration of an alloying metal.

1,424,537. CLOTHESLINE FASTENER. JOHN A. WETH, Streator, Ill. Filed Feb. 24, 1922. Serial No. 538,974. 1 Claim. (Cl. 24—133.)

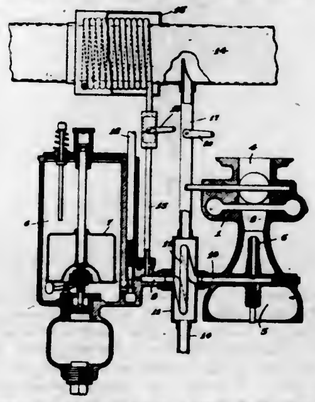


A clothes line fastener comprising a base plate adapted to be attached to a fixed support, an ear projecting from said plate, a member pivoted to said ear for swinging movement, an extension on said member, a dog pivoted to said extension, a serrated clamping surface on said member, said serrated clamping surface being straight and disposed at an angle with respect to the axis of pivotal movement of said member, one surface of said dog being straight and facing in the direction of said straight angularly disposed clamping surface of said member and at predetermined times during pivotal movement of said dog being adapted to extend in spaced parallel relation to said angularly disposed serrated clamping surface whereby that portion of a clothes line arranged between the dog and said latter mentioned surface may be clamped with even force throughout its length.

1,424,538. DRILL PRESS. CHARLES A. WIDMER, Paterson, N. J. Filed Nov. 13, 1918. Serial No. 262,265. 1 Claim. (Cl. 77—33.)

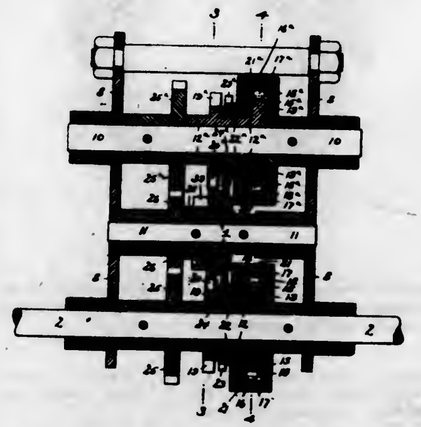
In combination, the frame, a tool-carrier-including train including a rotary driven member, a rotary driving gear member, a free rotary gear, said members and the gear being concentric, a pinion meshing with the gear and journaled in one and meshing with the other of said members, and a rotation preventing detent device for the gear movable into and out of locking relation thereto and actuable by a part of said train.

1,424,539. METHOD FOR BIFURCATING BLANKS. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Jan. 21, 1920. Serial No. 353,122. 4 Claims. (Cl. 10—27.)



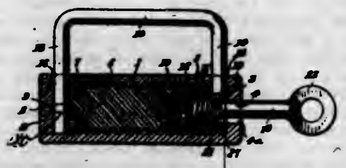
1. The method for bifurcating blanks which comprises slotting the blank with cuts at an angle to the length thereof which join at the inner ends.

1,424,540. METHOD FOR BIFURCATING BLANKS. RICHARD LESTER WILCOX, Waterbury, Conn., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn., a Corporation of Connecticut. Filed Feb. 12, 1920. Serial No. 358,015. 5 Claims. (Cl. 10—27.)



1. The method for bifurcating blanks comprising the slotting of the blank with one or more cuts of substantially uniform width in alignment with each other and substantially parallel to the length of the blank, then cutting the sides of the said cuts to form the sides of the finished slot.

1,424,541. VAPORIZER OR CARBURETOR FOR INTERNAL-COMBUSTION ENGINES AND PROCESS OF VAPORIZING THE MOTIVE FLUID FOR SUCH ENGINES. JOHN WILKINSON, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed Oct. 31, 1917. Serial No. 199,491. 2 Claims. (Cl. 48—219.)

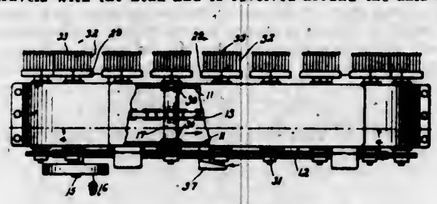


1. The process of vaporizing motive fluids for internal combustion engines comprising heating a liquid fuel by mixing heated air with the liquid in a confined passage, and thereafter mixing the resultant mixture of liquid and heated air with air when such first mixture is discharged from the confined passage, substantially as and for the purpose described.

1,424,542. POWER-TRANSMISSION MECHANISM. CALVIN C. WILLIAMS, Philadelphia, Pa. Filed Oct. 2, 1920. Serial No. 414,243. 3 Claims. (Cl. 74—53.)

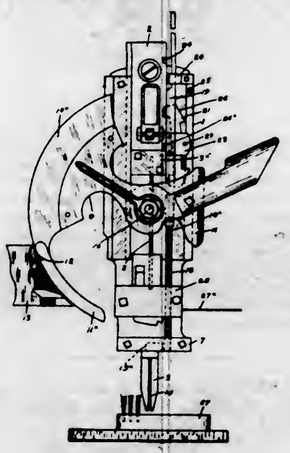
1. The combination, in power transmission mechanism, of a shaft, a member secured thereto, a member rotatably mounted thereon, means interposed between said members for releasably clutching them together, a control member for said clutching means, said control member being rotatably mounted upon said shaft, a pinion secured to said rotatably mounted member, a pinion secured to said control member, racks intermeshing with said pinions, and means for simultaneously reciprocating said racks.

1,424,543. PADLOCK. STEFAN WILOCH, Schenectady, N. Y. Filed Feb. 2, 1922. Serial No. 533,637. 5 Claims. (Cl. 70—108.)



2. In a padlock of the type described, a barrel, said barrel being internally threaded and having a key opening formed in one end thereof, and a screw bolt threaded into the barrel, a shackle bolt having side legs received in a side wall of the barrel with a transverse opening formed in one of said legs, a pin carried by the screw bolt adapted to be received in the opening in the shackle bolt leg, and a key for axially shifting the screw bolt to move the pin carried thereby into and out of engagement with the shackle bolt leg.

1,424,544. PEARL-COAT-DISTRIBUTING MACHINE. WALTER D. WOOD, Cranston, R. I. Filed Nov. 26, 1919. Serial No. 340,846. 14 Claims. (Cl. 91—55.)

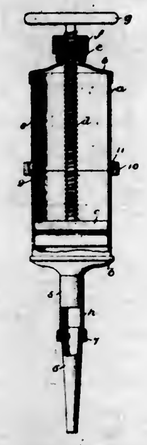


1. A machine of the character described comprising a traveling head, a carrier on the head on which a plurality of pieces of work are adapted to be mounted, means for causing said head to travel in a linear direction and also

impart a rotary motion to said carrier whereby the work travels with the head and is revolved around the axis of

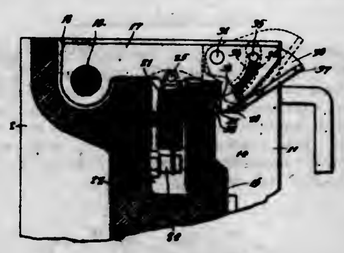
the carrier, and means for automatically discharging said carrier from said head at a predetermined point in its travel.

1,424,545. BRUSH-MAKING MACHINE. CARL YAEGER, Detroit, Mich., assignor to A. Laitner & Sons, Detroit, Mich., a Copartnership composed of Edward A. Laitner, Walter C. Laitner, and Emma R. Laitner. Filed Oct. 25, 1920. Serial No. 419,281. 12 Claims. (Cl. 300—5.)



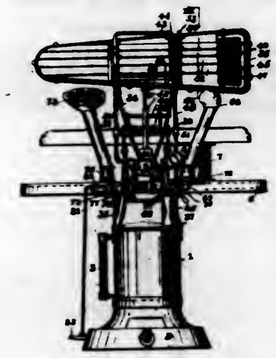
1. In a brush making machine, the combination with a bristle feeding nozzle having a longitudinal slot into its bristle feeding passage for disengagement of a tuft of bristles from the nozzle subsequent to anchoring of such tuft in a brush back, of means for delivering bristles to said nozzle, means for forcing the bristles through the nozzle and inserting them into a brush back, a member in proximity to said longitudinal slot of the nozzle providing an abutment for the bristles in their passage through the nozzle to prevent the bristles projecting through said slot, and means for moving said member in timed relation with the means for forcing the bristles through the nozzle to permit disengagement of the bristles through said slot after engagement of the bristles with the brush back.

1,424,546. ELECTRIC CURLER. MARY GREEN YEAGER, St. Louis, Mo. Filed Mar. 16, 1920. Serial No. 366,242. 1 Claim. (Cl. 132—33.)



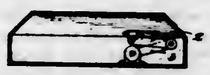
As a new article of manufacture, an electric curler comprising a heat non-conducting base; a shell of heat-conducting material; a clamp securing said shell to said base; a heating element seated in said shell; a ferrule wherein said shell is detachably mounted; a handle; a tubular sleeve extending through said handle and into said ferrule; and a plate secured to said handle and arranged to hold the curler against rotation.

1,424,547. GREASE GUN. WILLIAM A. YEAGHER, Jr., New Brunswick, N. J., assignor of one-third to Francis Mulvey and one-third to Thomas H. Howley, both of New Brunswick, N. J. Filed May 7, 1913. Serial No. 766,143. 1 Claim. (Cl. 221—79.)



A lubricant gun comprising a pair of tubes having outer heads and open inner ends, each tube forming a relatively deep cup having the same internal diameter as the other cup, means detachably to connect said open inner ends that said tubes may be normally connected in end-to-end relation and may be separated to facilitate the filling of the lubricant gun by filling each of the deep cups independently with lubricant through the open end thereof, a nozzle for one of said tubes, a piston constructed to slide snugly in each of said tubes, and means to move the piston through said tubes to force the lubricant therefrom.

1,424,548. CASING ELEVATOR. BEN N. YOUNGKEN, Los Angeles, Calif. Filed Aug. 30, 1920. Serial No. 406,910. 9 Claims. (Cl. 294—90.)

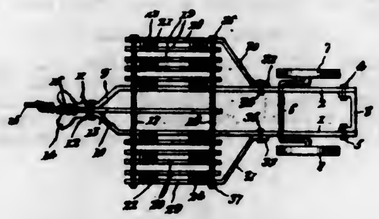


1. An elevator of the character described comprising two members hingedly united, a vertically movable latch pivoted on one member and engaging the other member to maintain the members in closed relation, and a pawl pivoted on the latch and engaging one of said members to maintain the latch against vertical movement, the pawl being adapted to swing horizontally in a latch releasing movement.

1,424,549. CLOTHES-PRESSING APPARATUS. JOHN J. ZURUK-ZURINSKY, McKeesport, Pa. Filed Sept. 10, 1921. Serial No. 499,593. 4 Claims. (Cl. 68—9.)

2. A cleaning and pressing apparatus comprising a pressing buck, means for directing steam therethrough, a pressing head, means for heating the head, a plurality of shiftable shutter elements for retaining the heat in the head, and a resiliently mounted foraminous pressing member arranged in the head.

1,424,550. BALANCING COVER SUPPORT. FREDRICK C. ASCHBURNER, Chicago, Ill., assignor of one-third to William H. Aschburner and one-third to Ernest F. Aschburner. Filed June 21, 1920. Serial No. 390,480. 2 Claims. (Cl. 217—60.)



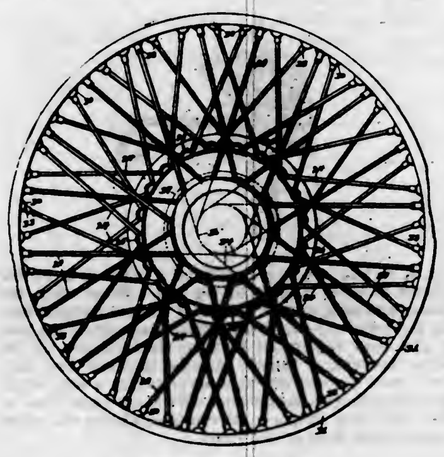
1. In a device of the class described, a stationary support, a lever, a spring for yieldingly anchoring said lever to said support, a second lever, means comprising a spring for yieldingly securing said second lever on the free end of said first member and a hinged member pivotally supported by said second lever.

1,424,551. COMBINATION POCKETKNIFE AND NAIL CLIP. ADNA F. BLANCHARD, Cranston, R. I., assignor, by mesne assignments, to Fairfield Manufacturing Company, Cranston, R. I., a Corporation. Continuation in part of application Serial No. 322,981, filed Sept. 10, 1919. This application filed Apr. 2, 1920, Serial No. 370,753. Renewed Nov. 30, 1921. Serial No. 519,030. 6 Claims. (Cl. 30—23.)

1. A combined pocket knife handle and nail clip comprising a handle body including resilient lining plates, a knife spring secured to the plates a distance from the pivot and secured to one plate a greater distance from the pivot short of the end of the spring body, said plates tending to diverge beginning intermediately of the handle, said plates being projected beyond the spring a distance and formed as clip devices, and means to compress the clip devices.

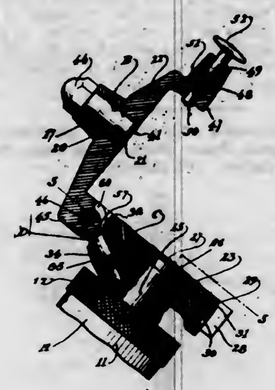
1,424,552. CULTIVATING IMPLEMENT. JOHN WILEY BRONSON, New Orleans, La. Filed June 21, 1921. Serial No. 479,334. 3 Claims. (Cl. 97—34.)

1. A cultivating implement comprising a pair of beams extending longitudinally in substantially parallel relation and being situated relatively far apart with their rear ends converging together and secured, means connecting the forward ends of the beams, supporting wheels at the forward portions of the beams, transversely elongated rods extending through the beams in spaced relation, bars adjustably mounted on said rods outwardly of said beams for receiving implements, the outermost bars having diagonal braces at their forward ends secured to said beams substantially as described.



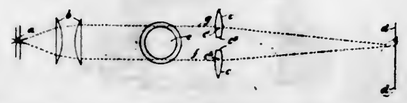
1,424,553. FIREARM. JOHN M. BROWNING, Ogden, Utah. Filed July 26, 1919. Serial No. 313,581. 35 Claims. (Cl. 42—17.)

1. In a firearm, the combination of a sliding magazine, an action-slide, a laterally movable breech-block carried by said slide and actuated by said magazine, a receiver having an ejecting-opening therein, and means for locking the breech-block in the ejecting-opening when actuated by said magazine.



1,424,554. WIRE-SPOKED WHEEL. EDWARD G. BUDD, Philadelphia, Pa., assignor, by mesne assignments, to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 7, 1918. Serial No. 238,704. 6 Claims. (Cl. 301—56.)

1. In combination, supporting means, a wheel comprising a metal hub having a portion seated on said supporting means, and a pressed out annular portion having pressed out channels with plane sides, and straight wire spokes projecting through the sides of the channels and arranged perpendicular to the sides of the channels and



in lines substantially tangential to the hub portion seated on said supporting means.

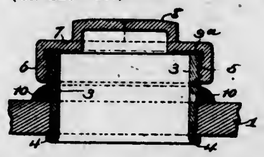
1,424,555. TILTING AND LOCKING DEVICE FOR STEERING WHEELS. ROBERT S. BUSBY, Jacksonville, Fla., assignor of one-half to Alfred D. Richardson and Roy O. Birchy, Jacksonville, Fla. Filed June 17, 1921. Serial No. 478,369. 10 Claims. (Cl. 74—33.)

5. In a steering device, the combination with a steering post and steering wheel, of an attachment therefor interposed between the wheel and post including a pair of hingedly connected members, the members being arranged for connection respectively with the post and wheel whereby relative movement between the wheel and post is permitted, locking means for preventing swinging movement of said members in relation to each other when the steering wheel has been moved in relation to the steering post, and locking means for preventing turning movement of the members, when the steering wheel has been moved in relation to the post.

1,424,556. GAUGING APPARATUS. ARTHUR GEORGE COOKE, County of Middlesex, England. Filed Jan. 8, 1921. Serial No. 435,982. 3 Claims. (Cl. 88—29.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

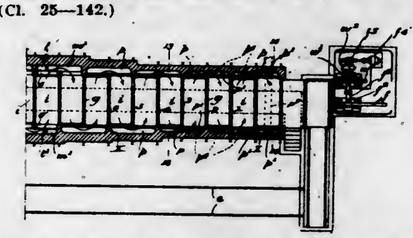
1. A screw-gauging apparatus comprising a stage on which the screw may be supported, a screen, and means for producing and projecting enlarged images of different threads of such screw in overlapping relation on said screen.

1,424,557. LUBRICATING-GREASE CUP. FRANCIS S. CRAVEN and JOSEPH MIHALYI, Washington, D. C. Filed Dec. 10, 1920. Serial No. 429,782. 3 Claims. (Cl. 184—45.)



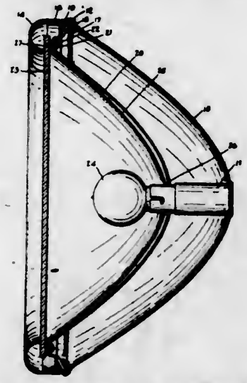
3. In an air tight lubricator of the character described, in combination, a hollow body portion provided with inlet and outlet openings at its opposite ends, a hollow movable cylindrical piston slidable within said body portion and dividing the same into upper and lower chambers, spring actuated valves for closing the entrance and outlet openings in said body portion, said piston having openings communicating with said chambers and the interior of the piston whereby as said piston is depressed to fill the upper chamber lubricant previously admitted thereto will flow into said lower chamber and be expelled past the valve at the outlet to said body portion.

1,424,558. BOTTLE. WILMOT F. CROZIER, Osceola, Nebr. Filed Aug. 29, 1921. Serial No. 496,452. 6 Claims. (Cl. 215—7.)



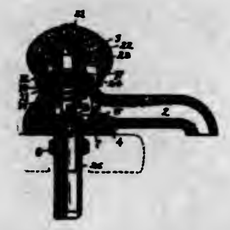
1. A bottle including a body closed at both ends and provided with lateral openings, closures for said openings, and retaining means common to both closures for holding the latter from displacement, said means being frangible to permit simultaneous removal of the closures.

1,424,559. STEAM BOILER. ETHAN I. DODDS, Pittsburgh, Pa., assignor to Flannery Bolt Company, Pittsburgh, Pa. Filed Oct. 31, 1919. Serial No. 334,779. 4 Claims. (Cl. 220—39.)



1. The combination with a boiler having a cleaning-out opening, of a nipple, said nipple being exteriorly threaded at one end and having a water-tight connection with said cleaning-out opening.

1,424,560. TUNNEL KILN. ARTHUR MCDOUGALL DUCKHAM and ARTHUR THOMAS KENT, London, England. Filed Feb. 27, 1922. Serial No. 539,636. 10 Claims. (Cl. 25—142.)



1. A tunnel kiln of the kind in which the gases have a horizontal path longitudinally of the tunnel, comprising trucks arranged so that the length of the truck is transverse to the length of the tunnel and baffle walls carried by the said trucks parallel to the length of the truck.

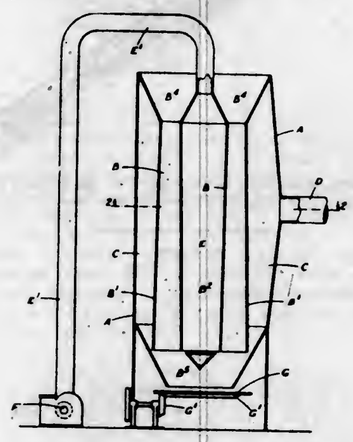
1,424,561. REFLECTOR-RENEWAL INSERT. HENRY F. DUNN, Indianapolis, Ind., assignor to Dunn Auto Products Company, Indianapolis, Ind., a Corporation. Filed Sept. 25, 1920. Serial No. 412,675. 2 Claims. (Cl. 240—41.)

1. A lamp having a casing, a lamp support within the casing, a reflector apertured to receive the lamp support and be supported thereby and having a peripheral flange, a lens closure mounted on said casing, a lens in said closure, an auxiliary and duplicate reflector for renewing the reflecting properties of the lamp similarly apertured and similarly supported and provided with a peripheral flange interposed between the first mentioned peripheral flange and the lens, and means for yieldingly maintaining said flanges and lens in abuttable relation to rigidly secure the same within the casing.

1,424,562. VITREOUS-CHINA COCK OR FAUCET. ARTHUR I. FISCHER, Cleveland, Ohio, assignor to Morris H. Glauber, Cleveland, Ohio. Filed Oct. 1, 1919, Serial No. 327,734. Renewed Apr. 27, 1922. Serial No. 557,031. 5 Claims. (Cl. 251—156.)

4. A cock or faucet consisting of a metal body having a screw-threaded neck at its top and a flange about the base of said neck, a spout member of vitreous material having a chambered head seated on said flange about the base of said neck and united in water-tight relation at the joints therewith, a thimble threaded into said neck having a quick internal thread, a valve having a stem rotatably engaged with said thread, and a hand-grip fixed to said valve stem having a skirting surrounding the upper portion of the head of said spout.

1,424,563. NOSE RING. ENOS GLICK, Paris, Ill. Filed May 28, 1921. Serial No. 473,334. 3 Claims. (Cl. 119—135.)



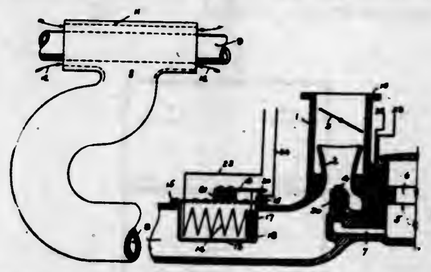
1. A nose ring for live stock comprising a ring adapted to engage the snout of the animal, a length of material coiled several times at its central portion to provide a spur bar, said spur bar being movable on the ring, the end portions of said spur bar extending in opposite directions in offset relation in the same plane.

1,424,564. TIE RACK AND COVER. EMANUEL O. GOLDSMITH, Memphis, Tenn. Filed Nov. 9, 1921. Serial No. 514,020. 4 Claims. (Cl. 211—14.)

1. A tie rack and cover comprising supporting means, pivoted arms thereon for holding merchandise, means for folding said arms, and a cover carried within the supporting means and adapted to be spread over the arms and articles carried thereby.

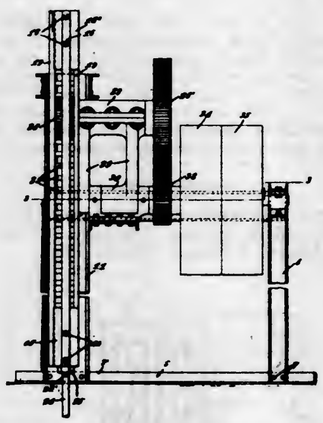
1,424,565. APPARATUS FOR DRYING COAL OR OTHER MATERIAL. THOMAS A. GOSKAR, Swansea, Wales. Filed Oct. 29, 1921. Serial No. 511,389. 3 Claims. (Cl. 34—34.)

1. Apparatus for drying coal or ashes or other material in a granular percolatable mass form in an upright and continuous column; comprising in combination, an upright chamber, adapted to hold therein the said material in the form of an upright column, having the walls of said chamber arranged to diverge downwardly from one another and provided with a profusion of openings therethrough; an outer casing enclosing said upright drying chamber; an enclosed space on each side of the said drying chamber; means to deliver the drying medium into said enclosed space so that it can be applied at a common temperature to the said column of material at all levels of said column in the heating zone; and means to pass said drying medium by induction through the interstices between the particles of the said mass of material to be dried, substantially as set forth.



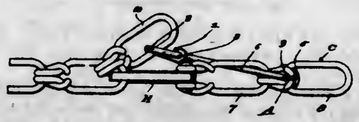
1,424,566. ROOF AND THE LIKE COVERING. WILLIAM HARRY GRIFFITHS, Hereford, England. Filed Apr. 14, 1922. Serial No. 552,555. 8 Claims. (Cl. 108—13.)

1. As an article of manufacture a sheet metal roofing-plate comprising a sheet having small openings therein, with an upstanding perimeter to each of said openings, for the purposes described.



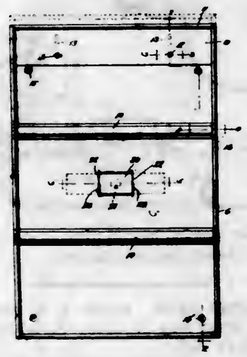
1,424,567. WARMING DEVICE FOR CARBURETORS. CHARLES D. HIGGINS, Berkeley, Calif. Filed Mar. 14, 1921. Serial No. 452,012. 14 Claims. (Cl. 219—34.)

1. In a carburetor a gasoline duct, an air inlet passage, an electrical resistance interposed in said passage and around said duct, a source of electricity, a switch and energising connections whereby the gasoline flowing in said



duct and the air flowing in said passage are heated by said resistance and before they commingle.

1,424,568. PUMP JACK. ERNST A. H. JACOB, San Antonio, Tex. Filed Aug. 14, 1919. Serial No. 317,522. 1 Claim. (Cl. 74—27.)



In a pump jack, a frame, guideways supported by the frame, a pump jacking including guide bars movable within the guideways, heads connecting opposite ends of the guide bars, each of the heads having a curved inner surface, side bars having connection with the heads at points intermediate the ends thereof, horizontal bars connecting the side bars, a pinion adapted to move between the horizontal bars and guide bars, an arm supporting the pinion, means for rotating the pinion, and said pinion adapted to contact with the curved surfaces of the head to move the pinion to opposite sides of the horizontal bars.

1,424,569. AUXILIARY CHAIN FASTENER. GEORGE W. JOHNSON, Gallatin, Mo. Filed Dec. 6, 1921. Serial No. 520,244. 2 Claims. (Cl. 24—73.)

1. A connector of the class described comprising a piece of heavy wire having one end bent to form a loop and the terminal thereof extended laterally and wrapped around the body portion of the wire, the other end of said wire being bent angularly at right angles and provided at its terminal with a knob.

1,424,570. **FRAME FOR ADVERTISING CARDS.** RICHARD A. JOHNSTON, New York, N. Y., assignor to Barron G. Collier, Inc., New York, N. Y. Filed Oct. 12, 1921. Serial No. 507,230. 2 Claims. (Cl. 40—125.)

1. A street car advertising frame comprising a rectangular metallic sheet provided with means for receiving and retaining the edges of an advertising card, and means for securing the intermediate portion of said advertising card to the said sheet whereby bulging of said advertising card will be prevented, said last mentioned means comprising a wooden insert, means on said metallic sheet for retaining said insert, and means for securing the card to said insert.

1,424,571. **MANICURE CASE.** SIEGFRIED HENRY KAUFMANN, London, England. Filed Oct. 19, 1921. Serial No. 508,828. 9 Claims. (Cl. 132—79.)

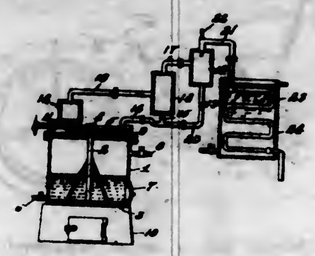
1. In a manicure case, a base, an upright hollow pillar mounted on this base, a vertical slot in one side of the hollow pillar to support a nail polisher in its interior, a series of loops around its exterior for the reception of various instruments and a cover adapted to fit over and enclose the whole and to engage the base so as to be held in position.

1,424,572. AWNING-ROLLER CONSTRUCTION. JOHN FIELDEN KING, Kalispell, Mont. Filed Sept. 27, 1920. Serial No. 413,122. 3 Claims. (Cl. 156—29.)

3. In a roller structure, a tube, a rod arranged therein, collars on the rod, one at each end and one at the center, the periphery of each collar being notched and there being annular grooves formed in the outer faces of the end collars, and a plurality of longitudinally adjustable truss-rods provided at their ends with heads arranged in said grooves, and adjacent said heads with reduced necks removably seated in the notches in the end heads, the central portions of the truss-rods being seated in notches in the central head which are out of circumferential

longitudinal alinement with respect to the notches in the end collars in which their opposite ends are seated.

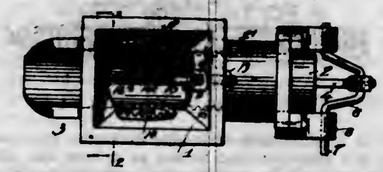
1,424,573. CANDLE HOLDER. OLAFFA A. LARSON, Butte, Mont. Filed Feb. 17, 1920. Serial No. 359,279. 2 Claims. (Cl. 248—42.)



1. An integral candle holder comprising an upper open resilient helix portion to grip the body of a candle, and a lower inverted conical helix portion axially aligned therewith and having its lower end closed to receive and hold the candle wick stub when released from the melted body material of the candle.

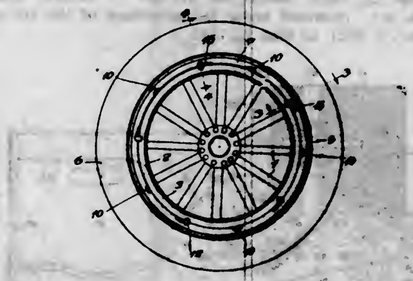
1,424,574. **PROCESS OF CONVERTING OILS.** ALMER M. MCAFEE, Bayonne, N. J., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Sept. 30, 1913. Serial No. 792,615. 74 Claims. (Cl. 196—26.)

5. The process of converting higher boiling petroleum oils into lower boiling oil which comprises heating such a higher boiling oil together with anhydrous aluminum chlorid to boiling temperature, separating vapors of lower boiling oil formed from higher boiling oil, and condensing the vapors of the lower boiling oil.



7. The process of converting higher boiling petroleum oils into lower boiling oil which comprises heating such a higher boiling oil together with anhydrous aluminum chlorid to distillation temperature, separating vapors of lower boiling oil formed from higher boiling oil, condensing vapors of lower boiling oil formed, and returning the higher boiling oil to the body of oil undergoing distillation.

29. In the treatment of petroleum oils, the process which comprises continuously distilling off low boiling vapors from a boiling body of high boiling oil containing aluminum chlorid and continuously supplying additional high boiling oil to said body.

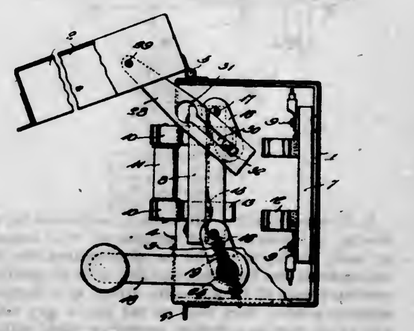


60. The process of converting petroleum hydrocarbons having higher-boiling points into naphtha, which consists in heating a mixture of said hydrocarbons and anhydrous aluminum chlorid to a temperature producing vapor of a lower boiling oil having an end-boiling point not substantially above the end-boiling point of naphtha and maintaining the mixture at such temperature.

1,424,575. **STOKER.** JAMES MACPHERSON, Jr., New York, N. Y. Filed Apr. 29, 1921. Serial No. 465,365. 7 Claims. (Cl. 259—89.)

1. A stoker having a movable ram, means to operate the ram, a member movably supported to be operated by the ram to engage coal over the ram, said ram having means to move said member sideways.

1,424,576. **LOCKING DEVICE FOR DEMOUNTABLE RIMS.** HARRY WALTER MARTIN and LANNIE MORRIS CALHOUN, Gilbert, La. Filed Mar. 30, 1922. Serial No. 548,151. 8 Claims. (Cl. 301—22.)

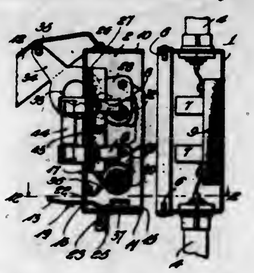


1. In combination with a wheel having a felly and a demountable rim carried thereby, of a plurality of bolts fitted transversely through the felly and having outwardly projecting heads with undercut slots, a locking ring adapted to seat against one side of the demountable rim and having wedge portions taking into the undercut slots and acting against the base walls thereof, and a yieldable catch carried by one of the bolts for engaging the ring, substantially as described.

1,424,577. **ANTIRATTLER.** JOSEPH W. MARTIN, Mora, Minn. Filed Sept. 20, 1921. Serial No. 502,011. 4 Claims. (Cl. 74—17.)

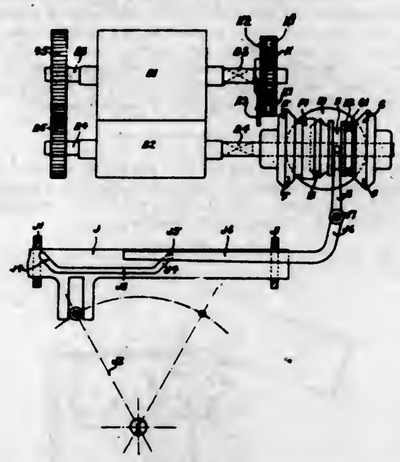
1. The combination with a steering post of an automobile including the ball arm thereof and bearing socket of the ball arm, and means connecting the steering post and arranged to bear against the bearing socket of the ball arm in a manner to prevent the disengagement of the latter from the bearing socket or the free noisy play of the ball end of the ball arm in the bearing socket.

1,424,578. **SAFETY SWITCH.** RALPH K. MASON, Bantam, Conn., assignor of one-half to John H. Lancaster, Litchfield, Conn. Filed July 8, 1919. Serial No. 309,280. 20 Claims. (Cl. 200—50.)



10. A switch of the character described comprising a container, relatively movable make-and-break contact members therein, the movable contact member including parallel links and a carrier pivoted at its opposite ends to relatively free ends of said links and held against angling thereby, and means for pivoting the relatively fixed ends of said links to the container, in combination with an operating handle connected axially of said relatively fixed end of at least one of the links.

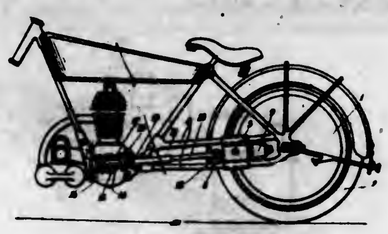
1,424,579. **SWITCH CASING AND COVER LOCK.** RALPH K. MASON, Bantam, Conn., assignor of one-half to John H. Lancaster, Litchfield, Conn. Filed June 2, 1920. Serial No. 386,128. 17 Claims. (Cl. 200—50.)



14. In a switch, a rear casing section carrying contacts, a front casing section carrying switch means,

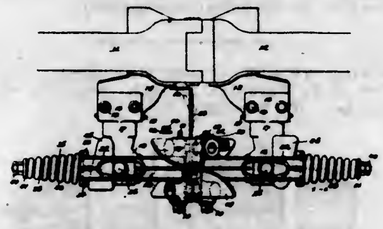
means for detachably connecting the two sections, and means positively preventing detachment of said sections

until the switch means is entirely freed from the contacts.



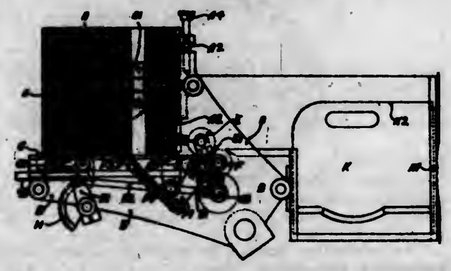
1,424,580. SLIVER-LAP-FEEDING MECHANISM. LOUIS GRIMOND MACINTYRE, Broughty Ferry, Scotland. Filed Nov. 6, 1920. Serial No. 422,157. 5 Claims. (Cl. 19—144.)

1. In apparatus for delivering a continuous lap of sliver flowing at constant speed successively to a series of two or more machines, means for interrupting the flow and for breaking the lap when the feed is to be diverted, comprising a pair of feeding rolls driven at a surface speed slightly greater than that of the lap, a gap bridged by the sliver and immediately preceding these rolls, clutch controlled mechanism for driving the rolls in the forward and reverse directions, means for operating the clutch to cause momentary stoppage and reversal of the rolls, as and for the purposes set forth.



1,424,581. FRICTION DRIVING GEAR FOR MOTOR VEHICLES. GEORGE SIDNEY MEPSTEAD, Mortlake, London, England. Filed Jan. 3, 1921. Serial No. 434,715. 3 Claims. (Cl. 74—26.)

1. A driving gear for motor vehicles comprising a vehicle frame having a rigid part, a driven wheel, a conical driven disc connected to said driven wheel, a driving shaft, a conical driving member slidably mounted upon said driving shaft, a carriage adapted to support said driving member slidably mounted upon said rigid part of the vehicle frame whereby the effective gear ratio may be varied, and means for bringing increased pressure upon the driven disc during rotation of said driving shaft, said carriage being provided with means relatively movable therein whereby said driving member



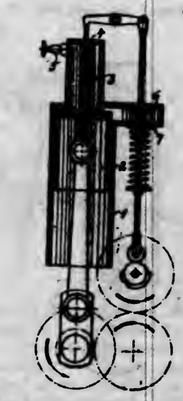
may be brought into or out of engagement with the driven disc.

1,424,582. AUTOMATIC TRAIN-PIPE CONNECTOR. BLYTHE J. MINNIS, Watertown, N. Y., and HENRY F. BICKEL, Plainfield, N. J. Filed Feb. 26, 1920. Serial No. 361,494. 13 Claims. (Cl. 285—24.)

4. In an automatic train-pipe connector, the combination of a connector-head having an orificed face adapted to be presented to a companion connector head; and a sealing element having orifices surrounded by yielding sealing means, said orifices normally registering with the orifices in said face and said sealing element being capable of removal as a unit by a sliding movement across said orificed face.

1,424,583. MACHINE FOR FLATTENING OR STRAIGHTENING BOOK COVERS OR CASES AND THE LIKE. JOHN MURRAY, London, England. Filed June 20, 1921. Serial No. 478,898. 5 Claims. (Cl. 93—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. A machine for flattening or straightening book-covers or cases and the like comprising three parallel rolls with their axes passing through the apices of a common triangle, and so positioned relative to one another as to engage a case fed between them; intermeshing means between the peripheries of two of the rolls

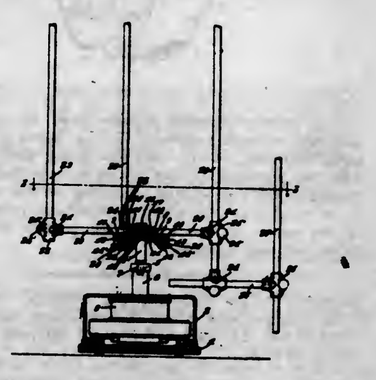


adapted to bring the axes thereof more closely adjacent and still permit of adjacent surfaces of the two rolls moving in opposite directions; means for feeding the cases successively to the rolls; and means for driving the rolls; as and for the purposes set forth.

1,424,584. FIRE-GRATE OVEN ATTACHMENT. ANDREW NELSON and OSCAR H. HINNARD, Chattanooga, Tenn. Filed Oct. 20, 1921. Serial No. 509,014. 4 Claims. (Cl. 126—137.)

1. An oven of the character described comprising a casing having a flared lateral outwardly opening extension thereon adjacent the lower and inner sides of the same, an oven within said casing having its side walls spaced from the adjacent walls of the casing to provide an air circulating way entirely thereabout, and a horizontally pivoted damper disposed longitudinally of said extension and arranged intermediately of its upper and lower sides, the outer portion of said damper extending without said extension.

1,424,585. MOTOR. HANS HENRIK NIELSEN, Kolding, Denmark. Filed Sept. 18, 1919. Serial No. 324,589. 1 Claim. (Cl. 123—75.)

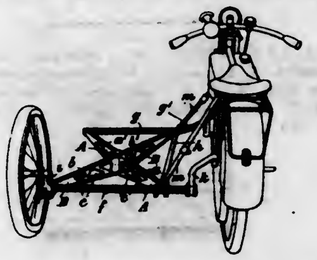


In a motor the combination of a cylinder having a piston, a cylindrical prolongation of the said cylinder forming a compression-chamber and having a volume of ⅛ to ¼ of the stroke-volume, an inlet-valve for gas-mixture placed in the upper third part of the said compression-chamber and being adapted to remain shut during the first ⅛ to ⅓ of the suction-stroke, an igniting device placed in the upper third part of the said compression-chamber, and an exhaust-valve placed at the foot of the said compression-chamber and above the said cylinder and being adapted to remain open during the first ⅛ to ⅓ of the suction-stroke, substantially as set forth.

1,424,586. PIPE JOINT. STEPHEN EUGENE PAGE, Brooklyn, N. Y., assignor to United Concrete Pipe Co., New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1919. Serial No. 336,497. 2 Claims. (Cl. 72—53.)

2. A joint for reenforced concrete pipe comprising abutting pipe ends having projecting spigots of substantially the same diameter, a sealing ring of ductile metal slipped upon and spanning said spigot ends, said ring having an expansion crimp overlying the parting of the joint, together with clamping rings engaging said sealing ring on opposite sides of said crimp and serving to secure the same to said spigot ends of the pipes, substantially as described.

1,424,587. DISPLAY RACK. JOSEPH MARTIN PERRY, Meridian, Miss. Filed Sept. 21, 1921. Serial No. 502,123. 2 Claims. (Cl. 211—20.)

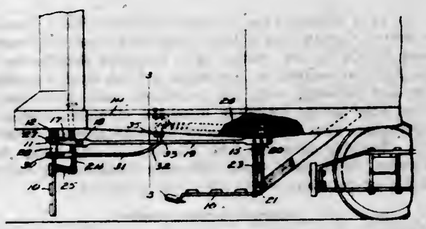


1. In a display rack the combination with a housing, a motor therein, and a stem projecting from the housing and driven by the motor, of a standard detachably engaging and rotated by the stem, a head fixedly mounted on and rotating with the standard, said head having angularly spaced clamping members, clamping plates cooperating with said members, rods interposed between the clamping members and plates and adjustably held thereby, said rods being extended tangentially to the circle of rotation of the clamping members.

1,424,588. UNDERFRAME OR CHASSIS FOR CYCLE SIDE CARS AND THE LIKE. MAURICE MARCEL PERRAS, Coventry, England. Filed Oct. 7, 1920. Serial No. 415,857. 3 Claims. (Cl. 208—45.)

1. A chassis for cycle side-cars comprising, two intersecting diagonally arranged girder-like members, said chassis having adjacent three corners thereof means for connection to the frame of the vehicle and to the side-car wheel, the fourth arm having the form of a cantilever, one of the intersecting girders having an aperture formed therein and a tongue adjacent the aperture, the other girder passing through said aperture and being

secured to the first named girder by means of said tongue, said first named girder having a channel formed

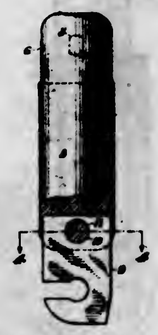


therein, and a strip secured at an angle to the second named girder and resting in said channel.

1,424,589. ROMPERS, MATTIE KELLEY REDFORD, Lexington, Ky. Filed Aug. 15, 1921. Serial No. 492,395. 5 Claims. (Cl. 2—144.)

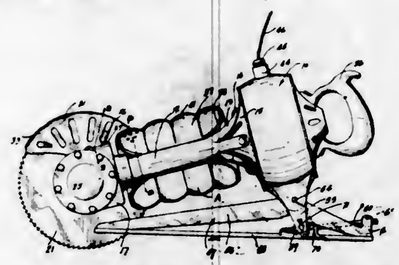
1. A garment having a waist and leg portion permanently secured together, the leg portion being composed of front and rear sections folded upon themselves with leg openings at the lower corners thereof, a flap formed in the rear section of the leg portion and adapted to be secured to the waist portion, and pockets formed in the upper corners of the leg portion between said front and rear sections.

1,424,590. CAR FENDER OR GUARD. CHARLES F. RICHARDSON and MARK S. FERGUSON, Kokomo, Ind. Filed Dec. 28, 1921. Serial No. 525,408. 4 Claims. (Cl. 293—5.)



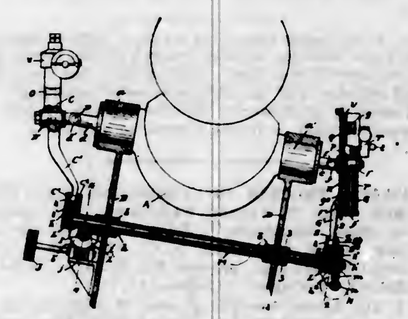
1. A car fender comprising a pivoted buffer normally disposed in vertical position, a fender member arranged rearwardly thereof, an extensible and contractible element having one end anchored and its other end attached to said member for normally tending to lower said fender, a reach rod formed of a short and a long section, pivotally connected together, said elongated section attached to said member and said short section attached to said buffer and providing means when the sections are disposed in lengthwise alinement to maintain said buffer vertical and said fender elevated against the action of said element, until said sections are swung on their pivots by the shifting of the buffer rearwardly, whereby the fender member is lowered by the action of said element.

1,424,591. SPARK PLUG. CHARLES THEODORE ROTH, Newark, N. J., and EBBERHARDT PETER NICHOLSON, Richmond Hill, N. Y. Filed May 12, 1920. Serial 380,800. 1 Claim. (Cl. 123—169.)



A spark plug, including a core having its side face formed with bayonet slots adjacent its upper end, a cap formed with openings adapted to encircle the upper end of said cap, said openings aligning with said bayonet slots, said slots being adapted to receive cement capable of keying into the same and through the cap openings whereby to prevent movement of the cap with said core, and means connected to said cap and associated with the core for forming a spark gap.

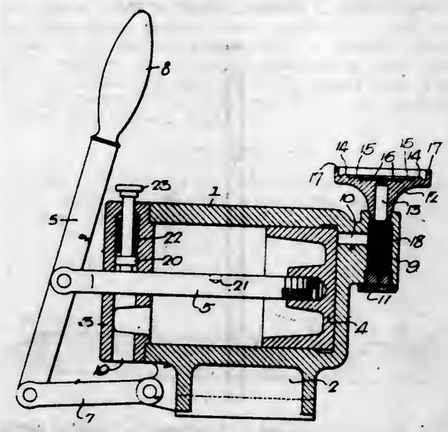
1,424,592. SASH WEIGHT. WILLIAM S. SANBORN, New York, N. Y., assignor to Sanborn Sectional Weight Co., Inc., New York, N. Y., a Corporation of New York. Filed July 19, 1921. Serial No. 485,800. 2 Claims. (Cl. 16—218.)



1. A sectional sash-weight comprising a body of cast-iron provided at one end with integral coupling means, a relatively flat coupling hook of malleable iron located at the other end of said body and extending into the same to an extent which corresponds to a fractional part of the axial length of said body, said malleable iron coupling hook having a major width corresponding to the cross-sectional width of the body in at least one direction and means within said body extending transversely to said major width of said malleable iron hook whereby separation of the latter from said body is resisted.

1,424,593. ELECTRICALLY-OPERATED HANDSAW, BUFFER, ETC. CHARLES SANDLIN, Denison, Tex. Filed Mar. 1, 1920. Serial No. 362,419. 4 Claims. (Cl. 143—43.)

1. In a power operated hand tool, a substantially rectangular guide block having a longitudinally extending rib formed on its outer face, a motor including a casing arranged transversely of the rib, means hingedly connecting the motor casing with the rib, a tool carried by the motor casing and operated by said motor, means for adjusting the inclination of the motor and the tool in relation to the guide block, a depending arm carried by the motor casing and disposed adjacent to the pivot point thereof, an indicator carried by the arm, and a scale carried by the outer surface of the block and arranged at one side of the rib for cooperation with the indicator.

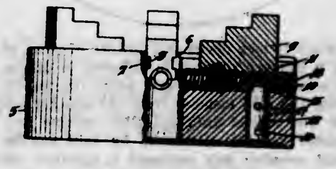


1,424,594. SIGHTING AND AIMING APPARATUS FOR FIELD GUNS, COMBINED WITH DEVICES FOR CORRECTING TRANSVERSE AND LONGITUDINAL INCLINATIONS OF THE GUN CARRIAGE. EUGÈNE SCHNEIDER, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint-Stock Company of France. Filed Dec. 28, 1920. Serial No. 433,659. 14 Claims. (Cl. 33—48.)

1. In a sighting apparatus for guns, the combination of a gun carried by a cradle having trunnions journaled in a carriage, with a sighting device pivotally mounted on one of the trunnions, a range-reading device pivotally mounted on the other trunnion, means connecting the two devices for maintaining them in conjugate relation, and means for simultaneously moving both devices on their pivotal connections to position the same vertically irrespective of any transverse inclination of the trunnions.

1,424,595. CASTING MACHINE. PAUL E. SCHWARZ and THOMAS D. SALMON, Philadelphia, Pa. Filed Mar. 23, 1922. Serial No. 546,193. 4 Claims. (Cl. 22—73.)

4. The combination in a casting machine of a cylinder casting including a hollow box communicating with the interior of the casting; a mold-supporting cup mounted on said box having a passage communicating with the cavity thereof; a screen in the cavity for preventing solid

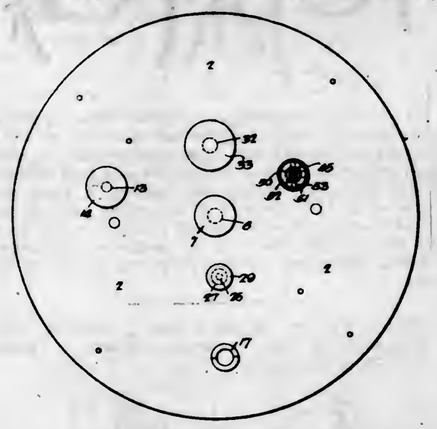


material passing into the cylinder casting; a piston in the cylinder casting; and means for actuating said piston.

1,424,596. ANT TRAP. JEFFERSON DAVIS SCRIVNER, San Benito, Tex. Filed Mar. 1, 1920. Serial No. 362,503. 1 Claim. (Cl. 43—121.)

An ant trap comprising an annular trough provided with spaced inner and outer vertical sides between which the ants are confined, said sides being provided at their upper edges with means to prevent the ants from climbing up the inner faces thereof and escaping, a drain pipe connected to the outer side of the trough adjacent the bottom thereof, and a porous plug arranged in said drain pipe for permitting water in the trough to continuously discharge therefrom without permitting escape of the ants.

1,424,597. CHUCK. HARRY E. SLOAN, Hartford, Conn. Filed May 13, 1919. Serial No. 296,852. 2 Claims. (Cl. 279—112.)

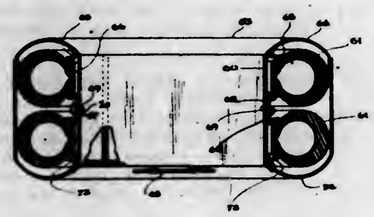


1. A chuck comprising a body having a feed screw slot opening to the face of the chuck, a jaw located on the body and projecting into said slot, and a feed screw support comprising two members engaging said screw from opposite sides, said body having a hole in the bottom of said slot in position to receive, embrace and hold in close contact the two members of said feed screw support when engaged with said feed screw.

1,424,598. STRIPPING APPARATUS FOR CARDING MACHINES AND THE LIKE. ALFRED SMITH, La Madeleine-lez-Lille, France. Filed May 7, 1920. Serial No. 379,612. 5 Claims. (Cl. 19—109.)

1. A suction operated card-stripping or cleaning device, comprising a stripping tube adapted to be arranged against the casing of a carding cylinder, and having a longitudinal slit extending over the whole width of the casing, and distributing means for permitting the exertion of the suction effort through said slit only at predetermined laterally spaced areas at successive time intervals so that the stripping of the card is effected at non-adjoining areas, and the evenness of the silver thus maintained.

1,424,599. SAFETY LOCK FOR MOTOR VEHICLES. GEORGE A. SOKOLOVE, Philadelphia, Pa. Filed Mar. 11, 1920. Serial No. 364,979. 22 Claims. (Cl. 200—43.)



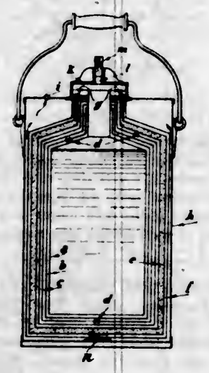
1. In a safety lock device, a plurality of pairs of spaced contacts, a member adapted in different positions to connect the contacts of each of said pairs alternately, means for moving the said member from the contact connecting positions, and means automatically operable for locking said member against movement by said moving means when said member has assumed a position connecting one of said pairs of contacts.

1,424,600. COMBINED DRILL AND SCREW SET. SYDOR SOLOF, Brooklyn, N. Y. Filed Dec. 3, 1921. Serial No. 519,587. 2 Claims. (Cl. 145—66.)

1. A brace driven tool holder consisting of a spindle exteriorly threaded and having a rectangular projection adapted to fit a recess formed in the brace, a pair of jaws associated with the spindle, a star wheel for operating the jaws, a pair of auxiliary jaws adjacent the first mentioned jaws, means for rotating the auxiliary jaws consisting of a cross bar pivoted to said auxiliary jaws and having a rectangular projection fitting a recess of similar shape formed in the lower end of the spindle screw, and means for simultaneously closing both pairs of jaws.

1,424,601. TIRE CARRIER. GEORGE W. STEWART, Loughman, Fla. Filed May 5, 1921. Serial No. 466,907. 3 Claims. (Cl. 224—29.)

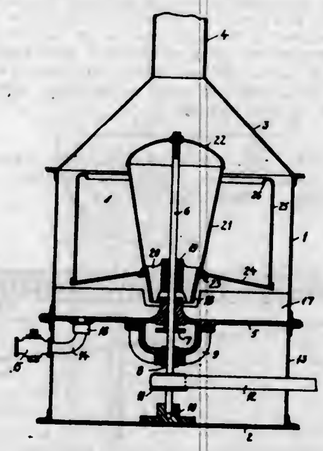
1. A tire casing comprising a pair of sections constituting a tire receiving chamber adapted for the reception of a plurality of tires, and a split spacing ring received in said chamber and having transversely extending arms terminating in outwardly directed tongues adapted for supporting tires in spaced relation to each other.



1,424,602. PROCESS OF PRODUCING ICE-CREAM MIX. PAUL W. TURNEY, Washington, D. C., assignor, by mesne assignments, to Zelma E. Turney, surviving joint tenant, Washington, D. C. Filed Feb. 8, 1921, Serial No. 443,414. Renewed Feb. 6, 1922. Serial No. 534,641. 6 Claims. (Cl. 99—11.)

1. The herein described process of producing an ice cream mix, consisting in swelling the casein particles in the milk and inducing a mutual attraction therein, and partly semi-dissolving the swelled particles through the introduction of sugar and an alkali agent.

1,424,603. ICE-CREAM MIX AND PROCESS OF MAKING IT. PAUL W. TURNEY, Washington, D. C., assignor, by mesne assignments, to Zelma E. Turney, surviving joint tenant, Washington, D. C. Filed Apr. 29, 1921, Serial No. 465,453. Renewed Feb. 24, 1922. Serial No. 539,034. 5 Claims. (Cl. 99—11.)

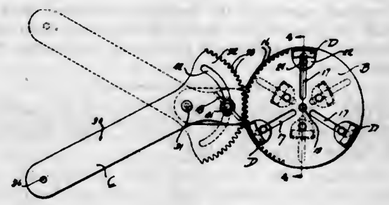


1. The method of making a filler for ice cream mix or the like, consisting in reducing the fluidity of the milk, adding thereto a proportion of alkali of such relatively small quantity as to be substantially imperceptible in the final product, and agitating the mixture to the consistency of a jelly.

1,424,604. RECEPTACLE FOR LIQUID AIR. GUILLAUME WEBER, Hayange, France, assignor to Société les Petits Fils de Francois de Wendel et Cie., Paris, France. Filed Sept. 27, 1919. Serial No. 326,978. 2 Claims. (Cl. 220—9.)

1. A portable receptacle for liquefied gases comprising an inner reservoir, a few concentric vessels arranged around said inner reservoir and in communication with each other by small openings, said concentric vessels being filled with a dead volume of atmospheric air, an intermediate casing surrounding the outer vessel and containing an insulating material, outer casings surrounding the intermediate casing and having their insides in communication with each other, a valve on the outermost casing adapted to open into the outer atmosphere, a passage affording a communication between the inside of the reservoir and the outer atmosphere, the innermost of the outer casings being in communication with said passage, a closure adapted to close the outlet of said passage and carrying means on the outermost casing.

1,424,605. COMBINED WASHING, RINSING, AND WRINGING MACHINE. ALFRED HAGBART WRIHE, Baekkelaget, near Christiania, Norway. Filed Mar. 6, 1920. Serial No. 363,684. 1 Claim. (Cl. 68—18.)

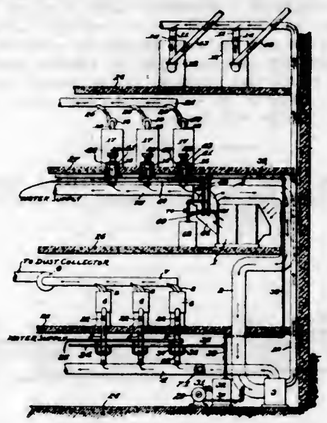


In a washing machine the combination with a container adapted to receive the washing agent, of a rotatable shaft passing through the center of said container, means for rotating said shaft, an inverted hollow cone secured to said shaft near the bottom of said container and formed with vanes inside, a perforated drum supported by the said cone, and an inverted hollow perforated second cone carried by the said first cone forming an extension thereof, the said first cone conveying the washing agent from the base of the said container to the second cone to be expelled therefrom by centrifugal force with uniform pressure into the said drum.

1,424,606. PIANO. JAMES H. WILLIAMS, Baltimore, Md. Filed July 6, 1921. Serial No. 482,719. 14 Claims. (Cl. 84—189.)

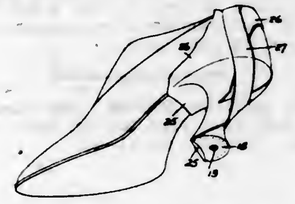
9. A piano having a sound board supporting frame including marginal and filler members of which the former have surface and depressed parallel channels extending longitudinally thereof and of which the latter have channels extending longitudinally thereof and interminal communication with one of the channels in the intersecting marginal members, the filler members being arranged with their channelled faces in spaced relation with the plane of the sound board.

1,424,607. ARTICLE HOLDER. DON CARLOS WISENBERG, Peru, Ind. Filed May 31, 1921. Serial No. 473,898. 8 Claims. (Cl. 81—3.1.)



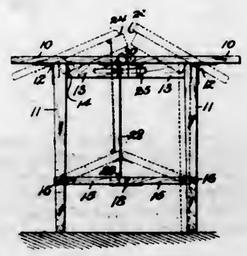
1. An article holder, comprising in combination a supporting base plate, a turn table oscillatively mounted on said plate, jaw elements on said turn table and plate, and means on said supporting plate for engaging and oscillating the turn table relative to said supporting plate, for moving said jaw elements relative to each other.

1,424,608. FLOUR-MILLING PROCESS. ALFRED W. WOOLCOTT, Coffeyville, Kans., assignor of one-half to Rea-Patterson Milling Company, Coffeyville, Kans., a Corporation of Kansas. Filed Dec. 20, 1919. Serial No. 346,290. 20 Claims. (Cl. 83—42.)



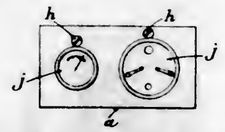
1. In the art of milling flour, the method which consists in purifying air by washing the same, thereafter,

and independently of the purifying process, controllably adjusting the moisture content of the purified air, and



conducting the air thus treated in closed paths to the individual machines of a milling system.

1,424,609. HEEL BINDER. EDWARD WILLIAM WOOD, Brooklyn, N. Y. Filed Aug. 30, 1921. Serial No. 496,822. 6 Claims. (Cl. 12—125.)

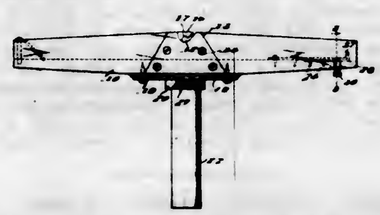


1. A heel binder of the character described, including a pair of crossed and integrally united endless elastic bands and a pressure pad located at the union of the bands.

1,424,610. FOLDING TABLE. JOSEPH K. ZIELONKO, Newark, N. J. Filed Oct. 19, 1921. Serial No. 508,690 2 Claims. (Cl. 45—116.)

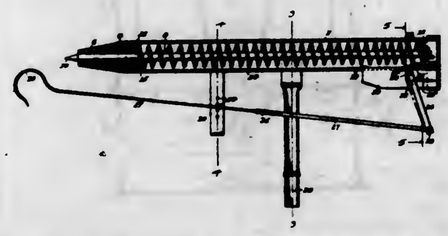
1. A table comprising two members, each member comprising a top, a pair of legs hinged to the top, stringers on which the hinged ends of the lugs abut when the top is horisontal, a rod connecting the legs at their lower part, an arm hinged to the center of the rod, the members being hinged together at the tops and at the inner ends of the arms, and a stay pivoted to an arm and the top of one of the members.

1,424,611. FASTENING MEANS FOR AUTOMOBILE ACCESSORIES. MARIUS JEAN-BAPTISTE BARBAROU, Paris, France. Filed June 10, 1920. Serial No. 388,042. 2 Claims. (Cl. 248—30.)



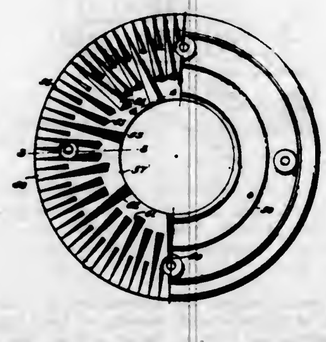
1. A fastening device for automobile accessories comprising in combination an elastic collar split transversely at one point, means for securing said collar to the dash board at a part thereof removed from the slit, a wedge like member adapted to close said collar and a screw operatively connected to said wedge like member.

1,424,612. NONCORROSIVE STEEL ALLOY. WILLIAM BELLEVILLE, Leicester, Mass. Filed June 16, 1921. Serial No. 478,145. 2 Claims. (Cl. 75—1.)



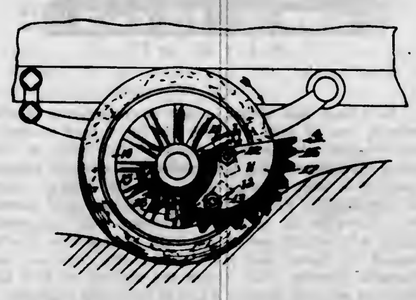
1. A non-corrosive steel alloy comprising approximately 15½% nickel, less than 1% carbon, approximately .3% silicon and .5% manganese, less than .1% each of chromium, sulphur, and phosphorus, and the principal portion of the remainder iron.

1,424,613. GRADE SIGHT. ENRIQUE JUAN BENOIST, Viña Del Mar, Chile. Filed Jan. 21, 1920. Serial No. 353,015. 5 Claims. (Cl. 88—2.3.)



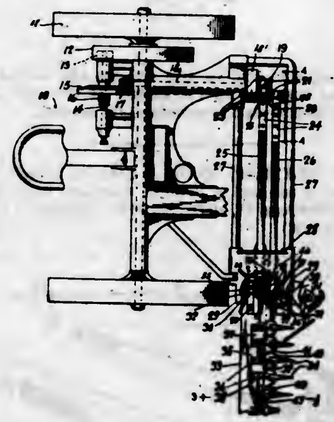
1. A grade sight of the character described, comprising a trough-shaped body portion, plates secured to the sides of the trough-shaped body portion and carrying hooks, a plum-bob detachably connected with the bottom of the body portion and depending therefrom, a scale held within the forward end of the body portion, an end sight held within such forward end in proximity to the scale, means to vertically adjust the end sight with relation to the scale, and an angularly arranged reflector held within the rear end of the body portion.

1,424,614. TRAPPER'S SPRING GUN. VERNON M. BROWN, Anthony, Kans. Filed Jan. 11, 1922. Serial No. 528,420. 1 Claim. (Cl. 43—79.)



A spring gun comprising a barrel, a spring projected plunger therein, a trigger releasing said plunger whereby it may be projected beyond one end of said barrel, a bait carrier comprising a rod connected at its rear end with said trigger and at its forward end provided with a bait receiving hook disposed beyond the end of the gun, a hanger depending from said barrel and provided with a vertical series of horisontal pins, said bait carrier rod extending through said hanger and resting on one of said pins, and means for longitudinally adjusting said rod.

1,424,615. GRINDING PLATE. HARRY BUCKLEY and RAY BUCKLEY, Louisville, Ky. Original application filed Apr. 8, 1921, Serial No. 459,566. Divided and this application filed July 13, 1921. Serial No. 484,376. 3 Claims. (Cl. 83—3.)



1. A grinding plate consisting of a body portion having a dished face said dished face being more abruptly dished at the periphery than toward the centre, a multiplicity of ribs triangular in cross section and having their cutting edges tangential to a circle at the center of the plate and all arranged in a common plane.

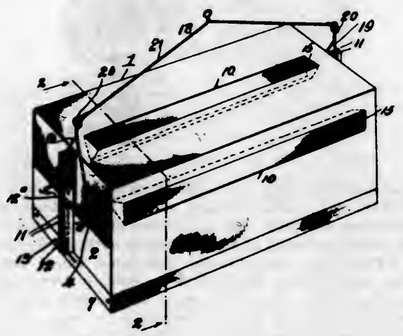
1,424,616. AUTOMOBILE EXTRICATING DEVICE. JOSEPH A. BUBON, Jr., Worcester, Mass. Filed June 16, 1921. Serial No. 478,146. 3 Claims. (Cl. 301—44.)

2. As an article of manufacture, an extricator for the purpose described, comprising a plate of a general segmental form, having a circular depression in its upper edge near one end for centering it on the hub of the wheel, and provided with means at a distance from said depression for fixing it positively to the wheel and provided with a row of transverse teeth across its bottom surface arranged in the form of a curve gradually increasing in distance from the center of said depression and extending all the way to the depression.

1,424,617. MOWER. PHILIP A. CAMPBELL, FRED F. EBY, and SAMUEL H. PRICE, Edmonton, Alberta, Canada; said Campbell and Price assignors, by mesne assignments, to Canadian Farm Implement Company, Limited, Vancouver, British Columbia, Canada, a Corporation of Canada. Filed Jan. 18, 1919. Serial No. 271,846. 1 Claim. (Cl. 56—297.)

In a mowing machine, a wheeled frame, a hollow head carried thereby, a shoe pivotally secured to the head, said shoe having its upper edge at its rear end depressed and being formed outward of the depression with a transverse lug, a finger bar secured in the depression, guard fingers thereon having their upper faces recessed, a lower sickle bar contacting the edge of the finger bar received in the recesses and resting on the shoe inward of the lug, a second sickle bar disposed over the first mentioned sickle bar, cutting blades on the confronting faces of the sickle bars, having their confronting faces concaved inwardly from their cutting edges, notched keeper members secured on the finger bar and receiving the upper sickle bar, said upper sickle bar at the portion thereof overlying the shoe having a widened portion which rests on the lug of the shoe, the lower sickle bar at the portion thereof arranged over the shoe having a lateral flange which rests on the portion of the finger bar connected to the shoe, lipped guide members secured to the shoe contacting the outer edges of the widened and flanged portions of the sickle bars and resting thereover, upstanding plates on the flanged or widened portions of both of the sickle bars, a flange on the plate for the lower sickle bar overlying the upper sickle bar, ball heads on the upstanding plates of both of the sickle bars, pitmen rods having their ends received in the hollow head, metallic straps projecting therefrom and having cup sockets to receive the respective ball heads, means for compressing the respective pairs of straps for regulating the frictional engagement between the sockets and the heads, a shaft revoluble on the machine, a flat wheel on the front end thereof, a stub shaft projecting therefrom, an arm centrally journaled thereon and having its end provided with ball heads, a link secured to the stub shaft, a stub shaft on the outer end of the link, an arm centrally journaled on the second mentioned stub shaft and having its ends provided with ball heads, and strap members on the respective pitmen extending therefrom and having cup-shaped sockets receiving the ball heads of the respective arms, and compressing means for the respective pairs of straps.

1,424,618. DENTURE RELINER. THOMAS W. CAREY, Jr., New Orleans, La. Filed Feb. 2, 1920. Serial No. 355,841. 1 Claim. (Cl. 32—4.)

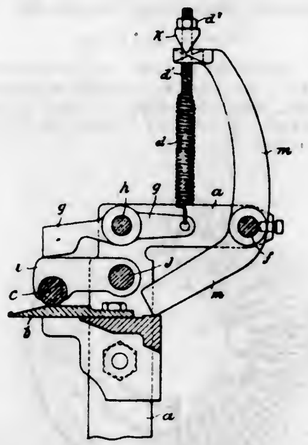


A dental plate formed of a non-metallic substance having a groove formed therearound adjacent its inner sur-

face, said groove formed with undercut walls and undercut recesses formed in both faces of said plate, said plates on the toothed side have a marginal groove formed therein,

metallic pieces located in said recesses and having their outer faces flushed with the surface of the plate and a coating of electro-plating covering said surface.

1,424,619. FLYTRAP. CLYDE A. CARLYLE, Detroit, Mich., assignor of one-half to Belle D. Cleghorn, River Rouge, Mich. Filed Aug. 13, 1921. Serial No. 492,055. 5 Claims. (Cl. 43—118.)



1. In a trap of the class described, the combination of a body and a bottom, said body and bottom each provided with a slot structure, each slot structure including a pair of end caps, each end cap comprising converging sides, a back integral with said sides, and a base integral with the back and sides.

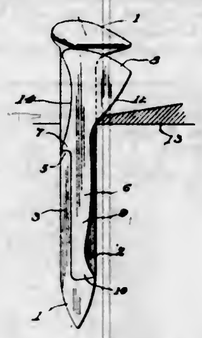
1,424,620. PROCESS FOR THE EXTRACTION OF THE CELLULOSE FROM VEGETABLE FIBERS. BENIAMINO CATALDI, Turin, Italy, assignor to Alessandro Pomilio, New York, N. Y. Filed May 17, 1921. Serial No. 470,428. 6 Claims. (Cl. 92—9.)

1. A process for the extraction of the cellulose from vegetable fibers by treatment with chlorine gas, characterized by the fact that the material to be treated, in its natural state if straw, esparto grass, jute, cotton and the like, or after removing the bark in the case of wood, is subjected to leaching in a digester, if required under heat, by means of an alkaline bath under heavy pressure, first hydraulic and then steam pressure; whilst the said material, after having been brought in a suitable state of subdivision, if required, is placed in another digester lined with material impervious to acid, and subjected to repeated successive treatments with chlorine gas alternating with water baths, these baths serving to cool the mass under treatment and to eliminate therefrom the hydrochloric acid formed by the action of the chlorine gas; these successive treatments with chlorine gas alternating with water baths being repeated until the temperature of the mass under treatment remains stationary; while the material, after the final washing, is subjected as usually under atmospheric pressure, to a final leaching with an alkaline bath exactly like the first, after which the incrusted substances are found to be eliminated and the pure cellulose remains.

1,424,621. COMBING MACHINE. JAMES WILLIAM CLEGG, Oldham, England. Filed Feb. 12, 1920. Serial No. 358,291. 2 Claims. (Cl. 19—119.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a cotton comber, the combination of a lap feed roll, a pair of levers pivoted centrally of their length, a spring engaging one extreme end of each of said levers thereby to exert pressure through the opposite ends of the levers on the ends of said roll, means for adjusting the tension of said springs, and removable means for maintaining the adjusted tension of the springs.

1,424,622. BOOK COVER AND BINDER. ROBERT J. CROSS, Pittsburgh, Pa. Filed Sept. 3, 1919. Serial No. 321,445. 9 Claims. (Cl. 129—13.)



1. In a loose leaf binder, a pair of cooperating binding elements, one of said elements having a pair of spaced walls formed with notches therein, the other of said binding elements having a threaded rod thereon adapted to engage in said notches, an adjustable member receivable between the walls of said first element and threadedly adjustable on said rod, whereby said adjustable member will engage one of the walls of said first binding elements to clamp said binding elements together, said adjustable member lying within the confines of said first mentioned binding element when in clamping position.

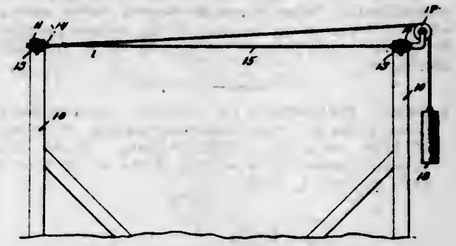
5. In a loose leaf binder, a binding member on which loose leaves are laid, an aligning stud slidably mounted in said member for engaging in the eyelets in said loose leaves and adapted to be wholly contained within said member, and means projecting the stud outwardly from the member.

1,424,623. RAIL SPIKE. HERBERT O. CRIPPEN, Jacksonville, Fla. Filed Sept. 11, 1920. Serial No. 409,519. 4 Claims. (Cl. 85—23.)

1. In combination with a rail spike provided with a rib having a convex seat thereon, an anchoring element having a concave portion arranged on the seat for movement and having one end shaped to be moved by the rail

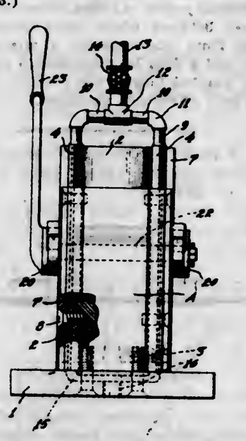
in the driving of the spike and its other end shaped to penetrate the tie.

1,424,624. MUFFLER CUT-OUT. WILLIAM H. CRYAN, Woonsocket, R. I., assignor of one-sixth to Romeo J. Danis, one-sixth to William F. Fox, one-sixth to Harold B. Findlay, and one-half to George F. Verhulst, all of Woonsocket, R. I. Filed Oct. 17, 1918. Serial No. 258,599. 6 Claims. (Cl. 251—123.)



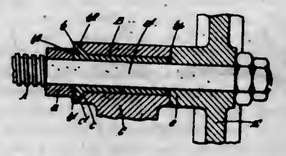
1. In combination, an exhaust pipe of an internal combustion engine, a connecting pipe for communicating the discharge end of said exhaust pipe with a muffler, and means for moving said connecting pipe away from position opposite the adjacent end of said exhaust pipe to thereby uncover the end of said exhaust pipe and cause the same to discharge the exhaust directly to the atmosphere.

1,424,625. ROTARY GLASS CUTTER. CARL F. DOERR, Yonkers, N. Y. Filed Jan. 14, 1922. Serial No. 529,183. 5 Claims. (Cl. 33—27.)



1. In a cutting implement having a plurality of cutters adapted to be selectively brought into cutting relation, embodying a cutter bar, a carrier sleeve longitudinally adjustable thereon, a stationary abutment at one extremity thereof, an axially movable abutment thereon, a cutter head mounted for axial and rotary movement on the sleeve between said abutments having circumferentially spaced cutters projecting from the periphery thereof and interengageable means on the confronting faces of the stationary abutment and the cutter head adapted to lock said elements against relative axial and rotary movement upon clamping engagement of said cutter head between the stationary and movable abutments.

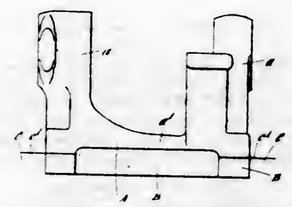
1,424,626. CLOTHESLINE. EUGENE P. DORE and JOHN A. KOHN, North Fond du Lac, Wis. Filed Oct. 25, 1921. Serial No. 510,205. 1 Claim. (Cl. 68—3.)



In a clothes line, spaced horizontally arranged supporting arms, pulleys rotatably mounted within openings provided in the arms, said openings providing a combined housing and guide, a line having one end secured to one of the supporting arms and passing around said pulleys and a weight secured to the opposite end of the line.

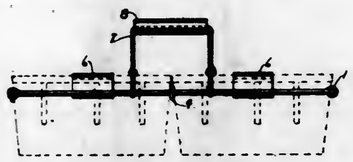
1,424,627. MOLD. HERBERT W. DREWS, Danville, Ill. Filed June 13, 1921. Serial No. 477,212. 8 Claims. (Cl. 22—123.)

1. A mold of the class described comprising a member having a part thereof of the same curvature as the curved face of the journal to be relined, strips on the said member spaced apart a distance equal to the width of the lining and means for circulating cooling fluid through the strips.



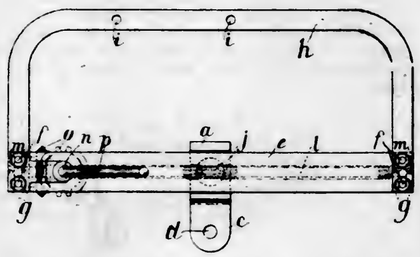
1,424,628. ABUTMENT FOR THE LEAD SCREWS OF LATHES. ARTHUR DRUMMOND, Ryde's Hill, near Guildford, England. Filed July 27, 1921. Serial No. 487,976. 1 Claim. (Cl. 64—25.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a lathe, a lead screw, an abutment on the lead screw, a lead screw bearing having a conical seating at



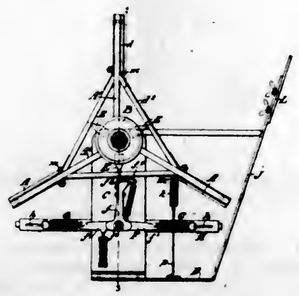
the abutment end, and a stationary sleeve in the said bearing, which sleeve is formed with an accurately faced flanged end adapted to receive the thrust of the screw abutment, the rear part of the flange having a small conical surface fitting closely in the said conical seating, whereby the necessary accuracy of the abutment support is obtained independently of the facing of the main bearing.

1,424,629. HEADSTOCK OF LATHES. ARTHUR DRUMMOND, Rydes Hill, near Guildford, England. Filed July 27, 1921. Serial No. 487,977. 1 Claim. (Cl. 82—28.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



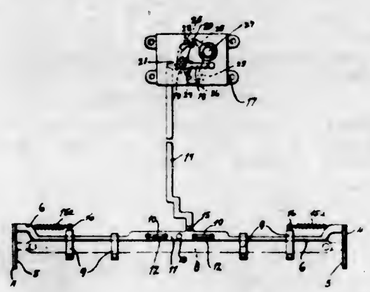
A detachable headstock for lathes, comprising a base, a pair of stepped pulley carrying limbs cast in one piece with the base, between which limbs the base is reduced in thickness from one limb to a minimum near the second limb, and a deep longitudinal rib on the underside of the base, adapted to give the requisite rigidity to the base at the part of reduced thickness.

1,424,630. CARRIER. ORRIN O. EATON, Watsonville, Calif. Filed May 31, 1921. Serial No. 473,879. 4 Claims. (Cl. 224—48.)



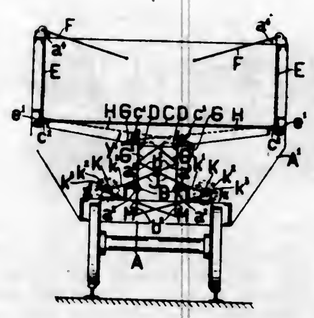
1. A basket carrier comprising a rectangular wire frame, cross wires arranged thereon whereby to form basket receiving spaces, and means carried by said cross wires to engage the baskets a distance below the upper edges thereof.

1,424,631. DRAWBAR COUPLING FOR TRACTORS. PERCY JAMES EDMONDS, Winchester, England. Filed May 28, 1921. Serial No. 473,443. 2 Claims. (Cl. 280—33.10.)



1. A draw-bar coupling, comprising a coupling link to engage the draw-bar of the implement and having a cylindrical recess therein, a guide designed to be fixed transversely of the tractor and to engage the said link so that the latter can be moved along it, a cylindrical nut fitting within the recess in the link so that the latter can swivel thereon, a worm carried by the guide and engaging the nut and means for rotating the worm, to traverse the nut and coupling link, substantially as described.

1,424,632. TARGET FOR SMALL-ARMS PRACTICE. CECIL FENTON, Brocton, England. Filed Oct. 9, 1920. Serial No. 415,867. 8 Claims. (Cl. 124—15.)

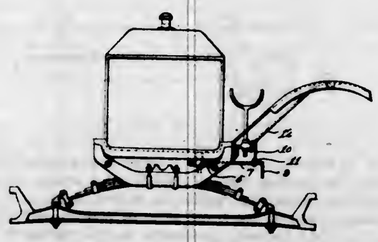


1. A target for small arms practice, adapted to disappear under the impact of a bullet, comprising a target plate mounted to turn freely upon a horizontal axis, a counterweight to such target plate, an arm which moves round when the target moves back under the impact of a bullet, and a spring acting to impel said arm in a direction to cause the target to return to its normal position.

1,424,633. SAFETY DEVICE FOR AUTOMOBILES. WOJCIECH FIAL, Harvey, W. Va. Filed Oct. 2, 1920. Serial No. 414,328. 1 Claim. (Cl. 188—31.)

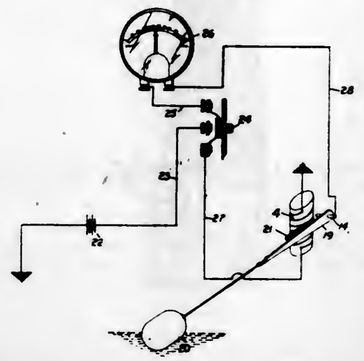
A lock for vehicles, comprising in combination with the axle and wheels thereof, of a toothed collar fixed to the inner ends of each of the wheel hubs, a pair of alined bars mounted to slide in opposite directions on the upper surface of said axle, toothed elements formed on the outer ends of said bars engageable with said collars, said bars having bevelled inner ends, a bar cam pivoted on said axle having its faces adapted for engagement with the said bevelled ends, links connecting said cam with each of said bars whereby they may be retracted, a rod operatively engaged with said cam, a hand lever for actuating said rod, means normally preventing movement of said lever, said means including a toothed ratchet wheel and a pair of pawls engaging opposite side thereof and means for retracting both of said pawls simultaneously.

1,424,634. DUMPING RECEPTACLE. FRITZ FINCKH and PAUL KRÜGER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Aug. 29, 1921. Serial No. 496,461. 10 Claims. (Cl. 105—260.)



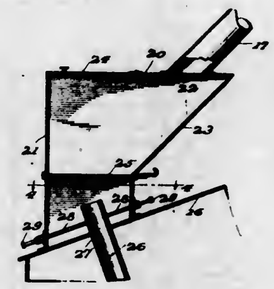
1. A dumping receptacle of the class described having an underframe, a bottom tiltable to either side, two side walls, force-closed hinged connections between the side walls and the bottom, said connections on the one hand releasing the side wall at the discharge side when the bottom is tilted, and, on the other hand, transferring the movement of the bottom on to the side wall at the opposite side, and means permanently connected to each side wall and actuated by the tilting of the bottom for rocking outwards the side wall at the discharge side when the bottom is tilted.

1,424,635. PIGMENT AND METHOD OF PRODUCING SAME. PETER FIREMAN, Trenton, N. J., assignor to Magnetic Pigment Company, a Corporation of New York. Filed May 31, 1919. Serial No. 301,028. 8 Claims. (Cl. 134—59.)



1. A method of preparing colored pigments, which comprises precipitating ferrous hydroxide from an iron-containing solution, oxidising the precipitated ferrous hydroxide in the mother liquor and controlling the oxidation by limiting the temperature of the mother liquor during the early stages of oxidation to a point below that at which black oxides form.

1,424,636. DRAINING DEVICE FOR MOTOR-VEHICLE RADIATORS, ETC. JACK FISHER, Buffalo County, Nebr. Filed Feb. 8, 1922. Serial No. 535,020. 1 Claim. (Cl. 137—139.)

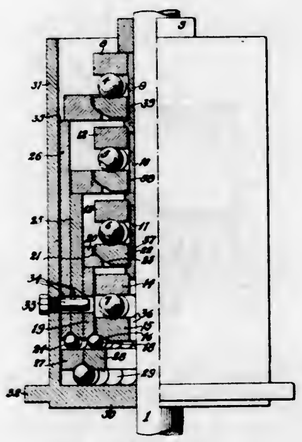


In combination with a motor car having a depending drain-cock located within the bounds of the chassis, a shaft connected to the plug of the cock by a universal joint and extending outwardly beyond the chassis and provided at its outer end with a crank for rotating it, and a hanger at the outer end of the shaft consisting of an open hook slidably mounted on the shaft between the crank and the universal joint.

1,424,637. ELECTRIC GAUGE. EDSON F. GALLAUDET, Providence, R. I. Filed Sept. 26, 1917. Serial No. 193,258. 5 Claims. (Cl. 219—48.)

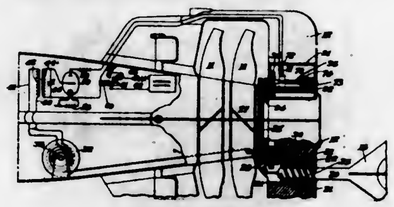
1. In an electric gauge, a float-controlled rheostat comprising as elements thereof a spool of non-conducting material, a resistance coil wound upon the spool and secured in position thereon, a float, and a brush mounted to move with the float to sweep one side of the resistance coil and of a width to bridge two adjoining turns thereof.

1,424,638. AUTOMATIC FEED DEVICE FOR PEARLING CONES. FRANK E. GIOZZA, New Orleans, La. Filed Mar. 28, 1921. Serial No. 456,089. 1 Claim. (Cl. 83—44.)



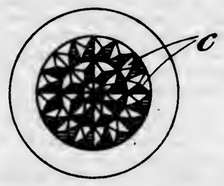
In a device for feeding dry material by gravity onto a horizontally rotating surface within a machine having a top plate spaced above said surface, said device including a feed box seated on the top plate and having an upper intake, an upright tubular discharge member for the feed box shiftable in the direction of its length through an opening in the said top plate, said discharge member opening at its upper end into the feed box and at its lower end below the top plate and having lengthwise series of apertures in its upper portion within the feed box, and supporting rods extending through opposite side walls of the feed box above the top plate and into selected threaded apertures of the discharge member whereby to support the lower end of the latter in selectively spaced relation to the said rotating surface onto which it discharges.

1,424,639. GLOVE. SIMONE AUGUSTINE GUERIN, New York, N. Y. Filed May 26, 1921. Serial No. 472,778. 4 Claims. (Cl. 2—9.)



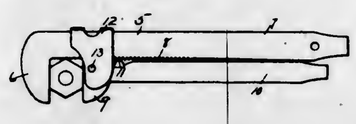
1. A glove having a cuff portion provided with a pocket on the outer front face of the cuff, such pocket being adapted to contain small articles and having its opening toward the palm of the glove to permit the articles to drop into the palm.

1,424,640. THRUST BEARING. SAMUEL N. HALL, Los Angeles, Calif. Filed Aug. 16, 1920. Serial No. 403,918. 6 Claims. (Cl. 64—49.)



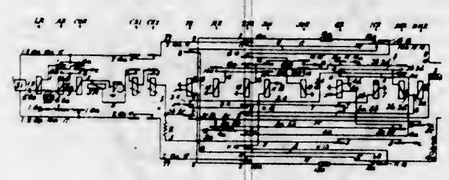
1. In thrust load receiving devices having a plurality of bearings each comprising relatively rotating members, the combination of means for equalizing the load among the bearings comprising a series of balls disposed between oppositely inclined annular faces of the parts of a pair of bearings in such manner as to be moved radially by the bearing carrying the greater portion of the load against the bearing carrying the lesser, thereby obtaining an equalization of the load between them.

1,424,641. MARINE TRAILER FOR RADIANT-ENERGY RECEIVING SYSTEMS. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Dec. 23, 1918, Serial No. 267,992. Renewed Dec. 24, 1921. Serial No. 524,730. 17 Claims. (Cl. 114—21.)



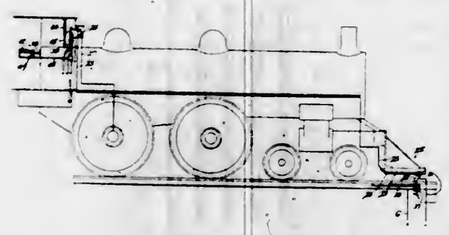
1. The combination of a marine body, a trailer connected to said body and arranged for radiant energy signalling purposes, means for automatically detaching said trailer from said body, and towing means for said trailer.

1,424,642. GAUGE GLASS. JOHN H. HANLON, Somerville, and WILLIAM J. HANLON, Fitchburg, Mass. Filed Mar. 7, 1918. Serial No. 220,948. 7 Claims. (Cl. 73—54.)



1. In a water gauge for boilers the combination of a body having an opaque rear face and a sight opening closed by a cylindrical glass the interior face of which is furnished with a plurality of projections disposed in a plurality of concentric circles, said projections being also disposed in such manner that they avoid straight line rows in any direction.

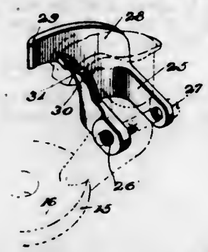
1,424,643. WRENCH. WILLIAM E. HAWKINS, Jr., Pelham, N. Y. Filed June 7, 1921. Serial No. 475,630. 5 Claims. (Cl. 81—78.)



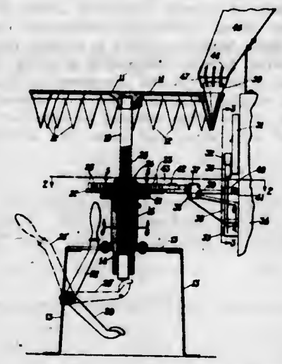
1. A wrench comprising a fixed jaw member including a jaw projecting from its front edge and a supporting extension therefrom having a holder edge, a carrier of U-shape open at its front edge to receive said extension and to slide thereon, a movable member pivotally mounted between the side parts of said carrier at the front edge of the fixed jaw member and including a movable jaw and a handle rigidly secured thereto to effect pivotal action thereof, said handle projecting from said jaw substantially parallel with the other handle in the grasping position of the jaws, and a detent upon said movable member adapted to engage said holder edge.

1,424,644. TELEPHONE SYSTEM. HENRY JAMES HERINK, London, England, assignor to The Relay Automatic Telephone Company, Limited, London, England. Filed Nov. 10, 1916. Serial No. 130,551. 12 Claims. (Cl. 179—27.)

1. In automatic and semi-automatic telephone systems, the combination of subscribers' lines, battery feeding devices, discriminating means adapted in one condition to connect battery feeding devices to the lines of calling and called subscribers, and to place the control of the release of the connection with the calling subscriber, and in another condition to cut off said device from a calling line, and to place the control with an operator, means for altering the condition of such discriminating means, a third conductor circuit and a relay in said circuit adapted on the circuit being extended to an operator to maintain the partially complete connection against release.



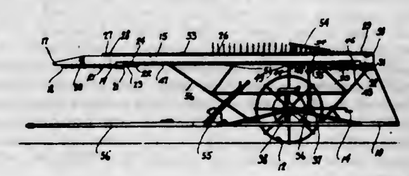
1,424,645. TRAIN STOP. WILLIAM E. HIGGINS and GEORGE S. MANN, Portsmouth, N. H. Filed Nov. 19, 1920. Serial No. 425,207. 8 Claims. (Cl. 246—187.)



1. The combination with a signal, of an automatic train stop mechanism including electrically controlled throttle operating and brake operating mechanisms, of a plurality of air controlling valves, including a brake controlling valve and a throttle controlling valve, a rock shaft, spring actuated means connecting the rock shaft with the valves for operating the latter to close the throttle and apply the brakes, a pivotally mounted electrically operated trip and a finger carried by the rock shaft and engaging the trip to hold the valves in closed position until the trip is operated.

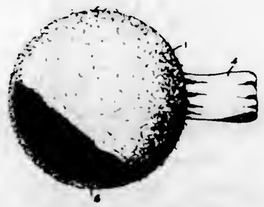
1,424,646. ATTACHMENT FOR SPINDLE BEARINGS. ROBERT H. HUGHEY, Greenwood, S. C. Filed May 4, 1921. Serial No. 466,676. 6 Claims. (Cl. 118—65.)

6. In combination, a rotatable spindle, a post bearing for rotatably supporting the lower end of said spindle, said post bearing having an extension formed therewith serving as an oil reservoir and said extension being in close proximity to the spindle, a pulley carried by the spindle and positioned adjacent the post bearing and about which a belt passes for rotating the spindle, an attachment adapted to be secured to the extension of the post bearing and to serve for preventing upward movement of the spindle, said attachment consisting in a U-shaped clip, the leg portions of which are adapted to straddle the oil reservoir extension of the post bearing, means for clamping the legs about the oil reservoir extension, and a finger extending from the bridge portion of said clip adapted to be disposed in close proximity to the upper side of the pulley.



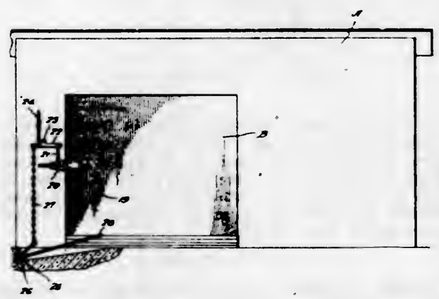
1,424,647. NESTING DEVICE. ISAAC ISRAEL, New York, N. Y. Filed May 10, 1921. Serial No. 468,404. 20 Claims. (Cl. 107—45.)

1. In a receptacle nesting device, in combination, a revoluble table carrying receiving members for receptacles, means for interrupting the revolution of the table, means for depositing a receptacle within a receiver at each period of non-revolution of the table and means whereby the table will be given a downwardly vertical movement by its revolution.



1,424,648. HEADER. MAT W. KESTERSON, Goree, and JAMES H. LATIMER, Weinert, Tex. Filed Dec. 22, 1919. Serial No. 346,731. 1 Claim. (Cl. 56—59.)

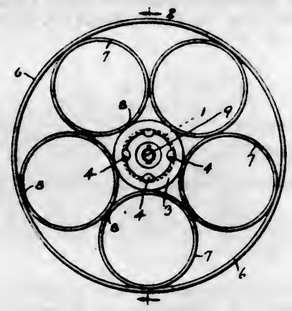
A grain heading machine comprising a wheel supported body, a conveyor frame transversely of the latter and mounted thereon, a cutter located at the forward end of the conveyor frame for severing the head of the grain from the stalk, an inclined arm carried by the wheel supported body and extending upward beneath the conveyor frame at the rear of the cutter for guiding



the stalk of the grain to one side of the conveyor frame, means for conveying the headed grain to the rear end of the machine, a cutter located at said rear end and means located in advance of the last mentioned cutter for causing all of the heads to pass the latter at a predetermined elevation.

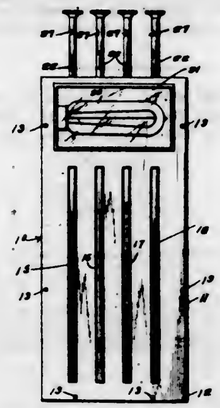
1,424,649. POWDER PUFF. WILLIAM KROHN, Buffalo, N. Y. Filed Dec. 28, 1920. Serial No. 433,701. 1 Claim. (Cl. 132—78.5.)

As a new article of manufacture, a powder puff comprising a pair of loosely fabricated pieces of material having their edges connected throughout the greater portion of their length to form a baglike receptacle, a finger receiving handle comprising a strap having its opposite end attached to the unconnected edges of said pieces, and readily separable fastener elements carried by the ends of the strap adapted to detachably connect the ends of said strap and close the mouth of said receptacle.



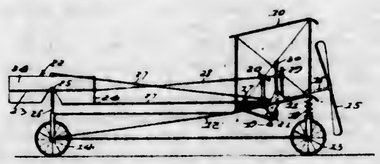
1,424,650. GARAGE-DOOR-OPERATING MECHANISM. ANTHONY KUBIK, Dickinson, N. Dak. Filed Feb. 21, 1921. Serial No. 446,675. 1 Claim. (Cl. 292—94.)

In combination with the sliding door of a building normally urged to open position, a catch member carried by an edge of the door, a lever pivoted intermediate its ends upon the door jamb above said catch member and spring pressed in one direction, a vertically movable keeper normally cooperating with said catch member whereby to hold the door closed, a link pivotally connected with the keeper and with one end of said lever, a treadle located within the approach to the door, and a flexible member connected with said treadle and with the other end of said lever.



1,424,651. WIRE REEL. EDWARD FULDA, New York, N. Y. Filed July 12, 1920. Serial No. 395,615. 11 Claims. (Cl. 242—70.)

8. A reel comprising a metal hub and hub plates, wire rings curved to the periphery of the reel and filler members consisting of wire rings disposed in the same plane and within the first-named rings and engaging along their curved surfaces with the insides of said first-named rings

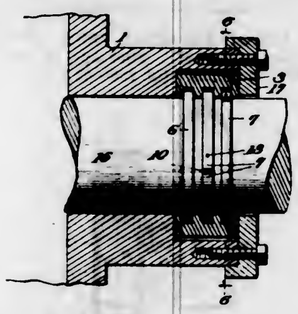


and with one another and with the curved periphery of the hub plates.

1,424,652. VEHICLE SIGNAL. JOHN H. KALBY, Schenectady, N. Y. Filed June 6, 1919. Serial No. 302,280. 3 Claims. (Cl. 116—53.)

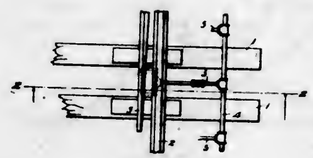
1. A signalling device having a signalling arm, a rod on which the arm is journalled, an actuating means eccentrically connected to the arm adjacent an upper corner thereof, means to urge the arm upwardly to a retracted position, and means to secure the arm in a projected position counter to said means automatically engageable with and releasable from said arm through movement afforded by the actuating means.

1,424,653. AIR CYCLE. LABAN B. KINNARD, Jacksonville, Tex. Filed Dec. 7, 1920. Serial No. 428,904. 1 Claim. (Cl. 244—14.)



An air cycle having air planes and a propeller, a steering mechanism consisting of a fan provided with radially disposed blades of which two are vertical and two are horizontal, the fan being universally mounted at a point intermediate the length of the blades, and control means for the fans consisting of a pivotally mounted transversely disposed handle bar, crossing rods having terminal pivotal connections with the extremities of the handle bar and with the forward outer edges of the horizontal blades, a hand lever, and a rod connecting the hand lever with the upper of the vertical blades, the last said rod having a pivotal connection with the vertical blade at the upper edge of the latter at a point intermediate its length.

1,424,654. HAIR FASTENER. SARAH MAY KITSON, Philadelphia, Pa. Filed Feb. 11, 1921. Serial No. 444,095. 1 Claim. (Cl. 132—46.)



A fastener for the hair comprising a band, a hair engaging hook at one end of said band having a struck up portion forming a second hook, a rigid tab on the other end of said band having an eye for engagement with said second hook for securing together the two ends of the band, said tab being provided with a traverse slot for engaging said band and permitting longitudinal motion thereof and having a longitudinal projection adapted to be engaged by the fingers to facilitate engagement of said eye and said second hook, and means in addition to the elasticity of said band for adjustment of its length.

1,424,655. METALLIC ROD PACKING. STEWART S. KURTZ, Jr., Canton, Ohio. Filed Oct. 17, 1917. Serial No. 197,153. 16 Claims. (Cl. 286—1.)

1. In a metallic contracting rod packing, the combination of an outer eccentric spring contracting ring open in its thin side, two inner eccentric contractable rings each having an opening in its thin side, both mounted within said outer ring side by side with said openings out of communication and with the thick side of the outer ring at the thin open sides of the inner rings and the opening of the outer ring at the thick sides of the inner rings, and means for locking the three rings in their said positions, thus providing two independent rod bearing rings having their ends gradually tapering into the thick portions thereof, whereby there is independent flexibility of the inner rings and their inner surfaces are caused to conform to the periphery of the rod and their outer surfaces caused to conform to the outer ring, thus making an improved closure between the inner surfaces of the inner rings and the rod, and an improved closure of the expansion zone of the inner rings.

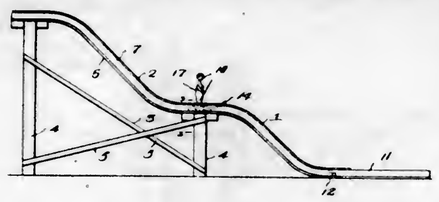
1,424,656. SWITCH-HEATER COVER. WILLIAM T. LAWLOR, Jersey City, N. J. Filed Jan. 21, 1922. Serial No. 530,927. 4 Claims. (Cl. 246—428.)

1. A pan including a removable cover having slots therein, to permit the burning of fuel in the pan, said cover being of general convex shape, and the upper edges of said slots overhanging the lower edges thereof.

1,424,657. DIVIDED RAIL. JOHN AMOS LETHERBY, Midland, Ontario, Canada. Filed Nov. 23, 1921. Serial No. 517,339. 1 Claim. (Cl. 238—142.)

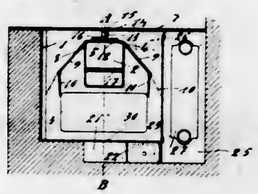
A divided rail comprising two series of half rail sections, a ratchet shaped recess formed in the ball of one rail section, a correspondingly shaped projection extending from the opposing section so as to fit into the recess, and a web portion extending downward from each ball portion and having a straight inner face which portions slightly diverge towards the bottom or foot of the rail.

1,424,658. MOLDING. EDWARD S. LIDSTONE, Providence, R. I. Filed Dec. 21, 1920. Serial No. 432,265. 2 Claims. (Cl. 247—37.)



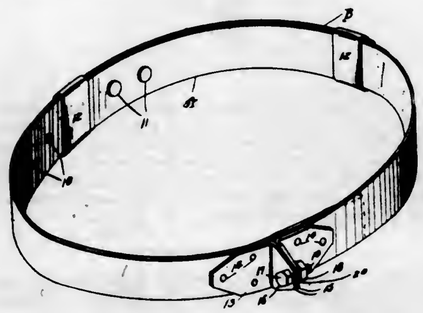
1. A molding, comprising a strip of bendable metal, the edges of said strip bent along longitudinal lines to form hollow spring beads adapted to receive wires, and presenting a pair of adjacent parallel grooved faces, said faces coacting with the intermediate portion of the strip to form a channel, and a sealing strip of metal having its edges located in the grooves.

1,424,659. FIGURE TOY. HARRY N. J. LINDER, Chicago, Ill. Filed June 3, 1921. Serial No. 474,804. 2 Claims. (Cl. 46—40.)



1. In a figure toy, the combination, of an inclined track, a figure for movement over said track including miniature skis, a body figure mounted on said skis, rollers carried

by said skis for engagement with said track, side rails on said track to prevent lateral movement of the figure



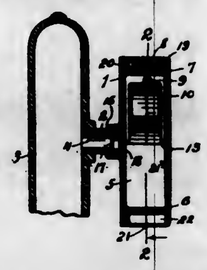
relative to the track, and guard plates mounted upon said side rails and overhanging the side portions of said track.

1,424,660. KITCHEN RANGE. AXEL EUGEN LUNDBERG, Sundsvall, Sweden. Filed Dec. 17, 1921. Serial No. 522,990. 7 Claims. (Cl. 126—1.)

1. Kitchen range, provided with a fireplace, located over the stove and which is so arranged that the flue-gases are carried off at both sides over the walls of the fireplace and downwards along said walls and the two side-walls of the stove and further under the bottom of the latter to an outlet for the flue-gases located at the latter place, characterized thereby that one or more openings (8) are arranged in the upper portion of each one of the side-walls, above which openings adjustable screens or stationary screens provided with dampers (10) extend from said walls, by means of which screens the room located on the sides of the fireplace can be screened off in such a way, that the flue-gases either are forced to flow over the walls of the fire-place up against the top of the range or through the openings (8) in the walls of the fire-place right down over and around the oven, in order to obtain a more advantageous concentration of the heat.

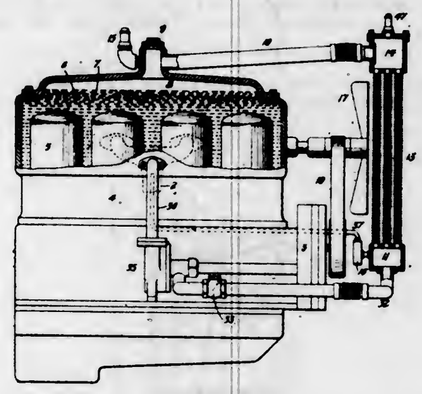
1,424,661. ADJUSTABLE HOOP. JAKE LYNN, Macon, Ga. Filed Apr. 12, 1922. Serial No. 551,884. 9 Claims. (Cl. 217—91.)

1 A hoop of the class described consisting of sections, one of said sections having an opening, the other section having means to enter said openings, means to prevent disengagement of said means and openings, the last mentioned means being held in position through the tension of the hoop



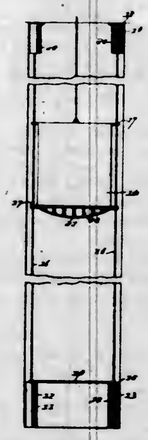
---

1,424,662. WELL DRILL. IRA J. MCCULLOUGH, Tucson, Ariz. Filed Jan. 10, 1921. Serial No. 436,118. 2 Claims. (Cl. 253—74.)



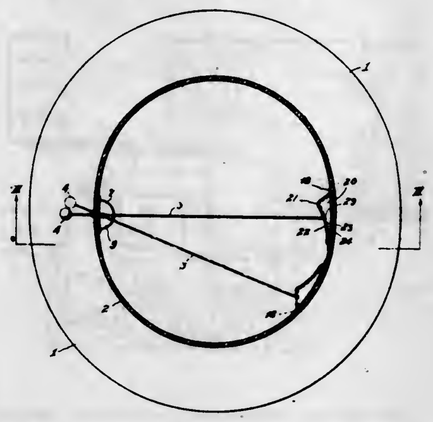
2. The combination with a rotary well casing, of a sleeve mounted in said casing, a pair of oppositely disposed bars provided with cutting jaws at their lower ends mounted in said sleeve, means for expanding said cutting jaws to extend beyond the outer periphery of said casing, and means for locking said jaws to said rotary casing.

1,424,663. STEAM-RADIATOR VENT. WILLIAM MCDONALD, Kansas City, Mo. Filed Apr. 15, 1921. Serial No. 461,714. 2 Claims. (Cl. 236—62.)



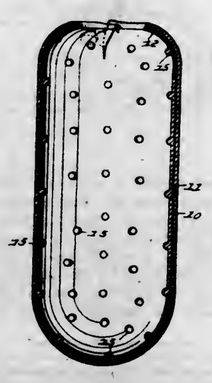
1. A steam radiator vent comprising a circular base member having a central tubular inlet stem adapted to be mounted in a radiator, the base member having an annular flange concentric with said stem provided in its upper side with an outlet and provided on its inner side with two oppositely disposed horizontal slots, an arcuate thermostatic bar having its ends mounted respectively in said slots, a float vertically slidable on and supported by said bar, a valve carried by said float adapted to close said outlet when said bar lifts said float to a pre-determined position, a cup-shaped cap mounted on the periphery of said base member and spaced apart from the said annular flange and forming therewith an annular chamber and provided in its lower side with an outlet, and a gasket disposed between and bearing against said cap and said flange, substantially as set forth.

1,424,664. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. HARRY C. MALLORY, Bellport, N. Y. Filed Apr. 20, 1917. Serial No. 163,332. 23 Claims. (Cl. 123—174.)



13. In an internal combustion engine cooling system, the combination with a liquid containing cylinder cooling jacket having a free vapor space above the liquid therein, of a condenser associated with said jacket in a closed circulating system comprising a conduit for passing vapor from said vapor space to the condenser and a separate conduit for returning liquid of condensation from the condenser to the jacket, and means for admitting air to and withdrawing it from said circulating system as required to maintain an approximately constant pressure less than atmospheric in said vapor space.

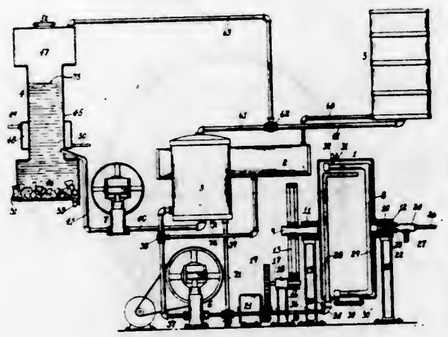
1,424,665. SAFETY DEVICE FOR ELEVATORS. JOHN MOSCHOS, Demopolis, Ala. Filed July 29, 1921. Serial No. 488,368. 3 Claims. (Cl. 187—67.)



2. A cushioning device for elevators having a spring supported platform arranged in the path of downward movement of the cage, buttons being connected with the upper ends of the platform supporting springs and supplemental reinforcing springs being arranged at the upper end of the elevator shaft and provided with terminal buttons connected with those of the platform supporting springs by cables extending parallel with the path of movement of the elevator cage.

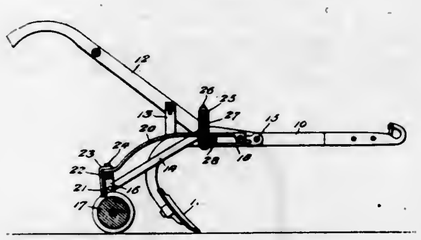
1,424,666. HATPIN. HERMAN MUEHLE, Cleveland, Ohio. Filed July 24, 1920. Serial No. 398,688. 5 Claims. (Cl. 132—69.)

1. A device of the character described comprising a hat pin provided at one end with an enlargement, a member fashioned with an opening adapted to receive said enlargement and a spring wire including parallel sections cooperating with said opening to secure said enlargement to said member, said sections crossing and closer together than said opening and adapted to be spread apart when said pin enlargement is forced into place.



1,424,667. BOTTLE PROTECTOR. CHARLES S. MURCH, Highland Park, Mich. Filed Aug. 19, 1919. Serial No. 318,434. 1 Claim. (Cl. 215—12.)

A bottle enclosing case made of elastic material and having an incorporated fabric reinforcement, the casing being formed at the upper end with a mouth and associated fastening means therefor to permit the mouth being disposed snugly around the neck of a bottle, the casing on the interior wall being provided with spaced knobs or pro-



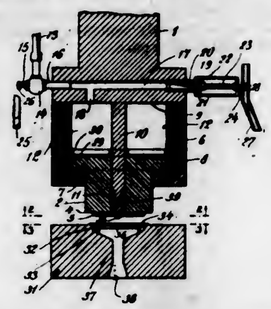
jections having rounded terminals for abutting engagement with the bottle held in the casing, whereby the bottle is held spaced from the interior wall of the casing.

1,424,668. PROCESS FOR RECLAIMING RUBBER. JOHN O. NAVONE, Oakland, Calif. Filed Jan. 24, 1920. Serial No. 353,847. 4 Claims. (Cl. 18—52.)

1. The process as disclosed which consists in dissolving the rubber from rubber products in a hydro-carbon, and then evaporating the hydro-carbon and precipitating the rubber in heated water.

1,424,669. CULTIVATOR ATTACHMENT. JESSEY P. NEELY, Adams, Tenn. Filed Oct. 31, 1921. Serial No. 511,865. 3 Claims. (Cl. 97—1.)

1. The combination with a cultivator frame, of an auxiliary frame pivoted upon the first mentioned frame, a yoke carried by the auxiliary frame, a roller journaled in said yoke, a lever pivoted at one end and its opposite end secured to said yoke, a yieldable means exerting a downward pressure on said lever for the purpose specified, and means for limiting the movement of the auxiliary frame and said lever under the influence of the yieldable means.



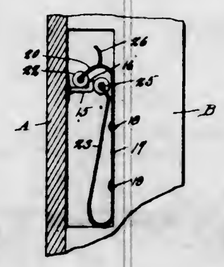
1,424,670. COTTON-PICKER'S SACK. LU E. NETTLES, Elbridge, Tenn. Filed May 3, 1921. Serial No. 466,376. 1 Claim. (Cl. 150—2.)

A cotton picker's sack comprising a body closed at its bottom edge and provided in its lower portion along its longitudinal edges and said closed bottom edge with eyelets, strips permanently attached along their upper edges to the side walls of the body and provided adjacent to their lower edges with rows of eyelets, an auxiliary bottom or shoe provided adjacent to its edges with eyelets, and adapted for use at opposite side of the body alternately, and means lacing the auxiliary bottom or

shoe to the body along the longitudinal and bottom edges thereof and to one of the said strips on the body.

1,424,671. METAL-WORKING MACHINE. JOHN EDWARD OGDEN, Cornwall, and JOSEPH KENNEDY, Richmond Hill, N. Y.; said Kennedy assignor to said Ogden. Filed May 5, 1919. Serial No. 294,785. 25 Claims. (Cl. 113—45.)

1. In a metal working machine, in combination, a movable punch head, a punch movable therewith and therein, a stationary die and an air cushion arranged to transmit the movement of the head to the punch to move the punch through a blank interposed between the punch and the die and automatically operable means for releasing air from said cushion.



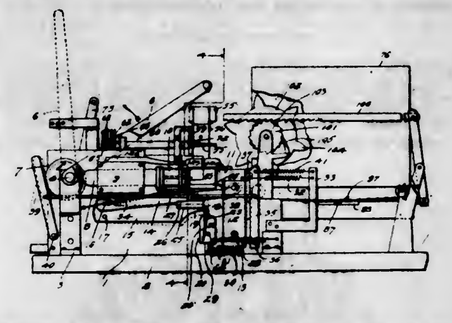
1,424,672. PROPELLER. GEORGE A. OGRISSEK, Jersey City, N. J. Filed July 23, 1919. Serial No. 312,656. 4 claims. (Cl. 170—170.)

1. A propeller comprising a hub, an inner series of radiating flat blades substantially the same width through-

out extending from said hub, a ring secured to the outer ends of said blades, and an outer series of flat blades extending radially from said ring, said last mentioned blades having straight forward edges and convexly curved rear edges, said curved edges approaching said straight edges toward the outer ends thereof.

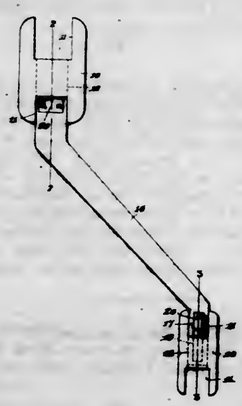
1,424,673. LATCH DEVICE. OLIVER H. ORENDORFF, Bloomington, Ill. Filed Nov. 9, 1920. Serial No. 422,904. 7 Claims. (Cl. 292—87.)

1. A device of the character described comprising a catch member having an angular end, and a holding member including an attaching portion, an outwardly extending arm portion, a tongue portion angularly disposed with respect to said attaching portion and said arm portion, said arm and tongue being resilient, and rollers journaled on the free ends of the arm and tongue in overlapping relation, one roller being initially engageable by said catch member and the other roller being adapted for subsequent engagement behind the angular end of the catch member.



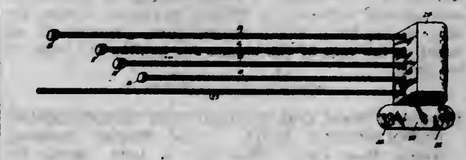
1,424,674. ARROW. ROBERT P. ORR, Albany, N. Y. Filed June 21, 1921. Serial No. 479,308. 2 Claims. (Cl. 102—26.)

2. An arrow comprising a body provided with a head, an elongated rubber bag open at one end and completely enclosing said head so that the closed end will project beyond the front of the head, a ligament for clamping the bag to said body, and a ferrule on the body and overlapping the open end of the bag.



1,424,675. AUTOMATIC-FEEDING SELF-ADJUSTING PECAN CRACKER. HENRY B. PAOLUCCI, San Antonio, Tex. Filed May 19, 1921. Serial No. 470,764. 19 Claims. (Cl. 146—3.)

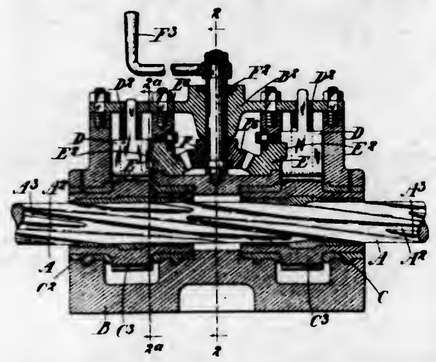
1. A nut cracking machine comprising a base, nut supporting means on said base, a nut cracking member slidably mounted on said base and adapted to move across the nut supporting means, a second nut cracking member pivoted to said base and located in the path of movement of the first named nut cracking member and adapted to recede under the influence of said first nut cracking member, a catch carried by said base, a locking plate carried by and movable with the first nut cracking member, and means actuated by the receding movement of the second nut cracking member to move the catch into engagement with the locking plate to cause the second named nut cracking member to offer resistance



against the first nut cracking member to crack a nut on the nut supporting means.

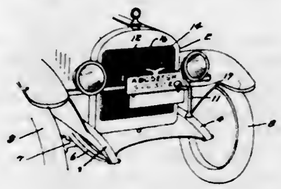
1,424,676. WRENCH. CLARENCE B. PARSONS, Sweet Springs, Mo. Filed Feb. 15, 1922. Serial No. 536,779. 2 Claims. (Cl. 81—119.)

1. A wrench including a head having a plurality of nut engaging jaws and a handle receiving socket between the contiguous ends of the jaws, said socket having spaced recesses in its interior, a handle adapted to be seated in said socket from either end, and a yieldable catch carried by said handle and engageable with said recesses to yieldably lock the handle to the head.



1,424,677. ROD GONG FOR STRIKING CLOCKS. WILSON E. PORTER, New Haven, Conn., assignor to New Haven Clock Co., New Haven, Conn., a Corporation. Filed Apr. 13, 1922. Serial No. 552,310. 2 Claims. (Cl. 116—169.)

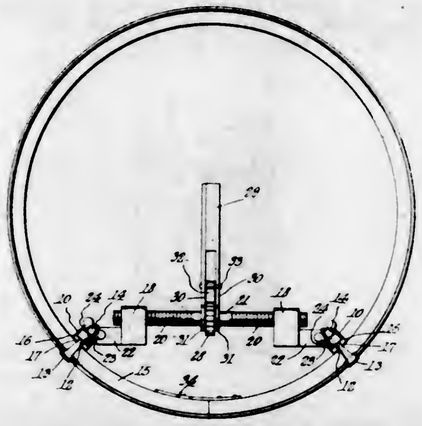
2. A rod-gong for striking-clocks, having its outer end counterbored and threaded, in combination with a plu-



rality of nut-like, interchangeable tuning-buttons differentiated in weight, each button having a threaded stem adapted to be entered into the said bore.

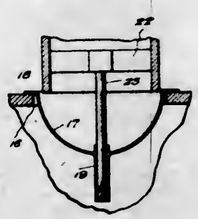
1,424,678. ROLLING MILL. JACQUES REIMANN, Birmingham, England, assignor to Tubes Limited, Birmingham, England. Filed June 2, 1920. Serial No. 386,087. 4 Claims. (Cl. 80—14.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. In a rolling mill, a plurality of feed-spirals each of a different pitch and operatively connected to the work-carrier and traveling with it to cause its partial rotation, each feed spiral adapted to cause a twist of substantially 90°, the longest pitch effecting this during the full return of the carrier, and the shorter pitches effecting it in lesser travels of the carrier, each feed spiral engaged by a co-operating nut immovable endwise, and means operable selectively for holding any one nut against rotation during the retraction of the work-carrier and work, substantially as set forth.



1,424,679. AUTOMOBILE ATTACHMENT. PERRY J. RIDENOUR, Silver City, N. Mex. Filed July 23, 1921. Serial No. 487,069. 2 Claims. (Cl. 40—125.)

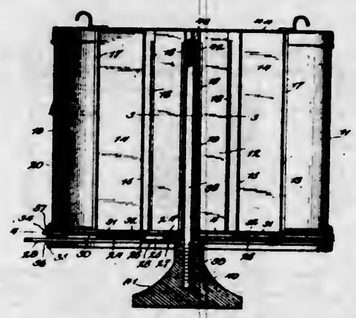
1. An anti-theft device for an automobile comprising means for displaying an identifying word, an identifying number and a law required light in inseparable relation to each other, a stud on said means, a flanged frame member for the automobile, a block adapted to receive the stud secured between the flanges, means for locking the stud to the block and a flanged cover permanently secured to the toes of the flanges for holding the block in its place.



1,424,680. TOOL FOR CONTRACTING OR EXPANDING DEMOUNTABLE RIMS. JOHN WESLEY ROBERTS, Grants Pass, Oreg. Filed Nov. 3, 1921. Serial No. 512,593. 1 Claim. (Cl. 157—1.)

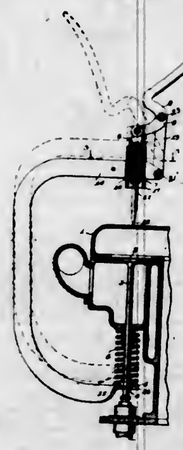
In a device of the character described, a pair of transverse bars provided upon their outer faces with serrated blocks integral therewith, said blocks being spaced from the ends of said bars, said bars having pairs of spaced knuckles upon the inner sides thereof adjacent to and opposite said blocks, said bars having elongated slots in their ends, clamping elements adjustably mounted in the slots, blocks having screw threaded openings and provided with arms adapted for insertion between said

knuckles, said arms being adapted to engage at their ends with said bars, said arms being cut away near their ends at corresponding sides whereby the bars may swing inwardly in one direction with relation to said rims, pivoted elements connecting the buckles and arms of a turn-buckle rod operating within the screw threaded openings to turn the turn-buckle rod.



1,424,681. PORTABLE PHONOGRAPH. JACOB READIGE ROSE, Philadelphia, Pa. Filed Aug. 5, 1921. Serial No. 490,182. 1 Claim. (Cl. 224—2.)

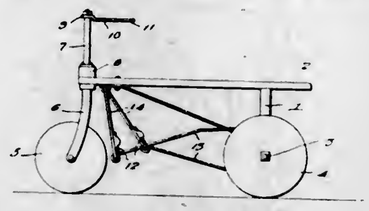
In a talking machine including a cabinet, and a sound board therein, the sound board being provided with a hole, a downwardly extending concavo-convex shell seating within said hole and provided at its center with a bearing socket, and a tone arm having one end carrying a reproducer and provided at its other end with a spindle revolubly seating within said socket.



1,424,682. COMMODITY CONTAINER. CHARLES F. SCHLOSSER, Brooklyn, N. Y. Filed May 31, 1921. Serial No. 473,886. 2 Claims. (Cl. 211—7.)

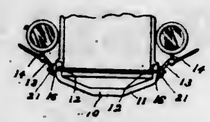
1. A commodity holder including a rotatable body-member embodying an inner series of receptacles and an outer series of receptacles, an upper series of pivoted members and a lower series of pivoted members, a discharge opening at the bottom of each of said receptacles, the upper series of pivoted members being arranged to leave the openings of the onter series of receptacles obstructed or unobstructed upon movement of the said members, the lower series of pivoted members being ar-

ranged to leave the openings of the inner series of receptacles obstructed or unobstructed upon movement of the said members.



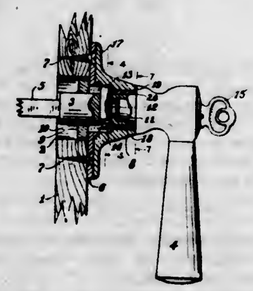
1,424,683. VALVE LIFTER. ROBIN ICH SHIBIYA, Omaha, Nebr. Filed Feb. 9, 1921. Serial No. 443,634. 1 Claim. (Cl. 29—86.3.)

A valve lifter for automobile engines, which comprises a threaded pin to be placed on top of the cylinder block, a plug having a threaded bore with which the pin adjustably engages, a slidable sleeve surrounding the plug, a pivoted lever connected to said plug, an arm connected to the sleeve and extending around the cylinder head, the lower end of the arm adapted to engage the valve spring, said arm having an aperture, a bolt passing through said aperture, a pair of sleeves surrounding the bolt on opposite sides of the arm, a pair of links disposed on the bolt adjacent the ends of the sleeves, the other ends of the links being apertured, a second bolt passing through the apertures in said links and through an aperture in the pivoted arm, and sleeves on the second bolt disposed between the links and the arm to space the links with respect to the arm, this combination of parts resulting in a balanced movement of the sleeve along the plug.



1,424,684. TRICYCLE. PETER P. SIMMON, Sioux City, Iowa. Filed June 11, 1920. Serial No. 388,827. 1 Claim. (Cl. 208—33.)

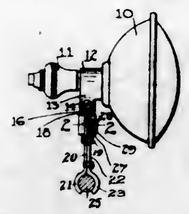
A device of the class described comprising a supporting frame, a seat board connected thereto, a double crank shaft journalled in said frame and rear wheels carried thereby, a steering post rotatably arranged in the front part of said board and in a strengthening block which is secured to the front end of the board, said post having a forked end and a front wheel carried thereby, the steering post also passing through the front part of the supporting frame, a steering bar carried by the upper end of said post and having a short part and a long part, stirrups for propelling the device and links adapted to connect said stirrups with the cranks, angle shaped arms



having one part rotatably secured to the under face of said board and the other part extending downwardly and rearwardly to the stirrup for rockingly supporting said stirrups, the stirrups being formed from the same strip of material which forms the arms, the stirrups being substantially in the form of a figure 8 with one loop regaging an eye formed on the link and its other loop receiving the foot, a lip being formed on the foot engaging part to act as a guide therefor.

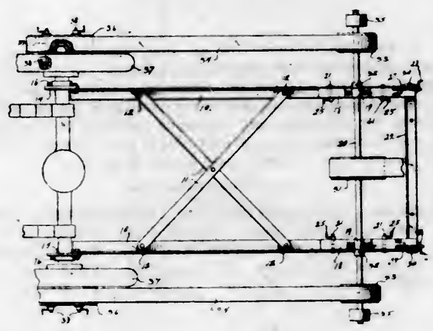
1,424,685. TRUSS FOR AUTOMOBILES. CHARLES SMALLEY, Wagner, S. Dak. Filed Oct. 18, 1921. Serial No. 508,527. 3 Claims. (Cl. 280—106.)

1. The combination with an automobile frame and a pair of fender irons extending therefrom, of a pair of bearing plates adapted to engage said frame, a pair of U-shaped members adapted to surround said fender irons, means for retaining said U-shaped members in position, a rod extending through said plates and means carried by said rod for retaining said plates in position.



1,424,686. HANDLE LOCK FOR AUTOMOBILES. WILLIAM A. SOMERS, Mount Carmel, Conn., assignor to The Mt. Carmel Manufacturing Company, Mount Carmel, Conn., a Corporation of Connecticut. Filed May 23, 1921. Serial No. 471,572. 11 Claims. (Cl. 70—91.)

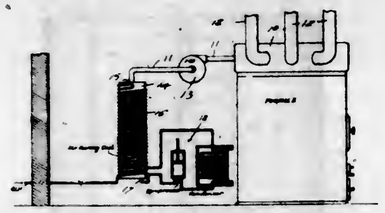
1. A locking device comprising a latch-spindle, an escutcheon plate, a guard for covering said escutcheon



plate, said guard being movable relative to said escutcheon plate independently of said spindle, and means for locking said spindle to said escutcheon plate and for locking said guard in position thereover.

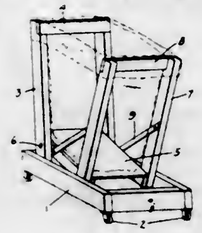
1,424,687. SPOTLIGHT SUPPORT. JASON C. STEARNS, Worcester, Mass. Filed May 31, 1921. Serial No. 473,763. 5 Claims. (Cl. 240—7.)

1. In a spot light bracket, the combination with two sheet metal plates each having a pair of curved claws for clamping the bracket on a rod, of means arranged with their centers in a plane parallel to the axis of the rod for holding the plates and the claws together, one of said plates terminating short of the other at the other end, and a third plate removably attached to the longer plate beyond the shorter one, the third plate and the longer one having semi-cylindrical passages constituting means for pivotally supporting a spotlight on an axis transverse to the axis of said rod.



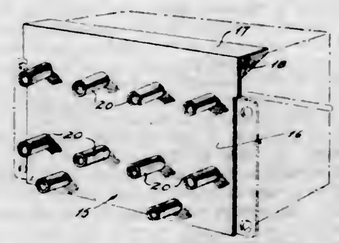
1,424,688. POWER TAKE-OFF FOR AUTOMOBILES. CHARLES H. STEHL, Tinley Park, Ill. Filed Jan. 28, 1922. Serial No. 532,474. 5 Claims. (Cl. 74—106.)

1. In a power take-off device for self propelled vehicles, spaced side frames, a drive receiving and transmitting shaft carried by the frames, and means for securing the frames to the vehicle embodying a U-shaped member attached to the end of each of said side frames and shiftable to direct the arms thereof upwardly, downwardly or in alignment with the side frames.



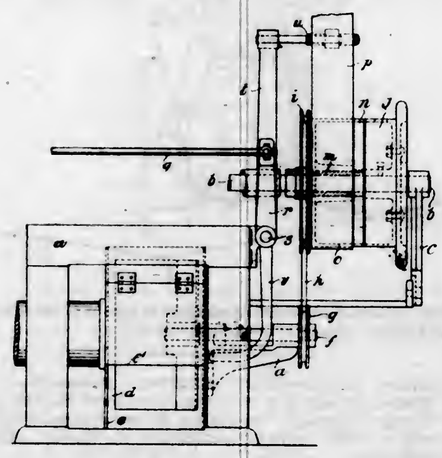
1,424,689. AIR COOLER. CHARLES W. STONE, Tuscaloosa, Ala. Filed Nov. 7, 1919. Serial No. 336,417. 4 Claims. (Cl. 257—229.)

1. An air cooler comprising a casing, an air pipe having its exhaust end located within the casing and its intake end located exteriorly of said casing, said pipe being bent to form a pair of coiled portions, and one of said portions surrounding the exterior of the casing and the other coiled



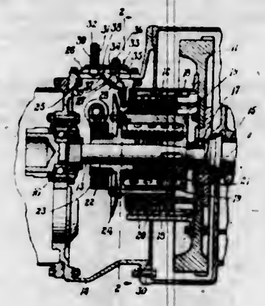
portion located within the casing, a cooling medium for the casing, and means for dispensing cooled air from said casing.

1,424,690. LAUNDRY-BAG HOLDER. PAUL R. STEER, Indianapolis, Ind. Filed Dec. 13, 1921. Serial No. 522,067. 4 Claims. (Cl. 83—26.)



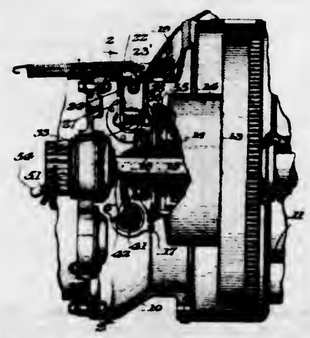
1. In a bag holder, a pair of fixed standards, a platform pivotally connected with said standards and adapted to swing downwardly by gravity, and standards connected with said platform and co-acting with the fixed standards for engaging and maintaining the mouth of a bag in open position.

1,424,691. GASKET. CHARLES TASSO and HUBERT B. DALY, New York, N. Y. Filed June 6, 1919. Serial No. 302,364. 4 Claims. (Cl. 180—90.)



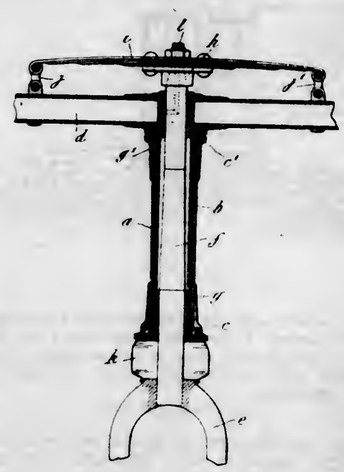
1. The combination with a motor vehicle having an apertured dash board, a coil box and insulators extending from the coil box through the apertures in the dash board, of a gasket comprising a relatively soft yielding body of water proof material adapted to be interposed between the dash board and coil box, said body being provided with apertures to receive the insulators and nipples on the front face of the gasket adapted to fit snugly about the insulators, and a flange at the upper edge of the gasket to partially overlie the top of the coil box.

1,424,692. COMBING MACHINE. ROBERT TAYLOR, Oldham, England. Filed Nov. 17, 1920. Serial No. 424,634. 3 Claims. (Cl. 19—109.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



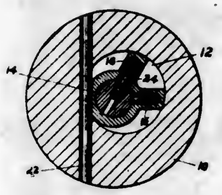
1. In a combing machine, the combination of a shaft, fast and loose pulley mounted thereon, a sleeve loosely mounted on the shaft, narrow and grooved pulleys keyed to said sleeve, a belt for driving said pulleys, a fan shaft adapted to be driven by the grooved pulley, and means for shifting said belt whereby the fan may be operated while the machine is going or stopped or the fan may be stopped without stopping the belt.

1,424,693. MOTOR VEHICLE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 12, 1916. Serial No. 125,222. 13 Claims. (Cl. 192—13.)



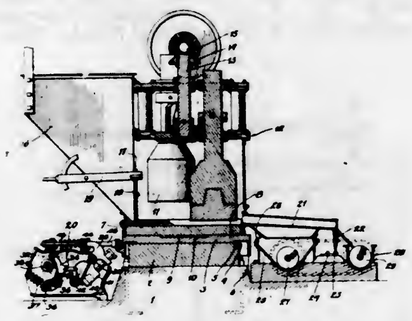
1. The combination with a clutch and a casing covering said clutch, of a disk mounted on the driven member of the clutch and movable as the clutch is disengaged, and a brake pivotally mounted on the inside of the casing and cooperating with said disk.

1,424,694. MOTOR VEHICLE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 7, 1917. Serial No. 190,242. 6 Claims. (Cl. 192—13.)



1. In combination with a clutch casing having a removable cover, a clutch within the casing, means for retarding the rotation of the driven clutch member when disengaged including a support removably fastened to said cover, and a brake member mounted on said support for yielding sliding movement.

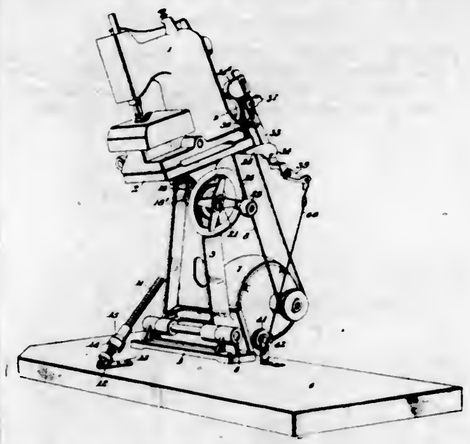
1,424,695. ELASTIC FORK FOR MOTOR CYCLES AND OTHER VEHICLES HAVING A SINGLE STEERING WHEEL. MARCEL ACHILLE VIOLET, Levallois-Perret, France. Filed Mar. 29, 1921. Serial No. 456,660. 4 Claims. (Cl. 208—103.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



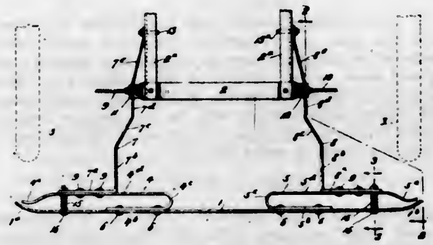
1. In an arrangement of elastic fork for motorcycles and other vehicles having a single steering wheel, a forward tube, a steering tube therein, a handle bar rigidly secured to said steering tube, a stem within the steering tube secured to the fork head and capable of moving lengthwise, sleeves to guide the stem; a leaf spring secured at its middle to said stem of the fork head and parallel to the handle bar, and links connecting the ends of the spring to the arms of the latter.

1,424,696. LOCK. HENRY G. VOIGHT, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn., a Corporation of Connecticut. Original application filed Apr. 9, 1919, Serial No. 288,668. Divided and this application filed June 16, 1919. Serial No. 304,449. 16 Claims. (Cl. 70—47.)

1. A cylinder lock, comprising a lock case, a key barrel rotatable therein, pin tumblers slidably mounted in said case and movable into locking engagement with said key barrel, and a second set of pin tumblers slidably mounted in said case and movable into frictional engagement with the pin tumbler sockets of the key barrel, said last mentioned pin tumblers provided with means for preventing the same from moving into locking engagement with said key barrel.



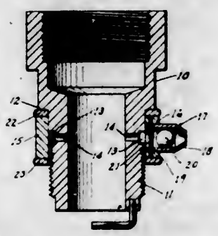
1,424,697. APPARATUS FOR REDUCING MATERIALS. RALPH H. WARREN, Montclair, N. J. Filed Aug. 1, 1921. Serial No. 488,855. 3 Claims. (Cl. 83—57.)



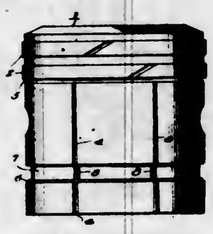
1. In a stamp mill, the combination of a vertically reciprocating stamp, a horizontal table with a die thereon, means for moving said table in one rectilinear direction and spring means for rapidly moving the table in the opposite direction.

1,424,698. ADJUSTABLE CARRIER FOR SEWING MACHINES. IRVING F. WEBB, Elizabeth, N. J., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Mar. 10, 1919. Serial No. 281,812. 12 Claims. (Cl. 112—11.)

8. In a device of the character described, the combination with a sewing machine, of a hinge-bracket to which the latter is secured, means including a threaded rod provided with a nut, together with means carried by said bracket for actuating said nut through frictional engagement with said latter means, said rod, nut and said means carried by said bracket cooperating to effect adjustments of and secure said machine against accidental adjustment when in its position of seam-formation but separable to permit of its adjustment to an idle position out of its field of seam-formation independent of said rod, nut and said means carried by said bracket-arm.

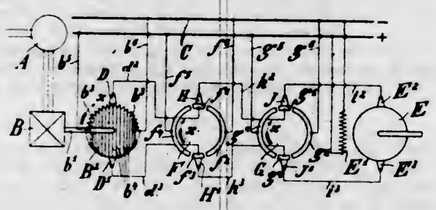


1,424,699. AUTOMOBILE BUMPER. FREDERICK A. WEANIG, Brooklyn, N. Y., assignor to New York Wire & Spring Company, a Corporation of New Jersey. Filed Oct. 5, 1921. Serial No. 505,601. 14 Claims. (Cl. 293—55.)



4. An automobile bumper comprising a plurality of members arranged to provide two free ends, one behind the other, at each of the opposite ends of the bumper and resilient connecting means arranged intermediate the ends of the bumper and connecting the aforesaid two free ends.

1,424,700. SPARK PLUG. LESLIE SPENCER WILLIAMS and BEVIE KERR, Wichita Falls, Tex. Filed Oct. 22, 1921. Serial No. 509,659. 1 Claim. (Cl. 123—169.)

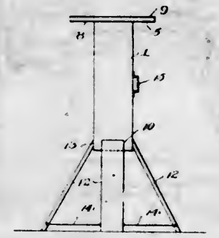


An attachment for spark plugs comprising a ring having a laterally extending opening, a nipple disposed within said opening, the end of said nipple being substantially conical, the opposite end of the nipple being disposed flush with the inner face of the ring, a check valve ball disposed within said nipple, and a pin extending transversely of the ring and through the nipple for securing the nipple to the ring and preventing removal of the check valve ball from the nipple.

1,424,701. PISTON. NOEL E. WILLIAMS, Canyon, Tex. Filed July 22, 1921. Serial No. 486,830. 1 Claim. (Cl. 74—108.)

A piston having the usual grooves for the expansible piston rings, the lower corners provided by the lowermost and next to the lowermost grooves being formed with continuous depressions, the outer face of the piston having longitudinal grooves entering from the lower end of the piston and terminating with the upper annular depression, said last mentioned grooves being gradually widened and increasing in depth from the upper to the lower ends thereof, and the groove receiving the lowermost piston ring having its opposed and inner walls provided with continuous grooves which communicate with the longitudinal grooves.

1,424,702. ELECTRICAL CONTROL APPARATUS. MAX WISSINGER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 8, 1920. Serial No. 408,958. 5 Claims. (Cl. 172—239.)

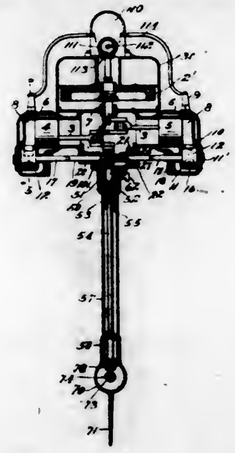


4. In combination with a direct current motor, a source of supply, a resistance element, a control switching means for variably connecting a motor to the line through said resistance element, said switching means comprising a plurality of contacts movable with respect to said resistance element, and a second switching means operatively connected with said first switching means for automatically connecting said motor to the line, direct, on a given relative movement of said contacts, with respect to said resistance element.

1,424,703. SCREW-DRIVER ATTACHMENT. JOSEPH V. WORK, Palisade, Nebr. Filed Nov. 12, 1921. Serial No. 514,782. 4 Claims. (Cl. 145—52.)

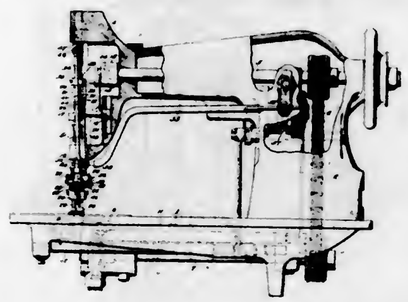
1. The combination with a screw driver having an adjustable collar thereon, a screw holder attachment therefor, comprising pivotally supported spring influenced screw engaging jaws, means on the shank of the screw driver contacting the collar and engaging between the jaws to swing the jaws away from each other when pressure, to a determined extent, is exerted thereagainst, and means removably associating the last mentioned means with the collar.

1,424,704. FOLDING CHAIR. NICKALOUS C. ZIRWES, Sheboygan, Wis. Filed Feb. 18, 1921. Serial No. 445,987. 2 Claims. (Cl. 155—135.)



1. A folding chair comprising a casing having slots formed in the bottom thereof, the upper wall thereof standing at an angle to the casing, and a slidably mounted block within the casing and legs swingingly connected to the block and adapted to pass through said slot and bind against said inclined wall each leg being further provided with inclined shoulders binding against the exterior surface of the case when in use.

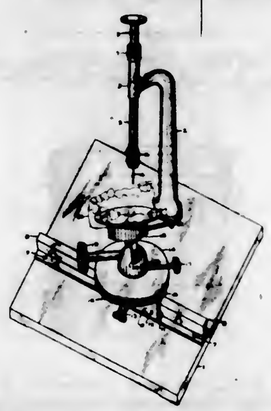
1,424,705. LIQUID-FUEL MOTOR. ROLLIN ABELL, Milton, Mass. Filed Apr. 25, 1916. Serial No. 93,548. 4 Claims. (Cl. 123—56.)



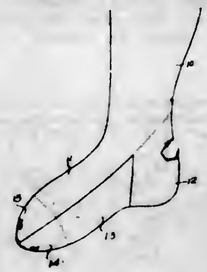
4. A liquid fuel motor having a vertically disposed crank-shaft, a support therefor, a fuel tank superimposed on the motor, a ratcheting device arranged on the shaft

below the said tank, and a manually operable starting lever projecting from below the tank between said tank

and the crank-shaft support and disconnectibly engageable with the said device, whereby the motor may be started.



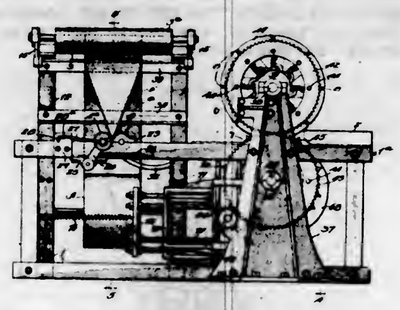
1,424,706. SEWING MACHINE. CHARLES M. ABERCROMBIE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Dec. 26, 1919. Serial No. 347,311. 8 Claims. (Cl. 112—81.)



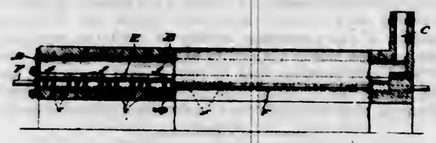
1. In a sewing machine, in combination, an actuating shaft, a reciprocating needle-bar, a needle carried thereby, operative connections intermediate said actuating shaft and said needle-bar including a flat spring support for the latter for imparting vertical reciprocatory movements to the needle, a vibratory guide in which said needle-bar is journaled for endwise reciprocation, and means for positively vibrating said needle-bar laterally upon said flat spring support.

1,424,707. DENTAL INSTRUMENT. HENRY A. ADLER, New York, N. Y., assignor to Adler Engineering Company, Corona, Long Island, N. Y., a Copartnership. Filed Nov. 15, 1921. Serial No. 515,266. 6 Claims. (Cl. 32—10.)

1. In a dental instrument of the class described, the combination of a base member, a standard mounted fixedly thereon, a mandrel carrying arrangement simultaneously rotatable and vertically adjustable supported by said standard, and an adjustable carriage arrangement for the dental model movably mounted on said base member, permitting the dental model to be shifted and revolved in the horizontal plane, also angled through a range of 180 degrees and revolved in any angular position, to bring the desired location on the dental model in the line of operation of the mandrel or other dental appliance, substantially as described.



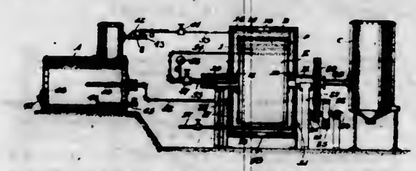
1,424,708. REFOOTING STOCKINGS. HENRY A. BRENDSEN, Bangor, Pa. Filed Dec. 23, 1920. Serial No. 432,734. 1 Claim. (Cl. 2—23.)



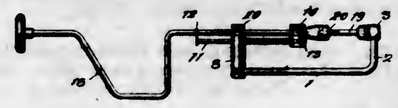
As an article of manufacture, a refooted stocking comprising a woven single ply fabric leg merging into a single ply foot top section, a re-inforced woven fabric toe top section seamed to the front end of said foot top section, a re-inforced woven heel section seamed to the edges of said leg, and a single ply woven sole formed with a woven re-inforced toe section, said sole with its re-inforced toe section being seamed to the edges of said toe top section and to the edges of said foot top section, one end of said sole being also seamed to said re-inforced heel section.

1,424,709. PAPER-TOWEL AND LIKE MACHINE. EDMUND BRUDER, Chicago, Ill., assignor of one-half to Harold I. Koppelman, Wilmette, Ill. Filed Jan. 19, 1918. Serial No. 212,592. 32 Claims. (Cl. 270—39.)

1. A machine of the character described having, in combination, means for imparting a longitudinal fold to a strip, means for transversely folding the strip into zig zag form, means for severing the strip into separate sheets, said folding means discharging the separate sheets in zig zag form and in upright position, and means operating upon the separate sheets after they are discharged from the folding means to interfold the adjacent ends of contiguous sheets.

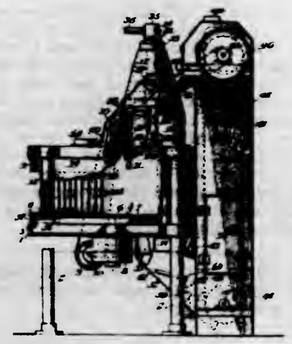


1,424,710. ALLOY FOR FORGING STEEL AND METHOD OF PRODUCING SAME FROM NICKEL ORE. LINUS PORTER BURROWS, Erie, Pa.; Lenah B. Archer executrix of said L. P. Burrows, deceased. Filed Jan. 20, 1920. Serial No. 352,775. Renewed Sept. 22, 1921. Serial No. 502,548. 3 Claims. (Cl. 75—17.)



1. The herein described process consisting in subjecting crushed nickel ore to the action of a gaseous product in a closed chamber until the oxygen is removed from the ore, subjecting said treated and refined nickel ore to a smelting process; breaking up the metallic product and disintegrating the same by exposing it to the atmosphere, taking the disintegrated material and subjecting it to an evaporating action at a low red heat without material oxidization resulting in the reduction of the weight of the air disintegrated product approximately twenty per cent.

1,424,711. PROCESS OF TREATING NICKEL ORES AND PRODUCT RESULTING THEREFROM. LINUS PORTER BURROWS, Erie, Pa.; Lenah B. Archer executrix of said L. P. Burrows, deceased. Continuation of application Serial No. 335,107, filed Nov. 1, 1919, which in turn is continuation of Serial No. 44,310, filed Aug. 7, 1915. This application filed May 4, 1920. Serial No. 378,895. Renewed Sept. 22, 1921. Serial No. 502,549. 4 Claims. (Cl. 75—17.)



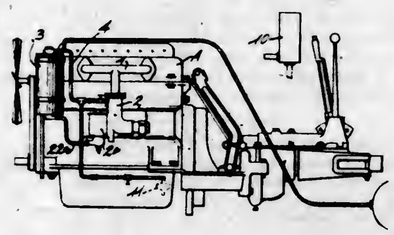
1. The process herein described consisting in first suddenly expanding steam, then separating the steam without condensation from any water held in suspension, then heating the resultant gaseous product and then subjecting crushed nickel ore in a closed chamber to the action of the gaseous product for approximately five hours at red heat.

1,424,712. ATTACHMENT FOR WRENCHES. AUGUST EDWIN CARLBERG, Worcester, Mass., assignor to Walden-Worcester, Inc., Worcester Mass., a Corporation of Massachusetts. Filed June 16, 1920. Serial No. 389,271. 10 Claims. (Cl. 81—55.)

1. An attachment for socket wrenches including a socket member and means adapted to receive the shank of a wrench and to hold the wrench with the socket thereof in register with the socket member, said means comprising a detachable member for permitting the removal or insertion of said shank within said means.

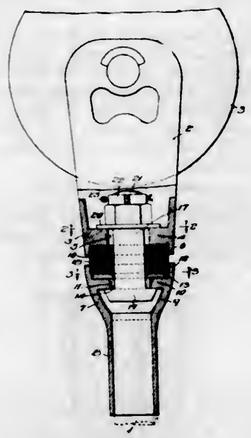
1,424,713. SAND-BLAST MACHINE. RICHARD G. COBURN, Chicago, Ill., assignor, by mesne assignments, to American Foundry Equipment Company, New York, N. Y., a Corporation of Ohio. Filed June 21, 1916. Serial No. 105,007. 19 Claims. (Cl. 51—15.)

2. A sand blast machine having a rotary sand receiving and distributing member provided with a substantially horizontal sand passage in which the sand may be fed by centrifugal action, a sand blast nozzle carried by said rotary member near the outer end of said passage and arranged to receive sand therefrom, and an air jet nozzle opening into said sand passage and directing sand through said sand blast nozzle.



1,424,714. FUSE PLUG. THOMAS F. COTÉ, Prince Albert, Saskatchewan, Canada. Filed Sept. 21, 1920. Serial No. 411,860. 3 Claims. (Cl. 200—128.)

1. A fuse plug comprising a body having one end open and its other end closed, a shell closing the open end of

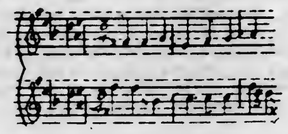


said body, a contact secured in the closed end of said body and having a reduced inner end, an insulating sleeve in said body and spaced from the walls thereof and having each end open, a fuse element having cut away portions at each end and having its ends bent at right angles in opposite directions to engage the ends of the sleeve and said fuse elements passing diagonally through the sleeve, closure caps closing the ends of the sleeve and securing the ends of the fuse element to the sleeve and one of said closure caps receiving the reduced end of the contact and the other closure cap engaging the shell, said sleeve having vent openings at a point intermediate its ends.

1,424,715. FUEL-FEEDING AND SUCTION-INDUCING DEVICE. JOSEPH C. COULOMBE, Lowell, Mass. Filed Mar. 31, 1917. Serial No. 159,045. 14 Claims. (Cl. 158—36.)

1. The combination with an internal combustion engine having a carbureter and a lubricating system; of means for feeding fuel to said engine comprising a suction chamber and a distributing chamber, a valve and valve mechanism for controlling the flow of fuel from the suction chamber to the distributing chamber, a fuel tank, a connection from the fuel tank to the suction chamber, a connection from the distributing chamber to the carbureter, a lubricating system, a pump driving oil through said system, an injector arranged in the oil circulating system, and a connection from said injector to the suction chamber, whereby the circulation of oil creates a sub-atmospheric condition in said chamber.

1,424,716. TROLLEY HARP. CHARLES J. DORRANCE, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 431,936. 11 Claims. (Cl. 191—60.5.)

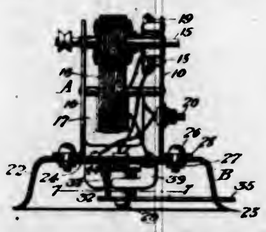


9. In a device of the kind described and in combination, a trolley harp having an integral web at its lower end, a trolley pole attaching part, and means directly securing said pole part and harp together against independent rotation, but permitting said parts to shift laterally in any direction in a plane.

1,424,717. FLEXIBLE TROLLEY HARP. CHARLES J. DORRANCE, Chicago, Ill. Filed Oct. 17, 1921. Serial No. 508,287. 13 Claims. (Cl. 191—60.2.)

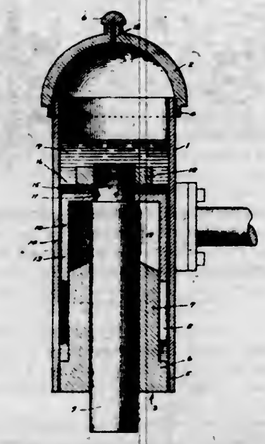
1. In a device of the kind described and in combination, a member arranged to be secured to a trolley pole and provided with a socket at one end, a web transversely of said socket inwardly of the end thereof, a second member arranged for attachment to a trolley wire contact device and provided with a web transversely across the lower end thereof, a pin projecting axially of said last-mentioned web, cushion means adapted to be seated between the webs of both said members and to receive said projecting pin, and means for securing said members together to permit a limited play therebetween in mutually transverse planes.

1,424,718. MUSICAL NOTATION. ORLANDO M. FEE, La Manda Park, Calif. Filed Oct. 28, 1921. Serial No. 511,095. 3 Claims. (Cl. 283—47.)



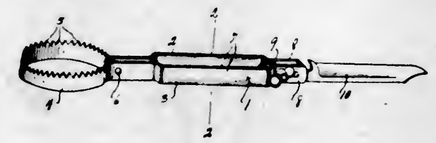
1. A method of forming a musical notation enabling easy transposition of a musical composition comprising adding to an ordinary five line staff a line above or below said staff or both, connecting the lines of this augmented staff in groups of five, marking each group with an appropriate signature so that the composition as written will read correctly in the signature marked.

1,424,719. BRICK-CLEANING MACHINE. SAMUEL M. FUNK, Long Beach, Calif. Filed July 29, 1920. Serial No. 399,967. 2 Claims. (Cl. 125—26.)



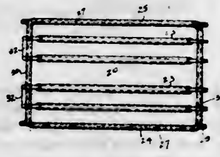
1. A cleaning machine including conveyors alongside of one another, cleaning surfaces at opposite sides of one of said conveyors, an abutment element beyond said cleaning surfaces for guiding the articles to be cleaned onto the second of said conveyors and turning said articles over upon a cleaned side, and a second set of cleaning surfaces at opposite sides of said second conveyor beyond said abutment element.

1,424,720. ELECTRIC SWITCH. ALFRED C. GILBERT, New Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Original application filed Apr. 18, 1916, Serial No. 91,976. Divided and this application filed Nov. 26, 1917. Serial No. 203,976. 14 Claims. (Cl. 200—6.)



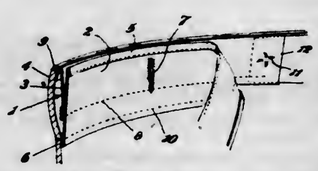
1. In an electric switch, a hollow casing member open at the bottom and at the top and adapted to rest on a suitable support, an insulating member secured in the open top portion of said casing member, and a current controlling device mounted on said insulating member and depending therefrom within said hollow base.

1,424,721. SHOCK ABSORBER. ROLAND M. GRUSS, San Francisco, Calif., assignor, by direct and mesne assignments, to Diamond Air Springs Company, San Francisco, Calif., a Corporation of California. Filed Mar. 29, 1921. Serial No. 456,781. 5 Claims. (Cl. 267—64.)



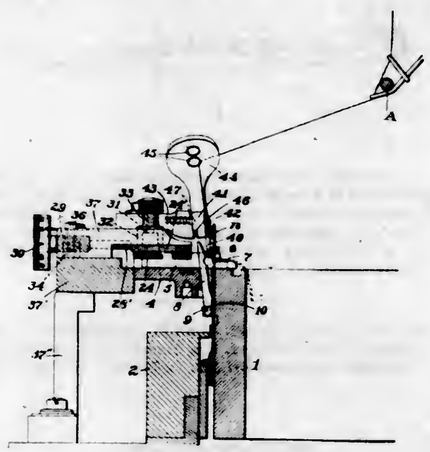
2. A shock absorber comprising a closed cylinder, a piston mounted for reciprocation within the cylinder and dividing the same into upper and lower air cushioning chambers, a liquid supported above the piston in the upper chamber of the cylinder and a head of compressed air above said liquid, means carried by the piston to confine the liquid above the piston, and means in the lower chamber of the cylinder adapted to telescope with the depending walls of the piston to compress the air in said lower chamber and produce a cushioning effect upon a down-ward stroke of the piston.

1,424,722. FISH SCALER. RUDOLPH C. HARTLEB, Cambridge, Md., assignor of one-half to Emanuel Reiner, Baltimore, Md. Original application filed July 18, 1921, Serial No. 485,489. Divided and this application filed Mar. 15, 1922. Serial No. 544,003. 3 Claims. (Cl. 17—10.)



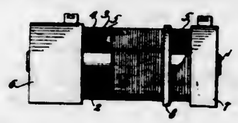
1. A device of the class described comprising a member constructed of a single piece of metal bent back upon itself to have substantially parallel sides, means for connecting the outer extremities of said sides, the intermediate portion of the member being enlarged to provide a head, a marginal portion of said head having serrations.

1,424,723. KNOCKDOWN METAL SHIPPING CASE. WILLIAM ROSS HARTLEY, New Haven, Conn. Filed July 19, 1920. Serial No. 397,311. 2 Claims. (Cl. 220—4.)



2. A metal shipping case comprising sides, and ends transversely corrugated and adapted to be interlocked at their edges, a top and a bottom each formed with open-ended longitudinal ribs shorter than the length of the said top and bottom and located between the end edges thereof, said top and bottom also formed with perforated flanges, the flanges of the ends also perforated in line with the perforations in the flanges of the top and bottom, and combined with fastening means adapted to pass through the perforations in the top and bottom and ends and through the said ribs.

1,424,724. WAISTBAND. MILTON L. HELLER, Brooklyn, N. Y. Filed Dec. 16, 1919. Serial No. 345,214. 4 Claims. (Cl. 2—142.)

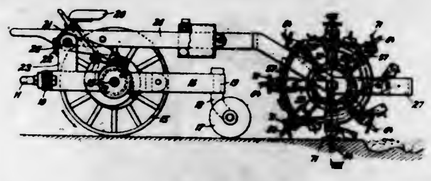


1. A waist band comprising a button hole strip having transverse button holes therein, a lining strip, and a straight line of stitching extending longitudinally and the entire length of said strips and passing through the lower ends of the button holes securing the strips together, reinforcing the button holes and constituting a guide for further operations on the waist band.

1,424,725. CAM MECHANISM FOR KNITTING MACHINES. KENNETH HOWIE, Norristown, and WILLIAM O. TAYLOR, Limerick, Pa., assignors to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1920. Serial No. 360,440. 12 Claims. (Cl. 66—21.)

11. A multiple feed knitting machine comprising knitting instruments, cams at the several feeds for said knitting instruments, micrometer adjusting means at each feed for the cams, each of said micrometer means being adjustable as to its indications to present like readings after the cams are initially set.

1,424,726. ELECTRICAL COIL. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,521. 4 Claims. (Cl. 179—172.)



1. An electrical coil comprising a magnetic core, a plurality of windings wound in concentric relation thereon, said core projecting equidistant from each end of said windings, a single winding wound on one projection of said core, said single winding loosely coupled to said concentric windings.

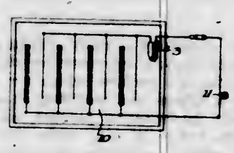
1,424,727. HULLER RIB. WALTER E. B. JORDAN, Wilson, N. C. Filed July 18, 1921. Serial No. 485,552. 2 Claims. (Cl. 19—62.)

2. As an article of manufacture, a huller rib for a cotton gin comprising a central outwardly bowed portion, and an upper portion extending forward from said central portion and having its under surface continuously curved and merging into the curved surface of the central portion, said upper portion having a narrow neck adjacent its end and terminating in a relatively wide securing flange, the forward under surface of said flange being curved upwardly to a point above the upper face of the neck portion and the ends of said flange adjacent the neck portion being curved and merging into the sides of the neck portion.

1,424,728. PROCESS OF AND APPARATUS FOR SOIL TREATMENT. HERBERT KNIGHT, New York, N. Y., and CHARLES A. BREWER, Noroton Heights, Conn.; said Brewer assignor to said Knight. Filed Jan. 5, 1921. Serial No. 435,051. 17 Claims. (Cl. 97—38.)

1. The process of soil treatment consisting in progressively and periodically introducing an explosive fluid in an expanding state beneath the surface and with the requisite suddenness to shatter the soil.

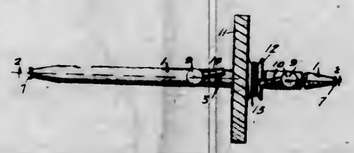
1,424,729. PIGMENT AND PIGMENT COMPOSITION, ETC. KARL BARRÉ LAMB, New York, N. Y., assignor to The American Cotton Oil Company, a Corporation of New Jersey. Filed Apr. 27, 1921. Serial No. 464,986. 5 Claims. (Cl. 134—60.)



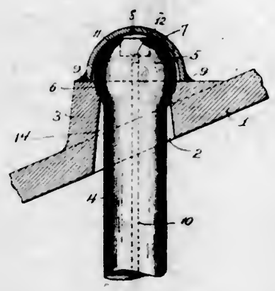
4. The method of producing a composite black pigment which comprises heating spent fuller's earth with stirring until the oil of the earth catches fire and burns itself out with the production of an intense black color.

1,424,730. HYDROMETER. CHARLES E. LINEBARGER, Chicago, Ill. Filed Feb. 26, 1919. Serial No. 279,289. 7 Claims. (Cl. 265—45.)

1. The combination of a hydrometric tube, means attached to one end of said tube for reducing the pressure in the tube, said tube having its extremities partly closed, a flexible tube attached to the other end of said hydrometric tube, and bodies of different densities enclosed within said tube, each of said bodies being homogeneous throughout, whereby if any portion of any of said bodies is worn or broken off from the body the remainder will be of the same density as the body was originally.



1,424,731. BATTERY-TEMPERATURE CONTROLLER. CHARLES E. LINEBARGER, Chicago, Ill. Filed Mar. 17, 1919. Serial No. 283,187. 2 Claims. (Cl. 171—314.)



1. The combination of an electric battery, a high resistance circuit connected to said battery, a thermostat connected in said circuit and mounted in one of the cells of said battery and adapted to be heated thereby, and also adapted to close said circuit when said battery reaches a predetermined temperature, whereby the said battery is cooled by the flow of electricity therefrom after said predetermined temperature has been reached.

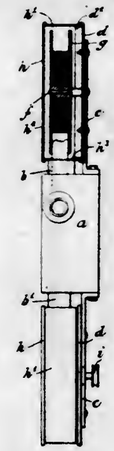
1,424,732. BREATH-EXERCISING DEVICE. JAMES W. MACPHERSON, Los Angeles, Calif. Filed Mar. 31, 1921. Serial No. 457,168. 3 Claims. (Cl. 46—37.)

1. An exercising device comprising a tube having a mouth piece, an air discharge from said tube, a rotatable fan actuated by said air discharge, a pulley secured to said fan and having a cord adapted to be wound thereon, and a standard extending above said fan and arranged to receive said cord over the same.

1,424,733. STAY-BOLT STRUCTURE. ROBERT S. MENNIE, Chicago, Ill., assignor to Flannery Bolt Company, Pittsburgh, Pa. Original application filed Feb. 5, 1916, Serial No. 76,333. Divided and this application filed Aug. 29, 1919. Serial No. 320,648. 4 Claims. (Cl. 85—1.5.)

1. In a staybolt structure, the combination with a boiler sheet having a bolt opening, of a mass of welding alloy having welded union with the outer face of the boiler sheet and having a shape forming an annular boss around the opening in the boiler sheet, a closure engaging said boss of welding alloy, and a staybolt having a head enclosed by said boss and closure.

1,424,734. ARTIFICIAL LIMB. HERBERT CLARADEN MILLER, Pittsburgh, Pa. Filed Jan. 14, 1922. Serial No. 529,218. 1 Claim. (Cl. 3—3.)

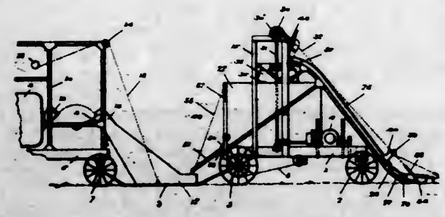


In an artificial limb a pair of aluminum sleeves apertured at their opposite ends and secured to the adjacent ends of any part of the limb to be given adjustment, by screws passing through said apertures and into the material of the limb, the free ends of said aluminum members sliding one within the other a pre-determined amount and secured therein by a steel rod, with a head on one end thereof and a nut on the other, said rod passing through aligned holes in the engaging portions of said members, the external holes in said members being counter sunk to receive the head of said rod, and securing nut, respectively.

1,424,735. MAGAZINE FOR CINEMATOGRAPHIC PROJECTORS. MORTON EARLE MYERS, New York, N. Y., assignor to The Precision Machine Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 14, 1919. Serial No. 277,074. 6 Claims. (Cl. 242—70.)

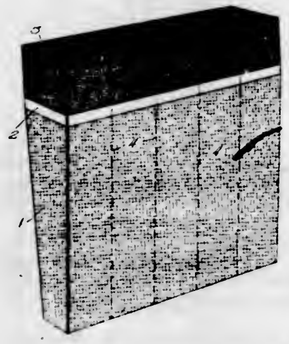
1. A magazine for cinematographic projectors embodying therein a back plate, a cover movably mounted in relation to said back plate and having a deep flange adapted to project across the edge of a reel, said flange having a slot therein through which the film may pass to the lens box, and a reel spindle supported so as to be

positioned intermediate said back plate and said cover, with its free end toward said cover, said spindle being



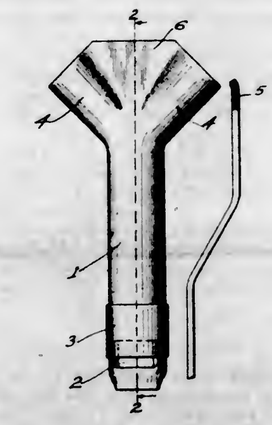
adapted to hold a film reel away from said base, whereby with the opening of the magazine, access may be had to the film upon said reel from either side thereof.

1,424,736. SENSITIZED-ELEMENT PACKAGE FOR PHOTOGRAPHIC APPARATUS. WALTER PACK, Takoma Park, Md., assignor to Charles A. Rogers, Hartford, Conn. Original application filed Jan. 29, 1921, Serial No. 441,019. Divided and this application filed July 11, 1921. Serial No. 483,764. 6 Claims. (Cl. 95—72.)



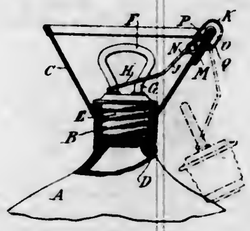
1. A photographic sensitized element package comprising a sensitized element provided with a severing portion, and surrounded by a completely sealed enclosing member which is adapted to be opened by cutting contact with said severing portion, substantially as described.

1,424,737. CONCRETE-MIXER LOADER. VIRGIL M. PRICE, San Francisco, Calif. Filed Jan. 6, 1920. Serial No. 349,737. 5 Claims. (Cl. 214—1.)



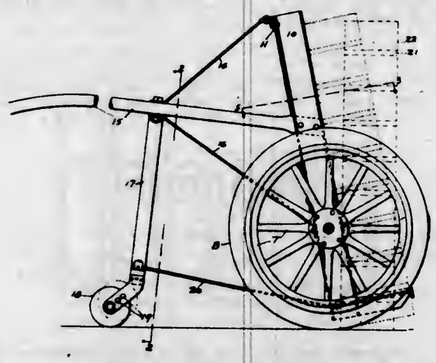
1. A concrete mixer loader comprising a frame, bins mounted on said frame side by side and having a longitudinal partition between them, said bins having rear discharge openings and gates, means for elevating materials and dumping same over said partition, a longitudinal chute hinged on said partition and adapted to be swung toward opposite sides for directing the material into one bin or the other, and means for receiving the materials from all of said discharge openings for delivering same to a mixer.

1,424,738. PHENOLIC CONDENSATION PRODUCT ARTICLE AND METHOD OF MANUFACTURE. LAWRENCE V. REDMAN, ARCHIE J. WEITH, and FRANK P. BROCK, Evanston, Ill., assignors to Redmanol Chemical Products Company, Chicago, Ill., a Corporation of West Virginia. Filed Sept. 8, 1921. Serial No. 499,213. 16 Claims. (Cl. 18—59.)



1. The method of uniting sections of infusible and substantially insoluble phenolic condensation products, which comprises subjecting the surfaces which are to be united to the action of a solvent and providing at said surfaces a fusible phenolic condensation product, and subjecting the plates to the action of heat while the surfaces to be united are in contact, and thus converting the fusible product to an infusible stage.

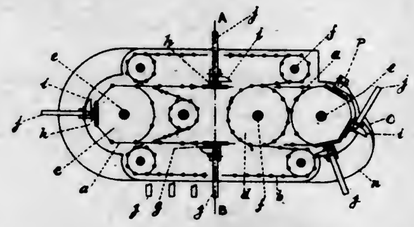
1,424,739. BURNER. JOHN B. REEVES, Los Angeles, Calif. Filed Mar. 2, 1921. Serial No. 449,101. 1 Claim. (Cl. 158—116.)



A burner comprising a tubular body, the upper end of which terminates in a Y-shaped head, the diverging arms of which head are hollow and communicate with the opening through the tubular body, parallel walls formed integral with and arranged between the inner portions of the arms of the Y-shaped head, said walls extending above the upper ends of the arms of the Y-shaped head, and the upper portions of said walls being spaced apart to form a relatively narrow slot that communicates with the openings through both arms of the Y-shaped head.

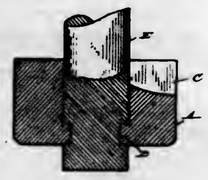
1,424,740. ATTACHMENT FOR WATER-BOTTLE STOPPERS OR THE LIKE. MAXIMILIAN CHARLES SCHWEINERT, West Hoboken, N. J. Filed Sept. 12, 1916. Serial No. 119,619. 11 Claims. (Cl. 215—101.)

1. A member having means for detachable connection to the funnel of a hot water bag or the like, and having a guide for a retainer, along which the latter may move, such guide extending along the inner side of the funnel.



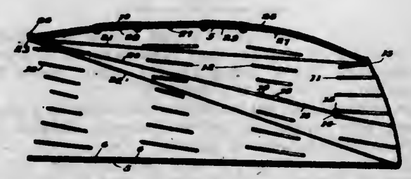
1,424,741. BRICK-CARRYING VEHICLE. DAVID F. SHOPE, Portland, Oreg., assignor to The Shope Brick Company, a Corporation of Oregon. Filed Oct. 25, 1920. Serial No. 419,280. 1 Claim. (Cl. 280—53.)

In a vehicle of the kind described, the combination of, an upright carrying frame pivotally mounted on an axle at a substantial distance from the upper end of the frame, and a two-wheeled truck having the same axle and supporting wheels of a diameter relatively large with respect to the length of said frame and equipped with highly resilient tires.



1,424,742. APPARATUS SUITABLE FOR USE IN THE DRYING OF PRINTED WALL PAPERS. JAMES SHORROCK, Darwen, England. Filed Mar. 22, 1921. Serial No. 454,505. 1 Claim. (Cl. 34—20.)

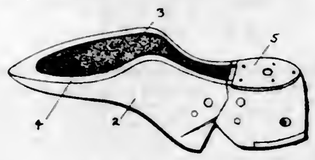
In apparatus known as "hanging tackle" suitable for use in the drying of printed wall papers, material-supporting rods mounted on movable continuous chains, pivots for enabling each of said rods to turn in a vertical plane, and hinges for enabling each of said rods to turn also in a horizontal plane, inclined surfaces operating by contact to move each of said rods on its hinge for opening the latter, as well as for raising said rod, together with a movable abutment member operated by movable arms in intermittent contact with a moving part of an



ordinary feeding mechanism of a wall paper drying plant, said movable member operating to strike near the root end of each of said rods in turn, for causing the latter to sweep rapidly round in the horizontal plane referred to, or rapidly to close the hinge aforesaid, all in manner and for the purpose substantially as herein set forth.

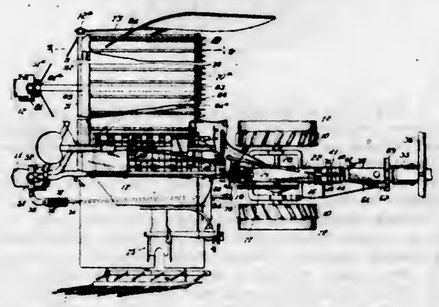
1,424,743. COUNTERBORING TOOL. JOHN HUGO SMITH, Detroit, Mich., assignor to The Eclipse Interchangeable Counterbore Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 19, 1920. Serial No. 367,138. 2 Claims. (Cl. 279—89.)

1. The combination with a holder member, of a tool member detachably mounted upon said holder member and adapted to be driven thereby, one of said members being formed with a socket and the other having a shank for engagement with said socket, the socket forming member having a pair of opposed ribs within its socket and said shank having oppositely arranged plane surfaces to pass between said ribs and being formed with oppositely arranged driving faces extending in rear of its plane faces, the latter being of greater depth than the depth of said ribs and said driving faces being of substantially the same depth as said ribs leaving notched portions engageable through a slight relative rotation of the holder member and tool member after the initial insertion of the shank in the socket.



1,424,744. SPRING STRUCTURE. DESIRE H. VAN HOVE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich. Filed Apr. 28, 1921. Serial No. 465,102. 11 Claims. (Cl. 155—181.)

1. In a spring structure for the back of car seats or the like, a substantially vertical back frame, a substantially vertical front frame, superimposed rows of double



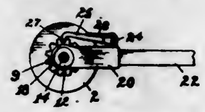
conical springs extending forwardly from the back to the front frame and connected to the frames, a row of substantially barrel shaped springs disposed over the aforesaid rows of springs, a wire connected to the latter springs intermediate their ends, and stay wires connected to said wire and to the lower edge of the front frame to stay and prevent sagging of the first mentioned wire or said upper row of barrel shaped springs.

1,424,745. PROCESS OF SHOE MANUFACTURE. SIDNEY C. WILSON, Penn Yan, N. Y., assignor to Wilson Process, Incorporated, Rochester, N. Y., a Corporation of New York. Filed Apr. 25, 1918. Serial No. 230,633. 3 Claims. (Cl. 12—142.)

1. That improvement in the process of manufacturing shoes, which consists in channeling an insole, turning back the channel flap, assembling said insole and an upper on a wooden last with the channeled face of the insole next to the bottom face of the last supplying a tempering agent to the channel flap, and performing the making operations on the shoe.

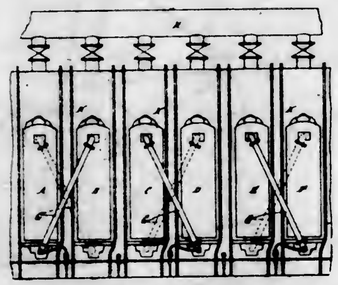
1,424,746. HARVESTING MACHINE. WALTER L. HENDRICKS, Aurora, Ill. Filed Jan. 25, 1918. Serial No. 213,758. 15 Claims. (Cl. 56—210.)

1. In a harvesting machine, in combination, a frame, front and rear carrying wheels for the frame, said frame comprising two sections pivotally connected at a point between said wheels, means for changing the vertical angular relation between said sections, a pole, an intermediate member between said pole and the forward section and connected to both and means for changing the vertical angular relation of the intermediate member relatively to the section to which it is connected.



1,424,747. IDENTIFICATION TAG FOR BABIES. LAWRENCE A. HUNTOON and JOSEPHINE G. HUNTOON, Springfield, Mass. Filed Aug. 26, 1920. Serial No. 406,245. 1 Claim. (Cl. 40—10.)

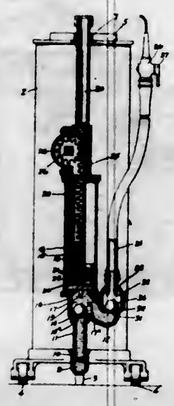
An identification tag for infants consisting of a transparent body having an external laterally disposed lug thereon provided with an opening, a cap adapted to be detachably secured to the body and provided with a similar lug adapted to align with the first lug, said body being capable of holding a record of birth so that the same may be read through the body and cap and a cord or the like adapted to be extended through the lugs to lock the cap against displacement and provided with means on its ends for securing the same about the body



of the infant to be identified, said cap having screw threaded engagement with said body.

1,424,748. LIFTING JACK. MILES T. STRANAHAN, Elyria, Ohio. Filed Apr. 2, 1920. Serial No. 370,679. 5 Claims. (Cl. 254—98.)

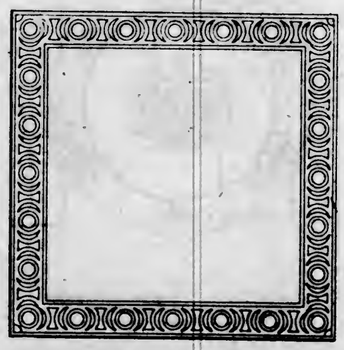
1. In a lifting jack, the combination of a screw, means for supporting the screw, means for permitting longitudinal movement of the screw and preventing rotary movement thereof, a power wheel for causing longitudinal movement of the screw, a yoke, a lever, means pivoted to the side of the lever for actuating the power wheel, and the lever being removably connected to the yoke whereby the means pivoted to the side of the lever for actuating the power wheel may be changed to either side of the power wheel, substantially as described.



1,424,749. METHOD AND APPARATUS FOR INCREASING THE YIELD OF HYDROGEN IN COAL GAS. JOHN HENRY WEST, Bayswater, and ARTHUR JAQUES, Waterloo, England. Filed May 13, 1922. Serial No. 560,806. 9 Claims. (Cl. 48—210.)

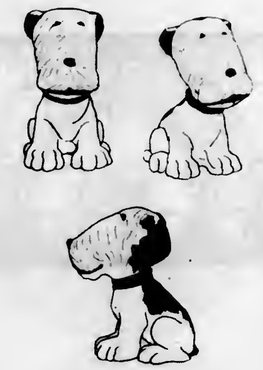
1. A process for obtaining an increased proportion of free hydrogen in the gases evolved in the carbonization of coal, the said gases being intended for the production of hydrogen by extracting it therefrom, which process consists in stripping the gases evolved during the initial stages of the carbonization of the coal by subjecting them to a purifying treatment for removal therefrom of the tarry vapours, adding steam to the stripped gases, passing the mixture of stripped gases and steam so obtained over the partially carbonized coal or coke, the temperatures of which latter has reached a value relatively high compared with the temperatures obtaining during the aforesaid initial stages of carbonization, and in effecting the carbonization at a rate sufficiently slow to allow the greater proportion of all the hydrocarbon products including the tarry vapours and even such gases as methane and ethylene, produced during the initial stages of the carbonization, to be decomposed during their passage over the aforesaid partially carbonized coal or coke.

REISSUES.



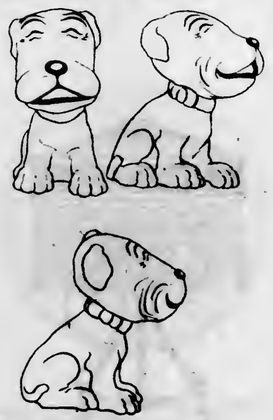
15,427. GREASE OR OIL DISPENSING APPARATUS. HANS M. BOE, Minneapolis, Minn. Filed Mar. 27, 1922. Serial No. 564,251. Original No. 1,369,517, dated Feb. 22, 1921, Serial No. 282,139, filed Mar. 12, 1919. 9 Claims. (Cl. 221—80.)

6. The combination, with a tank adapted to contain a lubricant, of a pump arranged outside the walls of said tank and adjacent thereto and having a pipe connection for withdrawing the contents of the latter, said pump including a barrel mounted on said pipe connection, a hollow guide projecting upwardly from said barrel adjacent the walls of said tank and forming a hand grip, a piston in said barrel having a rod slidable in said guide, a pinion geared to said rod and having an operating crank, a discharge duct connected with the lower portion of said pump, and valves for regulating the delivery of the lubricant from said tank to said barrel and to said discharge duct when said piston is reciprocated.



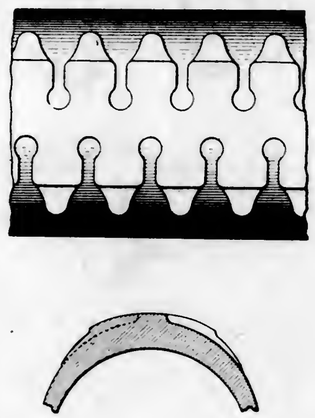
DESIGNS.

61,287. TYPEWRITER MAT. THOMAS W. ARTER, Bellaire, Ohio. Filed Nov. 23, 1920. Serial No. 426,092. Term of patent 14 years.



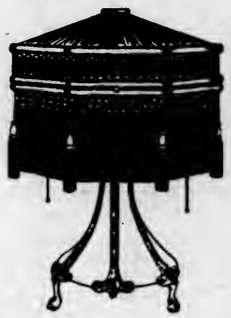
The ornamental design for a typewriter mat as shown.

61,288. TOY DOG. BURTON O. BIDWELL, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 1, 1922. Serial No. 1,497. Term of patent 7 years.



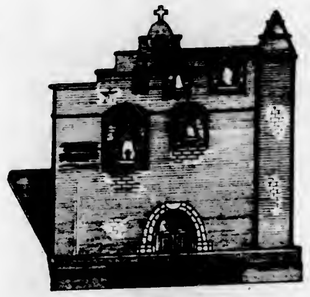
The ornamental design for a toy dog substantially as shown.

61,289. TOY DOG. BURTON O. BIDWELL, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 15, 1922. Serial No. 1,782. Term of patent 7 years.



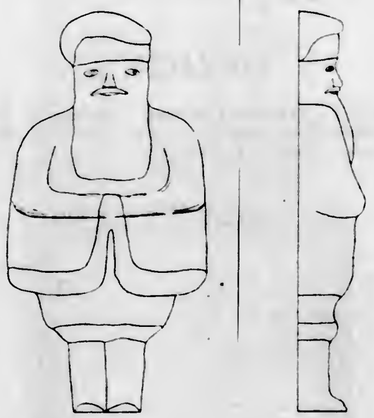
The ornamental design for a toy dog substantially as shown.

61,290. TIRE TREAD. FREDERICK A. BOLLINGER, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 14, 1921. Serial No. 515,140. Term of patent 14 years.



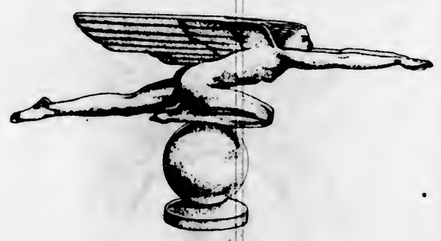
The ornamental design for a tire tread as shown.

61,291. COMBINED LAMP AND PHONOGRAPH. ANTHONY J. BURNS, Indiana Harbor, Ind., assignor to Burns-Pollock Electric Manufacturing Company, Indiana Harbor, Ind., a Corporation of Indiana. Filed Nov. 14, 1921. Serial No. 515,154. Term of patent 14 years.



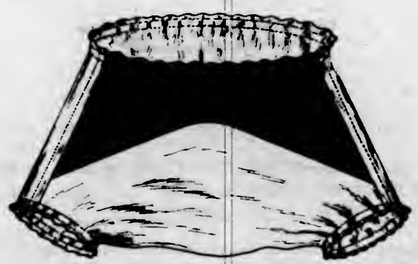
The ornamental design for a combined lamp and phonograph, as shown.

61,292. BOOKHOLDER. ARMITAGE S. C. FORBES and HARRYE R. P. FORBES, Los Angeles, Calif. Filed Nov. 15, 1920. Serial No. 424,308. Term of patent 3½ years.



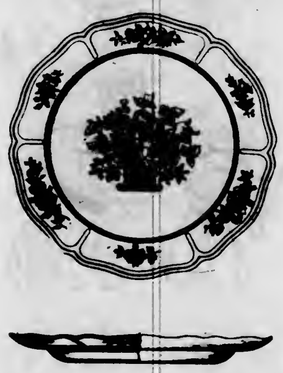
The ornamental design for a book holder as shown.

61,293. ICE CREAM, POP CORN, CANDY, OR CAKE. WILLIAM H. FRANCIS, Southington, Conn. Filed Mar. 1, 1922. Serial No. 959. Term of patent 7 years.



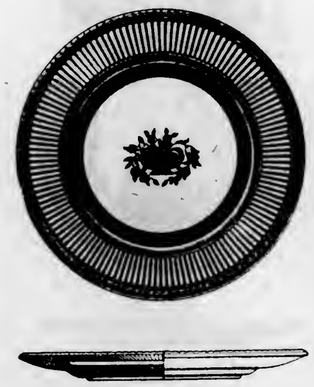
The ornamental design for ice cream, pop corn, candy, or cake, as shown.

61,294. STATUETTE. HARRIET W. FRISHMUTH, New York, N. Y. Filed Jan. 16, 1922. Serial No. 226. Term of patent 3½ years.



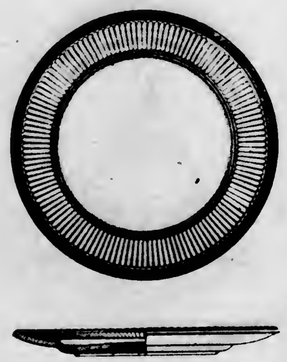
The ornamental design for a statuette, as shown.

61,295. GARMENT PROTECTOR. MAUDE SINCLAIR GEORGE, St. Louis, Mo. Filed Apr. 8, 1922. Serial No. 1,638. Term of patent 14 years.



The ornamental design for the garment protector, as shown.

61,296. PLATE OR SIMILAR ARTICLE. JOHN EDWARD GOODWIN, Stoke-upon-Trent, England, assignor to Josiah Wedgwood & Sons, Incorporated of America, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,537. Term of patent 14 years.

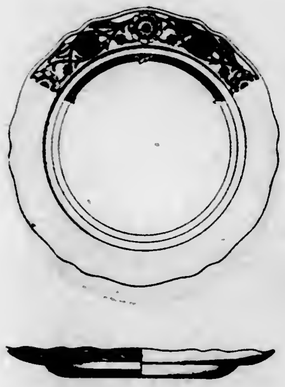


The ornamental design for a plate or similar article as shown and described.

61,297. PLATE OR SIMILAR ARTICLE. JOHN EDWARD GOODWIN, Stoke-upon-Trent, England, assignor to Josiah Wedgwood & Sons, Incorporated of America, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,538. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown and described.

61,298. PLATE OR SIMILAR ARTICLE. JOHN EDWARD GOODWIN, Stoke-upon-Trent, England, assignor to Josiah Wedgwood & Sons, Incorporated of America, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,539. Term of patent 14 years.

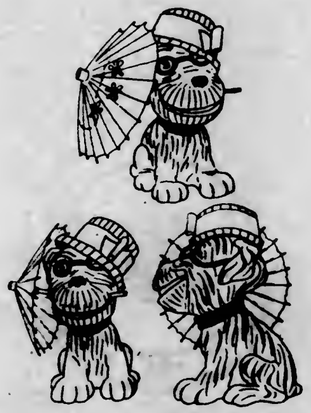


The ornamental design for a plate or similar article, as shown and described.

61,299. PLATE OR SIMILAR ARTICLE. JOHN EDWARD GOODWIN, Stoke-upon-Trent, England, assignor to Josiah Wedgwood & Sons, Incorporated of America, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,540. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown and described.

61,300. PLATE OR SIMILAR ARTICLE. JOHN EDWARD GOODWIN, Stoke-upon-Trent, England, assignor to Josiah Wedgewood & Sons, Incorporated of America, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,541. Term of patent 14 years.

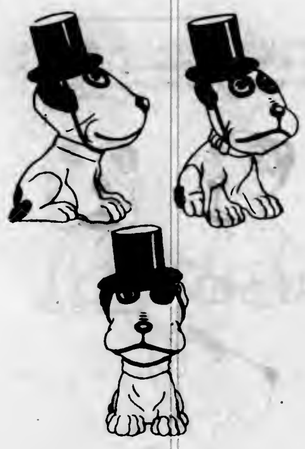


The ornamental design for a plate or similar article, as shown and described.

61,301. PLATE OR SIMILAR ARTICLE. JOHN EDWARD GOODWIN, Stoke-upon-Trent, England, assignor to Josiah Wedgwood & Sons, Incorporated of America, New York, N. Y., a Corporation of New York. Filed Oct. 29, 1921. Serial No. 511,542. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown and described.

61,302. TOY DOG. FRANK W. HOPKINS, Wilmette, Ill. Filed Apr. 1, 1922. Serial No. 1,499. Term of patent 7 years.

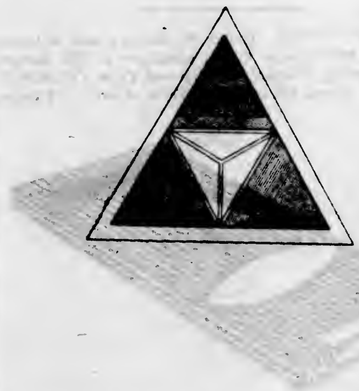


The ornamental design for a toy dog, substantially as shown.

61,303. TOY DOG. FRANK W. HOPKINS, Wilmette, Ill. Filed Apr. 1, 1922. Serial No. 1,500. Term of patent 7 years.

The ornamental design for a toy dog substantially as shown.

61,304. TOY DOG. FRANK W. HOPKINS, Wilmette, Ill. Filed Apr. 1, 1922. Serial No. 1,501. Term of patent 7 years.

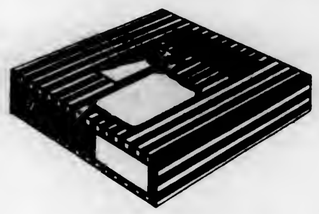


The ornamental design for a toy dog substantially as shown.

61,305. TOY DOG. FRANK W. HOPKINS, Wilmette, Ill. Filed Apr. 15, 1922. Serial No. 1,771. Term of patent 7 years.

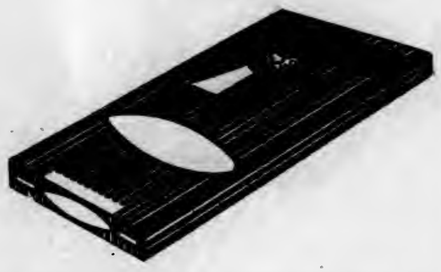
The ornamental design for a toy dog, substantially as shown.

61,306. BUTTON, BADGE, EMBLEM, PIN, OR ARTICLE OF SIMILAR NATURE. FREDERICK H. JOHNSON, East Greenwich, R. I. Filed Jan. 4, 1922. Serial No. 32. Term of patent 7 years.



The ornamental design for a button, badge, emblem, pin, or article of similar nature, as shown.

61,307. COMBINED PIN AND HAIRPIN HOLDER. GENEVA KAHN, Kirksville, Mo. Filed Oct. 20, 1921. Serial No. 509,189. Term of patent 3½ years.



The ornamental design for a combined pin and hairpin holder substantially as shown.

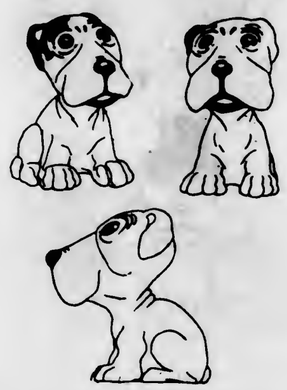
61,308. BOX COVER. HARRY W. KELSEY and WILLIAM H. BAER, Middletown, Conn., assignors to The Russell Manufacturing Company, Middletown, Conn. Filed Sept. 26, 1921. Serial No. 503,394. Term of patent 14 years.

The ornamental design for a box cover, as shown.

61,309. BOX COVER. HARRY W. KELSEY and WILLIAM H. BAER, Middletown, Conn., assignors to The Russell Manufacturing Company, Middletown, Conn. Filed Sept. 26, 1921. Serial No. 503,395. Term of patent 14 years.

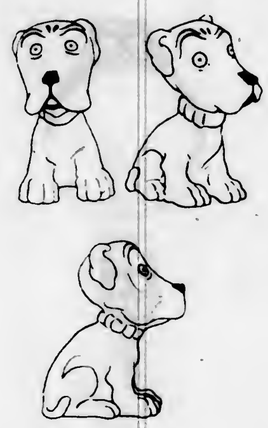
The ornamental design for a box cover, as shown.

61,310. BOX COVER. HARRY W. KELSEY and WILLIAM H. BAER, Middletown, Conn., assignors to The Russell Manufacturing Company, Middletown, Conn. Filed Sept. 26, 1921. Serial No. 503,396. Term of patent 14 years.



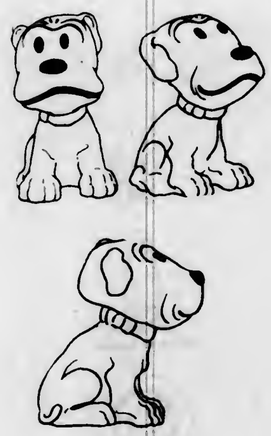
The ornamental design for a box cover, as shown.

61,311. CARTON. HARRY W. KELSEY and WILLIAM H. BAER, Middletown, Conn., assignors to The Russell Manufacturing Company, Middletown, Conn. Filed Sept. 26, 1921. Serial No. 503,397. Term of patent 14 years.



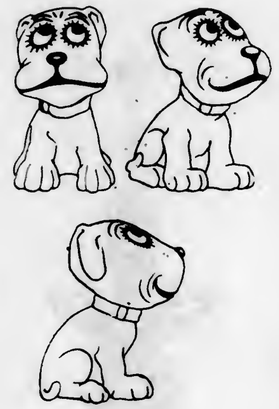
The ornamental design for a carton, as shown.

61,312. TOY DOG. ARTHUR LUND, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 1, 1922. Serial No. 1,498. Term of patent 7 years.



The ornamental design for a toy dog substantially as shown

61,313. TOY DOG. ARTHUR LUND, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 15, 1922. Serial No. 1,779. Term of patent 7 years.



The ornamental design for a toy dog substantially as shown.

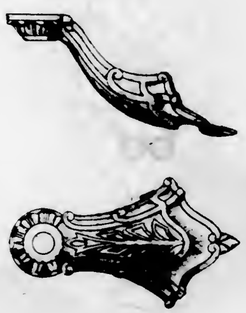
61,314. TOY DOG. ARTHUR LUND, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 15, 1922. Serial No. 1,780. Term of patent 7 years.

The ornamental design for a toy dog substantially as shown.

61,315. TOY DOG. ARTHUR LUND, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 15, 1922. Serial No. 1,781. Term of patent 7 years.

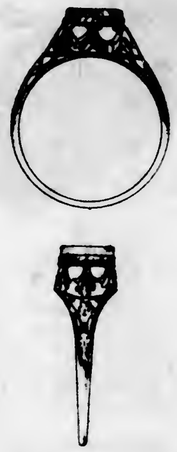
The ornamental design for a toy dog substantially as shown.

61,316. DOLL, STATUETTE, OR SIMILAR ARTICLE. MERWIN T. MIFFLIN, Duquoin, Ill. Filed Feb. 8, 1922. Serial No. 592. Term of patent 14 years.



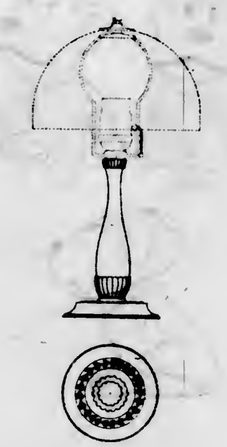
The ornamental design for a doll, statuette, or similar article substantially as shown.

61,317. LAMP FIXTURE. ALBERT J. D. OHM, Astoria, N. Y., assignor to MAX SCHAFFER CO., a Corporation of New York. Filed Nov. 29, 1921. Serial No. 518,692. Term of patent 3½ years.



The ornamental design for a lamp fixture as shown.

61,318. ARM FOR LAMP FIXTURES. ALBERT J. D. OHM, Astoria, N. Y., assignor to Max Schaffer Co., a Corporation of New York. Filed Nov. 29, 1921. Serial No. 518,693. Term of patent 3½ years.

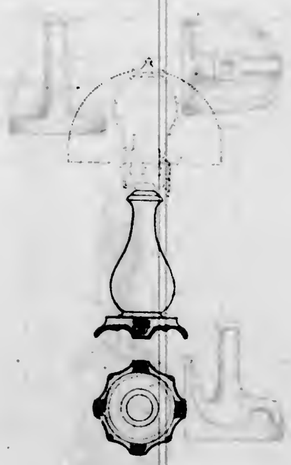


The ornamental design for an arm for lamp fixtures.

61,319. RING OR SIMILAR ARTICLE. JOSHUA W. MAYER, New York, N. Y. Filed May 24, 1922. Serial No. 2,399. Term of patent 7 years.

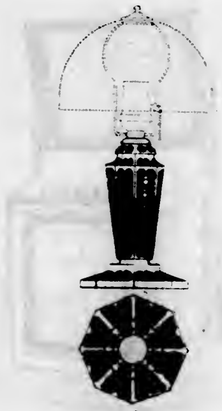
The ornamental design for a ring or similar article, as shown.

61,320. LAMP STANDARD. EDWIN B. PIKE, Milwaukee, Wis., assignor to Phoenix Light Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1921. Serial No. 501,205. Term of patent 3½ years.



The ornamental design for a lamp standard, as shown.

61,321. LAMP STANDARD. EDWIN B. PIKE, Milwaukee, Wis., assignor to Phoenix Light Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1921. Serial No. 501,206. Term of patent 3½ years.

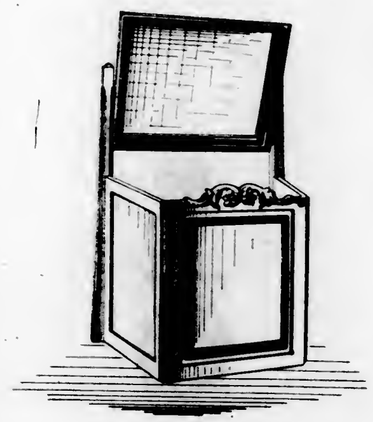


The ornamental design for a lamp standard, as shown.

61,322. LAMP STANDARD. EDWIN B. PIKE, Milwaukee, Wis., assignor to Phoenix Light Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1921. Serial No. 501,207. Term of patent 3½ years.

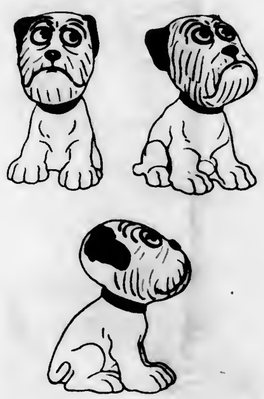
The ornamental design for a lamp standard, as shown.

61,323. LAMP STANDARD. EDWIN B. PIKE, Milwaukee, Wis., assignor to Phoenix Light Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1921. Serial No. 501,208. Term of patent 3½ years.



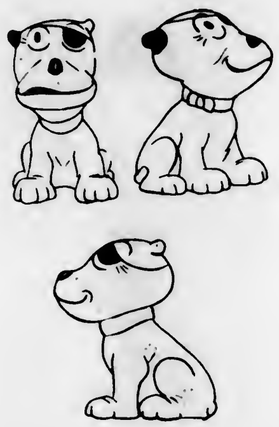
The ornamental design for a lamp standard, as shown.

61,324. PORTABLE MOTION-PICTURE SCREEN SUPPORT. PAUL S. PONON, Newark, N. J., assignor to Beaver Machine and Tool Co., Inc., Newark, N. J. Filed Feb. 6, 1922. Serial No. 577. Term of patent 14 years.



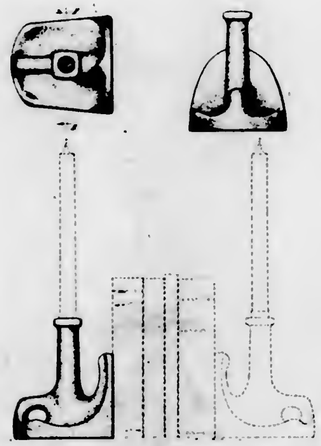
The ornamental design for a portable motion-picture-screen support, as shown.

61,325. PORTABLE MOTION-PICTURE SCREEN SUPPORT. PAUL S. PONON, Newark, N. J., assignor to Beaver Machine and Tool Co., Inc., Newark, N. J. Filed Feb. 9, 1922. Serial No. 614. Term of patent 14 years.



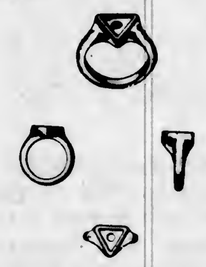
The ornamental design for a portable motion-picture screen support, as shown.

61,326. TOY DOG. WILLIAM H. POWERS, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 7, 1922. Serial No. 1,496. Term of patent 7 years.



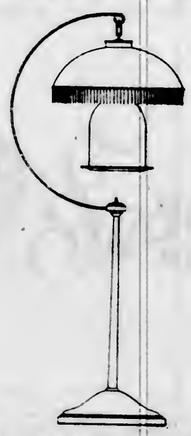
The ornamental design for a toy dog substantially as shown.

61,327. TOY DOG. WILLIAM H. POWERS, Chicago, Ill., assignor to Frank W. Hopkins, Wilmette, Ill. Filed Apr. 15, 1922. Serial No. 1,774. Term of patent 7 years.



The ornamental design for a toy dog substantially as shown.

61,328. COMBINED BOOK END AND CANDLESTICK. HARVEY REBER, Highwood, Ill., assignor of one-half to Genevieve Gillette, Highland Park, Ill. Filed July 7, 1921. Serial No. 483,060. Term of patent 3½ years.

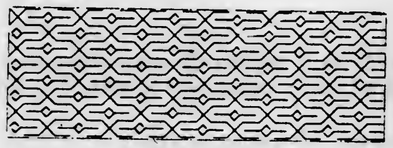


The ornamental design for a combined book end and candlestick as shown.

61,329. RING. FREDERICK W. RIEHL, Yonkers, N. Y. Filed Nov. 22, 1921. Serial No. 517,112. Term of patent 3½ years.

The ornamental design for a ring as shown.

61,330. COMBINATION LAMP STAND. LOUIS J. RITICH, Cleveland, Ohio. Filed Dec. 2, 1919. Serial No. 342,636. Term of patent 3½ years.



The ornamental design for a combination lamp stand, as shown.

61,331. PORTABLE LAMP BASE. THOMAS L. RYAN, Muncie, Ind. Filed July 25, 1921. Serial No. 487,545. Term of patent 3½ years.

The ornamental design for a portable lamp base, as shown.

61,332. SAFETY PAPER FOR CHECKS, DRAFTS, OR NEGOTIABLE INSTRUMENTS. JOHN F. SHOEMAKER, Chicago, Ill., assignor to Protectu Corporation, Chicago, Ill. Filed Feb. 27, 1922. Serial No. 928. Term of patent 7 years.

The ornamental design for safety paper for checks, drafts, or negotiable instruments as shown.

61,333. AUTOMOBILE TIRE. ISIDORE PETER SMITH, Chicago, Ill. Filed Feb. 16, 1920. Serial No. 359,191. Term of patent 14 years.

The ornamental design for an automobile tire, as shown.

61,334. BADGE, BUTTON, EMBLEM, OR ARTICLE OF SIMILAR NATURE. FRED WALTER, Jr., Los Angeles, Calif., assignor to Carl Entenmann Jewelry Company, Los Angeles, Calif. Filed Dec. 3, 1921. Serial No. 519,774. Term of patent 3½ years.

I claim the ornamental design for a badge, button, emblem, or article of similar nature as shown.

TRADE-MARKS

OFFICIAL GAZETTE, AUGUST 1, 1922.

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 124,438. (CLASS 39. CLOTHING.) GOLDSMITH & LERNER, INC., New York, N. Y. Filed Nov. 1, 1919.

ASC Sealect SHIRT

No claim being made to the word "Shirt" apart from the mark shown.

Particular description of goods.—Dress, Negligee, and Work Shirts, Pyjamas, Collars, and Cuffs, Men's Flat Underwear—viz, Two-Piece and Union Suits.

Claims use since Oct. 1, 1919.

Ser. No. 126,672. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) CARL C. CONWAY, EARLE E. CONWAY, and THEODORE P. BROWN, doing business as Simplex Player Action Company, Worcester, Mass. Filed Dec. 31, 1919.

Simplex

Trade-mark, "Simplex."

Particular description of goods.—Mechanical-Piano Playing Apparatus.

Claims use since about June, 1900.

Ser. No. 127,256. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) COVELAND ORCHARDS, Greensboro, N. C. Filed Jan. 17, 1920.

COVELAND REGISTERED MAGNUM BONUM C O COLOR QUALITY TRADE MARK

No claim is made to use of the words "Magnum," "Registered," "Bonum," "Color," "Trade-Mark," and "Quality" apart from the mark shown in the drawing. No claim is made to representation of an apple apart from mark shown in drawing.

Particular description of goods.—Apples, Fresh, Dried, or Canned.

Claims use since October, 1918.

Ser. No. 131,026. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) KEWAUKUM ALUMINUM COMPANY, Kewaskum, Wis. Filed Apr. 12, 1920.

KEWASKUM ALUMINUM COMPANY KEWASKUM WARE

No claim is made to exclusive use of the words "Ware" and "Trade-Mark," apart from the mark.

Particular description of goods.—Aluminum Kitchen Utensils—Namely, Pans, Kettles, Pots, Combination

Cookers, Drinking Cups, Jelly Molds, Cake Tins, Pie Plates, Strainers, Double Boilers, Tricolators, Percolators, Covers, Plates, Trays, Roasters, Griddles, Casseroles, Mixing Bowls, Muffin Pans, Skimmers, Cake Pans, Dippers, Ladles, Cake Turners, Spouts, Funnels, Coffee Balls, and Tea Balls.

Claims use since Mar. 19, 1920.

Ser. No. 131,536. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PORTO RICO FRUIT EXCHANGE, San Juan, P. R. Filed Apr. 23, 1920.

Tropiko

Particular description of goods.—Oranges, Grapefruit, and Pineapples in Their Natural State and in Tins. Jams, Marmalades, and Jellies.

Claims use since Sept. 1, 1917.

Ser. No. 133,264. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) LUDLUM STEEL COMPANY, Watervliet, N. Y. Filed June 4, 1920.

SICRO

Particular description of goods.—Alloys Used for Electrical Resistance and Heating Elements.

Claims use since Nov. 18, 1919.

Ser. No. 137,371. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) C. T. GLASSER, doing business as Poppette Confection Co., Minneapolis, Minn. Filed Sept. 20, 1920.

Poppettes

Particular description of goods.—Candied Popcorn.

Claims use since Jan. 10, 1920.

Ser. No. 137,957. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NEW ORLEANS COFFEE COMPANY LTD., New Orleans, La. Filed Oct. 5, 1920.

Arabian Prince

Particular description of goods.—Coffee.

Claims use since Sept. 28, 1920.

Ser. No. 138,749. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BISHOP & COMPANY, Los Angeles, Calif. Filed Oct. 25, 1920.

SIERRA

Particular description of goods.—Chocolate in Cake Form Used for Coating Candies, Cakes, and Like Goods, Chocolate Candies, and Sweet Chocolate for Eating Purposes.

Claims use since July, 1903, for chocolate candies; since July 10, 1917, for sweet chocolate and cake chocolate.

Ser. No. 140,705. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM H. ARBOUR, Pittsburgh, Pa. Filed Dec. 7, 1920.

ARBOUR'S

TRADE MARK

GOITRE MEDICINE

No claim being made to exclusive use of words "Trade-Mark," "Goitre," "Medicine," apart from the mark shown on drawing.

Particular description of goods.—A Preparation for the Treatment of Goiters.

Claims use since September, 1919.

Ser. No. 141,820. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) WICKWIRE SPENCER STEEL CORPORATION, Worcester, Mass. Filed Jan. 3, 1921.

NATWIRE

AD-MAP

Particular description of goods.—Puzzles.
Claims use since Apr. 20, 1921.

157,435. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) MATTHEW W. RYAN, New York, N. Y. Filed Dec. 29, 1921. Serial No. 157,280.

Ginghamette

Particular description of goods.—Cotton Piece Goods.
Claims use since September, 1916.

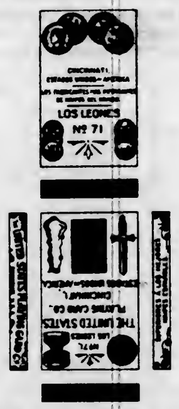
157,436. (CLASS 48. MALT BEVERAGES, EXTRACTS, AND LIQUORS.) LEROY SPENCER, also operating as The Home Supply, Chicago, Ill. Filed Apr. 22, 1922. Serial No. 162,779.

BOHEMIAN
BEVERAGE

Particular description of goods.—Malt Extract, Gelatin, and Hops for Making Nonintoxicating Malt Beverages.
Claims use since August, 1920.

157,437. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SUCHYWERKE A. G., Vienna, Austria. Filed Aug. 1, 1921. Serial No. 151,234.

SALISIN



Particular description of goods.—Pharmaceutical Preparation for Rheumatism and Fever.
Claims use since Apr. 10, 1920.

157,438. (CLASS 12. CONSTRUCTION MATERIALS.) UNITED STATES GYPSUM COMPANY, Chicago, Ill. Filed Feb. 27, 1922. Serial No. 159,903.

ARDEN

Particular description of goods.—Pottery and Casting Plaster.
Claims use since 1908.

157,439. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) THE UNITED STATES PLAYING CARD COMPANY, East Norwood, Cincinnati, Ohio. Filed Mar. 20, 1922. Serial No. 160,982.

Particular description of goods.—Playing Cards.
Claims use since Sept. 14, 1897.

157,440. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) GEORGE SHERMAN WARD, New York, N. Y. Filed Dec. 19, 1921. Serial No. 156,943.

KLEEN-RITE

Particular description of goods.—Dessert Dishes, Spoons, Forks, Knives, Soda-Glass Holders, Banana-Split Dishes, Coffeepots, Teapots, Butter Dishes, Salt Shakers, and Pepper Shakers, Said Goods Being Silver Plated.
Claims use since Mar. 1, 1920.

157,441. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) WELD IT ACETYLENE COMPANY, Detroit, Mich. Filed Apr. 5, 1922. Serial No. 161,813.

Particular description of goods.—Welding Apparatus, Cutting Apparatus—Namely, Blow Pipes or Torches—and Acetylene Generators.
Claims use since Mar. 1, 1917.

157,442. (CLASS 45. BEVERAGES, NONALCOHOLIC.) LOUIS WEINFELD, doing business as the Consolidated Bottling Works, Norfolk, Va. Filed May 15, 1922. Serial No. 163,908.

JAMESTOWN

Particular description of goods.—Nonalcoholic, Maltless Beverages Sold as Soft Drinks.
Claims use since 1911.

157,443. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WILLIAM ZIMMERMAN, Cedar Rapids, Iowa. Filed July 12, 1921. Serial No. 150,300.

Particular description of goods.—Shampoo for Hair and Scalp.
Claims use since May 1, 1921.

TRADE-MARK REGISTRATIONS CANCELED.

27,072. TEA. BERRY, HALL & Co., Burlington, Vt. Registered September 17, 1895. Canceled May 12, 1922.

54,547. COFFEE. THE ENTERPRISE COFFEE COMPANY OF BALTIMORE CITY, Baltimore, Md. Registered June 26, 1906. Canceled May 12, 1922.

88,514. POULTRY FEED. NICKEL PLATE ELEVATOR Co., Cleveland, Ohio. Registered September 24, 1912. Canceled June 19, 1922.

136,880. CERTAIN NAMED POULTRY AND STOCK FEED. THE NICKEL PLATE ELEVATOR Co., Cleveland, Ohio. Registered November 9, 1920. Canceled June 19, 1922.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

IN RE NATHAN, JR.

No. 1414. Decided April 3, 1922.

1. APPLICATION—DIVISIONAL—LIMITATION AS TO TIME OF FILING.

Where N. almost seven years after the granting of a patent to A. filed a divisional application divided out of his earlier application that was copending with the application of A., *Held* that the case was clearly within the rule announced in *Chapman* v. *Wintroath* (252 U. S., 126.)

2. SAME—SAME—SAME.

Where an applicant delays more than two years in filing a divisional application after the grant of an intervening patent for the same invention, *Held* that the limitations of section 4897, R. S., as to the time for filing apply.

Mr. Albert F. Nathan pro se.

Mr. T. A. Hostetler for the Commissioner of Patents.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents, refusing to allow a claim in a divisional application for a patent relating to a typewriter-carriage control. It is unnecessary to consider the mechanism of the invention, since the case turns upon a single question of law.

Nathan filed his original application September 2, 1905. On February 23, 1906, one Anderson filed an application for an invention embodying the subject matter of the claim here involved, on which a patent was granted December 15, 1908. On November 26, 1906, Nathan was required to cancel a claim in his original application which, with a slight modification, was the same as the present divisional claim. His divisional application was filed on March 31, 1915, almost seven years after the issue of the Anderson patent. A patent was granted Nathan upon the original application, from which the claim had been cancelled on April 27, 1915; hence, the original case and the divisional case were copending during the period of about one month. The claim which was originally set out in the divisional application, was identical in every particular with claim 14 in the original application, which had been cancelled pursuant to a ruling of the Examiner.

The Examiner rejected the claim in the divisional application for the reason that it specified a mechanically-returned carriage, which he held was not shown in the drawings accompanying the original application. Nathan then amended by deleting the reference to a mechanically-returned carriage. The claim was then rejected by the Primary Examiner as unpatentable over the Anderson patent. The position of the Examiner was in turn sustained by the Board of Examiners-in-Chief, and the Commissioner.

It is urged by appellant, that the Anderson application was copending with his application, and had been for a period of nine months, at the time he was required by the Examiner to cancel the claim in question; that the cases continued copending for over two years, or until the issue of the Anderson patent, and that during all that period, the Patent Office had knowledge of the pending Anderson application without giving appellant any notice which would have enabled him to present a divisional application containing the present claim. Inasmuch as appellant had two years within which to file his divisional application after the issue of the Anderson patent (R. S. sec. 4897), it is difficult to understand how he could have been prejudiced by this alleged negligence on the part of the patent officials.

It is urged that the claim in the divisional application was not only disclosed, but asserted in the original application; and on this theory appellant seeks to distinguish this case from one where a patentable element had been disclosed, but not claimed, in the original application. By this distinction, appellant seeks to escape the limitation of two years, within which period a divisional application may be filed after the issue of an intervening patent. But the present amendment claim did not appear in the original application, however, if it had, we think the contention would be unsound. The purpose of the limitation of two years is to require prompt action after the intervening patent has become public, and we perceive no difference, so far as the application of the period of limitation is concerned, between such a case and one where the claim to the invention first appears in a divisional application.

No excuse is offered for the failure to file the divisional application within two years after the Anderson patent was issued. This brings the case clearly within the rule announced in *Chapman* v. *Wintroath* (252 U. S., 126; 272 O. G., 913).

The decision of the Commissioner of Patents is affirmed.

U. S. Circuit Court of Appeals—Eighth Circuit.

EBERLE ET AL. *v.* STIX, BAER & FULLER DRY GOODS CO. ET AL.

Decided March 25, 1922.

[280 Fed. Rep., 117.]

PATENTS—No. 1,304,951. FOR SWING, HELD ANTICIPATED. The Eberle patent, No. 1,304,951, for a child's swing, *Held* anticipated, the patentee having combined old elements in substantially the same way, for the same purpose, as was done by others, and having produced no greater or better or different results.

APPEAL from the District Court of the United States for the Eastern District of Missouri; Jacob Trieber, judge.

Suit by John A. Eberle and others against the Stix, Baer & Fuller Dry Goods Company and others for infringement of Patent No. 1,304,951, issued May 27, 1919, to John A. Eberle, for an improvement in swings. From a judgment dismissing the bill, plaintiffs appeal. Affirmed.

Mr. Howard G. Cook for the appellants.

Mr. Samuel W. Banning for the appellees.

Before CARLAND and LEWIS, Circuit Judges, and POLLOCK, District Judge.

LEWIS, *Cir. J.*:

This is a patent infringement case brought by Eberle, the patentee and his licensee, appellants. The defense of anticipation was sustained and the bill dismissed; and with this we fully agree. The mechanical device is a child's swing, and the one and only claim runs thus:

> A child's swing comprising a single rigid rectangular seat frame, a rectangular fabric pocket having its upper margins folded over and secured to said rigid rectangular seat frame, suspension members secured to the corners of said rigid rectangular seat frame, and a rigid rectangular spreader separating said suspension members at points above said rigid rectangular seat frame, the corners of said spreader corresponding to the corners of said rigid rectangular seat frame.

But before Eberle, Thompson 58,510, Higham 472,351, Davidson 736,826, Carley 1,063,956, and Blain 1,104,609, each shows a single rigid rectangular seat frame, in suspended swinging baby jumpers or swings; Hawk 1,055,975, Patten 1,057,360, Carley and Davidson each shows a fabric pocket seat attached to the seat frames, and in Davidson, Blain and Carley the pocket seats are rectangular, and in Patten the fabric is folded over and secured to the rigid seat frame. All of the earlier patents just noted necessarily show suspension members, in most of them there are four of these members secured to the seat frame, all but Hawk which has three, and in Carley, Blain, Thompson, and Higham rigid spreaders overhead of the suspension members are shown. Nothing new or novel was brought in by Eberle. He used old elements, combined in substantially the same way for the same purpose as was done by those who preceded him, and the results from the use of his swing are no greater, or better, or different, or more easily or cheaply obtained than were the results obtainable from the use of like devices of baby jumpers and child swings disclosed in prior patents above referred to.

Affirmed.

PATENT SUITS.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 8, 1922.

The Diastatic Malt Extract Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Dimex Malt Extract Co., Inc., 71 Reservoir Avenue, Port Jervis, N. Y., for registration of a trade-mark and trade-mark registered October 20, 1914, No. 100,523, to the Diastatic Malt Extract Co., Room 1006, Hearst Building, Chicago, Ill., and a notice of such declaration sent by registered mail to said Diastatic Malt Extract Co., at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Diastatic Malt Extract Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 11, 1922.

The I. C. Hunsicker & Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of The Pittsburgh Dry Goods Company, No. 935 Penn Avenue, Pittsburgh, Pa., for registration of a trade-mark and trade-mark registered January 17, 1893, No. 22,342, to The I. C. Hunsicker & Co., Fourth and Washington Streets, Reading, Pa., and a notice of such declaration sent by registered mail to said I. C. Hunsicker & Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless said I. C. Hunsicker & Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 12, 1922.

Rainbow Ale Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Keystone Fruit Products Company, of 106 West Second Street, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered February 26, 1907, No. 60,913, to the Rainbow Ale Company, of 34 Madison Avenue, Atlanta, Ga., and a notice of such declaration sent by registered mail to said Rainbow Ale Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Rainbow Ale Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C. July 13, 1922.

Monte W. Burd, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Marshall Field & Company, of 219 West Adams Street, Chicago, Ill., and Hunter Mfg. & Com. Co., of 58 Worth Street, New York, N. Y., for registration of certain trade-marks and trade-marks registered March 20, 1906, No. 50,537, and February 14, 1905, No. 44,166 to Monte W. Burd, of 631 West Main Street, Louisville, Ky., and a notice of such declaration sent by registered mail to said Monte W. Burd at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Monte W. Burd, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C. July 13, 1922.

Harry Pennington, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William F. Huff, 1445 West 25th Street, Los Angeles, Calif., for patent and the application of Harry Pennington, 614 Ninth Street, Wichita Falls, Tex., for patent, and a notice of such declaration sent by registered mail to Pennington at his last address of record, 3640 Stratford Avenue, Highland Park, Dallas, Tex., having been returned by the post office undeliverable, notice is hereby given that unless said Pennington, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 21, 1922.

Gilmour Bros. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Cumberland Tobacco Works, Inc., of Nashville, Tenn., for registration of a trade-mark and trade-mark registered Jan. 30, 1894, No. 24,141, to Gilmour Bros. Co., Owensboro, Ky., and because of prima facie evidence in the record to the effect that Gilmour Bros. Co. is no longer in business, notice is hereby given that unless said Gilmour Bros. Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Patents Nos. 1,424,750 to 1,425,501.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 301—No. 2. TUESDAY, AUGUST 8, 1922. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Reciprocity of the Cuban Laws Recognized.

(ORDER No. 2,772.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 1, 1922.

Notice is hereby given that the laws of Cuba are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by section 2 ot the Nolan Act of March 3, 1921 (41 Stat. L., 1313), and that consequently the privileges specified in said section will be extended to citizens of Cuba, subject to the limitation that extensions will not be granted to relieve defaults falling under that section of the act for a longer period than five years, seven months, and nine days.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,340,930.

On July 5, 1922, a decision was rendered that Hoyt Catlin was not the first inventor of the subject matter covered by claims 1 and 2 of his Patent No. 1,340,930, subject, "Controlling device," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,382,601.

On June 29, 1922, a decision was rendered that John A. Cressey was not the first inventor of the subject matter covered by claims 1, 2, and 3 of his Patent No. 1,382,601, subject, "Confections," and no appeal having been taken within the time allowed such decision has become final.

Changes in Classification.

(ORDER No. 2,765.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., June 30, 1922.

The following change in the classification of inventions is hereby directed, to take effect immediately:

In class 240, Illumination (Division XXX), abolish the following subclass, with its definition:

Lanterns—
Projectors—
Dimmers—
45.1. Color screen.

The patents formerly contained in this subclass have been placed in various subclasses in class 240, Illumination.

WM. A. KINNAN,
Acting Commissioner.

Rule 72, as Amended April 17, 1919.

RULE 72. After the completion of the application the Office will not return the specification for any purpose whatever. If applicants have not preserved copies of the papers which they wish to amend, the Office will furnish them on the usual terms.

The drawing may be withdrawn only for such corrections as cannot be made by the Office; but a drawing cannot be withdrawn unless a photographic copy has been filed and accepted by the Examiner as a part of the application. Permissible changes in the construction shown in any drawing may be made only by the Office and after an approved photographic copy has been filed. Sketches filed to show proposed changes in construction must be in permanent ink. (See Rule 30.) Substitute drawings will not be admitted in any case unless required by the Office.

Renewal of Forfeited Cases.

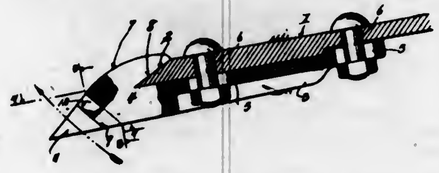
A petition for the renewal of a forfeited application need not be signed by the inventor or assignee, but may be signed by the attorney.

A power of attorney in the original application authorizing an attorney to transact all business in the Patent Office in connection with the application construed to be of sufficient scope to include the signing of a petition for renewal and the subsequent prosecution of the application. (*Ex parte Apee*, 101 O. G., 1609.)

Remittances to the Patent Office.

Checks should be certified. Cash should be registered; if by ordinary mail at risk of sender. Postage stamps not receivable.

Condition of Applications Under Examination at Close of Business July 29, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 67,867; Trade-Mark division, 8,304. Oldest new case, May 3; oldest amended, Apr. 18, 1921. The dates given are 1921 except where * indicates 1922.)

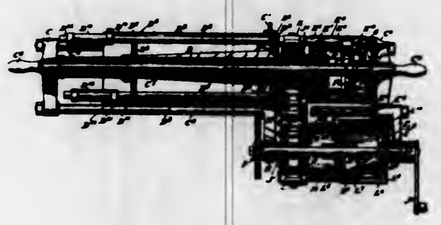
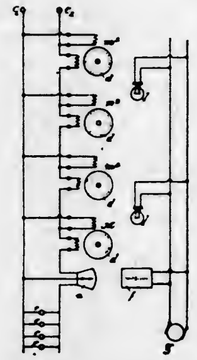
PATENTS



GRANTED AUGUST 8, 1922.

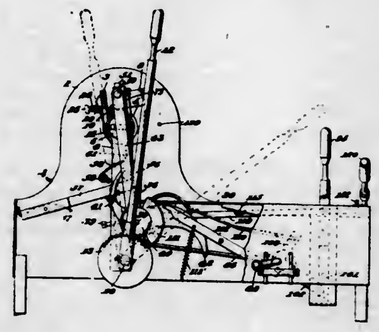
1,424,750. EXCAVATOR PLOWPOINT. CLAYTON O. ANGLEMEYER and FRANK E. PERLBERG, Racine, Wis. Filed Nov. 9, 1920. Serial No. 422,806. 2 Claims. (Cl. 37—56.)

1. A scraper bucket shoe, having a nose provided with a flat face and a chiseled edge tooth, having a rear flattened face in dove-tailed union with the corresponding flattened face of the shoe nose, the dove-tail being tapered in the opposite direction from the cutting strain load put upon the shoe.



1,424,751. AUTOMATIC RAPID-FIRE MACHINE GUN. FRIEDRICH BANGERTER, New York, N. Y. Filed Nov. 4, 1918. Serial No. 261,023. 32 Claims. (Cl. 89—2.)

13. In a gun of the class described, the combination of a rotatable body carrying a plurality of gun barrels, a travelling magazine comprising a plurality of explosion chambers adapted to align with said barrels, means for holding said explosion chambers rigidly to said barrels and firing the charge, and feeding and charging means adapted to feed and load said explosion chambers while in motion, said feeding and charging means comprising a rotatable cylindrical body carrying the loaded cartridge shells and a rotatable cylindrical body provided with a plurality of charging plungers adapted to move said cartridge shells from the feed body to and into said explosion chambers, and means for both manually and automatically actuating all of said stated means and mechanisms.

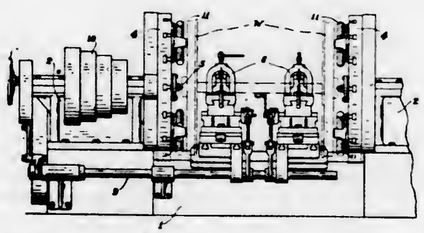


1,424,752. ADJUSTING INTEGRATING ELECTRICITY METERS. OTTO TITUS BLÁTHY, Budapest, Hungary. Filed Nov. 6, 1920. Serial No. 422,321. 4 Claims. (Cl. 175—183.)

4. A method for adjusting electric meters consisting in providing the rotary parts of the meters with marks arranged at regular intervals in a circle; illuminating said meters while under test with electric lamps, the luminous intensity of which fluctuates according to the undulations of the feeding current; feeding said lamps by an alternating current, the frequency of which is in such proportions to the number of marks on the rotary parts of

the meters, that at a given speed of the meters, the number of marks on the rotary part of the meter passing a given point is in predetermined proportion to the number of reversals of the current feeding said lamp; and adjusting the meters until the marks on their rotary parts appear to be stationary.

1,424,753. VERTICAL LOOSE-LEAF-BINDING MACHINE. HENRY M. CRIPPEN, Athens, Ohio, assignor to Henry M. Crippen, William N. Alderman, Field Scott, and Harley H. Haning, all of Athens, Ohio. Filed June 9, 1921. Serial No. 476,272. 18 Claims. (Cl. 129—7.)



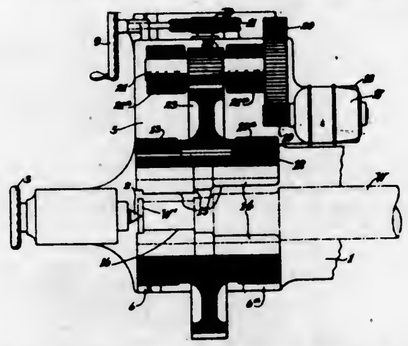
1. In a loose leaf binding machine, the combination with a horizontally disposed anvil, a vertically recipro-

cating series of punches co-operating with said anvil mounted to swing bodily laterally, and a stripper for the punches, of a vertically disposed series of receiving pins to one side of said anvil, and operating mechanism to reciprocate the punches, move them over the filing pins and then actuate the stripper towards the filing pins.

7. In a loose leaf binding machine, the combination with the punching and stripper mechanism, of a transverse fixed axle bar therebelow and having a flat upper side provided with upwardly extending base-engaging pins, and a series of sheet-receiving pins having a base flat on its under side and apertured to receive the said base-engaging pins; the flat under side of the base having a cushioning material affixed thereto.

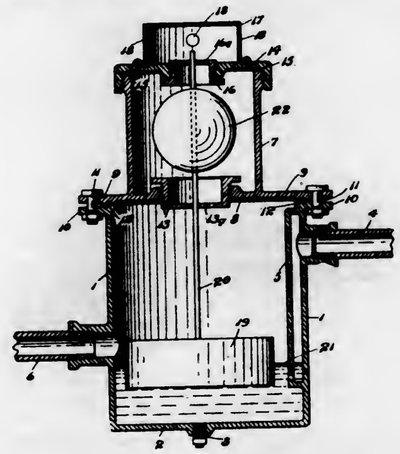
9. In a loose leaf binding machine, the combination with the punching and transfer mechanism and receiving pins, of a sheet carrier extending at its inner end alongside the lower ends of the pins, mechanism for elevating both ends of the carrier simultaneously, and means for throwing out of action the said elevating mechanism for both of said ends during the punching and transferring operation, whereby the carrier will remain stationary.

1,424,754. DRIVING MECHANISM FOR WHEEL LATHES. JAMES K. CULLEN, New York, N. Y., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed July 23, 1920. Serial No. 398,472. 24 Claims. (Cl. 82—8.)



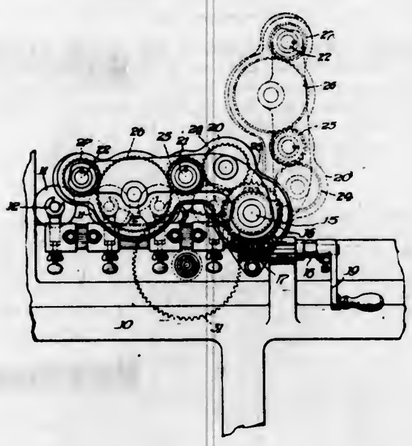
1. In a metal working machine, the combination of a rotary work holder, a plurality of driving elements mounted thereon, a wedge movable relative to each driving element for forcing the elements against the work, a separate power means for operating each wedge, and means for rotating the holder.

10. In a metal working machine, the combination of a rotary spindle and a work holder mounted on one end thereof, a plurality of driving elements mounted on the work holder, means movable relative to each driving element for forcing the elements against the work, power means comprising a cylinder having a resiliently operated piston therein for operating each of the first means, means comprising a conduit extending through the spindle and into communication with the cylinders for providing fluid pressure thereto, and means for rotating the holder.



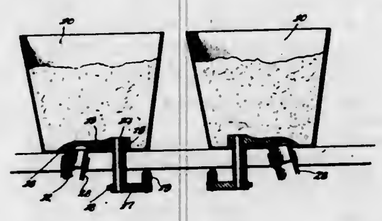
1,424,755. AXLE-MILLING MACHINE. JAMES K. CULLEN, New York, N. Y., and WILLARD T. SEARS, Montclair, N. J., assignors to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 2, 1921. Serial No. 441,847. 15 Claims. (Cl. 90—15.)

1. In a milling machine, the combination of a base, means thereon for rotatably supporting one end of a piece of work, a cutter support, an internal milling cutter rotatably mounted on the support and having internal cutting teeth longitudinally therealong, the said teeth extending radially inward to different distances along the cutter and being adapted to surround the work, means for moving the cutter toward and from the work,



and means for rotating the cutter whereby to mill stepped cylindrical portions of different diameters on the work piece.

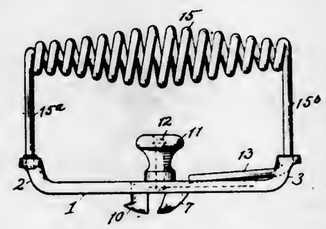
1,424,756. AIR VENT AND VACUUM SEAL. CHARLES V. DEAN and CHAUNCEY A. SIMONDS, Grand Rapids, Mich. Filed Mar. 1, 1920. Serial No. 362,411. 4 Claims. (Cl. 137—122.)



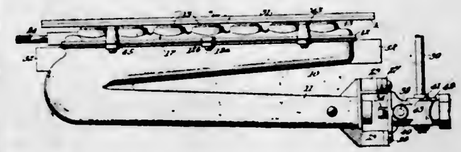
1. In a device of the character described, comprising a lower main chamber member having sides and bottom, an outlet pipe at one side thereof a distance above the bottom, an inlet pipe leading therein adjacent the upper edges of the member, said member being provided with a passage leading from said inlet pipe to a point a distance below the plane of the outlet pipe, a second and upper chamber member located above the first member and closing the upper end thereof and likewise having sides and bottom, the bottom thereof forming the closure to the lower member, a valve seat located in the bottom of the upper member, said valve seat having a passage therethrough connecting the interiors of the two members, a cap closing the upper end of the upper member, a second valve seat located in said cap and likewise having a passage therethrough, a rod passing downwardly through and guided by said valve seats, a float attached to the lower end of the rod adapted to be supported by water in the lower portion of the main member, and a spherical ball valve attached to the rod between the two valve seats, substantially as described.

1,424,757. PRINTING PRESS. EDWARD F. DUDLEY, Oak Park, Ill., assignor to The Miehle Printing Press and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1918. Serial No. 217,692. 9 Claims. (Cl. 101—358.)

1. In a printing press, the combination of a distributing roll for direct contact with an inking roll, means for vibrating the same, and means for moving said distributing roll from its normal operative contacting position with respect to the inking roll without changing the operative relationship between the distributing roll and its vibrating means.



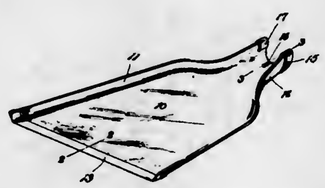
1,424,758. SANDING DEVICE FOR VEHICLES. WILLIAM L. FOURNIER, Seattle, Wash. Filed Jan. 21, 1922. Serial No. 530,866. 4 Claims. (Cl. 291—28.)



1. The combination with a wheeled vehicle; of a sand receptacle positioned adjacent one of the vehicle wheels and provided with a delivery aperture in its bottom, a channel leading from said aperture and adapted to conduct sand from the receptacle into the path of the wheel, a shutter for said aperture, a pivot for said shutter revolubly mounted in the body of said vehicle, an arm on said pivot, a spring for holding said shutter in closed position, and means connected with said arm to open the shutter.

1,424,759. SADIRON HOLDER. SAMUEL H. GIBSON, Cleveland, Ohio, assignor to The Fanner Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 7, 1919. Serial No. 302,554. 5 Claims. (Cl. 68—26.)

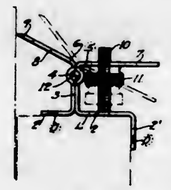
1. A sad iron holder comprising a base portion and handle formed as a coil, upright members securing the handle to the base, said upright members and hand engaging portion being formed from a single and continuous piece of wire, a latch member carried by the base, said wire having an extension which engages the latch to hold it in position.



1,424,760. BURNER FOR GAS FIRES. JOHN H. GRAYSON, Athens, Ohio, assignor to The J. H. Grayson Manufacturing Company, Athens, Ohio, a Corporation of Ohio. Filed May 3, 1921. Serial No. 466,409. 15 Claims. (Cl. 158—104.)

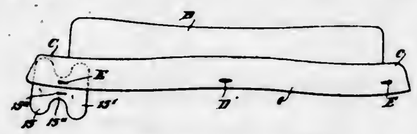
5. In a burner construction for natural gas and for artificial gas, a plurality of grids, a mixing tube, a manifold between the grids and the mixing tube, having a cross-sectional area at least as large as the sum of the effective apertures of the grids, means for constricting the said cross-sectional area and a gas admission mechanism having a variable orifice.

1,424,761. DUSTPAN. JOHN A. HALL, Union, N. H., assignor of one-half to Henry A. Townsend, Milton Mills, N. H. Filed Apr. 27, 1921. Serial No. 464,869. 5 Claims. (Cl. 65—62.)



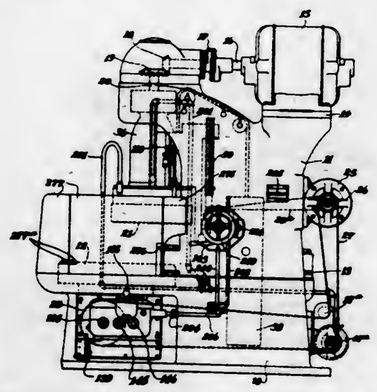
1. A dust pan including a fibrous body reduced at one end portion to provide a channel shaped handle, and a retaining spring embracing the handle and provided with coacting jaws lying within the handle.

1,424,762. SASH LOCK. AUGUST J. HANKE, St. Louis, Mo. Filed Mar. 5, 1921. Serial No. 450,075. 1 Claim. (Cl. 292—212.)



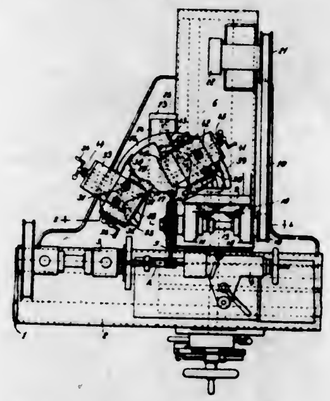
In combination with a pair of window sashes, a sash lock mounted on the lower sash, said lock comprising a

bracket bent from a single piece of flat metal and having a base and an upright portion with a loop in its upper end, a locking plate carrying a stop member terminating in prongs adjacent the upper sash, the locking plate



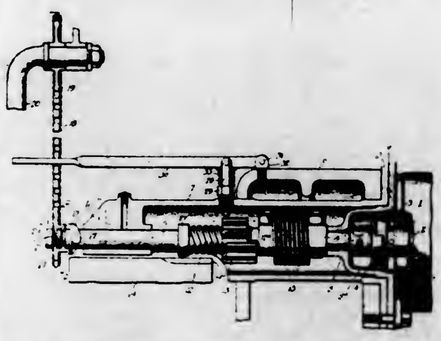
being pivotally mounted in the loop of the bracket, and means engaging the underside of the locking plate for moving the stop member into or out of engagement with the upper sash.

1,424,763. NECKTIE-KNOT RETAINER FOR COLLARS. WILLIAM KARL and HEINRICH KARL, Jersey City, N. J. Filed Mar. 24, 1921. Serial No. 455,057. 1 Claim. (Cl. 2—71.)



A necktie knot retainer comprising a stiff blank adapted to fit in the front portion of a collar and having a button hole in its lower edge portion intermediate its lateral edges to receive a collar button therethrough for supporting the retainer, and having an upwardly flaring recess in its upper edge forming a seat through which the knot of a necktie may rest, the flaring portion of the recess being adapted to accommodate the upper corners of the knot without compressing the same.

1,424,764. SURFACE GRINDER. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 7, 1921. Serial No. 443,298. 20 Claims. (Cl. 51—131.)



1. A surface grinding machine comprising in combination, a base, a work-carrying table thereon, a vertically mounted wheel spindle, a wheel on said spindle adapted to engage work on said table, a horizontally mounted motor for rotating said wheel spindle, and driving connections between said motor and spindle comprising a pair of bevel gears and a sliding connection whereby said wheel spindle may be rotatably connected to said motor with maximum flexibility and adjustment.

1,424,765. WHEEL-DRESSING MECHANISM. ANDERS E. LARSSON, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 16, 1918. Serial No. 222,929. 5 Claims. (Cl. 125—11.)

1. A mechanism for dressing the grinding wheel of a grinding machine, comprising a carrier slide movable forward and backward along lines parallel to the central plane of the wheel, a slide adjustable about an axis normally approximately tangent to the periphery of the wheel and mounted on the carrier slide, said second slide being movable to either side of the center line thereof and movable toward and from the wheel along lines at an angle to the lines of movement of the carrier slide, and means on said latter slide permitting a dressing tool to engage and dress a grinding wheel along a line at right angles to the direction of movement of said latter slide.

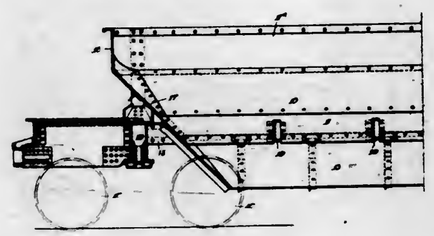
1,424,766. ENGINE STARTER. WILLIAM L. MCGRATH, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a Corporation of New York. Filed Mar. 20, 1919. Serial No. 283,779. 14 Claims. (Cl. 74—7.)

1. An engine starter device including a driving member normally disengaged from a part of the engine to be started and arranged when operated to be automatically engaged therewith, and power driving means and hand-operated driving means adapted to cooperate separately therewith, said hand-operated means being adapted when operated to be automatically connected with such member.

1,424,767. DRIVE BELT. FREDERICK MESINGER, New York, N. Y. Filed Sept. 3, 1919. Serial No. 321,321. 9 Claims. (Cl. 74—64.)

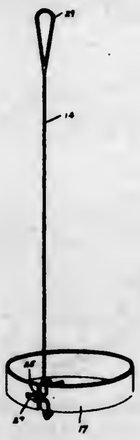
1. A drive belt comprising inner rigid links carrying pivot pins, outer flexible links received about the pivot ends, and reenforcing means for the outer flexible links having parts extending in spaced relation about the pivot pins, there being an intermediate layer of the flexible material of the outer links lying between the pivot pins and said parts.

1,424,768. LINK BELT. FREDERICK MESINGER, New York, N. Y. Filed Sept. 23, 1921. Serial No. 502,670. 5 Claims. (Cl. 74—64.)



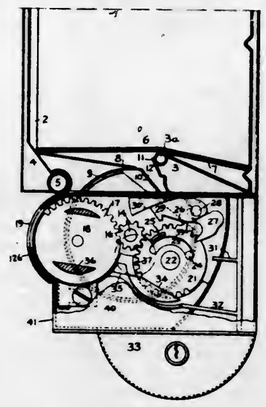
3. A link belt comprising inner links having bosses thereon and provided with enlarged heads at their outer ends, and outer links of compressible material having openings therein of substantially the same diameter as said bosses and adapted to be forced over said heads and pivotally received upon said bosses.

1,424,769. HYSTERESIS POWER TRANSMITTER AND BRAKE FOR PHONOGRAPH MOTOR MECHANISMS. MONTFORD MORRISON, Chicago, Ill. Filed Sept. 5, 1916. Serial No. 118,441. 2 Claims. (Cl. 172—239.)



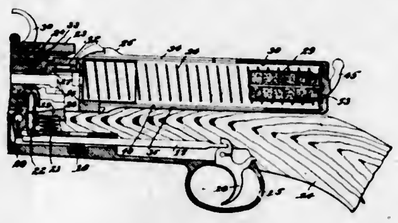
1. In an apparatus of the class described, a driving shaft carrying an armature of hysteretic material, a driven shaft carrying a field in juxtaposition to the field piece in such manner that the magnetic flux of the field establishes a connection therebetween, a normal load connected to the driven shaft of such magnitude as to cause slip between the armature and field, causing hysteresis torque between the armature and field, and as to cause the driven shaft to be driven at a constant speed independent of speed fluctuations in the movement of the field piece, means interposed between the field piece and armature adapted to absorb power, and means adapted to vary the relative positions of the armature, the field piece and the means interposed therebetween.

1,424,770. RAILWAY CAR. JOHN O. NEIKIRK, Lombard, Ill., assignor to Rodger Ballast Car Company, Chicago, Ill., a Corporation of Maine. Filed May 3, 1920. Serial No. 378,384. 2 Claims. (Cl. 105—250.)



1. In a railway car, a sill structure in which there are only two longitudinally extending sills, said sills being located outside of the truck wheels and between the normal positions of the regular center sills and side sills, said two longitudinally extending sills taking the vertical load and the pulling and buffing strains.

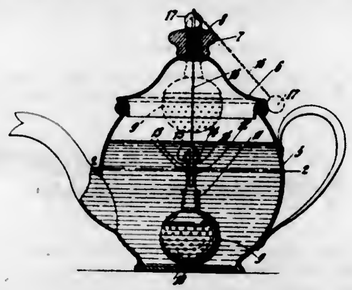
1,424,771. HOSE-LEG SUPPORTER. HERBERT B. NEWTON, Brookline, Mass. Filed Aug. 12, 1921. Serial No. 491,675. 2 Claims. (Cl. 241—6.)



1. A hose leg supporter comprising a standard formed to extend beside a portion of a human leg above the ankle, and provided at one end with hose leg-engaging means, and at its opposite end with strap-engaging means and with a coupling member inseparably attached to said means, and a strap adjustably connected at one end portion with the engaging means, and having a free end provided with a complemental coupling member, the interengagement of said coupling members converting the strap into a band adapted to loosely embrace the wearer's leg immediately above the ankle, the said strap-engaging means, and the coupling attached thereto, preventing displacement of the standard lengthwise of the band.

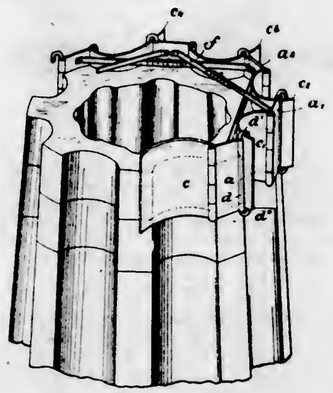
1,424,772. DISPENSING MACHINE. PHILIP D. PARSONS, Philadelphia, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Original application filed Sept. 10, 1920, Serial No. 409,348. Divided and this application filed Mar. 9, 1922. Serial No. 542,245. 6 Claims. (Cl. 211—8.)

1. In a dispensing cabinet, a case providing a compartment having a shelf at the bottom and extending part way across from the rear to support articles such as paper towels, combined with a rotary ejector having a throat opening for receiving a tab of the towels to be dispensed, hand operable means for imparting a rotary action to the ejector for the greater portion of a revolution, and a spring for returning the ejector to initial position with its throat opening directed upward.



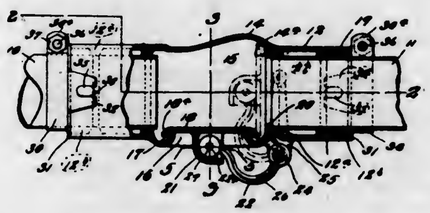
1,424,773. FIREARM. OSCAR V. PAYNE, Cleveland, Ohio, assignor to Auto-Ordnance Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 2, 1920. Serial No. 407,761. 31 Claims. (Cl. 42—3.)

1. A gun comprising a receiver, a bolt adapted to reciprocate longitudinally in the receiver, the bolt having a laterally extending portion passing outwardly through a slot in the receiver, a shutter in the receiver for closing said slot, recoil mechanism within said shutter, and means on said shutter engaged by said recoil mechanism to retain said shutter in adjusted position.



1,424,774. ADJUSTABLE CONTAINER FOR TEAPOTS. HERMAN PEARL, Elmira, N. Y. Filed Oct. 29, 1921. Serial No. 511,319. 3 Claims. (Cl. 53—3.)

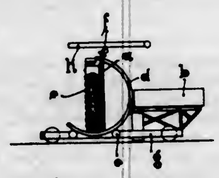
1. In combination with a tea pot or the like having a cover provided with an opening, a foraminous container for the material to be submerged in the liquid in the pot, a flexible element for suspending said container disposed through the opening in the cover, and means adapted to be engaged through said opening, when the suspending element is drawn therethrough to elevate the container, to retain said container in its elevated position and in association with said cover, said means



being constructed for disengagement from said cover by pressure exerted by the fingers laterally of said openings without elevation of said means.

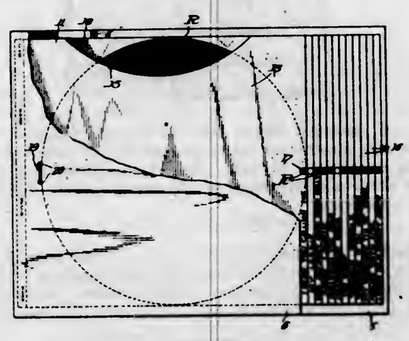
1,424,775. MOLD FOR BUILDING CHIMNEYS OF REENFORCED CONCRETE. JACQUES QUOST, Paris, France. Filed June 22, 1920. Serial No. 390,977. 6 Claims. (Cl. 25—124.)

1. A mold for building chimneys or other similar structures made up of elements each comprising a member of constant size and a member of which the size of the operative part varies substantially as described.



1,424,776. MUFFLER CUT-OUT. RICHARD SCHEID, St. Louis, Mo. Filed Apr. 1, 1921. Serial No. 457,748. 5 Claims. (Cl. 251—10.)

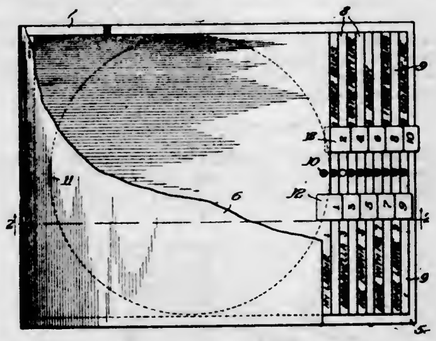
1. In a muffler cut-out, a single piece casting adapted to be interposed in the exhaust pipe of an engine, said



casting being provided with a transverse valve seat adjacent to its muffler end and having a discharge opening formed in its wall, there being an inwardly presented annular flange formed in said casting and encircling said opening, a valve adapted to be seated on said flange for closing said opening, an arm pivotally mounted on the exterior of said casting and having its free end projecting thereinto through said opening, flexible operative connection between said valve and said free end of said arm, resilient means for holding said valve on said annular flange, means for actuating said arm and moving said valve into engagement with said transverse seat, and means adapted to be secured to said exhaust pipe adjacent to each end of said casting for holding the latter against longitudinal and rotative movements.

1,424,777. PROCESS OF AND DEVICE FOR QUENCHING COKE IN NARROW CONTAINERS. WILHELM SCHÖNDELING, Essen-on-the-Ruhr, Germany. Filed May 12, 1920. Serial No. 380,934. 5 Claims. (Cl. 202—11.)

5. The process of treating cakes of coke having narrow and broad sides, comprising receiving the cake from a coking chamber into a quenching chamber on a side of small width, and thereafter positioning it on one of its broad sides to permit quenching water to adequately penetrate the coke.

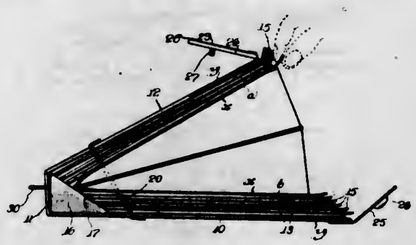


1,424,778. PHONOGRAPH-RECORD ALBUM. PHILIP N. SEA, Chicago, Ill. Filed May 5, 1920. Serial No. 379,189. 4 Claims. (Cl. 129—20.)

4. In a phonograph record album, the combination of a holder structure, a plurality of envelopes hinged at their inner edges on said holder structure, each envelope having a sight hole in its upper wall adjacent the front edge, and means at the inner end of each envelope for forcing received records forwardly into position with their front ends below the sight holes.

1,424,779. PHONOGRAPH-RECORD ALBUM. PHILIP N. SEA, Chicago, Ill. Filed June 12, 1920. Serial No. 388,418. 3 Claims. (Cl. 129—15.)

2. In a phonograph record album, the combination of covers and a plurality of record-receiving envelopes bound therein with their front ends underlapping, said envelopes being open only at their front ends, and a lifting tab secured to the upper wall of each envelope near the

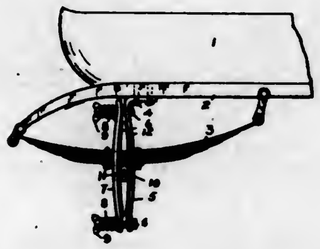


center of its open end whereby when the tab is raised the upper wall will be raised away from and to expose the contained record, said tabs underlapping.

1,424,780. PHONOGRAPH-RECORD ALBUM. FREDERICK W. SEA, Chicago, Ill. Filed July 31, 1920. Serial No. 400,429. 7 Claims. (Cl. 129—15.)

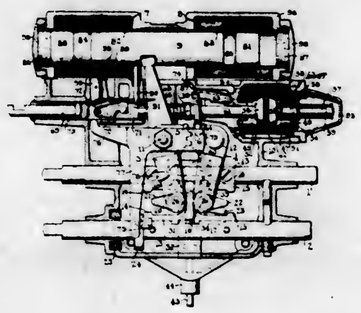
1. In a phonograph record album, the combination of a stack of envelopes having their adjacent walls secured together, and tabs at the open ends of the envelopes secured between said walls.

1,424,781. PHONOGRAPH-RECORD ALBUM. FREDERICK W. SEA, Chicago, Ill. Filed Dec. 20, 1920. Serial No. 431,810. 17 Claims. (Cl. 129—15.)



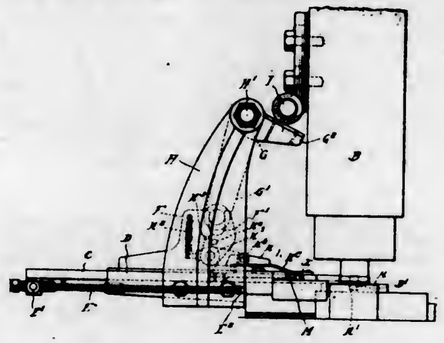
12. In a phonograph record album, a stack of envelopes open at their front ends and secured together at their adjacent walls at points within the sides thereof so as to leave the sides free, said envelopes being wider than the diameters of records to be received, and means for restricting the opening of the envelopes inwardly of their front ends in line with the transverse diameter of the records whereby such envelopes may be opened wide at their front ends and the contained records held spaced away from the upper and lower envelope walls.

1,424,782. ALLOY. WILLIAM H. SMITH, Cleveland, Ohio, assignor to The Cleveland Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 23, 1918. Serial No. 224,118. 5 Claims. (Cl. 75—1.)



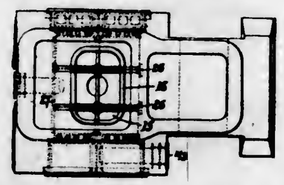
1. An alloy containing as principal ingredients, iron, chromium and nickel, the iron present being not less than 50% nor greater than 85%, the nickel present being not less than 1% nor greater than 10%, together with silicon from approximately 1 to 3%.

1,424,783. SHOCK ABSORBER. WILLIAM E. SNAMAN, Pittsburgh, Pa. Filed Aug. 13, 1921. Serial No. 491,939. 4 Claims. (Cl. 267—9.)



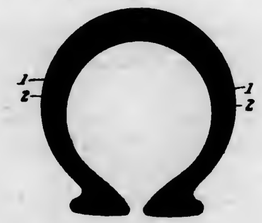
1. A shock absorber comprising a pair of spaced retarding elements adapted to depend from the body of a vehicle, the space between said elements gradually decreasing from the center towards each end, one of said elements being spring controlled and shiftable with respect to the other, and means capable of contacting with said elements below and above the center thereof, whereby said elements are utilized to retard the vertical movement of the vehicle body to absorb shock when the vehicle is travelling over an uneven road surface.

1,424,784. GEAR-SHIFTING MECHANISM. WILLIAM C. STEVENS, Milwaukee, Wis., assignor, by mesne assignments, to Vulcan Motor Devices Company, a Corporation of Pennsylvania. Filed June 5, 1920. Serial No. 386,852. 26 Claims. (Cl. 74—58.)



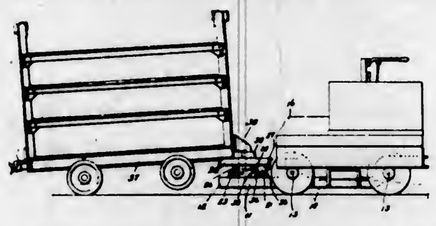
1. In a gear shifting mechanism for automobiles, in combination, a plurality of electro-magnets, means including parts operable by certain of said electro-magnets to effect a plurality of gear changes selectively and returnable to neutral by certain of said electro-magnets and control means for said neutralising and shifting electro-magnets subjecting the same to control by the automobile clutch lever for energization and to control by said first-mentioned means for de-energization.

1,424,785. FEEDING MECHANISM FOR WORK PIECES. WALTER N. STEVENSON, Evanston, Ill., assignor to F. J. Littell Machine Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 3, 1921. Serial No. 434,770. 6 Claims. (Cl. 164—88.)



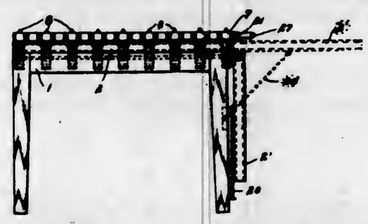
1. A feeding means for presses comprising an introducing member adapted to travel in a path to introduce a work-piece to the press, and a displacing member mounted upon and partaking of the introducing movements of the introducing member, and having an independent movement thereon to move the work-piece from the path of introduction when it arrives in position to receive the action of the press.

1,424,786. CONDENSER. JOSEPH D. STONE, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, a Corporation of Virginia. Filed Sept. 6, 1917. Serial No. 189,932. 7 Claims. (Cl. 60—95.)



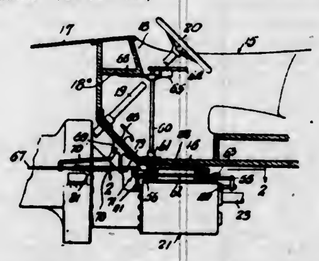
1. A combined engine and condenser therefor, the condenser shell and engine foundation of concrete or other non-metallic material being combined for transmission of the heat expansion of the condenser shell through the foundation.

1,424,787. RUBBER TIRE. JAMES TODD, Pittsburgh, Pa., assignor to The Sterling Varnish Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 8, 1917. Serial No. 147,378. 4 Claims. (Cl. 152—13.)



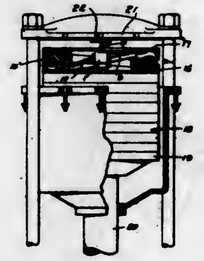
2. As a new article of manufacture, a pneumatic tire casing having on its outer surface a black asphalt varnish coating substantially impervious to light, water and air, deposited on said surface from a solution containing petroleum, benzene, substantially as described.

1,424,788. ELECTRIC TRUCK. CHARLES T. WESTLAKE and KARL S. HOWARD, St. Louis, Mo. Filed Dec. 8, 1919. Serial No. 343,212. 14 Claims. (Cl. 280—33.1.)



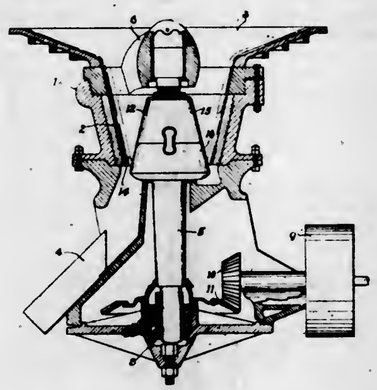
1. The combination with a tractor and a trailer, of an elevating member carried by said tractor and adapted to engage and raise one end of said trailer, coupling means operatively mounted in said elevating member and the connections between said coupling means and said tractor adapted to impart differential operating movement to said coupling means relative to said elevating member.

1,424,789. MACHINE FOR SHAPING CRUSH WORK. EDWARD W. WIESE, Sr., St. Louis, Mo. Filed Nov. 26, 1920. Serial No. 426,416. 21 Claims. (Cl. 223—52.)



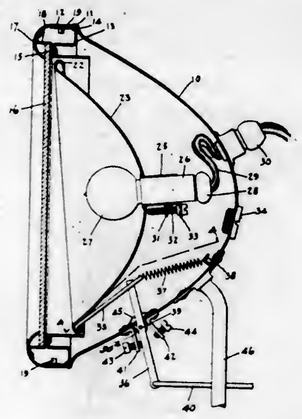
1. In a machine for making crush work, styli supporting means, certain of said styli supporting means being movable in longitudinal direction and all of said styli supporting means being movable in lateral direction, and a series of styli arranged in parallel rows in said supporting means, whereby each row of styli is extensible longitudinally in said supporting means independently of the other rows.

1,424,790. GEAR-SHIFT MECHANISM. EDWIN B. WILES, Chicago, Ill. Filed Nov. 8, 1920. Serial No. 422,455. 11 Claims. (Cl. 74—59.)



1. A gear shift mechanism, comprising in combination with a driving shaft, a driven shaft, a counter shaft, and a plurality of gears adapted to connect said shafts to operate the driven shaft at first and second speeds and in reverse, a clutch and operating yoke intermediate the gears of the first ratio and the reverse gear, a second clutch and operating yoke intermediate the gears of the second ratio and the driving shaft, a main gear shift arm, rotative members, one for each operating yoke at opposite sides of said arm, adapted to be oscillated in opposite directions thereby, and means connecting said rotative member to its associated operating yoke.

1,424,791. MOLD-OPENING DEVICE. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed May 25, 1921. Serial No. 472,498. 5 Claims. (Cl. 18—2.)

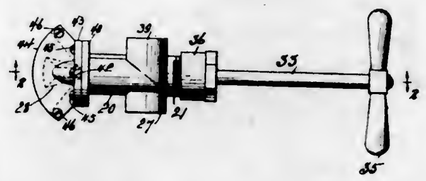


1. The combination with a sectional mold and an internal carrier and with a press type of vulcanizer having a movable ram and relatively stationary cover, of a device for separating both of the mold sections from a tire on the carrier by upward movement of the ram on which the mold rests.

1,424,792. ROCK CRUSHER. CLEMENS W. ACKERMANN, Chicago, Ill., assignor to Frog Switch and Manufacturing Company, Carlisle, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1919. Serial No. 347,923. Renewed June 12, 1922. Serial No. 567,742. 6 Claims. (Cl. 83—10.)

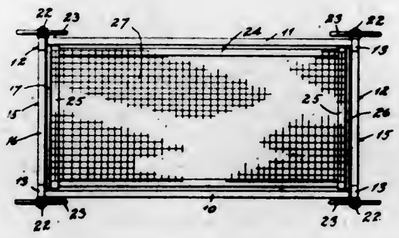
1. In a mantle for a crusher head, the combination of a head center, a mantle comprising an upper and a lower mantle section mounted on said head center, the adjoining edges of said mantle sections being provided with registering locking recesses terminating at points intermediate the ends of said mantle sections, a separate locking key independent of both mantle sections for locking said sections together, said locking key having enlarged end portions engaging in the co-operating recesses.

1,424,793. TILTING REFLECTOR FOR LAMPS. SAMUEL F. ARBUCKLE, Connersville, Ind., assignor to United States Automotive Corporation, Connersville, Ind. Filed Mar. 18, 1921. Serial No. 453,516. 6 Claims. (Cl. 240—41.)



1. In combination with a lamp casing and closure therefor, of a tilting reflector device including a reflector pivotally mounted in said casing, an actuating lever extending through said casing and pivoted thereto, means for limiting the movement of said lever, a spring mounted between said casing and reflector having its respective ends secured thereto for yieldingly maintaining said reflector in normal position, a member secured to said reflector in position to be engaged by said lever, and means secured to the lower end of said lever for operating the same for causing it to engage said member and move the reflector to tilted position against the action of said yielding mears.

1,424,794. WRENCH OR OTHER TOOL. JOSEPH RENÉ AYOTTE, Chicago, Ill. Filed Jan. 28, 1920. Serial No. 354,545. 10 Claims. (Cl. 81—177.)

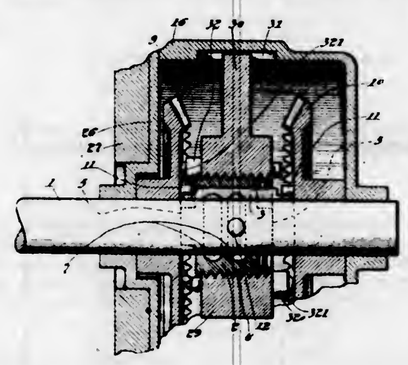


1. In a wrench or tool of the class described, the combination of an outer stationary tube forming a shank or handle, an inner rotary tube, an extension tube telescoped within the rotary tube, said extension tube having a longitudinal groove therein, and means engaging said groove to prevent relative rotation between said rotary tube and said extension tube, together with a tool-like device connected with the rotary tube and a handle connected to the extension tube.

1,424,795. OIL BURNER. JOHN F. BANNON, Bayonne, N. J. Filed Dec. 31, 1919. Serial No. 348,533. 3 Claims. (Cl. 158—75.)

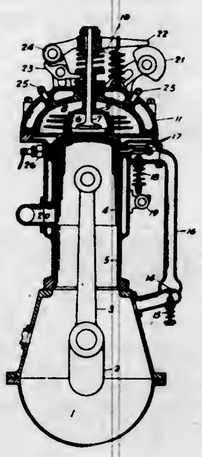
1. In a burner for liquid fuel the combination of a body portion with a nose end and having a steam chamber and an oil chamber adjacent one to the other, said nose end having an oil well spaced from said oil chamber and having a port connecting it with the oil chamber, a detachable cap for said nose end covering said oil well and one end of the steam chamber, said cap having a port connecting the steam chamber and the top of said oil well, said cap forming an outlet port with the upper portion of the oil well for the burner, means to furnish steam to the steam chamber and means to furnish oil to the oil chamber.

1,424,796. FOLDING BASSINETTE. HENRY BEHR, Brooklyn, N. Y. Filed May 7, 1920. Serial No. 379,526. 3 Claims. (Cl. 280—36.)



1. A folding bassinette, comprising folding panels, supporting members associated with said panels, and a removable member forming a bottom for said bassinette, adapted to rest on said supporting members and maintain the bassinette in full open position.

1,424,797. AUTOMATIC REVERSING MECHANISM. GUSTAVE W. BERTHOLD, Chicago, Ill. Filed Apr. 3, 1919. Serial No. 287,220. 15 Claims. (Cl. 74—50.)



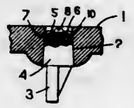
1. In a device of the kind described and in combination, a driven shaft, two rotatable members loosely mounted on said shaft, intermediate means between the two members so arranged that when either of said members is rotated the other will be rotated in the opposite direction, a cooperating clutch member slidably mounted upon the shaft positioned between the two members, arranged

to alternately engage them, and a cooperating encircling member axially movable on the clutch member so as to be

reciprocated thereby and arranged to alternately shift the clutch member into engagement with said rotatable members.

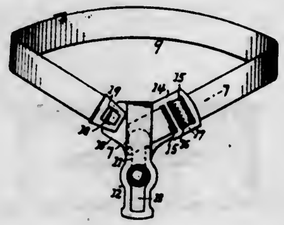
1,424,798. EXPLOSIVE ENGINE. HARVEY B. BLACK, Bogota, N. J. Filed Dec. 9, 1919. Serial No. 343,683. 11 Claims. (Cl. 60—16.)

1. The method of operating an internal combustion engine consisting in generating steam therein by mixing the gaseous products of combustion, resultant from the explosion of the vaporized fuel, directly with water preheated by contact with the engine parts normally heated by such explosion; separately confining said steam during its generation and during the explosion impulse stroke of the piston; admitting said steam to the piston upon its return therefrom; permitting the expansion of said steam to drive said piston upon its next stroke and repeating said steam cycle in alternation with the explosive cycle.



1,424,799. ADJUSTER. HARRY E. BROWN, Grenola, Kans. Filed June 16, 1921. Serial No. 478,120. 5 Claims. (Cl. 255—18.)

1. In a device of the class described, an upper clamp; means for mounting the upper clamp for swinging movement; a spreader; a lower clamp; a cable looped in the upper clamp and having its ends separated by the



spreader; and means for connecting the ends of the cable with the lower clamp.

1,424,800. HORSESHOE CALK. ANDREW BULSKI, Newton, Mass., assignor of one-half to Patrick J. Quinn and one-fourth to Stephen Sullivan, both of Newton, Mass. Filed June 25, 1921. Serial No. 480,272. 3 Claims. (Cl. 168—41.)

2. The combination with a horseshoe having an opening, of a calk having a shank to enter said opening, and a spring retaining device extending transversely of the shank and having a length slightly longer than the diameter of the shank whereby said retaining device will flex as the shank is introduced into the opening and the resiliency of said retaining device will cause the ends thereof to grip the walls of the opening and thereby to prevent the shank from being dislodged.

1,424,801. GARTER. ROBERT M. BYERS, Brooklyn, N. Y. Filed June 2, 1919. Serial No. 301,260. 5 Claims. (Cl. 241—6.)

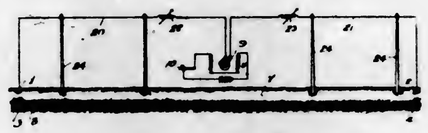
1. A garter comprising a clasp having back and front members, keyhole slots formed in the members, a button slidingly arranged in the slots, a lateral slotted lug projecting at an angle from the back to adjustably attach one end of an elastic band, and a hook located opposite to the lug for engagement with another end of the band.

4. A celluloid blank adapted to form a clasp for garters having a pair of longitudinal slots, one being above the other, and a lateral dog extending at an angle from the body of the blank.

1,424,802. MANUFACTURE OF RESILIENT TIRES AND APPARATUS THEREFOR. THOMAS H. CHANNON, Fitzroy, Melbourne, Victoria, Australia. Filed Jan. 3, 1922. Serial No. 526,659. 5 Claims. (Cl. 18—45.)

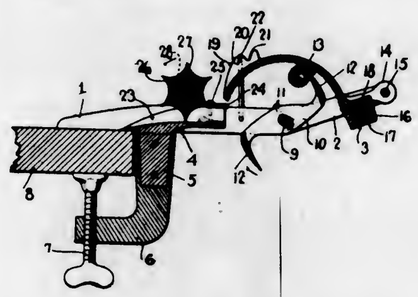
1. In means for making a resilient tire of the kind indicated, a circular dividing plate, in combination with a series of cores each of which is provided with an open mouthed gullet to receive the outer portion of said plate, and screws passing through threaded holes in said cores to retain them to the dividing plate, substantially as and for the purpose specified.

1,424,803. FASTENER. SEWELL M. CORBETT, Honolulu, Territory of Hawaii. Filed Sept. 18, 1920. Serial No. 411,304. 4 Claims. (Cl. 24—18.)



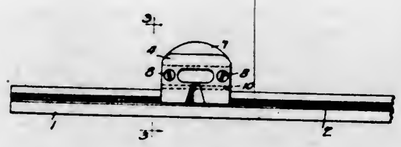
1. A device of the character described including a base having an overhanging forwardly bent back spring provided with a clamping tongue confronting the base in coacting relation, the bend between the base and back spring being formed to provide a substantially channel shaped keeper receiving the free end portion of the tongue.

1,424,804. JEWEL SUPPORT FOR COMPASSES. EDWIN W. DAY, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed July 23, 1917. Serial No. 182,126. 7 Claims. (Cl. 33—222.)



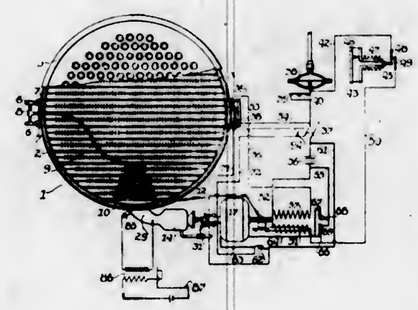
3. In a compass, the combination with a casing, of a spring supported by said casing, a supporting element on said spring, a member having a shouldered aperture on said element, a jewel clamped between the top of said element and the shoulders of said aperture, and a magnetic rotatable element pivotally supported on said jewel.

1,424,805. SUBTERRANEAN SIGNALING SYSTEM. LEE DE FOREST, New York, N. Y. Filed June 16, 1917. Serial No. 175,119. 8 Claims. (Cl. 250—3.)



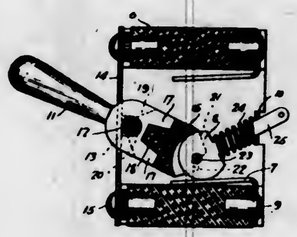
1. A system of electrical signalling comprising a pair of overhead base lines each formed between plates buried in the earth in substantially the same stratum of different conductivity from that of the earth's surface, and a signaling circuit associated with each of said base lines.

1,424,806. DOUGH-FORMING MACHINE. LOUIS DE VITO, Cleveland, Ohio. Filed May 17, 1919. Serial No. 297,839. Renewed July 30, 1921. Serial No. 488,677. 7 Claims. (Cl. 107—9.)



1. A device of the class described comprising a frame, means therein for rolling a piece of dough into spiral shape and cutting means for the dough cooperating with a part of the before mentioned means.

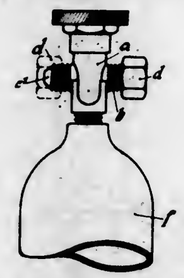
1,424,807. MAGNIFYING RUNNER FOR SLIDE RULES. CARL F. DIECKMANN, Chicago, Ill., assignor to Eugene Dietzgen Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 21, 1921. Serial No. 446,730. 3 Claims. (Cl. 235—70.)



1. A runner for slide rules having upstanding side plates adapted to travel along the rule, a transparent cross member extending from one plate to the other slightly above the upper surface of the rule, and having a reading line marked on it, a magnifying glass the ends whereof abut the inner surfaces of the plates, near the top, and tie rods for drawing the plates firmly against the ends of the transparent cross member and magnifying glass.

1,424,808. BURNER. JOHN A. DIENNER, Chicago, Ill., assignor to Charles A. Brown, Harvey L. Hanson, and John A. Dienner, Copartners doing business as Brown, Hanson & Boettcher, Chicago, Ill. Filed Dec. 10, 1917, Serial No. 206,431. Renewed June 21, 1922. Serial No. 569,883. 15 Claims. (Cl. 158—31.)

1. In combination, a boiler, a vaporizing burner, for heating said boiler, a vaporizing coil for said vaporizing burner, automatic regulating means controlled by conditions within said boiler for stopping and starting said vaporising burner, an atomizing burner, and means controlled by said automatic regulating means for automatically operating said vaporizing and atomizing burners in overlapping alternating sequence.

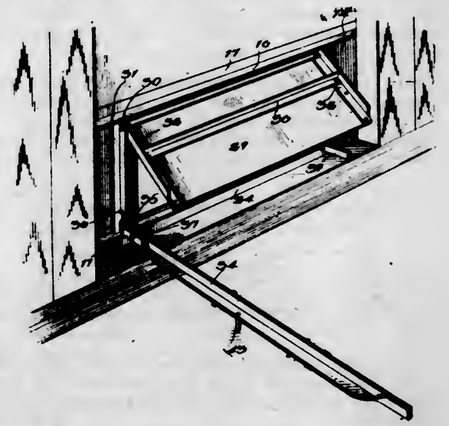


1,424,809. ELECTRIC SWITCH. HAROLD POTTER DONLE, Meriden, Conn., assignor to The Connecticut Telephone and Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed May 21, 1921. Serial No. 471,437. 7 Claims. (Cl. 200—67.)

1. In an electric switch, an insulating body having a passage extending from the front to the rear thereof with bearing notches in the front, a cross bar in the rear, a relatively stationary contact in said recess, a movable contact guided by said bar, a spring interposed between said bar and said contact, an operating handle pivoted in said bearing notches, an insulating connector interposed between said handle and said movable contact member, and a face plate holding said handle, said connector and said movable contact in place.

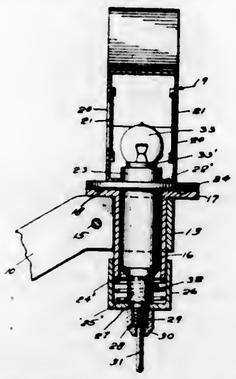
1,424,810. STOP VALVE FOR PRESSURE-GAS CONTAINERS. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany. Filed June 9, 1921. Serial No. 476,233. 2 Claims. (Cl. 251—155.)

2. In a stop valve for pressure gas containers the combination of a threaded delivery socket, a threaded dead socket having a domeshaped projection on its free end



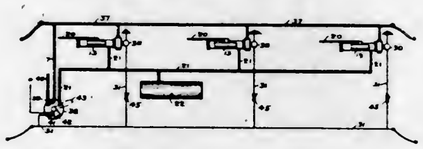
face, and a protecting screw cap adapted to be screwed on one or the other socket.

1,424,811. HYDROPLANE. ROBERT P. ERHARD, Juniata, Pa. Filed Dec. 1, 1920. Serial No. 427,567. 5 Claims. (Cl. 114—66.5.)



1. The combination with the hull of a hydroplane and tiltable planes at the sides thereof, of motor propelled means for tilting the planes at one side of the hull oppositely to the planes at the other side of the hull, and motor propelled means for shifting all of the planes simultaneously upwardly and downwardly at their front ends.

1,424,812. BOX-CAR DOOR. OSCAR FROMAN and WARREN ARTHUR WILMOTH, Edna, Kans. Filed Apr. 2, 1921. Serial No. 457,882. 5 Claims. (Cl. 292—259.)

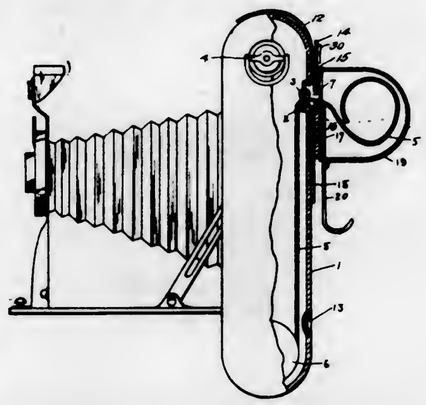


1. The combination with a body, of a gate horizontally hinged thereto, a hinge connected to the body for swinging movement about a vertical axis, a gate locking bar of angle iron horizontally pivoted to said hinge, and a keeper vertically pivoted to said body and having means overlapping and engaging the terminal portion of said lock bar, and also engaging said gate.

1,424,813. DIRECTION-INDICATING SIGNAL. JOSEPH A. GLANCEY, Rock Island, Ill. Filed Oct. 19, 1921. Serial No. 508,740. 3 Claims. (Cl. 116—48.)

1. A signal apparatus for indicating direction, comprising an outer casing provided at its upper end with a flange, said flange having depressions in its top face, an arm serving to hold the casing stationary and adapted to be secured to a part of an automobile, a direction indicating casing provided with openings in its sides, an inner casing projecting into the lower portion of the direction indicating casing, and provided near its upper end with a flange which is secured to the direction indicating casing, said inner casing being pivotally mounted within the outer casing, and having a reduced portion at its lower end projecting downwardly below the outer casing, a cap slidable upon the lower end of the outer casing and having an opening in its bottom to receive the lower end of said reduced portion, a coil spring arranged within the cap outwardly of the reduced portion and engaging the bottom of the cap and the lower end of the outer casing, a cap nut carried by the lower end of said reduced portion and engaging said cap, projections secured to the lower face of the flange of the outer casing and adapted to enter said depressions, an electric bulb held within the upper end of the outer casing and arranged within the direction indicating casing, and a cable extending through the inner casing and having suitable connection with the filament of the bulb.

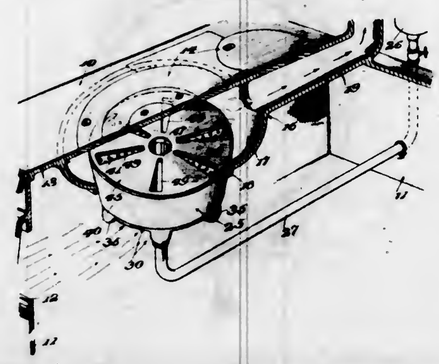
1,424,814. CAR-DOOR-OPERATING MECHANISM. ALBERT GOTTSCHALK, New York, N. Y., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Oct. 18, 1919. Serial No. 331,627. 20 Claims. (Cl. 105—341.)



1. In a door operating mechanism, the combination of a fluid pressure motor for the door, and means for controlling the operation of the motor either electrically or pneumatically.

1,424,815. PACKAGE RECEPTACLE FOR DOORS AND PARTITIONS. JOHN ALAN CAMPBELL GREENE, Folkestone, England. Filed Apr. 26, 1921. Serial No. 464,679. 4 Claims. (Cl. 232—41.)

1. The combination with a wall structure having an aperture and a shutter for closing the aperture, of a goods receiving apparatus comprising a container or casing divided into a number of compartments and mounted to slide on guides in proximity to the shuttered aperture in the wall structure, and means whereby the operation of the shutter of the aperture transmits a sliding motion to the container substantially as and for the purposes set forth.



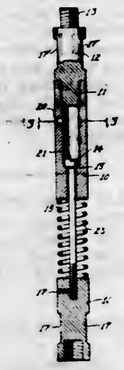
1,424,816. COMBINATION FILM CAMERA AND DEVELOPING TANK. ANTHONY F. GRILLONE, Rochester, N. Y. Filed Jan. 15, 1921. Serial No. 437,574. 6 Claims. (Cl. 95—13.)

1. A combination film camera and developing tank, comprising a camera, a detachable developing tank mounted at the back of said camera, means adapted to feed the exposed film from said camera into said tank, and means adapted to sever the film in said tank from the film in said camera, and means for releasing said developing tank with the severed film portion contained therein.

1,424,817. BURNER. ROBERT ASHLEY GRIM, St. Paul, Minn. Filed June 30, 1921. Serial No. 481,719. 6 Claims. (Cl. 158—86.)

1. A burner comprising a base having a plurality of radiating fuel troughs and air inlet openings intermediate the troughs, said base having a laterally extending annular shoulder and a series of upstanding legs, a shell resting on the annular shoulder and engaged by the lugs, a plurality of pairs of perforated plates arranged in the shell, the members of the pairs of plates being arranged on the opposite sides of the fuel troughs, said shell having slots in its inner wall receiving the outer ends of said plates, and a top plate having radiating flame openings overlying said fuel troughs and having a series of depending lugs engaging the shell and a central hub, said perforated plates being notched to accommodate said hub.

1,424,818. WHEEL. CHARLES GUERNSEY, Wabash, Ind. Filed June 1, 1920. Serial No. 385,472. 5 Claims. (Cl. 301—63.)

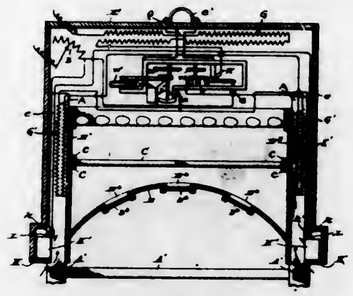


1. A vehicle wheel comprising a rim, a pair of discs secured thereto and provided with central openings, a ring secured to the inner periphery of one of said discs, a detachable hub adapted to be introduced through said disc openings, provided with a shoulder adapted to engage said ring and with a flange overlapping the inner margin of the other disc, and means co-operating with said flange to place said discs under tension.

1,424,819. BASKET TRUCK. LEE B. HAYES and VERN W. KEMP, Paonia, Colo. Filed Mar. 2, 1921. Serial No. 449,114. 6 Claims. (Cl. 214—65.5.)

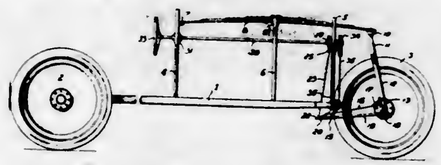
1. The combination with a hand truck, of a pair of arcuate cupped supporting arms pivotally mounted upon the lower end of the truck, and means upon the truck for moving said arms into and out of engagement with a circular article.

1,424,820. OIL-WELL TOOL. GUY F. HEAP, Midian, Kans. Filed June 13, 1921. Serial No. 477,311. 2 Claims. (Cl. 255—28.)



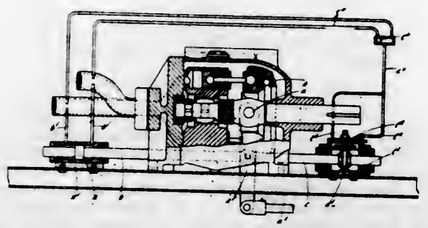
1. A sucker rod for oil wells comprising a plurality of sections, one of said sections including a tubular body portion, a coupling member joining the body portion with one of said sections, a rod swivelly connected with the said body portion and projecting beyond the end thereof, a coupling joining the rod with the adjacent section of the rod, and a cushioning element interposed between the latter mentioned sections of the rod for the purpose specified.

1,424,821. APPARATUS FOR INCUBATING. CHARLES M. HECK, Raleigh, N. C. Filed Nov. 19, 1914. Serial No. 873,061. 32 Claims. (Cl. 119—37.)



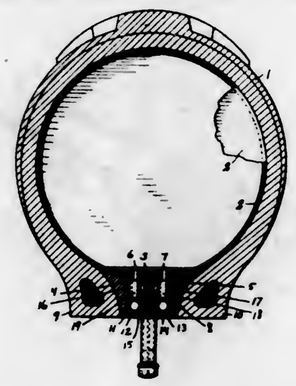
1. In an incubator the combination with an incubator chamber and ventilating flues, means for heating the

chamber, means adapted to be operated for heating the ventilating flues, and means acting automatically to throw



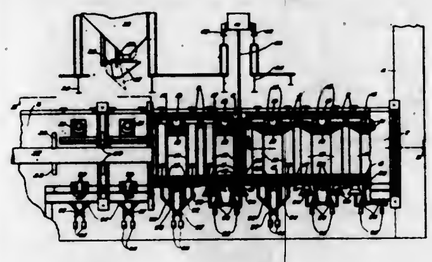
into operation the ventilating flue heaters upon the building up of a temperature in the incubator above a given point.

1,424,822. TRICYCLE OR THREE-WHEEL MOTOR VEHICLE. EDVIN HERDS, Detroit, Mich. Filed Dec. 27, 1920. Serial No. 433,239. 20 Claims. (Cl. 208—114.)



1. In a vehicle having a chassis and a single supporting and steering wheel in front, the combination of a vehicle supporting fork for the wheel, a steering fork for the wheel at approximately right angle to said supporting fork and extending horizontally rearward from the hub portion of said wheel, two radius rods with universal joints at both ends holding the lower end of said supporting fork relative to said chassis, and means connected to the rear end of the steering fork adapted to move it in a horizontal plane.

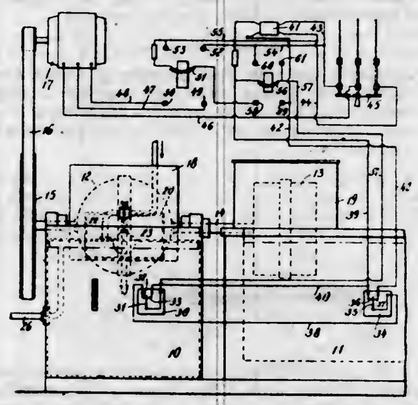
1,424,823. HYDRAULIC PUMP AND MOTOR. MAURICE KERR INGOLDBY, Westminster, London, England, assignor to The Variable Speed Gear, Limited, Westminster, London, England. Filed Nov. 28, 1921. Serial No. 518,186. 20 Claims. (Cl. 103—3.8.)



1. In a variable stroke fluid pump having at least one cylinder and piston, a member controlling the stroke of the piston, and balancing means acting on said member interposed between the same and a part which remains stationary during the stroke controlling adjustments of said member, for approximately balancing the resistance offered by the fluid to the adjustment of said member in the stroke increasing direction.

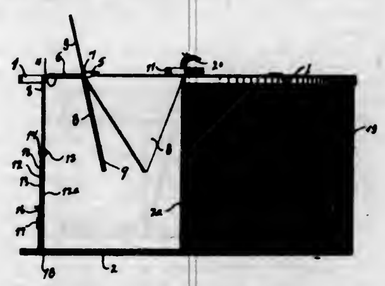
1,424,824. TIRE. ORIN JOHNSON and CLARENCE NEUMAN, Menasha, Wis. Filed Nov. 20, 1920. Serial No. 425,384. 2 Claims. (Cl. 152—22.)

2. In a tire, the combination with a casing of a plurality of cells, a filling strip, provided with grooves and apertures, an inflating tube and a deflating tube disposed within the grooves of the filling strip and communicating with the cells through nipples received within the apertures, and means to prevent air from passing from an unpunctured cell to a punctured cell.



1,424,825. VERTICAL RETORT ZINC-SMELTING FURNACE. ARCHIBALD JONES, Pittsburgh, Pa. Filed Feb. 19, 1921. Serial No. 446,415. 6 Claims. (Cl. 266—19.)

1. A smelting furnace comprising a furnace chamber, a plurality of vertical retorts arranged in rows in said chamber, and a fixed condenser arranged between two rows of said vertical retorts and communicating with each of said retorts in said rows.

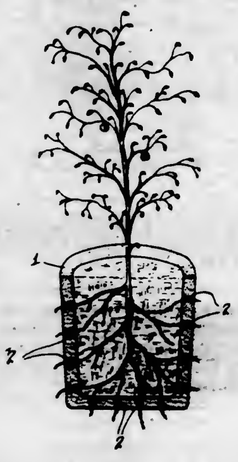


1,424,826. CONTROL FOR REFRIGERATING MACHINES. ALFRED D. KARR, Newark, N. J., and KARL D. PERKINS, New York, N. Y., assignors to Audiffren Refrigerating Machine Co., New York, N. Y., a Corporation of New Jersey. Filed Mar. 2, 1920. Serial No. 362,756. 18 Claims. (Cl. 62—4.)

2. In refrigerating apparatus provided with motor driven compression and expansion members rotatably mounted in a condenser tank and a refrigerating plant respectively, the combination of a thermostat in the condenser tank and a thermostat in the refrigerating tank, and means associated with the thermostats for controlling the driving motor, said thermostats being electrically connected to each other and to the controlling means so that the thermostat in the refrigerating tank can control said means only when the thermostat

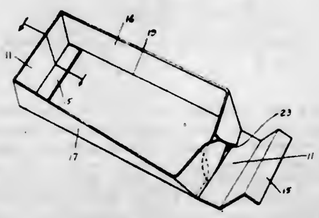
in the condenser tank is in normal circuit closing position due to a predetermined temperature of the liquid in said tank.

1,424,827. ANIMAL TRAP. JOSEPH KENDZIERSKI, Minneapolis, Minn. Filed Apr. 23, 1921. Serial No. 463,783. 1 Claim. (Cl. 43—69.)



A trap comprising upper and lower frames, a multagonal wall disposed vertically therebetween, a multi-recessed disc secured at the corners of said wall, tongues extending radially inward from the corners, shutter-like doors pivotally mounted on the inner ends of said tongues, said doors being depressed by weight, stops limiting the movement of said doors, gravity operated means for returning said doors to their initial positions, and operable means for obtaining access through said wall.

1,424,828. OPHTHALMIC MOUNTING. HENRY E. KIRSTEIN and THOMAS LEYTHAM, Rochester, N. Y., assignors to E. Kirstein Sons Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 20, 1920. Serial No. 404,838. 2 Claims. (Cl. 88—53.)

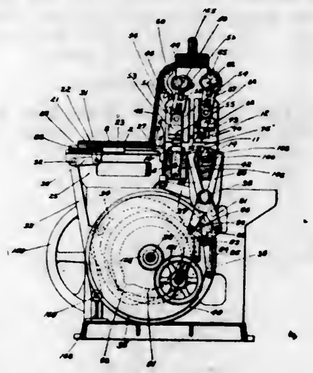


1. An ophthalmic mounting comprising a non-metallic lens frame, a temple supporting member formed of non-metallic material and having a portion projecting outwardly and portions extending rearwardly from the plane of the frame and forming a pocket closed at its front and outer side and open at its rear and inner side, and a temple pivotally mounted in the pocket to fold inwardly over the rear face of the frame and to have its outward movement limited by the outer side of the pocket.

1,424,829. FERTILIZER POT. HENRY KLEB, Elizabeth, N. J. Filed Apr. 18, 1921. Serial No. 462,221. 2 Claims. (Cl. 47—34.)

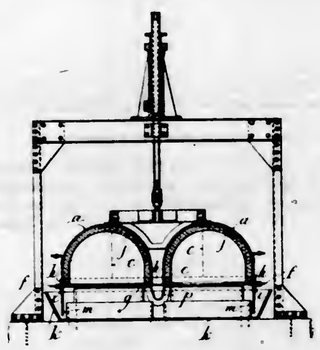
1. A fertilizer pot or receptacle consisting of plant nourishing materials and a porous binding material.

1,424,830. LOCK FOR PAPER BOXES. EUGENE KOTTERMAN, Marion, Ind., assignor to International Printing Company, Indianapolis, Ind., a Corporation. Filed Aug. 1, 1921. Serial No. 488,814. 3 Claims. (Cl. 229—34.)



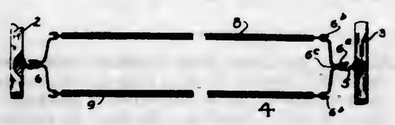
2. A box construction including a body portion and double sides and ends, a flap on each end of said sides, and of such form that when doubled each end of a side is provided with a projecting tongue and adjacent pocket portion to provide a dual lock construction.

1,424,831. MACHINE FOR FORMING REENFORCING GIRTHS. ALBERT S. KUX, Chicago, Ill., assignor to Signode System, Inc., a Corporation of Delaware. Filed Nov. 10, 1917. Serial No. 201,221. 21 Claims. (Cl. 153—2.)



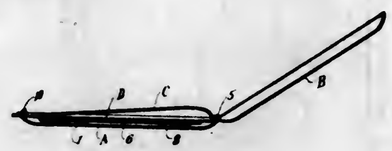
1. In a machine for making metallic reenforcing girths for metallic tension resisting box strapping, means for

feeding a strip of girth forming material of a width sufficient to form a single line of girths sidewise, means for



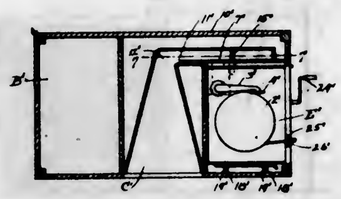
severing said strip into a plurality of blanks each adapted to form a reenforcing girth, and means for thereafter forming said blank.

1,424,832. GAS-REVERSING VALVE. WYVIL HARTLEY LAKE, Stoke-upon-Trent, England. Filed Aug. 16, 1921. Serial No. 492,854. 5 Claims. (Cl. 137—148.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



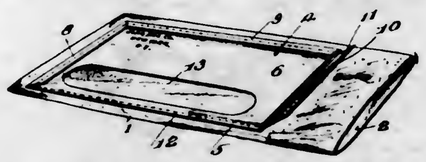
1. In a gas reversing valve of the kind referred to, a vertically movable hood comprising two separate arched casings of metal, a trough uniting adjacent edges of such casings, said trough having closed ends, and a liquid seal which the trough aforesaid enters when the hood is in its lowermost position said trough when elevated as well as when lowered, containing liquid sufficient to prevent warping.

1,424,833. HAT SUPPORT. FRANK B. LEONARD, Chicago, Ill. Filed July 9, 1921. Serial No. 483,613. 4 Claims. (Cl. 45—13.)



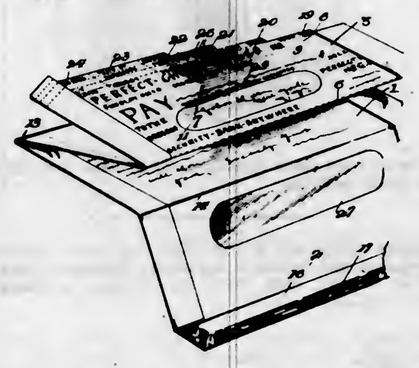
1. A hat support comprising a pair of yokes, each yoke shaped at the center to receive elements for fastening the device to the braces of an automobile top, and a pair of resilient members suspended between said yokes in parallel spaced relation, the distance between the members being substantially the width of a hat crown.

1,424,834. CASE FOR CIGARETTES AND THE LIKE. WILLIAM H. LESTER, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed June 16, 1921. Serial No. 477,878. 4 Claims. (Cl. 206—41.)



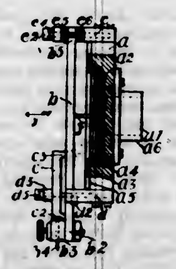
1. In combination with a case having a pair of dished covers connected by a spring hinge, a leaf swingingly mounted between the covers, spring means for normally holding the leaf against one of the covers, and a mounting on the leaf adjacent said cover for carrying a thin article, the said leaf being also provided with a mounting for a similar article, substantially as described.

1,424,835. PHONOGRAPH CONSTRUCTION AND HOUSING. FREDERICK H. LIVINGSTON, Binghamton, N. Y., assignor to William J. Vogt, Binghamton, N. Y. Filed June 9, 1920. Serial No. 387,709. 3 Claims. (Cl. 274—2.)



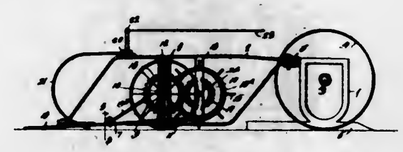
1. In a musical instrument, a housing, a horn rigidly mounted therein, a drawer slidably mounted in the housing and provided with a partition forming two compartments, phonograph operating mechanism mounted in one of the compartments of the drawer, a tone arm arranged in communication with the other compartment and carried by the drawer and an adjustable passage establishing communication between the horn and the compartment which communicates with the tone arm, substantially as described.

1,424,836. BAG AND ENVELOPE. WILLIAM E. LOVER, Findlay, Ohio. Filed July 2, 1918. Serial No. 243,039. 1 Claim. (Cl. 229—72.)



In an article of the class described, a bag of limp material having a mouth at one end, an envelope having a back disposed against one side of the bag, means extending along the side edges of the envelope and the end edge thereof remote from the mouth of the bag to secure the front and back of the envelope together and to the said side of the bag, the said sides and end of the envelope being permanently closed by said means and the other end of the envelope being left unattached and open to provide a mouth spaced inwardly from the mouth of the bag, the said back of the envelope being provided at its last mentioned end with an extension providing a closure flap for the said mouth end of the envelope.

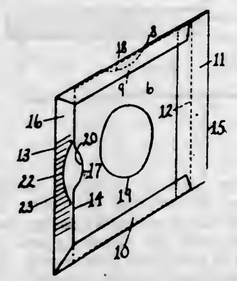
1,424,837. COMBINED LETTER SHEET, CHECK, ENVELOPE, AND CARBON COPY. WILLIAM E. LOVER, Findlay, Ohio. Filed July 8, 1918. Serial No. 243,825. 4 Claims. (Cl. 283—9.)



1. In an article of the class described, an original sheet and a second sheet integrally connected along one edge to receive a manifolding sheet between them, the original sheet having upon its face a negotiable instrument form and the second sheet having upon its face a substantial duplicate of said form whereby a record of the instrument will be produced upon the duplicate form through the manifolding sheet, the united marginal portion of the negotiable instrument form of the first-mentioned sheet bearing series of numerals representing series of numerals arranged in decimal divisions, whereby when the original sheet is separated to leave connected therewith portions of the said margin bearing a selected arrangement of numerals a maximum amount will be left and the remainder of the said margin will remain integral with the said second sheet.

1,424,838. REPRODUCER FOR TALKING MACHINES. EVERETT M. LOW, Brooklyn, N. Y. Filed May 12, 1919. Serial No. 296,622. 7 Claims. (Cl. 274—35.)

1. A sound box having a diaphragm, a lever adapted to receive vibrations, a bridge between the lever and the diaphragm, the lever having an incompressible support on one side of the sound box and extending across to and having a second support on the opposite side of the sound box and a confining means for rigidly retaining the lever on the said incompressible support and a second confining means for retaining the lever on the said second support.

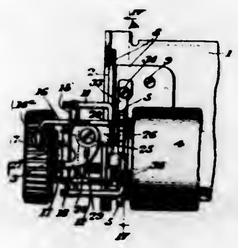


1,424,839. BEAN BUNCHER. JOHN M. MCINTYRE, Bad Axe, Mich. Filed Apr. 9, 1920. Serial No. 372,502. 4 Claims. (Cl. 55—9.)

1. In a machine of the character specified, a toothed rotary member, a plurality of strips having an end portion bent to extend around said rotary member and incline downwardly and rearwardly, and means for connecting the strips and admitting of their having an independent movement to conform to the surface condition of the ground.

2. In a machine of a character set forth, a supporting frame, a toothed member mounted in the frame and adapted to have a rotary movement imparted thereto, an axle yieldably mounted in the frame and provided with ground wheels, and connecting means between said axle and said toothed member to impart a positive rotary movement to the latter.

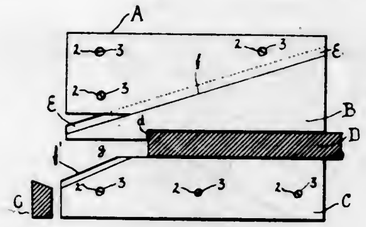
1,424,840. PHONOGRAPH ENVELOPE AND METHOD OF MAKING THE SAME. MARC G. MARKOSAP, Brooklyn, N. Y. Filed Mar. 3, 1921. Serial No. 449,567. 19 Claims. (Cl. 129—16.7.)



14. An envelope for filing phonograph records adapted to form a plurality of compartments opening in different directions, one thereof extending in a plurality of directions beyond another.

17. The method of making a phonograph envelope having a plurality of compartments, which consists in providing means of sufficient length and width to form three sides, then folding a pair of contiguous sides successively upon the same side of the third side to form a plurality of compartments opening in different directions.

1,424,841. TYPEWRITING MACHINE. KENNETH E. MARSH, Groton, N. Y., assignor to Corona Typewriter Company, Inc., Groton, N. Y., a Corporation of New York. Filed July 22, 1920. Serial No. 398,109. 24 Claims. (Cl. 197—114.)



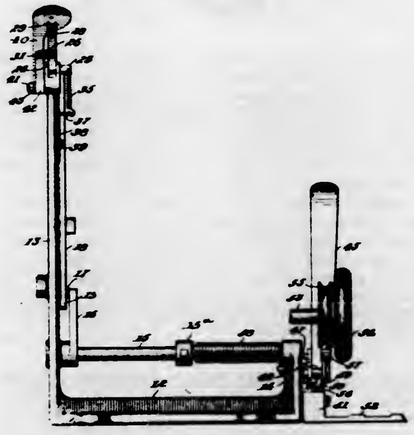
1. In a typewriting machine, the combination of a rotatably supported platen, a ratchet wheel rotatable

with said platen, a pivotally and slidably supported line-space lever, a fixed pawl carried by said lever adapted to engage and rotate the ratchet wheel, and an overthrow

locking pawl carried by said lever adapted to engage the ratchet after a predetermined movement of the line-space lever.

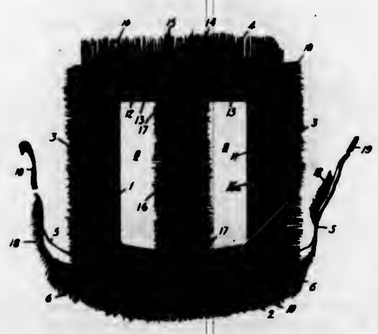
1,424,842. BENCH DOG. LEO A. MATTHEWS, Binghamton, N. Y. Filed Oct. 25, 1920. Serial No. 419,498. 1 Claim. (Cl. 144—307.)

A device of the character described, including a pair of guides, means for securing the guides to a bench, the inner edge of one of the guides having the main portion of its inner edge cut slantingly and bevelled inwardly, a wedge of triangular form having one side edge arranged on a slant and bevelled outwardly for coacting with the complemental edge of said guide and having its other side edge arranged at a right angle to its base and offset to form a shoulder, and the other guide having its inner side edge straight and the inner corner of said side edge being cut away at a slant and bevelled outward to provide an opening for the passage of shavings, substantially as and for the purposes set forth.



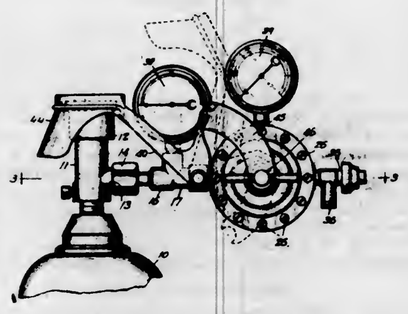
1,424,843. AIR COOLING AND CIRCULATING DEVICE. GEORGE L. MENK, St. Louis, Mo. Filed Mar. 20, 1919. Serial No. 283,856. 4 Claims. (Cl. 62—131.)

1. In a device of the character described, a hollow column which tapers upward, terminating with a restricted throat and flared mouth, an adjustable closure for said mouth, a cooling element in the lower portion of said column, and mechanical means for creating a forced draft upward through said column, said column having air intake openings near its bottom whereby the air entering the column passes in contact with said cooling element, and outlet openings near its top, but below



the throat, said outlet openings being of lesser area than said intake openings.

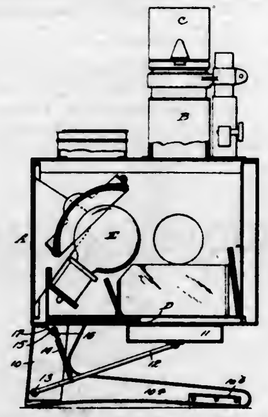
1,424,844. STOP-MOTION DEVICE. WILLIAM S. MILLS, Trumbull, and HECTOR E. BISAILLON, Bridgeport, Conn. Filed June 11, 1921. Serial No. 476,824. 4 Claims. (Cl. 112—219.)



1. In a stop-motion device, the combination with a power shaft provided with a wheel to which a brake may be applied, of a tripping mechanism comprising a spring-actuated rock-shaft, a setting handle attached to said rock-shaft and having an arm provided with a pin, a bracket supporting said rock-shaft, a lever having a slot entered by said pin, a brake device carried by said lever and arranged to act on said wheel, a latch-lever mounted on said bracket and operatively connected with said rock-shaft, a spring-held tripping rock-shaft supported by said bracket and carrying a holding latch having a finger normally engaging said latch-lever and holding the stop-motion device inactive, a tripping arm carried by said stripping rock-shaft and provided with a narrow slit permitting free passage of a thread, but adapted to be tripped by knots or lumps in the threaded to release said latch from said latch-lever and thus render the stop-motion device operative to apply said brake device positively to said wheel on said power shaft.

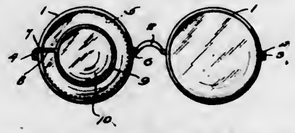
1,424,845. TRANSFORMATION. WILLIAM E. NOLAN, Wilkinsburg, Pa. Filed Sept. 20, 1920. Serial No. 411,528. 15 Claims. (Cl. 132—53.)

1. A transformation comprising a hair-supporting foundation constructed of soft pliable material of substantially open frame formation having a side or perimetral entrance permitting the same to be moved transversely to the perpendicular axis of the head along a path adjacent to the scalp to operative position around natural hair on the head.



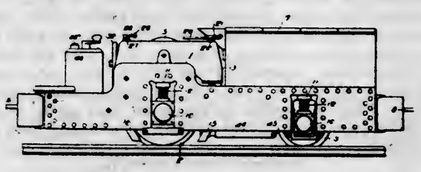
1,424,846. REDUCING-VALVE APPARATUS. WILLIAM S. NOYES, Chicago, Ill. Filed Mar. 8, 1920. Serial No. 364,231. 5 Claims. (Cl. 50—23.)

1. In an apparatus of the class described, the combination with a tank, of a releasing valve therefor, a regulator connected with said valve including a spring pressed diaphragm, and interlocking mechanism between said valve and the regulator which compels the release of the spring pressure on the diaphragm before the releasing valve can be operated, for the purpose described.



1,424,847. PROJECTION APPARATUS. HARVEY N. OTT and FRANK H. BUFTON, Buffalo, N. Y., assignors to Spencer Lens Company, Buffalo, N. Y. Original application filed Nov. 13, 1919, Serial No. 337,773. Divided and this application filed Jan. 31, 1921. Serial No. 441,126. 10 Claims. (Cl. 88—24.)

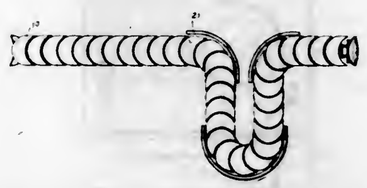
1. In a projection apparatus, the combination with a light casing, a source of light therefor, and a projection objective, said casing having an exposure opening for objects, of an object holder adapted to hold an object in image projecting relation to said exposure opening, said object holder being mounted to swing to and from image projecting and object receiving positions, a crank



shaft journalled in said apparatus, a crank on said crank shaft, and a spring connected at one end to said crank and at its other end to said object holder.

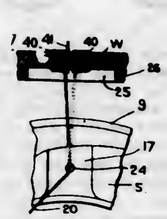
1,424,848. JEWELER'S LOUPE. EUGENE W. PADDISON, Mount Airy, N. C. Filed Oct. 17, 1921. Serial No. 508,243. 5 Claims. (Cl. 88—41.)

1. A jeweler's loupe comprising a ring provided with a hook for engagement with the nose piece of a pair of spectacles, a lens rim, a lens therein, a link connecting said lens and rim whereby said ring and lens rim are held in spaced parallel relation, and means on said link co-operating with the above mentioned hook element for supporting said loupe in operative position, said means being adapted to seat on the pivot of an ear piece of a pair of spectacles.



1,424,849. STORAGE-BATTERY LOCOMOTIVE. CHARLES A. PRATT, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1917. Serial No. 166,514. 9 Claims. (Cl. 105—50.)

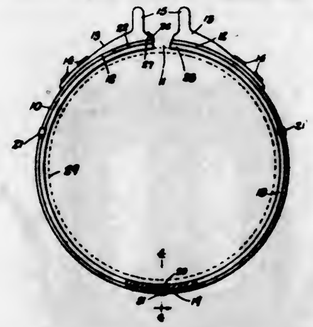
1. A storage battery locomotive comprising a storage battery and a single, wheeled section, said section having two driving wheels, an axle connecting said driving wheels and two undriven wheels, an axle connecting said undriven wheels, said two axles fixed against relative movement in a horizontal plane and an electric motor operatively connected with said driving wheels, said undriven wheels being smaller in diameter than the driving wheels, the storage battery mounted on said wheeled section



above the undriven wheels, the driving wheels being outside of the boundary of said storage battery, said storage battery fixed against movement in a horizontal plane with relation to the axle of said undriven wheels.

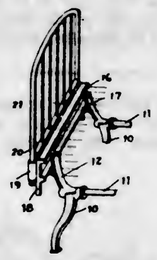
1,424,850. UNIVERSAL CARRIER CHAIN. BENJAMIN H. PURCELL, Terre Haute, Ind., assignor of one-third to Earnest Lawyer and one-third to Francis I. Honderik, both of Terre Haute, Ind. Filed Apr. 2, 1921. Serial No. 458,162. 6 Claims. (Cl. 198—189.)

1. A universal carrier comprising a flexible belt adapted to curve about a horizontal and a vertical axis, and means mounted on said belt adapted to provide a horizontal uninterrupted carrying surface of constant width while passing around a vertical axis so arranged as to permit said belt to return about a horizontal axis and carry articles about a vertical axis.



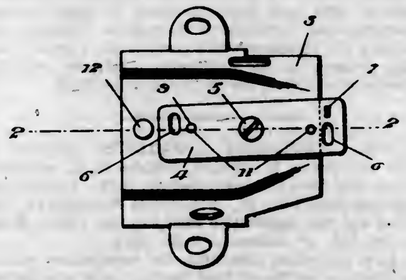
1,424,851. SEWING MACHINE. FRANKLIN A. REECE, Chestnut Hill, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed June 14, 1919. Serial No. 304,223. 5 Claims. (Cl. 112—73.)

1. In a two-thread lock-stitch buttonhole sewing machine having a needle for manipulating the upper thread and a bobbin for the under thread, which bobbin is inserted through a loop of needl thread at each stitch, the combination with said needle and bobbin, of means to interlock the needle thread and bobbin thread and to produce two parallel lines of stitching on opposite sides of the buttonhole and spaced from each other with the point of interlocking constituting the purl on the under side of the work, and a guide for the bobbin thread as it passes from the bobbin to the work, said guide being situated in a vertical plane midway between said lines of stitching.



1,424,852. BRAKE-BAND LINING. ARTHUR L. RENNIE, Jamaica, N. Y. Filed June 4, 1921. Serial No. 474,936. 6 Claims. (Cl. 188—249.)

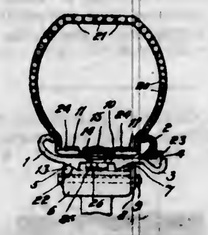
3. A brake band provided at its opposite ends with bracket plates which are secured thereto and a lining strip for said band, said lining strip being provided with transverse keepers adapted to engage the opposite side edges of the brake band and with an attaching plate having an outwardly directed rivet member adapted to be passed through a corresponding aperture in one of the bracket plates, said attaching plate being also provided



at its outer end with a hook member adapted to engage a lip on the corresponding end of said bracket plate.

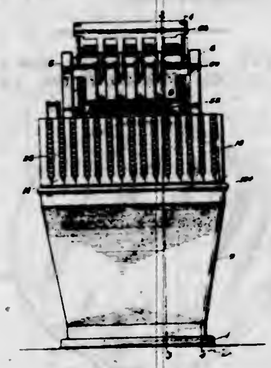
1,424,853. BED. JULIUS KOEVER, Richmond Hill, N. Y. Filed Apr. 28, 1921. Serial No. 465,210. 2 Claims. (Cl. 5—16.)

1. A three-piece bed comprising a supporting element consisting of legs, rails and brackets rising from the rails and provided with supporting ledges, a bed bottom having its end rails arranged to lie on the ledges of the supporting element, said bed bottom having brackets at the ends thereof with vertical bores through said brackets, and detachable head and foot boards having their side members adapted to extend downward through the aforesaid bores of the bed bottom brackets, and means for retaining the head and foot boards in the aforesaid bores.



1,424,854. SEWING-MACHINE NEEDLE PLATE. EDWARD J. ROGERS, Anacortes, Wash. Filed June 23, 1921. Serial No. 479,817. 2 Claims. (Cl. 112—45.)

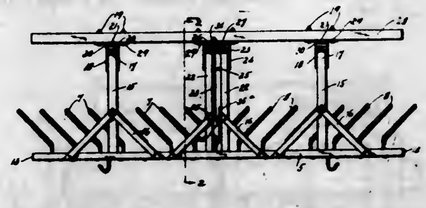
1. A reversible needle plate device for a sewing machine embodying a support, a double ended needle plate



bearing on the support, a pivot member engaging through the support and mounting the needle plate for turning movement to bring either end portion into position for sewing, and a spring catch at the under side of the support engaging said pivot member to be held in position and having means engaging upwardly through the support to engage said plate for retaining it in either position.

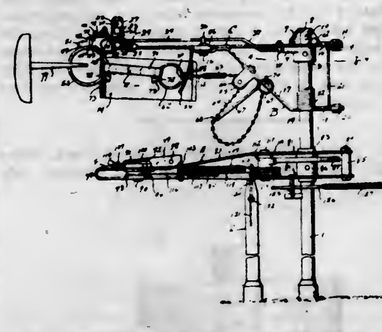
1,424,855. TIRE. JOHN HENRY RYDER, Brooklyn, N. Y., assignor to Standard Wire Tire Corporation, New York, N. Y., a Corporation of New York. Filed May 31, 1919, Serial No. 300,956. Renewed Jan. 6, 1922. Serial No. 527,518. 4 Claims. (Cl. 152—8.)

2. In a tire, the combination of a series of tapered wires adapted to be torsially and spirally bent from one edge of the tire to the other in the form of a series of crowns that are closely associated with each other so as to constitute a flexible tubular tire, the center of the spiral twist being the center of said tubular tire, and a supporting ring for said wires having lateral flanges provided with a series of openings to receive the bent ends of the tapered wires.



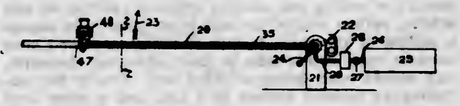
1,424,856. PUNCHING MACHINE. CHARLES W. SPICER, Towson, Md. Filed Mar. 20, 1915, Serial No. 15,856. Renewed Dec. 31, 1921. Serial No. 526,415. 60 Claims. (Cl. 164—112.)

1. A punching machine comprising a plurality of shiftable punches, means for simultaneously setting all of the punches, means for simultaneously locking them in operative position, and means for forcing the punches through a blank.



1,424,857. GROUND-TREATING IMPLEMENT. ALBERT SPRAGUE, Longmont, Colo. Filed Dec. 3, 1921. Serial No. 519,615. 1 Claim. (Cl. 55—22.)

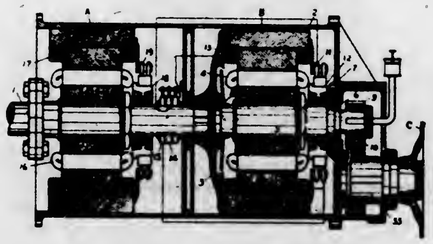
A ground treating implement of the character described comprising a main beam, blades carried by the rear ends of said beam for supporting said beam above the ground, spaced connecting beams projecting from said rear face of the main beam, the rear ends of said beams being beveled and provided with connecting hinged sections, the end face of said connection being beveled, corresponding to the beveled ends of the connecting beams, and a scraping member having a plurality of blades secured to the forward face thereof, the intermediate



portion of each face having hinged knuckles adapted to register with the knuckles of the connecting hinged section of the beams, and adjusting means carried by certain of said beams and operatively connected to the upper portion of the scraping member for moving said scraping member relative to the ends of the beams, said beveled ends of the connecting beams serving as stops to limit adjusting movement of the scraper in one direction.

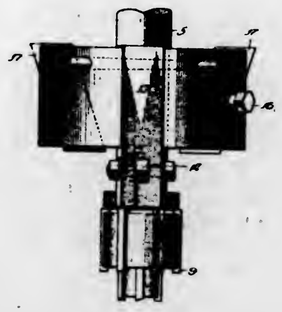
1,424,858. MAIL-BAG MECHANISM. JOHN A. STARR, Mayville, Wis. Filed Nov. 18, 1920. Serial No. 423,958. 16 Claims. (Cl. 258—26.)

1. A mail handling mechanism including a station device comprising a standard, a supporting frame rotatably mounted upon the standard, means under control of an applied mail bag for locking the crane in working position and automatically releasing the same when the mail bag is taken therefrom, automatic means for swinging the crane into a second position when the locking means is released, and a bag supporting means carried by the crane.



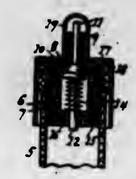
1,424,859. SIGNAL APPARATUS. WARNER T. TABB, New York, N. Y., assignor to The Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed May 5, 1917. Serial No. 166,673. 14 Claims. (Cl. 116—63.)

6. In apparatus of the class described, in combination, a crossing-gate, means adapted to move said gate into



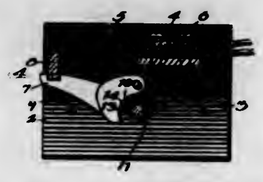
and out of operative position, a gas burner mounted upon said gate, a source of gas supply, means adapted to connect said source of supply with said burner, and means adapted intermittently to vary the supply of gas to said burner.

1,424,860. TRANSMISSION SYSTEM FOR AUTOMOBILES. HARRY L. TANNER, Brooklyn, N. Y. Filed Aug. 18, 1916. Serial No. 115,665. 10 Claims. (Cl. 290—12.)



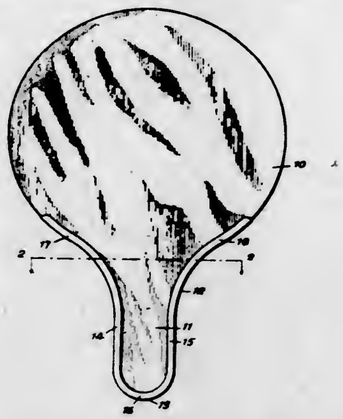
2. In a means for starting a load from a rotating power source, the combination with a primary power source and a driven element, of a dynamo electric machine comprising relatively rotatable parts one of which is coupled to said power source and another to said element, a second dynamo electric machine coupled to said source, electrical inter-connections between said machines, means for first weakening the field of said second machine, whereby the first machine acts as a generator and said second machine as a motor, means for reversing the field of said second machine relative to its armature, and means for weakening the field of said first machine whereby the load is driven entirely by said first machine acting as a motor.

1,424,861. TOOL. PETER TAYLOR, Ottumwa, Iowa. Filed June 10, 1920. Serial No. 387,814. 2 Claims. (Cl. 29—105.)



1. A tool for machining hubs and the like, including, in combination, a spindle, a head keyed to said spindle, means for holding said head in adjusted position on said spindle, cutters carried by said head adapted to engage a portion of the outer surface of a hub, a second head mounted upon said spindle in axial alignment therewith, said second head being provided with cutters for machining an interior surface of a hub, and a third head secured to said second head, said third head being provided with cutters for machining another portion of the interior of said hub.

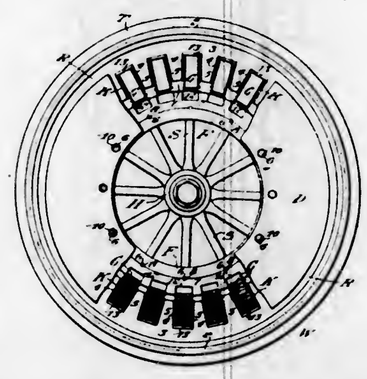
1,424,862. BOTTLE STOPPER. HARRY D. VREDENBURGH, Brooklyn, N. Y. Filed Sept. 29, 1921. Serial No. 504,060. 4 Claims. (Cl. 215—74.)



1. A bottle stopper comprising a tubular casing having a valve seat, a channeled stem surmounting the casing, a spring pressed plunger valve cooperating with the seat, and a stem projecting from the valve coacting with the channelled stem.

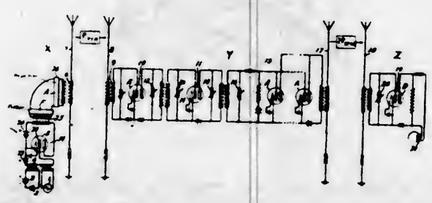
1,424,863. KEY-CONTROL TELEPHONE SWITCH. DON C. WALKER and BONZANO WEEKS, Memphis, Tenn. Filed Sept. 26, 1921. Serial No. 503,407. 4 Claims. (Cl. 179—189.)

4. A switch for closing an electric circuit, comprising spaced terminals adapted to yieldingly resist movement for bringing the same together to establish the circuit, a lever for moving said terminals into engagement, and a key operated mechanism adapted to move said lever to bring the terminals together and also adapted to permit the lever to return to its initial position when released and thereby opening the circuit.



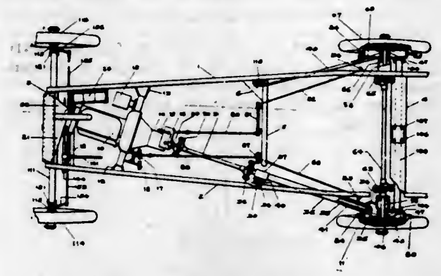
1,424,864. FAN. NATHAN WARSHAW, New York, N. Y. Filed June 15, 1921. Serial No. 477,694. 1 Claim. (Cl. 230—33.)

A fan, comprising a flexible body section with a flexible substantially U-shaped protruding portion, and a metallic tubular handle element also having an approximately



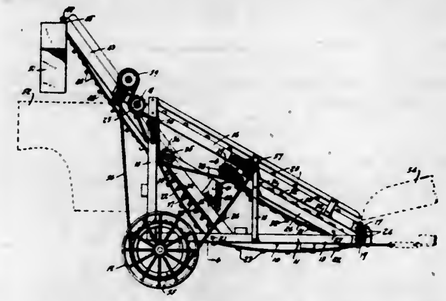
U-shaped part with the end portions of its legs being flared in outwardly diverging directions and the entire inner edge of the handle element having a continuous slot in which the marginal edge of the protruding portion and the adjacent marginal edge parts of the body section are fixedly disposed.

1,424,865. RESILIENT VEHICLE WHEEL. ALVAH WISWALL, Providence, R. I.; Edward W. Shedd administrator of said Alvah Wiswall, deceased. Filed May 22, 1919. Serial No. 299,014. 6 Claims. (Cl. 152—38.)



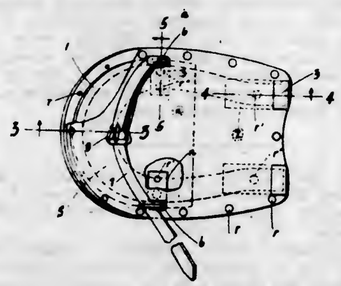
1. In a resilient vehicle-wheel, the combination with a wheel-structure having a fixed rim, of an outer floating rim surrounding the fixed rim, both of said rims formed with opposite pockets closely spaced therearound, resilient means arranged between the two rims to maintain them normally in concentric relation, and a plurality of studs mounted in the pockets of one rim to adapt them to positively engage the pockets in the opposite rim, said studs being so arranged that only a portion of their number engage between the two rims at the traction point of the wheel when the outer rim is carried into eccentric relation with the inner fixed rim.

1,424,866. METHOD AND MEANS FOR RELAYING MODULATED CARRIER WAVES. PETER I. WOLD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1917. Serial No. 149,213. 11 Claims (Cl. 250—15.)



11. A transmission system comprising means for producing a carrier wave, means for modulating said wave, means for suppressing one of the components of the modulated wave, and means for distorting the wave form of the resulting energy by combining its components to produce a second carrier wave of different frequency modulated in the same manner as the first mentioned carrier wave.

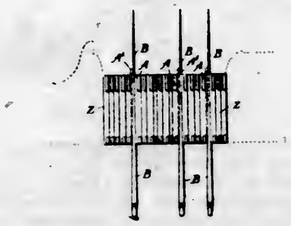
1,424,867. AUTOMOTIVE VEHICLE. AUSTIN M. WOLF, Plainfield, N. J. Filed Dec. 8, 1919. Serial No. 343,155. 30 Claims. (Cl. 180—70.)



1. An automotive vehicle, comprising a chassis frame, an engine placed with its shaft at an angle with the longitudinal axis of the chassis, a propeller shaft connecting said engine shaft with one of the rear wheels and lying in line with said engine shaft, and a direct power transmitting connection between said rear wheel and the other rear wheel.

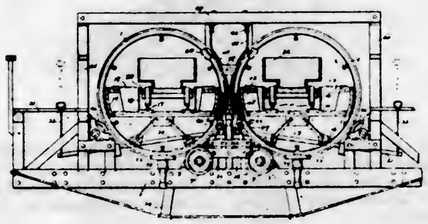
1,424,868. POTATO PICKER. AUGUST F. ZABEL and RALPH V. TOWNSEND, Minnesota Lake, Minn. Filed Apr. 22, 1922. Serial No. 556,022. 9 Claims. (Cl. 130—32.)

1. In a potato picker, a cleaning apparatus comprising an inclined conveyor, means for feeding the potatoes thereto, and means carried by the conveyor for engaging the potatoes and worming the same to one side of the conveyor.



1,424,869. LAWN HORSESHOE. CHARLES ZINGER, Webster Groves, Mo. Filed Jan. 5, 1921. Serial No. 435,092. 3 Claims. (Cl. 168—3.)

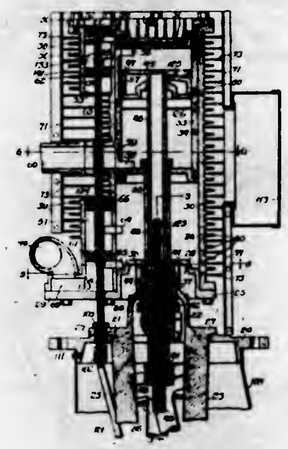
1. A lawn horseshoe comprising a metallic stiffening plate, layers of leather bounding the same, notches in



said plate, and anchor plates positioned in said notches and extending beyond said layers of leather to form means for attaching the shoe to a hoof.

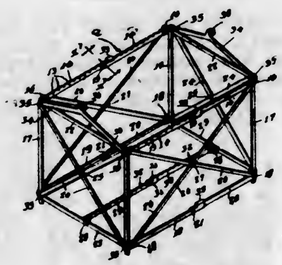
1,424,870. JUSTIFYING SPACER OR SPACE BAND. JAMES H. BECK, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Mar. 28, 1921. Serial No. 456,330. 11 Claims. (Cl. 199—68.)

1. A justifying spaceband comprising a relatively stationary wedge-shaped member, and a movable cooperating wedge-shaped member slidably connected thereto, said movable member being slotted and presenting two marginal bars extending in the direction of its movement and an intermediate bar extending in the same direction and serving to add strength and rigidity to the movable slotted member during the justifying action.



1,424,871. AUTOMATIC REVOLVING DUMP. EDWIN J. BEST, Woodward, Ala. Filed July 14, 1919. Serial No. 310,810. 17 Claims. (Cl. 214—52.)

1. An automatic rotary dump comprising a rotatable cage, means to unbalance the cage, releasable latch means to hold the dump against rotation when thus unbalanced, and fly-wheel means supported independently of and rotatable with the cage, said fly-wheel means being adapted by its inertia to retard the starting movement of the cage and to store up sufficient energy from an automatic gravitating movement of the unbalanced cage to positively return it to initial position.



1,424,872. EXPLOSION ENGINE. RANSOM Y. BOYER, Maywood, Ill., assignor of one-half to Orlando J. Buck, Chicago, Ill. Filed Nov. 27, 1917. Serial No. 204,192. 38 Claims. (Cl. 123—62.)

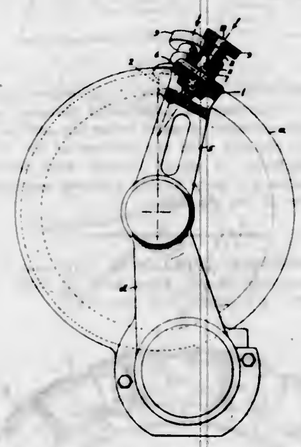
1. An explosion engine embodying a cylinder having an intake and an exhaust port, a hollow piston reciprocable therein and closed with the exception of a port, a piston within the hollow piston and reciprocable axially with relation thereto, said port in the piston being movable into operative relation to the said intake of the cylinder for permitting the entrance of a charge of fuel into the hollow piston and between said pistons, and out of such relation, means for relatively reciprocating the pistons to compress the charge therebetween, and

provisions for transferring said compressed charge from between the pistons into the cylinder and between the end of the cylinder and hollow piston to be exploded, and an ignition chamber exterior to the cylinder, said charge during such transfer passing the ignition point in said chamber during the ignition period.

1,424,873. FILM-TREATMENT CAGE. AUGUSTUS G. BOXELL, Los Angeles, Calif. Filed July 19, 1919. Serial No. 312,050. 3 Claims. (Cl. 95—109.)

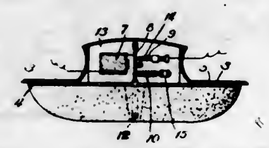
1. A film-treatment cage comprising uprights, notched upper members supported by the uprights, and a notched lower member connected with the uprights, the notches being adapted to engage film-holding frames.

1,424,874. FOUNTAIN WASHING DEVICE. FRANK M. BRADBROOK, Elmira, N. Y. Filed June 14, 1921. Serial No. 477,472. 1 Claim. (Cl. 15—127.)



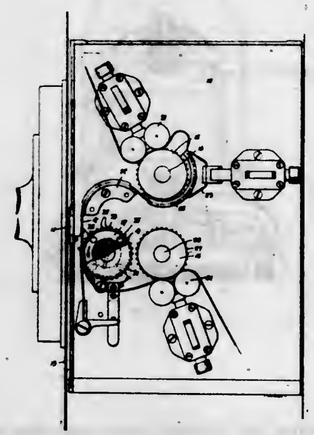
A fountain washing device of the class described comprising an elongated hollow container having a rigid

tube at one end communicating with the interior thereof and adapted for attachment to a flexible hose, one side wall of the container having a plurality of perforations therein and being of outwardly curved form in transverse



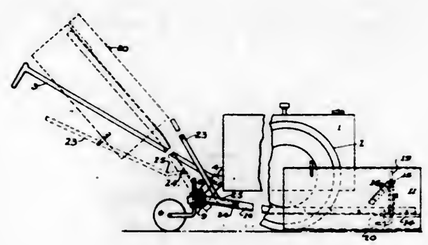
section, a cloth enclosing the side walls of the container in contact therewith and extending from the first named end of the latter to a point beyond the other end thereof, and means encircling the cloth and container for retaining the cloth in position flatly engaging said container.

1,424,875. SHARPENER FOR MEAT-SLICING MACHINES. WILLIAM F. H. BRAUN, Philadelphia, Pa., assignor to The Braun Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 24, 1921. Serial No. 472,189. 2 Claims. (Cl. 51—247.)



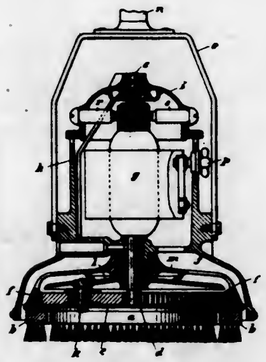
1. A knife sharpener for slicing machines comprising the combination of two sharpeners each of the form of a conic frustum and provided with generally upright spindles, of which one is inclined to the knife plane to present the conical face of its sharpener to the flat knife face and of which the other is inclined in a plane parallel to the knife plane to present the conical face of its sharpener to the beveled knife face in sharpening or skew relation, a guide for positioning the spindles in the described relation and in which the spindles are free for affording gravity rolling contact of the shapeners with the knife, and manual means for lifting and holding the sharpeners out of action.

1,424,876. MANICURING INSTRUMENT. MILTON H. BURK and EDITH MAY CURRIER, St. Joseph, Mich. Filed Feb. 10, 1922. Serial No. 535,606. 10 Claims. (Cl. 132—73.)



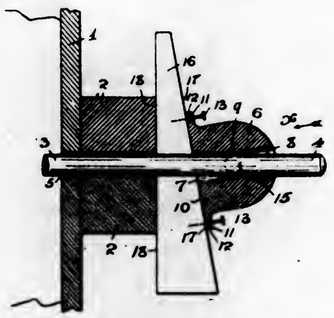
7. A buffing or polishing device adapted for use as a manicuring instrument, comprising a top plate having a hollow handle on the upper surface thereof, an elongated buffer slidable endwise back and forth on the bottom of said plate, provided with a surface covering adapted for polishing the finger nails, the buffer being rounded and shaped substantially like that of an ordinary manicuring instrument, and means enclosed in said handle to rapidly vibrate said buffer in a straight line while said handle is held in the hand of the user, thereby to obviate the necessity of reciprocating the buffer manually during the manicuring of the nails.

1,424,877. FILM SPROCKET WHEEL FOR MOVING-PICTURE MACHINES. HAGAR B. BYRON, New York, N. Y. Filed May 28, 1921. Serial No. 473,541. 5 Claims. (Cl. 88—17.)



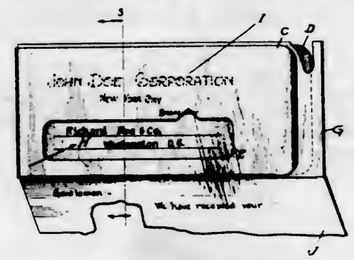
1. A film sprocket wheel for moving picture machines provided with teeth having bi-cone side faces and involute front and rear driving faces.

1,424,878. SNOWPLOW. HARRY R. CANFIELD, Cleveland, Ohio. Filed Feb. 9, 1920. Serial No. 357,284. 13 Claims. (Cl. 37—57.)



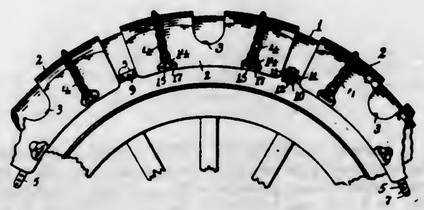
1. A tractor, a snow plow propelled thereby, a horizontal transverse pivot for the plow on the tractor on which the plow may turn to pass over ground obstacles, and a handle to turn the plow on the pivot.

1,424,879. WAXING OR POLISHING BRUSH. SVEN MANFRED CARLSTEDT, Stockholm, Sweden, assignor to Aktiebolaget Lux, Stockholm, Sweden. Filed Nov. 2, 1918. Serial No. 260,851. 3 Claims. (Cl. 15—49.)



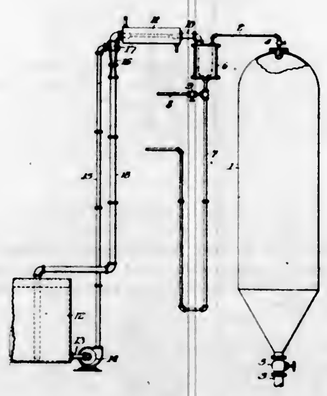
1. A waxing and polishing brush comprising a casing, a motor in said casing, a motor shaft extending below the casing, a brush-member rotatably mounted below said casing and operatively connected by gearing with said shaft, and a brush-ring outside said member rotatably mounted on said casing and operatively connected to said gearing.

1,424,880. HOLDING OR TYING MEANS FOR MOLDING APPARATUS. SAMUEL S. COLT, Orange, N. J. Filed July 28, 1921. Serial No. 488,056. 15 Claims. (Cl. 25—131.)



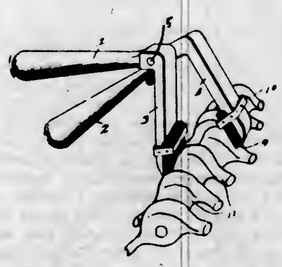
10. A wedge-engaging holding or tying element comprising a body provided with oppositely disposed truncated cone-shaped duct-portions for oscillatorily mounting said element upon a rod.

1,424,881. HAND LETTER FOLDER. JOSHUA L. COWEN, New York, N. Y. Filed Nov. 7, 1919. Serial No. 336,331. 5 Claims. (Cl. 120—8.)



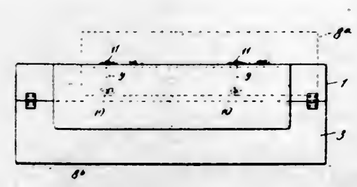
1. A folding device for folding an enclosure for a window envelope comprising a positioning member adapted to position the enclosure so as to bring the address thereon in positive registry with the window of the envelope when said enclosure is placed therein, said positioning member comprising a plate having a recess corresponding to the window of the envelope.

1,424,882. NONSKID APPLIANCE. GIOVANNI S. CUCCHIARA, Needham, Mass. Filed Jan. 11, 1921. Serial No. 436,577. 4 Claims. (Cl. 152—16.)



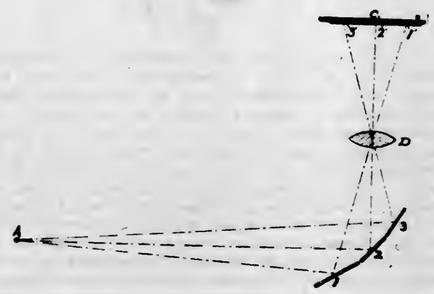
4. A non-skid appliance comprising a series of pads, bars imbedded therein and terminally projecting therefrom, and means for attaching said bars one to another embracing an offset plate having a hole near each end, a hook having a threaded stem slidable in each hole, and a nut turning on each stem, said hooks being adapted to be engaged with adjacent ends of two bars.

1,424,883. PROCESS AND APPARATUS FOR PREPARING SULPHITE DIGESTION LIQUOR. DAVID B. DAVIES and EDWARD P. STRONG, Munising, Mich. Filed June 1, 1920. Serial No. 385,708. 8 Claims. (Cl. 92—2.)



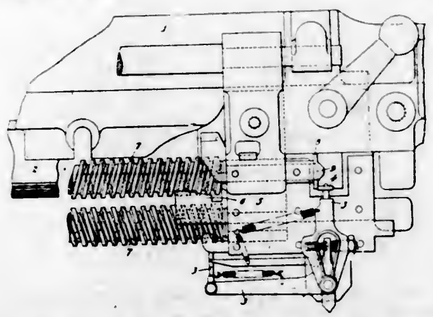
1. The process of preparing sulphite digestion liquor, which consists in withdrawing the liquor from a storage tank, circulating the same in a confined current and returning it to the tank at a point below the surface of the liquor therein, and aspirating sulfurous acid gas into the circulating current of liquor to effect the absorption of the gas thereby.

1,424,884. CLAMP. GRANVILLE MAY DEANE, Dallas, Tex. Filed Jan. 12, 1921. Serial No. 436,767. 2 Claims. (Cl. 128—69.)



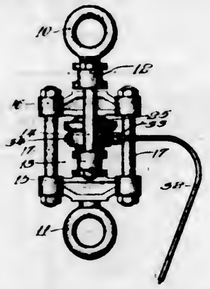
1. A device of the character specified, comprising a pair of handle members each having at one end an angular jaw, a rod on which the two handle members are pivoted alongside each other, the jaw of one handle member being spaced further away from the pivoted pin than the jaw of the other handle member for the purpose specified, and cushioning pads on the engaging faces of the jaws.

1,424,885. COMBINED CABINET AND PIANO. JOSEPH HUNTER DICKINSON, Larchmont, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Nov. 5, 1918. Serial No. 261,240. 1 Claim. (Cl. 211—16.)



The combination with an upright piano having a lid for the top thereof, the front section of said lid being hinged to swing upwardly and thus uncover an opening in the top of the piano through which access may be had to the interior thereof, of a cabinet, and a pair of horizontally swinging arms having relatively offset vertical pivots at their opposite ends, the pivots on respective ends of the arms being rotatably connected to the cabinet at points toward its opposite ends, and the pivots at the opposite ends of the arms having means for rotatably supporting them at the back of the piano adjacent to its top, said arms being of such length and so operative that while they are at the limit of their forward movement they support the cabinet in superposed parallel relation with the top of the piano and when swung rearwardly they support the cabinet in parallelism but offset rearwardly of the rear edge of the front hinged section of the lid.

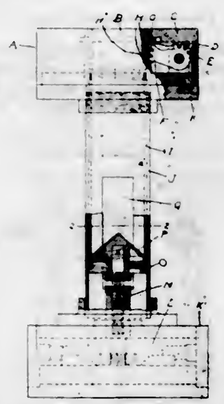
1,424,886. METHOD AND APPARATUS FOR PRODUCING MULTIPLE-IMAGE EFFECTS IN PHOTOGRAPHY. LEON F. DOUGLASS, Menlo Park, Calif. Filed Oct. 31, 1921. Serial No. 511,882. 18 Claims. (Cl. 95—18.)



1. The method of producing variable multi-image effects on a single sensitised film, which comprises interposing in the path of light rays from an object to be photographed, a plurality of elements capable of directing a plurality of images onto said film and successively exposing the film to a series of laterally disposed images.

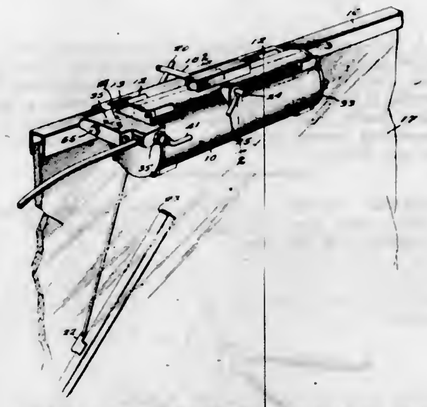
1,424,887. DISTRIBUTING MECHANISM OF TYPOGRAPHICAL COMPOSING MACHINES. TOM DRAKE and ROBERT DUDLEY CARTER, Broadheath, England, assignors to Linotype and Machinery Limited, London, England, a Limited Liability Company of Great Britain. Filed Apr. 9, 1921. Serial No. 459,865. 5 Claims. (Cl. 199—41.)

1 Distributing mechanism such as described, having a distributor bar, and a plurality of distributor screws, characterized by means for feeding a plurality of matrices to the distributor screws during each revolution of the latter.



1,424,888. DYNAMOMETER. CLARENCE M. EASON, Moline, Ill., assignor to Hyatt Bearings Division, General Motors Corporation, Newark, N. J., a Corporation of Delaware. Filed May 20, 1920. Serial No. 382,727. 6 Claims. (Cl. 265—47.)

1. In a dynamometer the combination of attaching members, a proximate and a distant cross head, the spaced side connections for each of the attaching members standing in angular relation to one another and subtending an interior space, the cross heads and attaching members comprising open compression frames in interlinked relation, oppositely disposed compression members carried by the respective compression frames an interposed capsule for containing liquid located between the compression members and within the space subtended by the compression frames, and a flexible connection in communication with the interior of the capsule for transmitting variations of pressure, substantially as described.

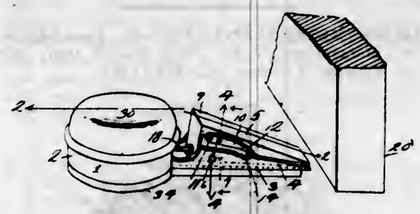


1,424,889. CHUCK. DON N. FINLAYSON, Flat Rock, Mich., assignor to Detroit Pneumatic Chuck Company, Flat Rock, Mich., a Corporation of Michigan. Filed Mar. 26, 1920. Serial No. 369,124. 4 Claims. (Cl. 279—119.)

1. The combination with a chuck having a central enlarged aperture extending therethrough, an annular wall extending inwardly from the chuck face, radially movable jaws and a longitudinally movable sleeve telescoping over the wall for operating said jaws, of a tube connected with said chuck and forming an extension of the central aperture therein, a motor mounted on the opposite end of said tube, an inner tube connected at one end to the actuating member of said motor and at

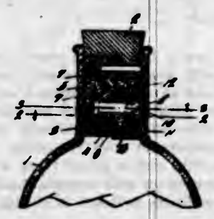
its opposite end to said longitudinally movable sleeve, and a deflector within said inner tube for directing the chips outward through registering apertures in said inner and outer tubes.

1,424,890. WINDSHIELD CLEANER. WILLIAM M. FOLBERTH, Cleveland, Ohio. Filed Dec. 29, 1919. Serial No. 348,175. 17 Claims. (Cl. 121—164.)



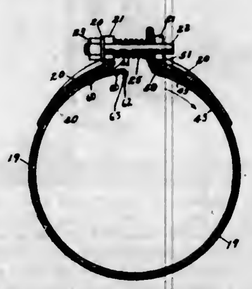
1. Valve actuating mechanism for windshield cleaners having a cylinder, a reciprocating piston, and means for connecting said cylinder to a source of suction, said valve actuating mechanism comprising a shiftable valve, a pivoted valve supporting member, a spring connected thereto, a second pivoted member, said spring being connected to said second pivoted member, and means actuated by the movement of the piston for shifting the end of said spring to opposite sides of the pivot point of the pivoted supporting member.

1,424,891. BURGLAR ALARM. JAMES A. FOLEY, Omaha, Nebr. Filed Sept. 1, 1921. Serial No. 497,530. 3 Claims. (Cl. 116—32.)



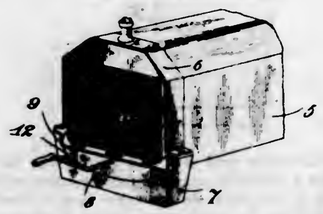
2. The combination with a door actuated burglar alarm comprising a base having a spring actuated bell ringing mechanism at one end thereof and controlled through the medium of a longitudinally disposed and movable shaft,

of a door engaging wedge carried by said bore, said door engaging wedge being loosely connected to the outer end of the shaft, said wedge shaped member being pivoted vertically and longitudinally movable in the base, a



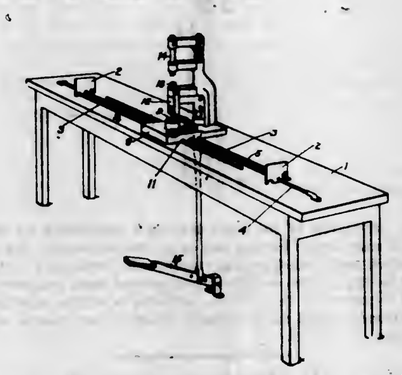
gravity actuated pawl carried by said door engaging wedge and cooperating with a notch in the base, and a stop carried by the wedge for limiting the downward movement of the pawl and so positioned that when the wedge is rocked on its pivotal point the pawl will be moved out of engagement with the notch.

1,424,892. NONREFILLABLE BOTTLE. SAMUEL E. FREED, East Palestine, Ohio. Filed Aug. 1, 1921. Serial No. 488,949. 3 Claims. (Cl. 215—21.)



1. In a non-refillable bottle, a lower valve part having a valve-receiving opening and a tongue projecting over the opening at the bottom thereof, a slidable valve normally reposing in said opening and having an outlet passage normally closed at its upper end by the wall of the opening and at its lower end by the said tongue, and an upper valve part having a recess into which the said valve may slide to uncover the outlet passage when the bottle is inverted, said upper valve part also having an outlet passage communicating with said recess whereby the contents of the bottle may be discharged therethrough.

1,424,893. TRANSMISSION AND LINING FOR THE BANDS THEREOF. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Detroit, Mich., a Corporation of Delaware. Filed Aug. 9, 1920. Serial No. 402,369. 10 Claims. (Cl. 188—259.)

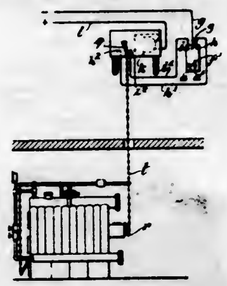


5. A lining for transmission bands adapted to be loosely received between a band and drum, comprising a strip of heavy fabric having flexibility and resiliency whereby one end thereof may be forced around a drum between the drum and band, and a strip of comparatively rigid reinforcing material secured to one end of the lining, said strip being also adapted to form one member of an attaching and supporting device.

1,424,894. CRANK-HOLDING ATTACHMENT. AIMÉ GENDRON, Montreal, and CHARLES BRIÈRE, Beauharnois, Quebec, Canada. Filed Feb. 17, 1921. Serial No. 445,789. 2 Claims. (Cl. 74—33.)

1. A device of the character described, including a plate, ears extending from said plate, an arm pivoted between said ears, a forked terminal provided upon said arm and a spring attached to the plate for engaging said arm and retaining the same in operative and inoperative positions.

1,424,895. CENTERING DEVICE. LOUIS B. GIRARD and FRED L. MENELEY, Los Angeles, Calif.; said Meneley assignor to said Girard. Filed Mar. 30, 1921. Serial No. 457,127. 2 Claims. (Cl. 164—91.)

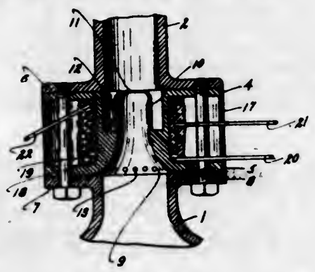


1. In combination with a punching means having a base provided with a fixed die member, a centering device comprising two parallel rods guided in said base and provided with teeth and a fixed gear wheel mounted to turn in said base coaxially with said die member and adapted to engage the teeth of said rods to cause equal movement thereof in opposite directions, and stop means carried by the respective rods, said stop means being equidistant from the center of said die means.

1,424,896. THERMOSTATIC ELECTRIC CONTROL FOR HEATING SYSTEMS. EDWARD E. GOLD, New York, N. Y., assignor to Gold Car Heating & Lighting Company, New York, N. Y., a Corporation of New York. Filed Dec. 15, 1919. Serial No. 344,870. 4 Claims. (Cl. 236—74.)

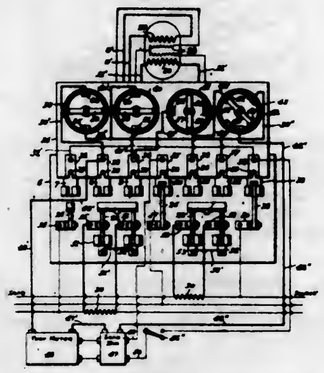
1. Apparatus for the thermostatic electric control of heating systems including, in combination, an expansible vessel adapted to be moved bodily, an electric motor, de-

vices the movement of which is initiated by the expansible vessel to control the circuit of the motor, a controlled element in the heating system operatively connected to the motor, an adjustable seat for the thermostat, a slidable



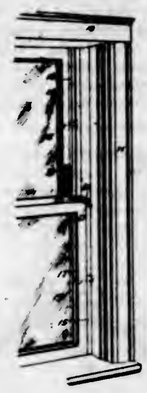
rack for adjusting said seat and moving the thermostat bodily, and a manually operated indicator arm operatively connected to the rack and movable over a temperature scale to indicate the temperature range of effective operation of the thermostat adapted to control the apparatus.

1,424,897. HAIR CURLER. JOSEPH GOLDSMITH, Jr., Chicago, Ill. Filed Feb. 11, 1922. Serial No. 535,691. 2 Claims. (Cl. 132—42.)



1. An article of the class described comprising an elongated wire frame having one of its ends inwardly bent to form an open-ended loop or recess, said frame at its other end having its two side members twisted upon one another and terminating in a recess and means within said last-mentioned recess for releasably retaining an elastic band therein.

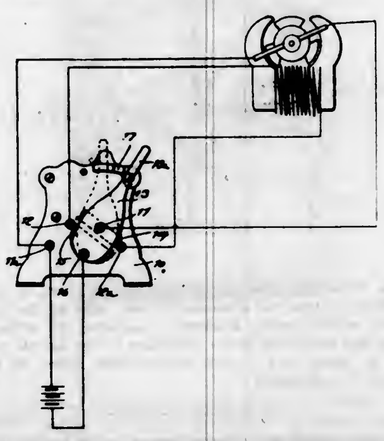
1,424,898. GAS HEATER AND VAPORIZER. THOMAS W. GORMAN, Spokane, Wash. Filed Feb. 23, 1921. Serial No. 447,314. 6 Claims. (Cl. 219—38.)



1. The combination with the manifold and carbureter, of an interposed bushing having a mixing chamber and formed with a nozzle disposed centrally therein, said bushing having air ducts leading to the mixing chamber and means for controlling admission therethrough, and a heating element surrounding said bushing for the purpose described.

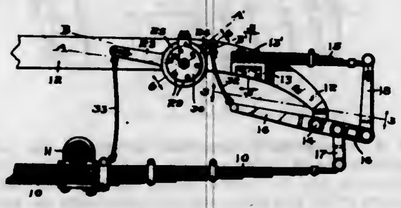
1,424,899. METER-TESTING DEVICE. JOHN LEE GRAYSON, Morgantown, W. Va. Filed Jan. 17, 1921. Serial No. 437,878. 7 Claims. (Cl. 175—183.)

2. A testing device for meters embodying a terminal-board provided with a series of contact- terminals adapted to contact with and be supported upon a series of fixed terminals connected with the current and potential circuits of a meter, a series of make-and-break switches secured upon the terminal-board and including a single pole, double throw switch, and a plurality of wire connections permanently mounted on said terminal-board and connecting said make-and-break switches in circuit with said contact-terminals.



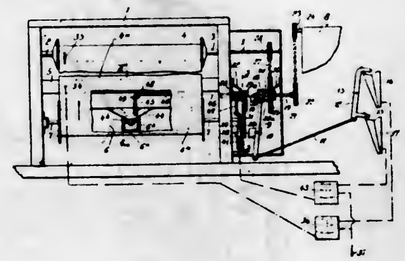
1,424,900. SASH LOCK. EUGENE GUSY, Buffalo, N. Y. Filed July 7, 1920. Serial No. 394,516. 1 Claim. (Cl. 292—57.)

A sash lock for connecting two sash members of a window which are slidable vertically and also movable laterally relatively to one another, comprising a horizontal guide tube adapted to be mounted on one of said members and provided with a longitudinal slot, a vertical guide adapted to be mounted on another of said members and provided with a longitudinal slot which is T-shaped in cross-section, and a locking rod slidable and rotatable in said guide tube and having a T-shaped head at its front



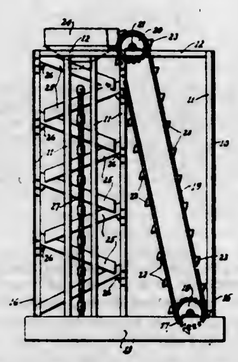
end which engages with said T-shaped slot and a stop at its rear end adapted to engage with the inner end of said horizontal guide, and the inner part of the periphery of said rod being provided with a longitudinal feather adapted to engage the slot in said horizontal guide-way while the outer part of said periphery is cylindrical, said head sliding vertically in said T-shaped slot upon raising or lowering either of said sash members, and said feather being adapted to engage the slot of said horizontal guide tube upon moving either of said sash members laterally relatively to the other, and said stop being adapted to limit such lateral movement.

1,424,901. MOTOR SWITCH. DOUGLAS R. HARPER, Cameron, Tex. Filed Apr. 9, 1921. Serial No. 460,051. 2 Claims. (Cl. 200—6.)



1. A reversing switch comprising in combination a support, a pair of contacts mounted upon the support, a third contact likewise mounted upon the support, an insulating member mounted for oscillation upon the last named contact of a conductor carried by said member and electrically connected with said last named contact and adapted to alternately engage the contacts of the pair when the member is oscillated, a second conductor carried by said member and likewise adapted to alternately engage the contacts of said pair, the engagement of the second conductor with the contacts being alternated with their engagement by the first named conductor.

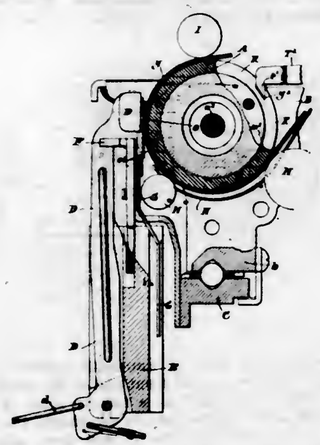
1,424,902. SHOCK-ABSORBING DEVICE FOR VEHICLES. ROBERT H. HASSLER, Indianapolis, Ind. Filed June 17, 1921. Serial No. 478,239. 3 Claims. (Cl. 267—19.)



1. A resilient suspension system for vehicles which comprises the combination of a vehicle frame member, a main spring, a supplemental leaf spring supported by the vehicle member, a lever supported intermediate its ends in said vehicle member, means for pivotally connecting the adjacent end of the main spring to the lever between its point of connection with the frame member and its rear end, means for connecting the free end of the supplemental spring and the rear end of the lever together, a friction device arranged on the frame member, a one-way connector for connecting the friction device and the forward end of the lever together, and a second one-way connector for connecting the friction device with the main spring.

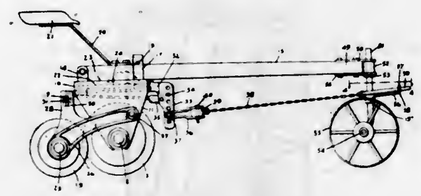
1,424,903. AUTOMATIC MUSICAL INSTRUMENT. ROBERT HEAD, New York, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Sept. 10, 1918. Serial No. 253,446. 3 Claims. (Cl. 84—122.)

1. In combination with an automatic musical instrument using a music-sheet, the front end of the music sheet having an imperforate portion; a take-up spool to which the front end of the music-sheet is attachable and which is adapted to be rotated to take up said sheet, said spool having an annular peripheral recess; a finger at the take-up spool yieldingly tending to move into said recess but being prevented by the said imperforate portion of the sheet when the sheet is wound around said spool; and pneumatic means comprising a controlling port and valve therefor, said valve being operated from the aforesaid movement of the finger relatively to said recess when the latter is uncovered by said imperforate portion of the front end of the music sheet.



1,424,904. SAND-DRYING DEVICE. FRANK X. HEINDL, Kersey, Pa. Filed Oct. 1, 1921. Serial No. 504,694. 3 Claims. (Cl. 34—37.)

3. A device of the character described comprising an enclosed upright frame having an open top, an upwardly traveling conveyor extending along the forward portion of the frame, a series of oppositely inclined chutes mounted within the frame and pivotally connected therewith at their upper ends and discharging into one another, the free ends of the chutes bearing upon the chute next be-



low adjacent the pivoted end thereof, heating means beneath each chute, and means for independently vertically adjusting the pivotal connection of said chutes with said frame.

1,424,905. TYPEWRITING MACHINE. EDWARD B. HESS, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 21, 1922. Serial No. 555,853. 15 Claims. (Cl. 197—144.)

1. An auxiliary platen for typewriting machines, comprising a strip of suitable rigid material co-extensive in length with that of the main platen, and curved on opposite sides to conform to the curvature of the main platen, in combination with supports at its ends for holding it to turn about the longitudinal axis of the main platen while in contact therewith and which are provided with detent devices.

1,424,906. CLOD CRUSHER AND PACKER. JOHN I. HOKE and LYNN I. HOKE, South Bend, Ind. Filed May 28, 1921. Serial No. 473,527. 17 Claims. (Cl. 55—21.)

1. In a land pulverizer, the combination of a cultivating device supporting frame, a second frame adapted to support a second cultivating device, means pivotally connecting said second frame to said first frame for rocking movement upon a longitudinal axis, and other means pivotally connecting said second frame to said first frame for rocking movement upon a transverse axis.

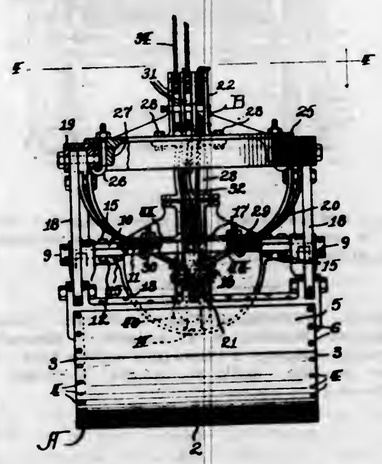
1,424,907. TELEGRAM HOLDER. JOHN A. HULIT, Chicago, Ill. Filed Nov. 23, 1921. Serial No. 517,215. 7 Claims. (Cl. 129—35.)

1. In a holder, a standard, a base therefor, a spring extending upward and then over the top of the standard and then downward a distance to bear against one side thereof, with an arch in the top of the spring to clear the top of the standard, means to secure the spring to the other side of the standard near the top thereof, the lower end portion of the spring being curved to facilitate

access between it and the side of the standard, a screw inserted through the standard to bear against the inner surface of the spring, whereby to regulate the action of the spring relatively to the thickness of the article to be held in place, and a lock nut on said screw to bear against the standard.

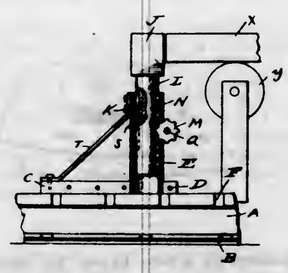
1,424,908. COATING COMPOSITION OR PAINT. MONE R. ISAACS, Philadelphia, Pa., assignor to United Products Corporation of America, Philadelphia, Pa., a Corporation of Delaware. Filed July 30, 1919. Serial No. 314,363. 15 Claims. (Cl. 134—50.)

2. A composition of matter adapted for use as a coating composition or paint, comprising casein, an alkali, a soluble fluoride, and binding and filling material.



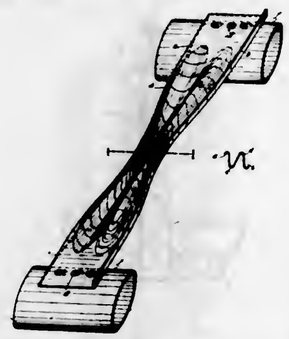
1,424,909. TRACTOR WHEEL. MATHIAS V. JARECKI, Columbus, Nebr. Filed Mar. 11, 1922. Serial No. 542,973. 5 Claims. (Cl. 301—52.)

4. A tractor wheel comprising a pair of rim bands relatively spaced, holding plates connected to the inner surfaces of the rim bands, tractor lugs on the exterior surfaces of the rim bands and in register with the plates, means on the rim bands operatively engaging said lugs to assist in holding them in position, a tire band encircling about the lugs substantially centrally between the rim bands, said tire band being disposed radially of the wheel, and staples straddling the tire band and passing through the lugs and through the plates and provided with means on their inner ends for securing



the bars together, and interconnecting means between the tire band and the lugs, to insure against relative movement of said parts.

1,424,910. BUCKET AND HOISTING APPARATUS. FRED A. JOHNSON, St. Paul, Minn. Filed Oct. 16, 1919. Serial No. 331,136. 8 Claims. (Cl. 37—30.)



1. The combination of a grab bucket, a circular head member having an opening formed in the center thereof, a plurality of bucket sections, pivotally connected to said head member, a circular operating member positioned below said circular head member and connected to the buckets, and operating blocks detachably mounted on said circular head and operating member and adapted to be drawn through the opening in said head and removed therefrom.

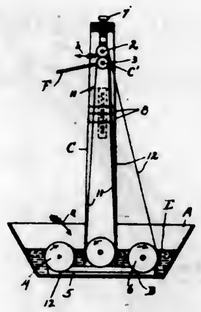
1,424,911. ADJUSTABLE STANDARD-LENGTH-RAIL SPOTTER. HARRY A. JONES and EDWARD W. STRUVE, Parsons, Kans. Filed Jan. 20, 1920. Serial No. 352,656. 4 Claims. (Cl. 20—67.)

1. A device of the character specified comprising an elongated support, a base slidable on the support, a latch mounted upon the base and adapted to engage notches in the support to secure the base in the required adjusted position, and stop means carried by the base.

1,424,912. PANEL ROD. HUGO JUNKERS, Dessau, Germany. Filed June 28, 1920. Serial No. 392,580. 5 Claims. (Cl. 189—37.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

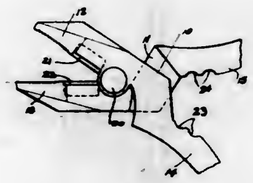
1. A sheet metal panel rod comprising flat end portions and a middle portion contracted transversely and having a longitudinal corrugation formed therein.

1,424,913. GATE-OPERATING MECHANISM. FRANK KAHLER, Dillon, Mont. Filed Nov. 30, 1920. Serial No. 427,408. 6 Claims. (Cl. 39—55.)

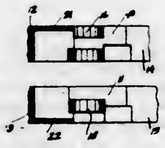


1. In a gate operating mechanism, a base consisting of a member having a vertical bore the side wall of which has upper and lower inclined ways and passages connecting the same at their ends and intermediate their ends, the upper way being downwardly inclined from the intermediate passage and the lower way being downwardly inclined from the end passages, a gate supporting member seating in the aforesaid bore and movable vertically therein, said member having a stud for engagement with the inclined ways, and normally positioned in line with the intermediate passage, means for blocking the end passages, means for moving the supporting member upwardly to locate its stud in position to engage the upper way, and means for retracting the blocking means to permit travel of the stud to the lower way.

1,424,914. WETTING AND WRINGING MACHINE FOR BOX-TOE DOUBLERS IN SHOES. EDWARD C. KANE, Binghamton, N. Y. Filed Feb. 9, 1920. Serial No. 357,414. 5 Claims. (Cl. 91—31.)



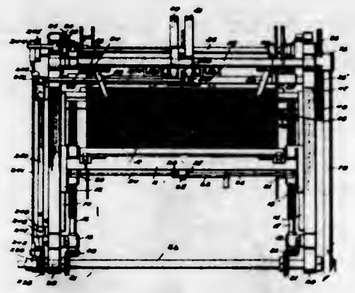
1. In a dipping and wringing machine, for box toe doublers, a portable vat, for emersing fluid or liquid therein; a portable frame removably mounted therein, having within it a series of rollers, some of which are partially emersed within the liquid, but 2 of which are out of the liquid and have adjustable pressure between



them; conveyor belts mounted on said rollers, having frictional contact with each other; means for adjusting the tension of said belts, a receiving platform mounted

on said frame, means for continuous turning of said rollers and belts in a forward movement, and adjustable removable means connected with the frame for stabilizing the roller frame within the vat.

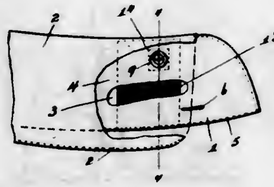
1,424,915. PLIERS. ELIAS AUGUST KAUFFMAN, Chicago, Ill., assignor to K. T. Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 23, 1920. Serial No. 412,235. 5 Claims. (Cl. 7—3.)



3. A pair of pliers comprising two jaw members, a pivot pin for pivotally connecting said jaw members together, and oppositely disposed cutting blades on said members extending into contact with said pivot pin, the metal being cut away from said blades and said pivot pin to permit such extension, substantially as described.

1,424,916. PAPER-FEEDING MECHANISM. WILLIAM M. KELLY, Jersey City, N. J. Original application filed Oct. 13, 1916, Serial No. 125,429. Divided and this application filed Apr. 10, 1920. Serial No. 372,816. 23 Claims. (Cl. 271—62.)

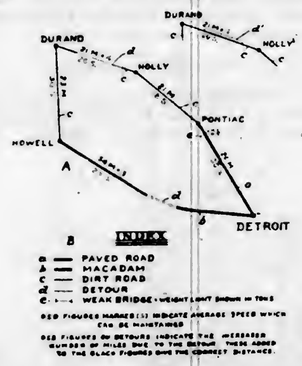
1. In a sheet feeding mechanism, a vertically movable table for supporting and elevating a pile of sheets comprising vertically arranged screws at the sides of said table for moving the latter, nuts pivoted to the table and adapted to swing into and out of engagement with said screws, a handle pivoted on said table, and links con-



necting said handle with said nuts arranged to lock the nuts in engagement with the screws when the handle is in an extreme position.

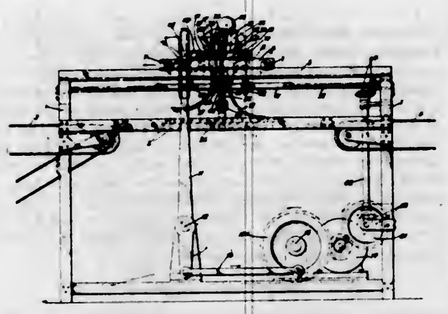
1,424,917. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Nov. 16, 1921. Serial No. 515,454. 8 Claims. (Cl. 199—44.)

1. A linotype magazine provided with a matrix locking bar shiftable longitudinally in opposite directions, means for projecting the bar into the magazine as it is shifted in one direction and positively-acting means for withdrawing the bar from the magazine as it is shifted in the opposite direction.



1,424,918. FOLD COLLAR. RICHARD OAKLEY KENNEDY, ALEXANDER H. GILLESPIE, and RICHARD C. MARSHALL, Troy, N. Y., assignors to Cluett, Peabody & Co., Inc., Troy, N. Y., a Corporation of New York. Filed May 19, 1919. Serial No. 298,196. 9 Claims. (Cl. 2—67.)

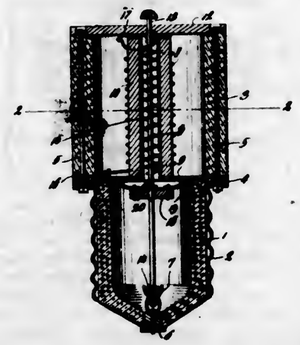
1. A launderable article having an attached button and having an area occupied by said button of substantially less thickness than the permanent area immediately adjacent to and on diametrically opposite sides of the area occupied by the button.



8. A launderable article having an attached button and having an area immediately surrounding the location of said button permanently of substantially greater thickness than the area occupied by said button.

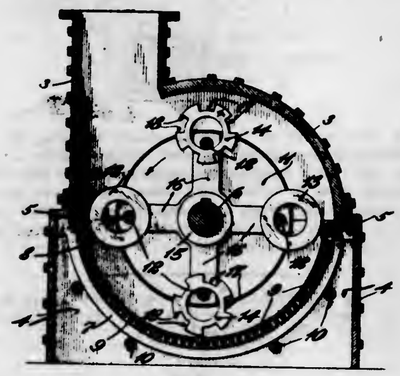
1,424,919. ROAD MAP. HARRY C. KESSLER, Warrington, Pa., assignor to Breuker & Kessler Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 27, 1921. Serial No. 464,901. 8 Claims. (Cl. 283—34.)

1. An automobile road map having marks indicative of localities, lines indicative of roads connecting localities, figures adjacent said lines indicative of mileage between localities on roads indicated by such lines, and other figures adjacent said lines indicative of practicable speeds obtainable on such roads between such localities.



1,424,920. WASHER-PLACING MACHINE FOR RUBBER-HEEL MOLDS. JULIUS H. KINTZELE, ABRAHAM MANHEIMER, and FREDERICK M. ETTER, St. Louis, Mo. Filed Aug. 31, 1921. Serial No. 497,299. 34 Claims. (Cl. 18—1.)

1. A machine of the character described, comprising a carriage, a magazine supported by the carriage, a passage supported by the carriage for conducting washers from the magazine to position for engagement by pins to which the washers are to be applied, means for operating the carriage to cause the washers to be engaged by the pins in one row, mechanism for moving the carriage to position to cause washers to be engaged by the pins in another row, and means for delivering washers from the magazine into said passage.

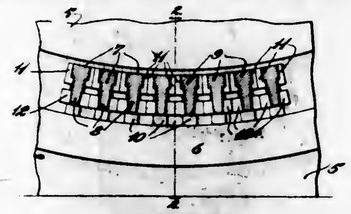


1,424,921. AUTOMATIC CIRCUIT BREAKER. HERBERT B. KISSINGER, Lock Haven, Pa. Filed Nov. 27, 1920. Serial No. 426,861. 2 Claims. (Cl. 200—94.)

1. An automatic circuit breaker including a base, a pair of contact elements on the base, a spring actuated plunger adapted to engage the contact elements to close a circuit, a solenoid surrounding the plunger, the winding of said solenoid being in circuit with the plunger through one of the contact elements, a coil spring surrounding the plunger for normally holding the same out of contact with the other contact element, a contact knob formed on the inner end of the plunger and having an annular groove therein, a contact spring situated on the last mentioned contact element, said spring being substantially U-shaped and having its arms curved so that their mid portions will be closer to each other

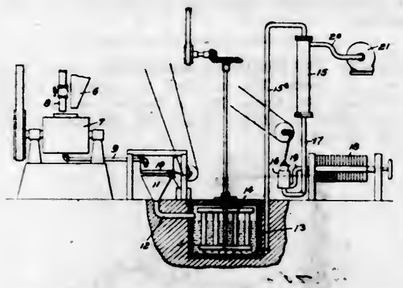
than their other portions whereby the mid portions may fit in the groove of the contact knob for normally holding the same in engagement with the contact spring, an armature for the solenoid, a spring resisting actuation of the armature by the solenoid, and means for moving the plunger upon movement of the armature by the solenoid.

1,424,922. PULVERIZING MACHINE. PAUL S. KNITTEL, St. Louis, Mo., assignor to American Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 9, 1918. Serial No. 253,324. 8 Claims. (Cl. 83—11.)



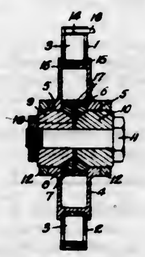
1. A hammer and crushing member for pulverizing machines of the high-speed percussion and crushing type comprising an annular body of sufficient weight to serve as a crushing roller and having a relatively large central opening, the periphery of said body being offset at intervals to form extending crushing surfaces and hammer faces at the ends of said surfaces.

1,424,923. PULVERIZER. PAUL S. KNITTEL, St. Louis, Mo., assignor to American Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 2, 1919. Serial No. 269,328. 5 Claims. (Cl. 83—11.)



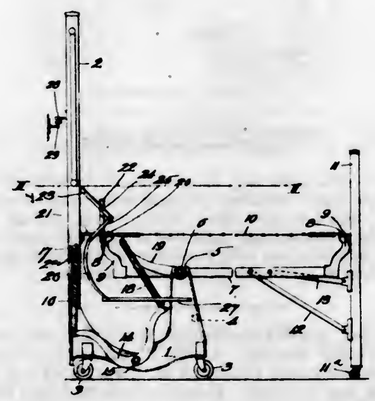
1. A pulverizer having an arcuate grate comprising separate grate bars, each grate bar consisting of a vertical

stem portion having a head portion at the top thereof, said grate bar having spacing lugs on its opposite sides provided with flat end faces, some of the lugs on one side of the bar being disposed in pairs at equal distances from a line midway of the length of the bar, and some of the lugs on the other side also being disposed in pairs at equal



distances from said midway point and the lugs on one side being offset longitudinally of the bar with respect to the lugs on the opposite side of said bar, whereby when said bar is placed along side of a similar bar with the lugs of said bars registering, one width of spacing is obtained and, when said bar is turned end for end the lugs of said bars are out of register and a different width of spacing is obtained.

1,424,924. METHOD OF PRODUCING CLAY BODIES. GROVER W. LAPP, Le Roy, N. Y. Filed Aug. 27, 1919. Serial No. 320,163. 23 Claims. (Cl. 25—156.)



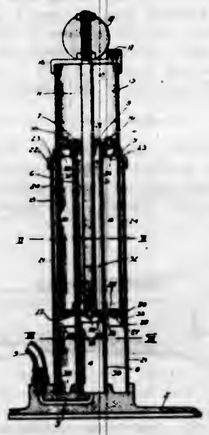
1. The method of preparing elastic material for use in the production of ceramic ware, which consists in forming slip, filter-pressing the slip, disintegrating the filter-pressed cakes in a receptacle, exhausting the receptacle of air and other fluid, and compressing the filter cakes into a compact mass while retaining the reduced pressure within the receptacle.

1,424,925. CROSSHEAD. JOSEPH PIERRE LAVOIE, Montreal, Quebec, Canada. Filed Apr. 21, 1921. Serial No. 463,173. 3 Claims. (Cl. 74—84.)

1. In a cross head in combination, a pair of guides, each having a longitudinal channel therein, one guide having a plurality of holes formed in the bottom thereof; a cross head slidably mounted on said guides and formed with a hole, a connecting rod having a conical hole adjacent one end; and frusto-conical members engaged in said conical hole and spaced from each other to form an intermediate recess, said connecting rod having a hole therein communicating with said recess.

1,424,926. FOLDING BED. THOMAS A. LOGAN, JOSEPH F. BROWN, and CHARLES E. DAVIS, Kansas City, Mo. Filed Dec. 2, 1920. Serial No. 427,735. 5 Claims. (Cl. 5—18.)

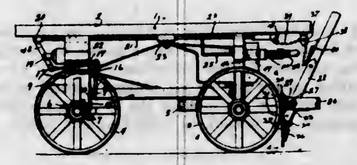
1. In a folding bed, a rectangular frame comprising a transverse headframe and a pair of side bars projecting forwardly from the headframe adjacent the lower corners thereof and terminating at their front ends in upwardly projecting arms, a rectangular frame for carrying a mattress, pivoted at an intermediate point of its sides, to said arms and of substantially the same width as the headframe, a pair of curved arms rigidly secured to the rectangular frame at its pivotal point, a pair of relatively U-shaped rocker bars pivoted to said side bars, a pair of retractile springs connecting the rear ends of said rocker bars to the headframe, and a second pair of retractile springs connecting the front ends of said rocker bars to said pair of curved arms.



1,424,927. FOOD PRODUCT AND PROCESS OF PREPARING SAME. SIGMUND LUFT, Maywood, Ill. Filed Aug. 2, 1920. Serial No. 400,768. 4 Claims. (Cl. 99—10.)

1. The process of treating cereal grains to produce a ready-to-eat food which consists in tempering the hulled kernels, forming the same into substantially unbroken scales, and roasting the scales to crisp dryness while being agitated to preserve the individuality of the grains.

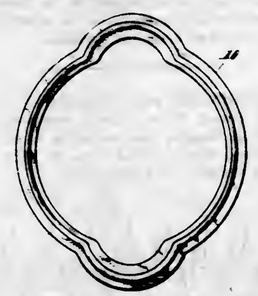
1,424,928. PUMP. CHARLES S. MCCLELLAND, Pittsburgh, Pa. Filed May 14, 1921. Serial No. 466,818. 7 Claims. (Cl. 230—27.)



1. A triple cylinder air pump comprising a base, an innermost high pressure cylinder secured in the base and provided with an air inlet and an outlet delivery port, an outermost cylinder also mounted in the base provided with an air inlet port, a reciprocable cylinder intervening between said cylinders provided with an air inlet port, and a co-acting central plunger within the innermost cylinder.

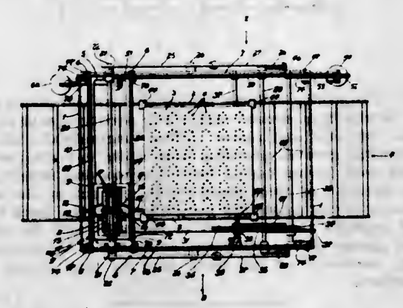
7. The combination with a reciprocable member, of a packing cup thereon having an outer annular flange and

an inner reversed flange, a holding ring provided with laterally extending spring tongues engaging the outer annular flange, and means for holding said parts in position.



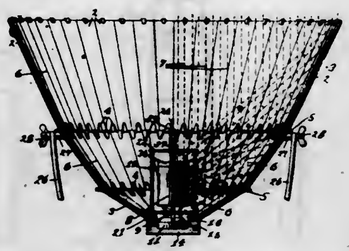
1,424,929. TONGUE-OPERATED LOCK FOR TRUCK WHEELS. LEE R. MCKINNEY, Linton, Ind. Filed Nov. 13, 1920. Serial No. 423,881. 2 Claims. (Cl. 188—106.)

1. In a device as specified, a truck having forward and rear wheels, a lock mechanism for the hubs of the rear wheels, a tongue pivotally mounted on the forward hounds of the forward wheels, and operatively connected with the lock mechanism, whereby upon moving the tongue from a substantial perpendicular position to a horizontal position and back again the lock mechanism actuates to unlock and lock the rear wheels, and means operatively connected with the lock mechanism for actuating the mechanism independently of the tongue.



1,424,930. GASKET FOR HANDHOLE PLATES FOR WATER-TUBE BOILERS. PATRICK H. MAHONEY, Chicago, Ill. Filed May 3, 1919. Serial No. 294,531. 3 Claims. (Cl. 288—1.)

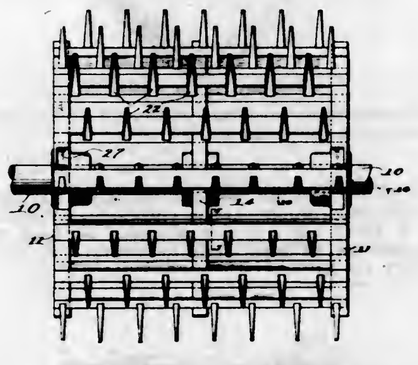
1. A lead gasket for a hand-hole plate, said gasket being substantially circular in form and outwardly bulged at diametrically opposite points, said gasket having a



circumferentially extending ridge located on both sides, substantially as described.

1,424,931. WASHER-PLACING MACHINE FOR RUBBER-HEEL MOLD. ABRAHAM MANHEIMER, FREDERICK M. ETTER, and JULIUS H. KINTZELE, St. Louis, Mo. Filed Dec. 16, 1921. Serial No. 522,734. 40 Claims. (Cl. 18—1.)

1. A machine of the character described, comprising a magazine for containing washers, a finger for guiding the washers to position for engagement by the pins on which the washers are to be placed, and a support for the finger, permitting oscillation of the finger to deliver washers to pins in zigzag rows.

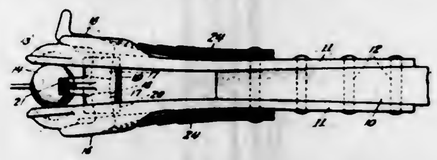


1,424,932. SOLAR HEATING DEVICE. MARCEL ELOI MOREAU, San Francisco, Calif. Filed Aug. 28, 1920. Serial No. 406,736. 3 Claims. (Cl. 126—270.)

1. A solar heating device comprising a housing; a plurality of plane reflecting surfaces symmetrically mounted

in converging relation about an axis and arranged in a plurality of annular series of different inclinations to focus rays from the sun upon a focal area; and tabs formed upon the housing and arranged to be turned inwardly to engage said reflecting surfaces for retaining the same in operative position upon the housing.

1,424,933. CYLINDER FOR THRASHING MACHINES. ROBERT H. OWEN, Butte, Mont., assignor of one-third to Edward F. Maginn and one-sixth to M. H. Gleason, both of Butte, Mont. Filed Nov. 2, 1921. Serial No. 512,252. 3 Claims. (Cl. 130—27.)

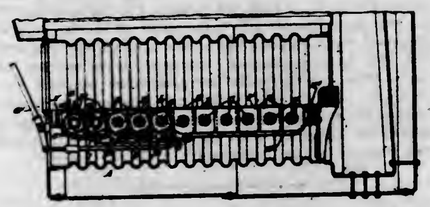


1. A thrashing cylinder having circular end plates and an intermediate circular support or partition, said partition and said end plates having longitudinally alined peripheral grooves provided with under cut side walls, tooth bars having flaring inner portions and slidable in the direction of their lengths into and out of the said grooves, means detachably associated with the tooth bars and engaging the end plates to normally hold the tooth bars against sliding movement, and series of teeth detachably connected to the tooth bars in their length as described.

1,424,934. SIDEHILL ORCHARD LADDER. WILLIAM PATERSON and MAY H. PATERSON, Oakland, Calif. Filed Jan. 20, 1921. Serial No. 438,717. 3 Claims. (Cl. 228—64.)

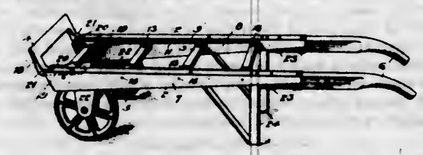
1. In a side hill orchard ladder of the type described the combination of an automatically adjustable base pivotally attached by means of a bolt fixed to the lower step of the ladder, said bolt projecting through a vertically arranged slot centrally located in the upper portion of said base, permitting the base to slide up and down and to oscillate freely upon said bolt, a curved rack fixed to the main frame of the ladder, a movable clamp-jaw pivotally connected to the upper portion of said base, a bolt fixed to the upper portion of said base and passing through said movable jaw, the shank of said last mentioned bolt being adapted to mesh in the cavities in said curved rack, said vertically arranged slot permitting the shank of said last mentioned bolt to escape from the cavities in said rack when the ladder is raised.

1,424,935. PITMAN CONNECTION. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Feb. 26, 1919. Serial No. 279,439. 19 Claims. (Cl. 287—89.)



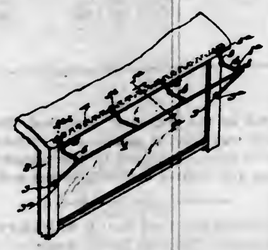
17. In a pitman connection, a pitman having resilient straps, a lever movable through substantially 180° relative to said straps, and strap engaging members movable relative to and controlled by said lever.

1,424,936. LATCHING MECHANISM. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 18, 1919. Serial No. 324,475. 7 Claims. (Cl. 292—124.)



1. A latching mechanism comprising in combination a pivoted latching member, resilient means for forcing said latching member in one direction about its pivot and controlling means having an oblique pivotal connection with said member for locking the member in open position against the tension of said resilient means.

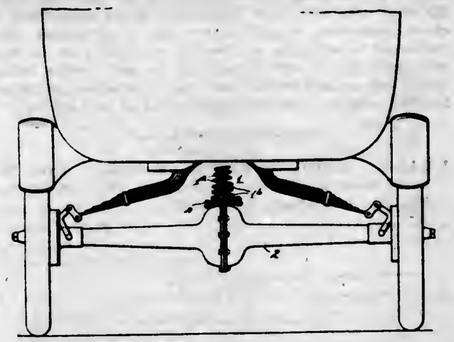
1,424,937. GRATE. OLAF W. PETERSEN, Buffalo, N. Y., assignor to Petersen Stoker Company, Buffalo, N. Y. Filed Aug. 1, 1919. Serial No. 314,599. 5 Claims. (Cl. 126—181.)



1. A grate including a plurality of rotatably mounted grate bars, each of said grate bars having a central supporting rod, and a plurality of plates secured to said supporting rods and spaced apart, the plates of one grate bar being adapted to enter into the spaces between the plates of an adjacent grate bar, said plates having a plurality of substantially flat edges, and intermittently operating mechanism for turning said grate bars for advancing the fuel, said mechanism after each operation leaving the grate bars in positions in which the uppermost flat edges of the plates lie substantially in the same plane to form a substantially flat grate surface.

1,424,938. HAND TRUCK. EDWIN L. PETERSON, Pittsburgh, Pa. Filed Dec. 6, 1919. Serial No. 342,989. 5 Claims. (Cl. 280—56.)

1. A wheeled truck having a body portion comprising a metal frame formed of longitudinal channel side bars having progressively increasing load supporting surfaces formed thereon, lugs provided on said side bars and a plurality of cross bars extending into said channel bars and secured to said lugs and side bars.



1,424,939. GLARE GUARD FOR WINDSHIELDS FOR AUTOMOBILES, ETC. WINFORD D. PICKARD, Norman, Okla. Filed Apr. 25, 1921. Serial No. 464,177. 1 Claim. (Cl. 296—95.)

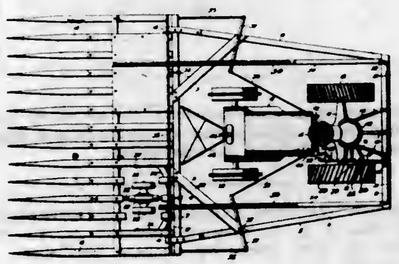
A wind-shield for automobiles, comprising a hood-equipped, foldable or collapsible and extensible frame, whose lateral or side-portions are each formed of a plurality of pivoted-together link-members, the upper ends of the uppermost link-members having pivotal connection with the automobile, at its top-forward edge, intermediate link-members being proximately U-shaped, the resultant channels formed thereby receiving and providing for pivoting therein of other of the link-members, whose inner ends are pivotally connected to the lower ends of the uppermost link-members, said intermediate links being mutually adjustable with respect to each other for shortening and lengthening the shield appliance.

1,424,940. REAR-AXLE ATTACHMENT FOR AUTOMOBILES. WINFORD D. PICKARD, Norman, Okla. Filed Sept. 29, 1921. Serial No. 504,008. 3 Claims. (Cl. 267—28.)

1. A device of the type described, including a spring of general tapering coiled type, whose coils are formed with looped arcuate portions, in combination with the rear-axle housing of an automobile, having upstanding studs received by the flared lower end or base of the spring, nut-equipped bolts inserted transversely through said studs, and proximately U-shaped couplings adapted to be applied to the lower terminal of the spring, and nut-equipped bolts inserted transversely through said couplings and adapted to clamp the arms of said couplings

upon said lower spring terminals, the lowermost looped arcuate portion of the spring conforming to, and adapted to seat centrally upon the axle-housing.

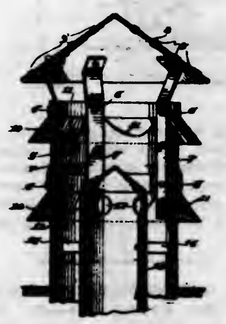
1,424,941. GAUGING AND MEASURING INSTRUMENT. FRIEDRICH A. G. PIRWITS, Rochester, N. Y. Filed Dec. 30, 1919. Serial No. 348,341. 10 Claims. (Cl. 33—189.)



1. In a testing and marking apparatus, the combination with a support, and a work table adjustable on the support, of a microscope, movably mounted on the support, above the work table, a tool also movably mounted on the support, and means for locking either the tool or the microscope in the same fixed position relative to the support.

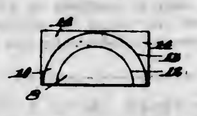
1,424,942. AUTOMOBILE APPLIANCE. THOMAS RAMAGE, The Pas, Manitoba, Canada. Filed May 7, 1921. Serial No. 467,555. 1 Claim. (Cl. 280—94.)

The combination with the front axle of an automobile, a steering spindle supported thereby, a steering arm ex-



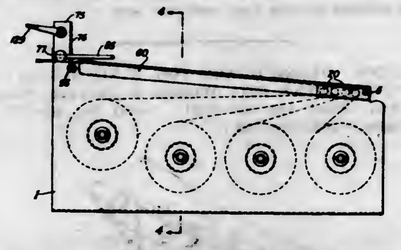
tending through said spindle having a forwardly projecting end, a nut on said projecting end and a cotter pin extending through said projecting end for locking said nut, of a tensioning device connecting said steering spindle with said axle, said tensioning device comprising a clevis connected to said cotter pin, a detachable clip connected to said axle, a forwardly projecting ear formed with said clip, a spring, one end of said spring being connected to said clevis, and an adjustable connection between said ear and the opposite end of said spring.

1,424,943. MOTOR-DRIVEN BUCK RAKE. EARL W. REED, Sunnyside, Wash. Filed Jan. 5, 1921. Serial No. 435,130. 11 Claims. (Cl. 56—27.)



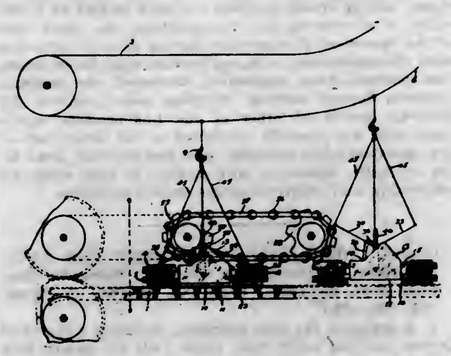
1. In combination, a supporting frame attachable to and transportable by a tractor, a tiltable rake structure carried by the frame, and means engageable with a spoke of one of the drive wheels of the tractor for effecting automatic adjustment of the rake structure.

1,424,944. VENTILATOR. WALTER RENSTROM, Chicago, Ill. Filed May 31, 1917. Serial No. 172,016. 1 Claim. (Cl. 98—4.)



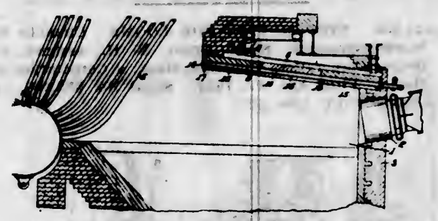
In a ventilator, the combination with a plurality of telescoping sections having their adjoining edge portions overlapping and secured together; longitudinally extending reinforcing bars connected to said sections, the upper portions of said bars being extended beyond the upper edge of the upper section of said ventilator; a hood carried by and secured to said bars in spaced relation with respect to the said upper section; angular downwardly and outwardly inclining aprons carried by and secured to the upper edge of each of said sections, and openings formed at the upper ends of each of said sections, substantially as described.

1,424,945. PROCESS OF FORMING HOODS AND APRONS FOR VENTILATORS. WALTER RENSTROM, Chicago, Ill. Original application filed May 31, 1917, Serial No. 172,016. Divided and this application filed July 14, 1919. Serial No. 310,633. 1 Claim. (Cl. 113—116.)



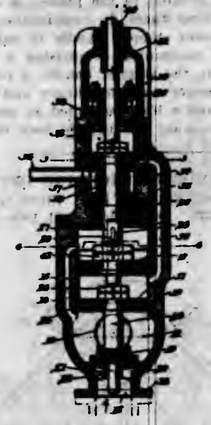
A method of making ventilator parts from separate sections by cutting blanks for half a hood and half an apron, said blanks being cut from the same piece of material by cutting along two concentric lines having diameters coincident with one of the edges of the piece of material in one operation, forming the blank for half the hood into a conical shaped half hood section and flaring a portion of the blank for the half apron forming a half apron section, and joining other similar parts therewith to provide a complete ventilator hood and apron.

1,424,946. AUTOGRAPHIC REGISTER. HERBERT L. ROBERTS, Toronto, Ontario, Canada, assignor to Business Systems, Limited, Toronto, Canada, a Corporation of Canada. Filed July 27, 1918. Serial No. 247,039. 27 Claims. (Cl. 282—11.)



1. A machine of the character described, the combination of suitable web feeding means, and suitable registering means, with means actuated by the registering means for disengaging the feeding means from the web.

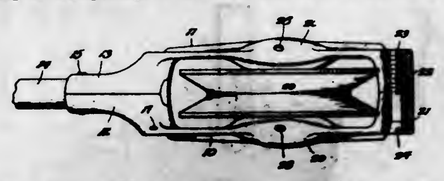
1,424,947. CONVEYER AND MOLD SEPARATOR. WILLIAM E. SIMPSON, Detroit, Mich., assignor to Palmer-Bee Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 14, 1921. Serial No. 444,716. 16 Claims. (Cl. 18—2.)



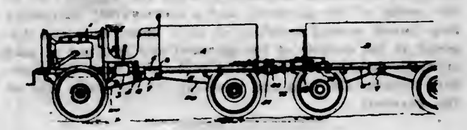
1. The combination with a conveyer for sectional molds, of means for moving one of the sections of the mold away from another, and automatic means for initially separating the sections.

1,424,948. ARCH FOR THE FIRE BOXES OF BOILERS. WILLIAM J. STOOP, Wheeling, W. Va. Filed Feb. 17, 1921. Serial No. 445,684. 3 Claims. (Cl. 122—6.)

1. An arch for the fire boxes of boilers, comprising an arch facing composed of a plurality of parallel courses of longitudinally alined blocks of a suitable refractory material, each course having the blocks thereof provided with parallel longitudinally extending bores, a water pipe of substantially U-shape extending throughout said courses and having the opposite legs thereof received in said bores, said pipes having their outer ends coupled together in series to provide for circulation of water successively through the various courses, and means supporting said courses.



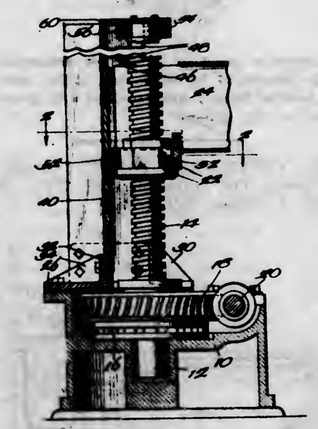
1,424,949. AUTOMATIC STEAM STOP VALVE. WILLIAM B. STORK, Andover, Mass. Filed Oct. 17, 1919. Serial No. 331,432. 11 Claims. (Cl. 137—139.)



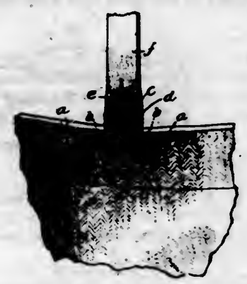
1. An automatic stop valve including in combination, a valve body formed with a chamber having an inlet passage and an outlet passage, a valve controlling the inlet passage constructed to close when the pressure in the inlet passage is less than in the chamber, a cylinder, a stem connected with the valve extending into said cylinder, a pair of spaced pistons in said cylinder, the one adjacent the valve being secured to said stem, a slidable spindle secured to the other piston and projecting outside the cylinder, said stem and second piston being connected for limited relative longitudinal movement, the spaces at the opposite ends of said pistons being in communication with fluid at the same pressure as in the outlet passage, and a valve controlling the supply of fluid at the same pressure as in the inlet, to the space between said pistons.

1,424,950. TROLLEY HARP. FREDERICK THORNTON, Huntington, W. Va., assignor to Thornton Trolley Wheel Co., Ashland, Ky., a Corporation of Kentucky. Filed Sept. 9, 1920. Serial No. 409,093. 8 Claims. (Cl. 64—24.)

1. A trolley harp including side members having lubricant chambers provided with openings in the side walls thereof, substantially semi-spherical bearing cups having studs at their outer ends fitting in the openings in the outer side walls of the chambers, the rims of the cups fitting in the openings in the inner side walls of the chambers, the walls of the cups being provided with openings communicating with the chambers, and a trolley wheel having an axle provided with substantially semi-spherical trunnions fitting in said cups.

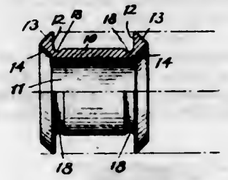


1,424,951. VEHICLE DRIVE TRANSMISSION SYSTEM. DON G. TIFFANY, Newark, Mich., assignor to Walter W. Jones, Flint, Mich. Filed June 15, 1920. Serial No. 389,157. 7 Claims. (Cl. 180—14.)



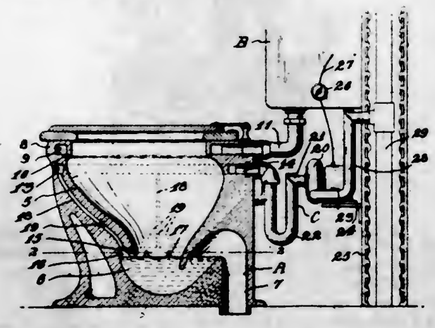
1. The combination with a main motive power vehicle and a series of trailers, of a driving system therefor including means connecting the ground engaging elements of all the vehicles in driving relation with the main motive power vehicle, and couplings included in the said driving system between the vehicles locally movable in a direction longitudinally of the vehicles.

1,424,952. HOUSING FOR VERTICAL SCREW JACKS. JOHN S. TOWNSEND, Harvey, Ill., assignor to Whiting Corporation, Harvey, Ill., a Corporation of Illinois. Filed Dec. 22, 1920. Serial No. 432,572. 4 Claims. (Cl. 254—103.)



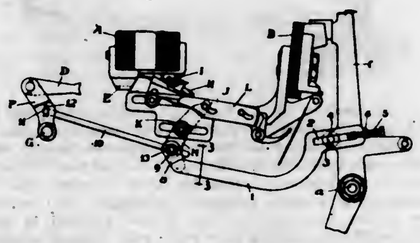
1. In mechanism of the class described, a main base member, a vertical screw having its lower end journalled therein, means for operating the screw carried in the base, a cover plate casting for the base, partially enclosing the screw, lugs rising from the cover member, a single vertical I-beam interfitting with said lugs and enclosing three sides of the screw, means securing the I-beams to said lugs and means supporting the upper end of the screw in the upper end of the I-beam.

1,424,953. GARMENT FASTENER. ALEXANDRA N. TURNQUIST, Glenellyn, Ill. Filed May 23, 1921. Serial No. 471,565. 1 Claim. (Cl. 24—225.)



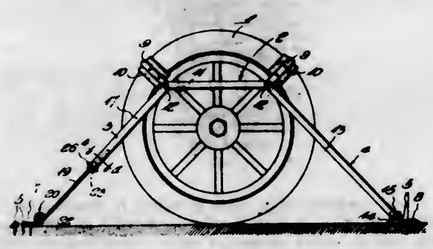
A garment fastener formed of a strip of metal and comprising hooks adapted to pass through a garment, upwardly extending members between the hooks to lie at the inside of the garment, and a downwardly extending loop joined to said members at their upper ends and disposed at the outside of the garment and in front of said members, said hooks extending forwardly from the members towards the loop and upwardly at the outer side of the garment.

1,424,954. SPOOL OR HOLDER FOR COMMUTATORS. CHARLES A. VAN DUSEN, Toledo, Ohio, assignor to The Toledo Standard Commutator Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 20, 1920. Serial No. 411,565. 4 Claims. (Cl. 171—321.)



2. A one-piece spool or holder for commutators comprising a cylindrical barrel having at its ends integral segment holding flanges, and provided with grooves at the inner face of the flanges.

1,424,955. VENTILATING TOILET. GEORGE H. VAN ECK, Tampa, Fla. Filed Mar. 18, 1921. Serial No. 453,271. 4 Claims. (Cl. 4—21.)

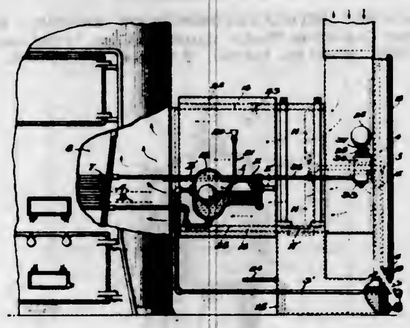


1. A toilet bowl having an internal suction chamber therein arranged above the water trap, a second chamber arranged adjacent to the water trap and communicating with the interior of the bowl and passageways in said bowl connecting the chambers.

1,424,956. STOP MOTION FOR LOOMS. CHARLES E. VANHONAKERROUCK, Salem Depot, N. H., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 17, 1922. Serial No. 553,390. 4 Claims. (Cl. 139—52.)

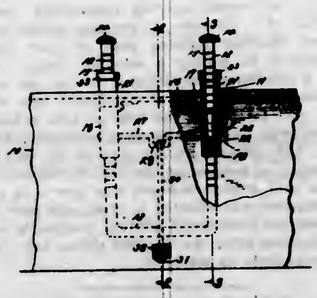
4. A stop motion for a loom including a swinging carrier which is brought into action when a warp thread breaks or becomes unduly slack, a swinging stop finger which is brought into action when a weft thread breaks or runs out, and a shipper handle which swings back and forth in a plane parallel to the planes of swing of said carrier and said stop finger, in combination with mechanism connecting said shipper handle to said stop finger and carrier, said mechanism comprising a rod attached at its front end to the shipper handle, a rock shaft connecting said connector and stop finger and rocking with respect to both, and a link connected at one end to said carrier and at its other end to said rock shaft.

1,424,957. AUTOMOBILE SECURING DEVICE. HARRY W. VAN TILBURG, Elkhart, Ind. Filed June 17, 1920. Serial No. 389,636. 10 Claims. (Cl. 188—32.)



6. A structure of the character set forth, comprising a pair of members spaced apart and connected together and straddling the wheel to be secured, and members operatively connected with said first-named members and inclining downwardly in opposite directions from the center of the wheel, the outer ends of said second-named members being attachable to the support upon which the wheel rests, for placing the structure under tension.

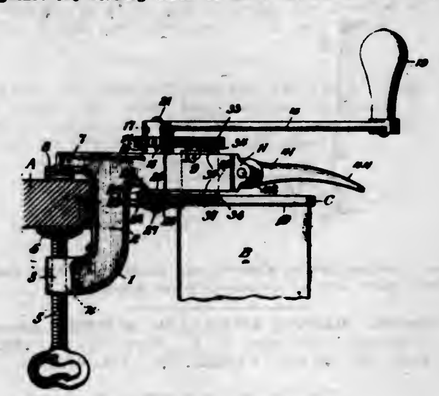
1,424,958. AUTOMATIC FAN SYSTEM FOR HOT-AIR FURNACES. NATHANIEL B. WALSH, Kalamazoo, Mich., assignor to Furnace Fan Corporation, Niles, Mich. Filed Apr. 11, 1922. Serial No. 551,441. 5 Claims. (Cl. 237—1.)



5. An automatic air circulator for a hot air furnace, comprising a steam generating chamber positioned within the fire-pot of the furnace, a steam engine operatively

connected to said chamber, means actuated by the engine for controlling the volume of air passing through the air ducts of the furnace, and means controlled by the intensity of the fire within the fire-pot to start the engine

and maintain it at an intermittent action at low fire intensities and in continuous operation at normal and high intensities.



1,424,959. ADJUSTABLE FOOT REST FOR SHOE-SHINING STANDS. JAMES EMORY WALKER, Hecla, S. Dak. Filed Nov. 16, 1921. Serial No. 515,036. 2 Claims. (Cl. 15—265.)

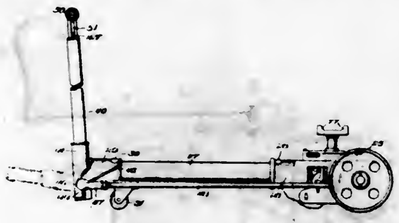
2. A shoe shining stand having a platform, a vertically movable U-shaped frame below the platform and having its arms extended through guide openings in the platform, said arms presenting foot-rests at their upper exposed ends, supporting means having engagement with the said arms below the platform for supporting the frame in raised position, and means for releasing the said supporting means to permit the descent of the said frame, said releasing means being operable from a point exteriorly of the said stand.

1,424,960. CAN OPENER. ROBERT H. WALLER and GRANBERY JACKSON, Nashville, Tenn., assignors to Quicksafe Manufacturing Company, Nashville, Tenn., a Corporation of Tennessee. Filed July 19, 1921. Serial No. 485,794. 2 Claims. (Cl. 30—3.)

1. In a can opener, the combination with a support having an outstanding arm, a vertical shaft mounted in said arm, a feed roller and cutter mounted at the lower end of the shaft, a gear at the upper end of the shaft, an operating handle also at the upper end of the shaft and operating in a horizontal plane above the arm, a movable bearing block mounted in said arm, a second shaft mounted in the bearing block, a second feed roller mounted on the lower end of said second shaft, a gear mounted at the upper end of the second shaft and engaging with the gear of the first shaft, a spring acting against the bearing block to move the same outwardly,

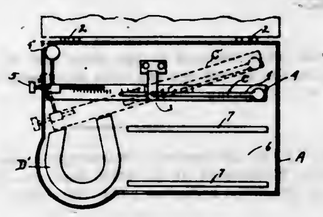
and a cam lever mounted in the outer end of the arm and bearing against the bearing block in opposition to the tension of said spring.

1,424,961. FAN. BUSHROD C. WASHINGTON and STUART K. JOICE, Washington, D. C. Filed Sept. 23, 1919. Serial No. 325,000. 2 Claims. (Cl. 230—33.)



1. The combination with a stationary casing having a fan actuating motor therein, said motor being actuated by a reciprocating rack moved inwardly manually and outwardly under the impulse of a spring, said rack being provided with a finger receiving socket having its side adjacent the casing inclined inwardly towards the casing thereby providing a finger engaging surface which will prevent slippage of the finger and a finger engaging socket carried by the casing opposite the rack socket and having its inner side at substantially a right angle to the casing for preventing slipping of the finger, said socket forming means for preventing the fingers from coming into the path of the fan during a fan operation.

1,424,962. TRUCK JACK. IRA A. WEAVER and ROLLA G. STOCKER, Springfield, Ill., assignors to The Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed July 9, 1919. Serial No. 309,593. 29 Claims. (Cl. 254—2.)

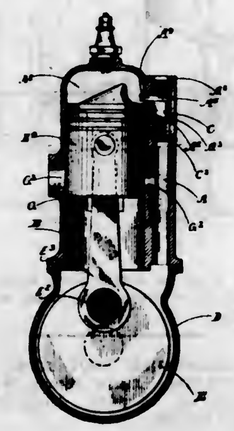


1. In an appliance of the character described, the combination of a truck having a caster-wheel and rotatable steering means near one end of the truck, a lifting-jack on said truck, a handle movably mounted on said truck near the other end thereof, means connecting said

handle and jack whereby the former may operate the latter and means permanently connecting said handle

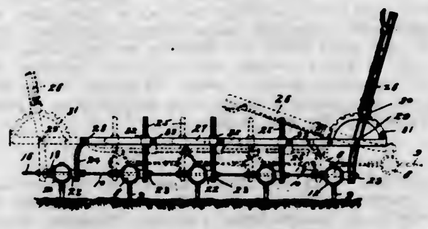
and steering means whereby the handle may turn and steer such means, substantially as described.

1,424,963. MAGNET FIRE-ALARM SYSTEM. ANTON WELLERT, Binghamton, N. Y. Filed Feb. 14, 1922. Serial No. 536,494. 4 Claims. (Cl. 116—67.)



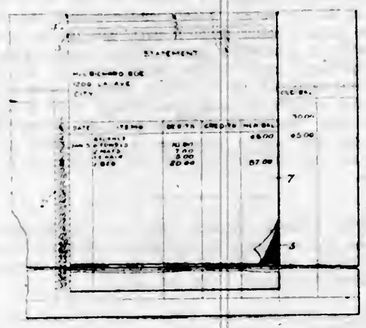
3. In combination, an alarm mechanism, a driving mechanism therefor an atmospherically controlled and magnetically controlled trip lever means for adjusting the operation of said lever, an intermediate trip lever for holding the driving mechanism in inoperative position, operative means for operating the trip lever to release the driving mechanism when the mechanism becomes heated to a predetermined degree, comprising a pivoted thermometer body, a magnet, and operative connection between thermometer body and the trip lever substantially as described.

1,424,964. PUMP. ARTHUR W. WELLINGTON and ARTHUR F. RYAN, San Jose, Calif. Filed July 5, 1921. Serial No. 482,525. 9 Claims. (Cl. 103—111.)



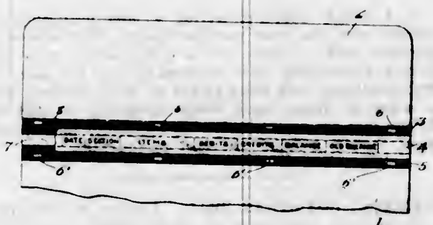
1. In combination, a pump head, a discharge casing suspended therebelow, a pump bowl carried by said casing, an impeller arranged in said bowl, a shaft operatively mounted with relation to said head and impeller, and a roller operatively mounted on said shaft between said head and bowl.

1,424,965. INTERNAL-COMBUSTION ENGINE. ROBERT GLADSTONE WELLS, Marple, England. Filed Jan. 4, 1921. Serial No. 434,960. 2 Claims. (Cl. 123—73.)



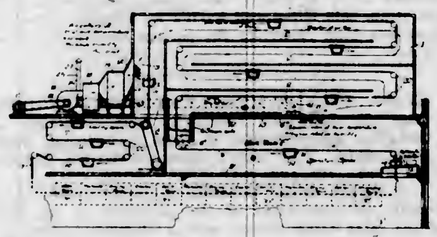
1. In a two stroke internal combustion engine, the combination of a cylinder, a working piston therein, a comoustion chamber forming part of said cylinder, a pump adapted to deliver a working charge into said cylinder, a conduit communicating at one end with said combustion chamber, and at the other end with said pump, a port formed in the side of said cylinder communicating with said conduit at a point intermediate of its ends, and adapted to be covered by said working piston during a portion of the latter's stroke, a valve located in said conduit between said port and said combustion chamber and adapted to close said port by movement under the pressure of mixture trapped in said combustion chamber after the working piston has closed said port, substantially as set forth.

1,424,966. HARROW. WILLIAM T. WEATMAN, Minneapolis, Minn. Filed Oct. 15, 1920. Serial No. 417,164. 4 Claims. (Cl. 55—102.)



1. A harrow comprising forwardly and rearwardly spaced toothed bars, links flexibly connecting said bars for independent rising and falling movements, a rigid tie bar extended over said toothed bars, crank arms rigidly connected to the front and rear toothed bars and pivotally connected to said tie bar, other crank arms rigidly connected to the intermediate toothed bars and slidably and pivotally connected to said tie bar, a lever pivotally connected to said tie bar and to one of said toothed bars, and means on said tie bar for securing said lever against movement.

1,424,967. COLLATED WORK SHEETS. JOHN A. WHERRY, New Orleans, La. Filed July 21, 1921. Serial No. 486,363. 6 Claims. (Cl. 282—23.)



1. The combination of a main work sheet having a notch in one transverse edge thereof, and a supplementary work sheet adapted to be folded over or creased along any one of several lines and engaged at the crease or fold with the edge of the main sheet within said notch.

1,424,968. RECORD SHEET OR CARD. JOHN A. WHERRY, New Orleans, La. Filed July 29, 1921. Serial No. 488,433. 10 Claims. (Cl. 283—66.)

1. A record sheet, comprising a main section, a separate top section, and means for detachably connecting said sections with their edges in the same plane, said top section having heading indicia applied thereto.

1,424,969. DRYING METHOD AND MEANS. EZEKIEL FIELD WHITE, Detroit, Mich. Filed Jan. 24, 1921. Serial No. 439,637. 13 Claims. (Cl. 34—12.)

10. A drying apparatus of the character described comprising an elongated passageway which is open at both ends, means to induct attempered air adjacent to one of said ends and to educt said air adjacent to the other of said ends, and means adjacent to the point of induction for said air to adjust and determine the direction of air flow in said passageway and at the ends thereof.

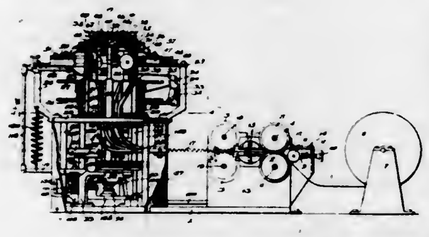
1,424,970. ARTICLE HOLDER FOR POCKETS. PETER S. ZONTOS, St. Louis, Mo., assignor of one-half to Demos Xelaras, St. Louis, Mo. Filed Jan. 3, 1922. Serial No. 526,836. 6 Claims. (Cl. 24—11.)

1. An article holding device for pockets consisting of a horizontally disposed member adapted to be arranged on the inside of a pocket in proximity to the upper end of the pocket and formed from a narrow strip of metal that is provided at its ends with rearwardly projecting arms, a part on said member that is adapted to embrace the upper edge portion of the pocket and retain said member in operative position below the upper edge of the pocket and a retaining element arranged parallel to said member and connected to the arms at the ends of said member.

1,424,971. MEANS FOR SECURING ANTISKID CHAINS TO VEHICLE WHEELS. CARL ACKERBERG, Oshkosh, Wis., assignor to Challoner Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed Mar. 24, 1920. Serial No. 368,449. 9 Claims. (Cl. 152—2.)

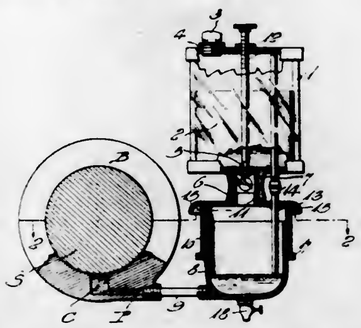
3. Means for securing an anti-skid chain to a vehicle wheel, comprising a plate having a hook at each side thereof, the bights of said hooks being formed integral with said plate and the shanks of said hook extending in opposite directions in spaced substantially parallel overlapping relation.

1,424,9..-. FINISHING ARTICLES IN BASKETWARE. GEORGE B. AMBLER and HAROLD F. SHAW, Leominster, Mass., assignors to F. A. Whitney Carriage Company, Leominster, Mass., a Corporation of Massachusetts. Filed Feb. 24, 1920. Serial No. 360,626. 7 Claims. (Cl. 147—48.)



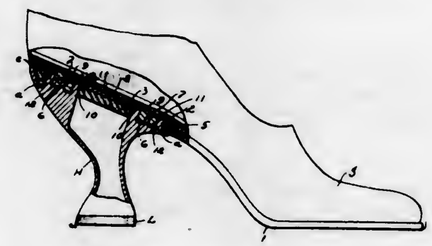
1. A method of finishing the margins of wicker articles comprising securing marginally of the article a strip of wicker fabric to overlie the face thereof, reversely bend-

ing said strip and rolling the reversely bent strip into hollow form over the margin of the article the rolled



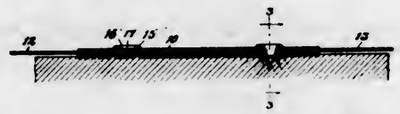
strip being spaced from the margin of the article for at least a major portion of its length and securing the opposite edge.

1,424,973. MACHINE FOR MANUFACTURING WIRE CAGES. WILLIAM E. BAKER and WILLIAM F. SONNEMAN, Waco, Tex., assignors to Wonder Trap Co., Inc., Waco, Tex. Filed Sept. 4, 1920. Serial No. 408,218. Renewed June 24, 1922. Serial No. 570,717. 48 Claims. (Cl. 140—71.)



1. In a cage forming machine, means for supplying a sheet of metal, means for dividing the sheet longitudinally into strips to form stays for the cage, and means for passing wire strands transversely of the stays and securing the same together.

1,424,974. LUBRICATING DEVICE. RALPH LINN BARNETT, Langeloth, Pa. Filed Sept. 16, 1920. Serial No. 410,635. 3 Claims. (Cl. 184—103.)

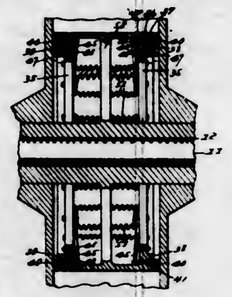


3. A lubricating device of the class described comprising a transparent reservoir having a valve seat at the center of its bottom, and a depending internally screw-threaded neck directly beneath said valve seat, said neck being formed with a sight-opening, a screw threaded needle valve arranged in said reservoir and co-operative with said seat, a receiving cup disposed beneath said reservoir, being provided at its bottom with an outlet and being open at its top and provided with external screw threads, a closure for the open end of said cup having screw threads engaged with the threads on the latter, being formed with air intake openings and with a depending guard flange co-operative with said openings, said closure being open at its center and being equipped with a screw threaded neck engaged with the threads of said first named neck, a vacuum release pipe carried by said closure and extendnig into said reservoir, and a stop-nut on the threads of said receiving cup for controlling the adjustment of said closure.

1,424,975. SHOE HEEL. LANGDON S. BARRON, St. Louis, Mo., assignor of one-half to Benjamin Richter, St. Louis, Mo. Filed Apr. 30, 1921. Serial No. 465,948. 3 Claims. (Cl. 36—40.)

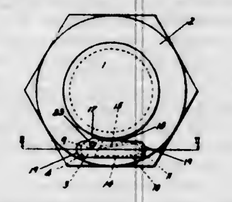
1. A hollow shoe-heel having a boss projecting upwardly from the inner surface thereof, said boss being provided with a recess and a wedge, and a boss projecting downwardly from the heel seat of the shoe, the last mentioned boss being kerfed so as to divide it into a series of fingers, said wedge operating to bind the fingers into the recess on forcing the bosses into engagement thereby securing the heel to the shoe.

1,424,976. BOX-STRAP SEAL. SAMUEL BARUCH, New York, N. Y. Filed Feb. 25, 1921. Serial No. 447,892. 3 Claims. (Cl. 292—325.)



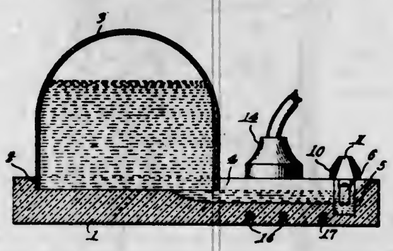
1. A seal for strap ends including a tubular member adapted to receive the strap ends, and having its outer and inner walls, each provided with a portion adapted to be deformed into locking engagement with the strap, said outer wall having an annular outwardly extending bead encircling the portion thereof to be deformed.

1,424,977. PACKING MEANS FOR ROTARY ENGINES. EARL E. BIDWELL, Frederick, Okla., assignor of forty-five one-hundredths to Price Quesenberry, Frederick, Okla. Filed May 1, 1920. Serial No. 378,315. 3 Claims. (Cl. 123—8.)



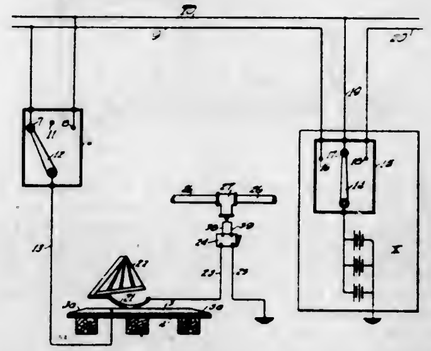
1. A rotary engine including a casing and a rotor therein, the side edges of the periphery of the body of the rotor being formed with a circumferentially extending groove, an annulus having a tongue extending into said groove and projecting laterally beyond the rotor body and into contact with the adjacent end of the rotor casing, the rotor body being hollow and there being

a series of passages extending from the rotor body and parallel to the axis thereof into the groove therein, a series of pins disposed in said passages and bearing



against the tongue of the annulus, and a series of springs disposed within the hollow rotor body and operatively engaged with the pins to urge them laterally outward.

1,424,978. NUT LOCK. ANDREW BIRCHMAN, GUSTAVE O. MATTER, and JOSEPH H. MCCOY, Portland, Oreg., assignors to Universal Nut Lock Company, Portland, Oreg., a Corporation of Oregon. Filed Mar. 17, 1920. Serial No. 366,568. Renewed Jan. 10, 1922. Serial No. 528,138. 5 Claims. (Cl. 151—26.)



1. The combination with a nut, provided with an oblong recess having its longitudinal axis substantially parallel to a tangent to the bore of the nut, and open means of operative communication with said bore, of a locking member pivotally mounted in one end of said recess and in operative communication, through said means, with said bore, and a locking-member-actuating spring operatively mounted in the other end of said recess.

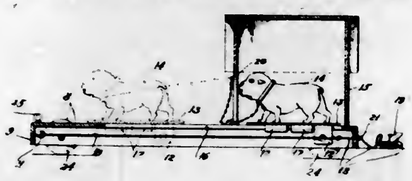
1,424,979. ELECTRIC HUMIDOR. JOHN ERNEST BLOUNT, Louisville, Ky. Filed Mar. 18, 1922. Serial No. 543,489. 5 Claims. (Cl. 219—38.)

1. In an electric humidor, the combination of a recessed base, a water containing bowl mounted in the recessed portion of said base, the base having a well spaced from the bowl, the base also having a channel communicating from the interior of the bowl to the well, and electrodes extending into the well and spaced apart to form a suitable gap.

1,424,980. AUTOMATIC TRAIN-STOPPING DEVICE. RUDOLPH BOARDMAN BOYLE, Kansas City, Mo. Filed Oct. 9, 1920. Serial No. 415,799. 2 Claims. (Cl. 246—13.)

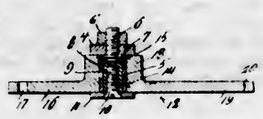
1. In a train stopping device, a track, a plurality of ramps disposed along the track, a pair of line wires, a switch box for each ramp, means in said switch box for connecting each ramp with either of said line wires, a dispatcher station, a switch box at said dispatcher station, a source of current, and means in the switch box at the dispatcher station for connecting said source of current with either of said line wires.

1,424,981. WRIST BLOTTER. EDWARD R. BRATLAND, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 454,692. 4 Claims. (Cl. 120—25.)



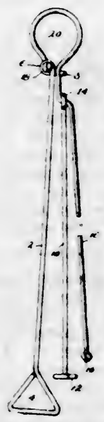
4. A wrist blotter comprising a blotting member including a wrist strip and a forwardly extending palm engaging portion, a flexible guard and attaching member for engaging the outer surface of the wrist strip of the blotter member, leaving the palm engaging portion exposed, the terminals of the wrist strip overlapping one another when in their folded position, and a snap fastener for securing the terminals of the wrist strip together, the male and female portions of the snap fastener constituting means for securing the flexible guard and attaching member to the wrist of the blotter member.

1,424,982. TOY. RICHARD B. BUDIN, Brooklyn, N. Y. Filed Feb. 23, 1921. Serial No. 447,269. 1 Claim. (Cl. 46—45.)



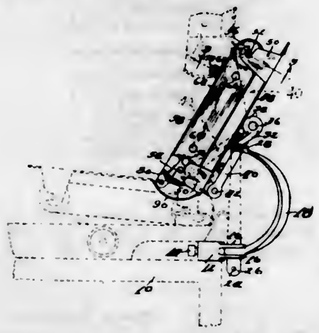
A toy as characterized comprising a table having an elongated narrow slot therein; a thin platform partially covering said slot and supported by said table, said platform having rigidly attached thereto, a perforated pendant bracket for extension through and below said slot; an open hook permanently disposed adjacent the forward end of said table in line with the perforation in said bracket; a perforated member attached to said table

at the opposite end thereof, the perforation in said member being aligned with the perforation in said bracket, said perforation having a contracted lateral extension; a non-elastic cord operatively engaging said bracket and being extended through said perforation therein and through the perforation in the member at the rear of said table, said cord equalling approximately the length of said table, and being provided with a knot adjacent



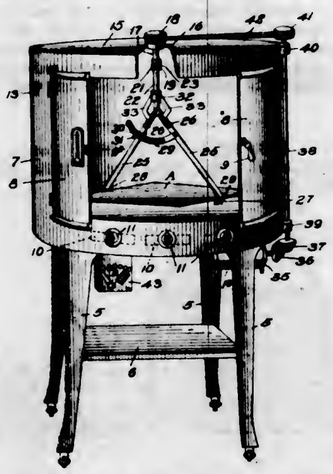
said bracket, said knot being adapted for engagement by the contracted extension of said perforation for restraining the platform and bracket connected therewith in a position adjacent the rear end of said platform and an elastic member operatively uniting said hook and said bracket, said member being extended through the perforation in said bracket and adapted for extension over, for engagement by said hook.

1,424,983. SHOCK ABSORBER. OLIVER E. BURGOON, Toledo, Ohio. Filed July 7, 1920. Serial No. 394,409. 2 Claims. (Cl. 208—97.)



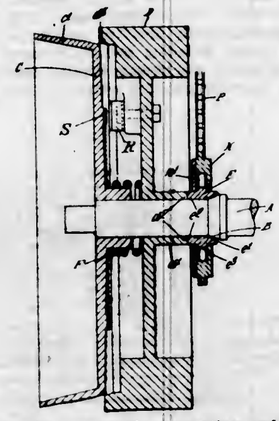
1. The combination with a bicycle fork and a wheel, of a bolt secured to the fork and having a threaded opening in its outer end, shoulders between the end of the bolt, a wheel mounting on the bolt and engaging said shoulders, a washer for the bolt, a screw threaded into the opposite end of the bolt for retaining the washer, and spring means for resisting vibrations of the wheel.

1,424,984. OBSTETRICAL INSTRUMENT. ATVILL BYRD, Kansas City, Mo. Filed May 4, 1920. Serial No. 378,933. 3 Claims. (Cl. 128—352.)



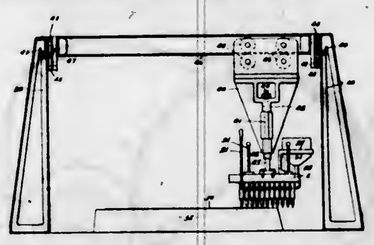
1. In a set of instruments of the character described, a flexible rod having an eye and a handle, an element projecting from said main rod adjacent the eye, a cable connected to said eye, and a supplemental flexible rod connected to said cable and adapted to form the same into a running loop by drawing it through the element projecting from the main rod.

1,424,985. TYPEWRITER ATTACHMENT. CLARENCE H. CALDWELL, Oak Park, Ill. Filed June 1, 1920. Serial No. 385,475. 8 Claims. (Cl. 120—33.)



8. A device of the kind described comprising two adjustable clamps, a semi-circular bracket mounted in each clamp on a pivot pin, a gear on the end of each pivot pin, lugs depending from the clamps, a single revolvable shaft mounted in the lugs, gears on the ends of the shaft adapted to coact with the gears on the pivot pins, an arm pivotally mounted on the upper end of each semi-circular bracket, cylindrical lugs on the end of each arm provided with stops, a shaft fixed in the lugs, arms pivoted on the shaft and held in position by the stops, a plate pivotally mounted on the arms, said plate being provided with two pairs of upstanding lugs, a shaft revolvably supported by each pair of lugs, and a movable copy holder supported by said shafts.

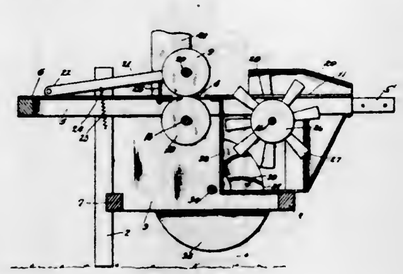
1,424,986. PLATE TWIRLER FOR ENGRAVERS. JAMES A. CAREY, Pittsburgh, Pa. Filed Dec. 2, 1920. Serial No. 427,908. 12 Claims. (Cl. 91—60.)



5. A twirling device comprising a rod member, legs pivoted to one end of said rod member and adjustable toward and away from each other, and means for supporting and rotating said rod member.

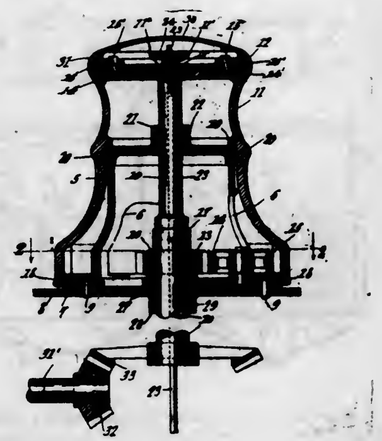
1,424,987. CLUTCH. ALBERT HAWKINS CLARK, Molesey, England. Filed Nov. 5, 1920. Serial No. 422,111. 9 Claims. (Cl. 123—185.)

In a clutch for operatively connecting and disconnecting a rotary body with a shaft on which it rotates, the combination of a shaft, a rotary body thereon, two fixed clutch members on the said shaft, the rotary body being axially movable between the said clutch members and adapted to engage with one of them, a rotary sleeve having cam surfaces adapted to engage counter cam surfaces on the rotary body and a coned surface adapted to engage the other fixed clutch member, and means for imparting rotary movement to the said sleeve.



1,424,988. COUNTERSINKING MACHINE. ARTHUR J. COUGHTRY, Bethlehem, Pa. Filed Apr. 9, 1920. Serial No. 372,407. 5 Claims. (Cl. 77—22.)

1. In a countersinking machine, the combination of a frame, tool carriages mounted on the frame and movable toward and from each other to space the same apart, tool spindles mounted in the carriages, the spindles being mounted to adjust themselves radially whereby each spindle centers itself independently of the other spindles, means common to all the carriages to simultaneously move them along the frame to vary the spacing of the tools, and driving means for the spindles, substantially as and for the purpose specified.

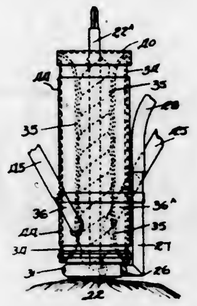


1,424,989. CANE STRIPPER. VICTOR L. COVEY, Tell City, Ind., and TONA COVEY, Louisville, Ky. Filed Mar. 9, 1921. Serial No. 451,033. 1 Claim. (Cl. 130—31.)

In an apparatus for the purpose set forth, the combination of a table top having a transverse series of longitudinal slots therein and a transverse slot in advance of the longitudinal slots, a transverse series of rigid pins rising from the table top adjacent and in advance of the transverse slot and alined with the respective longitudinal slots, co-operating upper and lower feeding rollers mounted respectively above and below the table top in the vertical plane of the transverse slot, a rotatable stripper mounted below the table top, blades carried by said stripper playing through the longitudinal slots in the table top, a hood

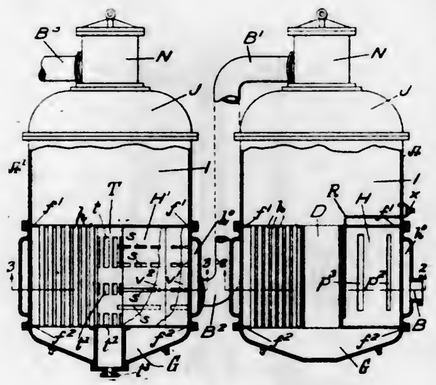
secured upon the table top and housing the blades, the front and rear ends of said hood being open and the rear end contracted, and means for operating the stripper and the feed rollers.

1,424,990. CAPSTAN. ALBERT A. COYLE and WILLIAM S. MITCHELL, St. Louis, Mo. Filed Mar. 29, 1920. Serial No. 369,639. 3 Claims. (Cl. 254—150.)



1. In a capstan, a base having a bed plate, roller bearings supported in the periphery of the bed plate and in the base, adjacent to the upper end thereof, a revolving drum having an internal flange resting on the upper end of the base, portions of the drum contacting with the roller bearings, an operating shaft extending through the drum, a pinion movable with the operating shaft, a pinion in mesh with the first mentioned pinion, a gear formed within the lower portion of the drum the teeth thereof contacting with the teeth of the second mentioned pinion to rotate the drum when the shaft is rotated, and means for disconnecting the shaft and first mentioned pinion.

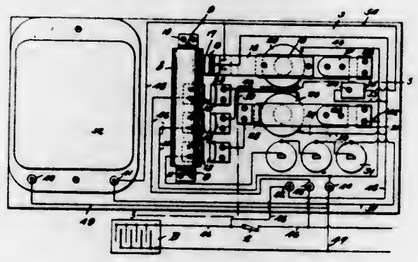
1,424,991. WAVING OR CURLING HAIR. ALEXANDER CRAIG, Sydney, New South Wales, Australia. Filed Mar. 24, 1921. Serial No. 455,357. 5 Claims. (Cl. 132—36.)



1. In hair waving or curling, apparatus for combing and tensioning the hair in wisps or bunches consisting of

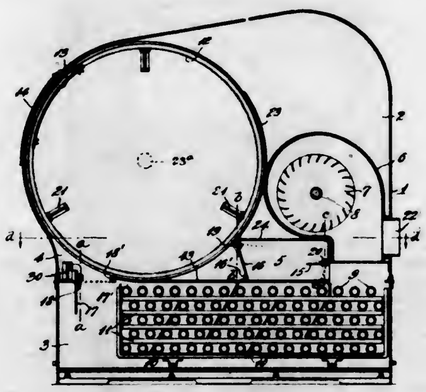
upper and lower plates, a toothed or comb surface on the inner side of one plate, opposed rubber pads on said plates,

a casing around the end thereof, means for pressing them together and a rod or bobbin upon which the hair is coiled under tension.



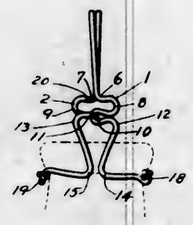
1,424,992. EVAPORATOR. WILLIAM H. P. CREIGHTON, New Orleans, La. Filed Dec. 30, 1920. Serial No. 434,083. 10 Claims. (Cl. 127—18.)

1. A vacuum pan or effect provided with a steam belt having transverse tube sheets, tubes for the passage of liquid, connecting said tube sheets and opening therethrough; a series of radial partition plates separating the heating space into a series of wedge shaped chambers, each containing a group of said tubes, means for supplying steam to the outer portions of said chambers, and means for carrying off the heating fluid from the contracted inner portions of said chambers.



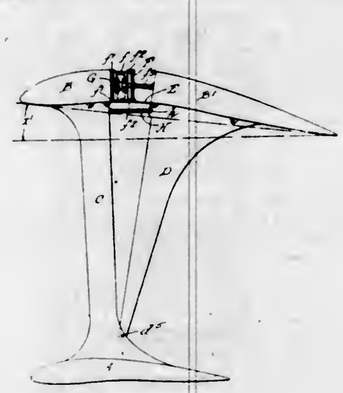
1,424,993. AUTO THEFT ALARM. JOHN L. CROSSER, Tulsa, Okla. Filed May 8, 1920. Serial No. 379,929. 1 Claim. (Cl. 177—314.)

In a device of the class described an ignition circuit; a main source of energy and an ignition switch for said circuit; a normally open alarm circuit including said main source of energy, an electromagnetically operated switch comprising a coil, and a signal; a circuit including said main source of energy, said ignition switch, a manually operated switch and the coil of said electromagnetically operated switch, so that when said manually operated switch is closed and the ignition switch is closed, said circuit will be energized to operate the electromagnetically operated switch and close the alarm circuit; an auxiliary alarm circuit including said signal, an auxiliary source of energy, a manually operated switch and a second electromagnetically operated switch comprising a coil for holding said electromagnetically operated switch open when energized; a circuit including said main source of energy, said second-named electromagnetically operated switch coil and a manually operated switch, so that when said



last named manually operated switch is closed, the second-named electromagnetically operated switch will hold the auxiliary alarm circuit open and permit it to close when said main source of energy is cut off; and lock-controlled means for operating all of said manually operated switches.

1,424,994. DRYING TUMBLER. EDMUND I. CUTTER, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Apr. 23, 1920. Serial No. 376,136. 14 Claims. (Cl. 34—5.)



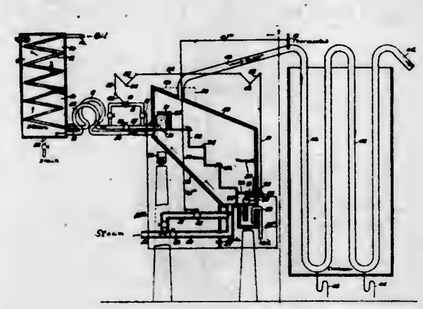
3. In a drying machine, the combination of a blower and air chamber, a heating chamber, a drying chamber, said several chambers having communicating passageways therebetween, means for forcing air through said machine, dampers for passageways between the air and drying chambers, the air and heating chambers, the heating and drying chambers respectively, and a single operating means for closing the first named damper and opening the other two dampers, or vice versa, whereby the heating chamber can be included in or excluded from the air circuit through the machine.

1,424,995. MILK-BOTTLE CARRIER. WILLARD W. DE LONG, Seattle, Wash. Filed Dec. 6, 1921. Serial No. 520,267. 5 Claims. (Cl. 215—100.)

2. A device of the type described comprising two sections of material each bent to form straight bars at the top, then bent downward, then bent to form S shaped sections about half-way down the vertical portions which when put together form hinges and then bent in the form of semi-circles in a horizontal plane at the lower ends of the vertical sections.

1,424,996. WING CONSTRUCTION FOR AIRPLANES. DAVID EARLE DUNLAP, Buffalo, N. Y., assignor of three-fourths to Abraham J. Elias, Buffalo, N. Y. Filed Apr. 23, 1921. Serial No. 463,836. 20 Claims. (Cl. 244—12.)

8. In an airplane, a wing divided along a substantially upright plane extending lengthwise of the wing into front and rear parts, which are adjustable toward and from each other to increase the speed range of the airplane, struts connected to said rear part and pivoted below said rear part, and which resist the strains to which said rear part is subjected, and means connecting said parts and operable to move said parts toward and from each other.

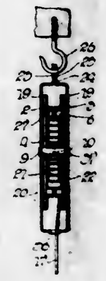


1,424,997. DRILLING MACHINE. ARTHUR L. EDWARDS, Maupin, Oreg. Filed July 25, 1921. Serial No. 487,257. 15 Claims. (Cl. 74—48.)

1. A pitman rod comprising a body, locking arms carried thereby and having fingers, a plunger in said body, a sleeve slidable on said plunger, a coiled spring confined between said sleeve and one end of said plunger, a second coiled spring confined between said sleeve and one end of said body, said sleeve being provided with means

engaging the fingers of said locking arms whereby to hold the sleeve in a set position, and an attaching means carried by said body.

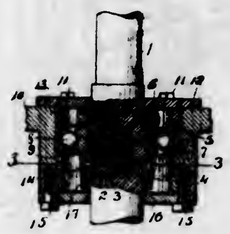
1,424,998. PROCESS OF AND APPARATUS FOR DISTILLING. JAMES T. FENTON, Salt Lake City, Utah. Filed Mar. 29, 1921. Serial No. 456,581. 13 Claims. (Cl. 196—25.)



1. An apparatus adapted for use as an oil topping still, having a stepped bottom, an oil inlet, an overflow weir adjacent said inlet, and a vertically movable gate over said weir, each end of said gate being vertically adjustable.

6. An oil still comprising a distilling chamber, an oil inlet pipe at one end of said chamber and an oil well at the other end thereof, two valves in said inlet pipe, means governed by the depth of the oil in said well for controlling one of said valves, and means governed by the temperature of the oil in said well for controlling the other valve.

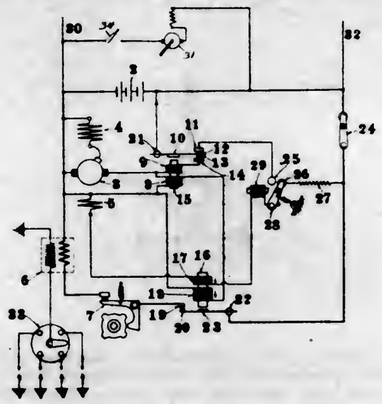
1,424,999. CORD SUPPORT FOR ELECTRIC LIGHTS. ERNEST R. FROST, Chicago, Ill. Filed Apr. 8, 1920. Serial No. 372,249. 1 Claim. (Cl. 248—10.)



In combination, a take-up mechanism comprising, a plurality of disks having the material pressed inwardly to form spacing ribs in each face and an annular chan-

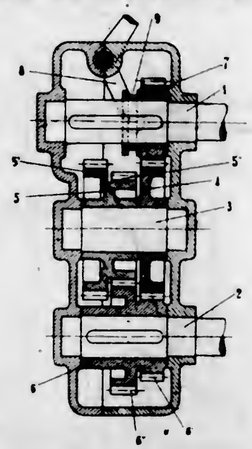
nel in one, said disks being arranged with the ribs abutting each other whereby a spring retaining cavity is formed, a winding spring located in said cavity, centrifugal controlled dogs on one of said disks, a hanger bracket pivotally carrying said disks comprising, opposite

parallel bar members integrally joined at the lower end, a lug struck out from one of the bar members to form a stop for said dogs in riding in said annular channel, the upper end of said brackets meeting face to face wherein an aperture is formed to provide insertion of a supporting hook.



1,425,000. BEARING LUBRICATOR. RALPH I. FROST, Augusta, Kans., assignor to The Geo. W. Brown & Son State Bank, trustee, Augusta, Kans. Filed Dec. 6, 1920. Serial No. 428,703. 4 Claims. (Cl. 64—56.)

4. In a bearing lubricator, a vertical rotary threaded shaft having an annular peripheral flange, a bearing member mounted on said shaft, an annular member encircling said shaft and spaced apart therefrom and having an inner peripheral flange bearing against said first named flange and provided with a flaring annular wall having one or more transverse holes, a nut on said threaded shaft arranged to hold the bearing member against said annular member, and a lubricant container into which said flaring wall extends, substantially as set forth.

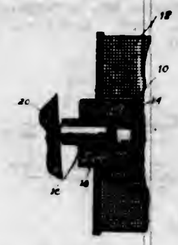


1,425,001. IGNITION SYSTEM. VALÈRE A. FYNN, St. Louis, Mo., assignor to Wagner Electric Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 7, 1918. Serial No. 221,065. 7 Claims. (Cl. 290—37.)

4. In a battery charging and ignition system, a charging generator provided with means for producing an auxiliary exciting magnetization, a battery, a switch for connecting the generator and battery, and means oper-

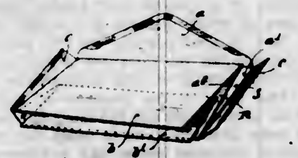
able only when the battery switch is in open position to connect the battery to the auxiliary magnetizing means.

1,425,002. CHANGE-SPEED GEAR. ADALBERTO GABELLI, Milan, Italy. Filed June 11, 1920. Serial No. 388,341. 3 Claims. (Cl. 74—58.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



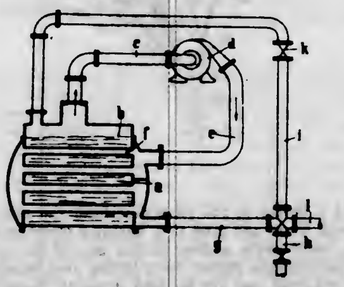
1. A change-speed gear, comprising a driving shaft; a driven shaft; a pinion slidably fixed to the driving shaft; shifting means for said pinion; an intermediate shaft; a plurality of loose pinions on the intermediate shaft; at least one loose pinion having two toothed rims, one of which is adapted to be engaged by the slidable pinion on the driving shaft; and a plurality of toothed elements mounted on the driven shaft to rotate therewith, each of said toothed elements meshing with one of the loose pinions on the intermediate shaft.

1,425,003. SWITCH. ADOLPH A. GAZDA, Chicago, Ill., assignor to Kaestner & Hecht Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1920. Serial No. 411,625. 13 Claims. (Cl. 175—372.)



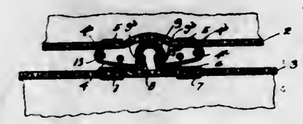
1. The combination of a movable switch member of magnetic material, an electro-magnet including a station-

ary pole piece arranged to move said switch member, said pole piece having a socket in its face, and a damping



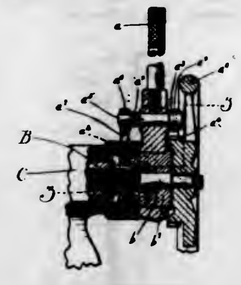
plunger loosely slidable in said socket, the movement of said plunger in either direction being effected by the switch member.

1,425,004. COMBINED SENDING AND RETURN ENVELOPE. ARTHUR W. GROGIN, Minneapolis, Minn. Filed Dec. 31, 1919. Serial No. 348,646. 6 Claims. (Cl. 229—73.)



6. A combined sending and return envelope comprising a sealed pocket and a parallel pocket opening at one longitudinal edge, said envelope having a flap folded into said latter pocket of substantially the same area as one side of the envelope and adapted to be drawn out and folded over the sending address side of the envelope to seal said latter pocket so that the same can be used for a return envelope and also to form a side adapted to receive the return address.

1,425,005. METHOD OF EVAPORATING LIQUORS AND APPARATUS THEREFOR. WILHELM GENSECKE, Bad Homburg, Germany. Filed Apr. 27, 1920. Serial No. 377,142. 7 Claims. (Cl. 127—9.)

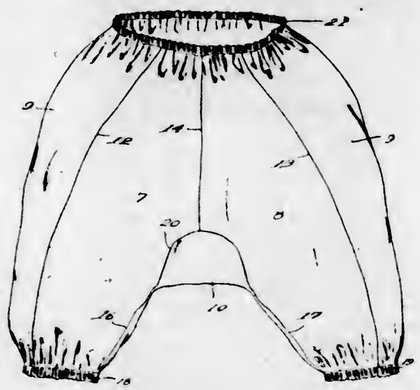


3. In a plant for evaporating liquids comprising a container for the liquid to be evaporated and a chamber for the heating medium in heat exchanging proximity to said liquid, a line for conveying the vapor away from said container, means for withdrawing mixed vapor and condensate from said chamber, a trap for separating the vapor from the condensate, a passage of adjustable section connecting said trap and said vapor line for joining the uncondensed vapor with the vapor generated in said container, and means for compressing these joined vapors and conveying them into said heating chamber.

1,425,006. FASTENING DEVICE. HENRY G. GOLDSTEIN, Cleveland, Ohio. Filed July 11, 1921. Serial No. 483,772. 2 Claims. (Cl. 24—208.)

1. In a fastening device, a disc shaped body terminating in a peripheral beading having an edge at the rear of said body terminating in material penetrating fastening prongs, the base of said beading forming a supporting shoulder on the face side of the material and extending approximately parallel therewith and said prongs being bent inwardly beneath the material in cooperative relation to said supporting shoulder.

1,425,007. RATCHET FEED MECHANISM. GUSTAF A. GRANLUND, Cincinnati, Ohio, assignor to The Greaves-Klusman Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 21, 1920. Serial No. 390,877. 3 Claims. (Cl. 74—54.)



1. In a lathe feed mechanism the combination with a spindle housing, of a spindle screw extending into the housing, a pull bar rotatably mounted on the spindle screw, a ratchet wheel fixedly mounted upon the spindle screw, a head pawl on the pull bar, a tail pawl on the pull bar and attached to the head pawl, means to normally hold the head pawl in engagement with the ratchet wheel, and means on the housing adapted to be engaged by the tail pawl and to thereby disengage the head pawl from the ratchet wheel when the pull bar is moved beyond a normal limit.

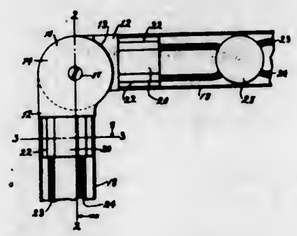
1,425,008. WEARING APPAREL. LOUIS N. GROSS, Cleveland Heights, Ohio. Filed June 20, 1922. Serial No. 569,576. 3 Claims. (Cl. 2—122.)

1. A woman's bloomer garment comprising a bifurcated back member having its side edges cut along parallel lines and having a U-shaped crotch portion cut intermediate converging bifurcated portions, and two front members having a combined width less than the width of the back member and having the outer edges thereof cut on a bias to the outer side edges of the back member and converging inner edges terminating in an arcuate edge cut complementary to the curved edge of the crotch portion of the back member, the outer edges of the back member being joined to the outer edges of the front members along seams formed on a bias in the front of the garment and the inner edges of the front members

being joined to the crotch portion and converging edges of the back member by a continuous seam extending up-

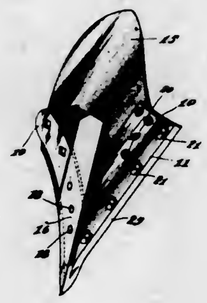
wardly from the bottom of the legs of the garment, the upper portion of the seam being arcuate at the front of the garment above the crotch.

1,425,009. BOTTLE STOPPER. CHARLES F. GUARD, Phoenixville, Pa. Filed Sept. 27, 1919. Serial No. 326,732. 7 Claims. (Cl. 215—58.)



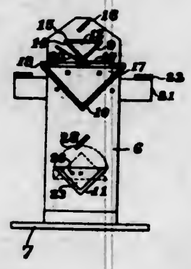
1. The combination with a bottle including a neck, of a stopper therefor comprising a non-absorbent stem, a cork carried by the stem, and means carried by the stem for engagement about the bottle neck for permitting a limited sliding movement of the stem in relation to the bottle neck and arranged to prevent accidental disconnection of the stopper and bottle.

1,425,010. PROCESS AND MACHINE FOR MAKING BRICKS. WILLIAM H. HAWS, Johnstown, Pa., assignor of one-fourth to Henry Y. Haws, Johnstown, Pa., and one-fourth to David Barry, Johnstown, Pa. Filed July 29, 1920. Serial No. 399,742. 27 Claims. (Cl. 25—102.)



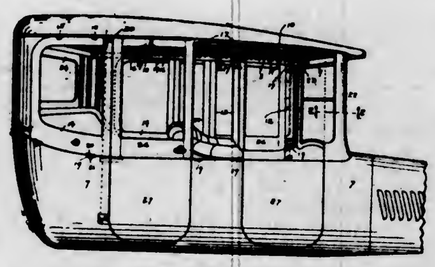
27. The process of molding bricks from brick forming material which consists in supplying a mold with an excess of material, compressing portions of the material near the walls of the mold with greater force than the material removed from said walls while relieving pressure on said last-mentioned portion of material, then finally compressing all the material.

1,425,011. JOINT FOR ELECTRICAL CONDUITS. JAMES C. HERRON, Chicago, Ill., assignor to Reflector & Illuminating Co., Chicago, Ill., a Corporation of Illinois. Filed May 12, 1920. Serial No. 380,761. 5 Claims. (Cl. 247—31.)



1. A joint for conduits compriaing, in combination, two elements, each element comprising a portion adapted to be connected to a conduit, a joint member projecting from said portion having a part of its perimeter formed on the surface of a cylinder and having opposite flat sides, the axis of which cylinder is laterally offset from the center line of said portion, the thickness of said member being one-half the thickness of said portion and a post projecting axially of said member, the height of said post being equal to the thickness of said member the inner ends of the posts and the inner flat sides of the cylindrical parts abutting so as to cause the conduits to be arranged in the same plane, and a screw embedded in one post and extending into the other post to connect the same.

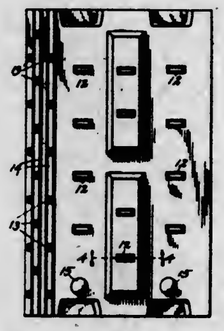
1,425,012. PLOWSHARE. JONAS HETLAND and MARCUS HETLAND, Valley City, N. Dak. Filed May 6, 1921. Serial No. 467,451. 2 Claims. (Cl. 97—21.)



2. In a device of the class described, the combination of a mold board and land side, having a shouldered recess on its under sides, a frog having one of its sides provided with sunken slotted seats having stud engaging ribs which converge and are inclined upwardly towards their rear ends, said side extending below the edge of the mold board, and the other side formed with a forward tapered portion having a reduced shoulder thereon, a removable share having a rearwardly opening pocket at its forward ends to receive the tapered portion of said frog, and provided with horizontal and vertical flanges to abut the land side and tapered portion of said frog, headed studs on said share to engage said sunken slots in said frog and be wedged therein under plowing pressure, but readily releasable therefrom on forward movement of the share relative to said frog and mold board.

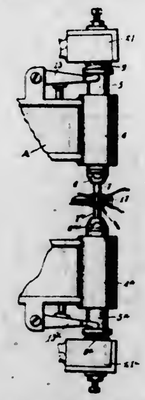
1,425,013. POULTRY FEEDER. JOHN C. HOSTLER, Altoona, Pa. Filed Mar. 27, 1922. Serial No. 547,245. 2 Claims. (Cl. 119—61.)

1. A feeder comprising a pair of spaced supporting standards, troughs connecting the standards to each other, said troughs being disposed one above the other, a shield rotatably mounted above the top trough, covers hinged at their confronting inner edges to the intermediate trough, a shield rotatably mounted between the standards, beneath the last mentioned trough, and a movable trough rotatably mounted beneath the last mentioned trough and shield, and means for holding said rotatable trough in its upright or inverted position.



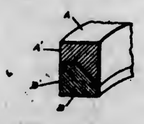
1,425,014. AUTOMOBILE TOP. MATTHEW R. HULL, Connersville, Ind., assignor to Rex Manufacturing Company, Connersville, Ind., a Corporation of Indiana. Filed Mar. 29, 1917. Serial No. 158,455. 1 Claim. (Cl. 296—103.)

In combination with an open vehicle body, a deck provided with narrow longitudinal side members, means at the front and rear ends of the body for supporting the deck a fixed distance above the body, deck reinforcing rails secured to the side members of the deck and extending the length and around the corners of the deck and depending below the lower edges of the deck to form flanges, means for securing said rails to the deck side members, removable windows, panels and door extensions arranged between the lower edges of the deck and the upper edges of the open vehicle body and alined by the depending portions of said deck reinforcing rails, and means for removably securing said windows, panels and deck reinforcing rails together.



1,425,015. CONCRETE ROOF-TILE PALLET. FORREST C. HYTEN and PAUL J. HAWKINS, Indianapolis, Ind. Filed Dec. 28, 1921. Serial No. 525,422. 3 Claims. (Cl. 25—43.)

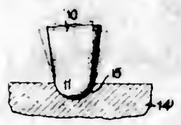
1. A pallet on which concrete roofing tiles are troweled in the manufacture of the tiles, having projections in addition to those for positioning the mold members and giving form to the tile at frequent intervals over the entire concrete contacting surface of the pallet to check



the sliding of the wet concrete on the pallet during the troweling operation.

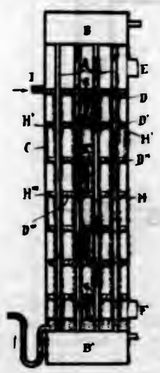
1,425,016. DUPLEX EYELETING MACHINE. GEORGE W. JACQUES, Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 13, 1920. Serial No. 351,168. 17 Claims. (Cl. 218—152.)

15. In a fastener setting machine, a hollow double-ended combined cutting punch and set, a pair of anvils and sets telescopically arranged, one such anvil and set cooperating with each end of said hollow punch and set to punch two pieces of material and force the punchings within said hollow punch and set, and then to set fasteners in said materials, and a spring-pressed element carried by one of said anvils and arranged to eject the punchings from said hollow punch and set on the retraction of the other of said anvils.



1,425,017. DUPLEX PISTON RING. SIGFRED JOHNSEN, Menominee, Mich., assignor of one-third to James A. Bell, Clintonville, Wis., and one-third to J. H. Vernet, Menominee, Mich. Filed Sept. 2, 1919. Serial No. 321,085. 1 Claim. (Cl. 74—109.)

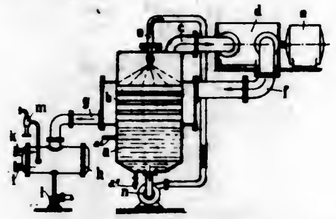
An expansible piston packing comprising an outer split ring and an inner split ring of greater expansive force



than said outer ring, both of said rings having inner cylindrical surfaces, an outer cylindrical surface on said outer ring, an outer cylindrical surface on said inner ring and of less area than the outer cylindrical surface of said outer ring, annular surfaces on said rings extending inwardly from the adjacent edges of said outer cylindrical surfaces and cooperating conical surfaces extending from said annular surfaces to the inner cylindrical surface of the respective rings.

1,425,018. PHONOGRAPHIC RECORD. EARLE W. JONES, New York, N. Y., and EDWARD R. HARRIS, Arlington, N. J. Filed June 3, 1916. Serial No. 101,550. 13 Claims. (Cl. 214—42.)

1. A sound record having therein a laterally undulatory record groove having the form in cross section of the segment of a true circle.

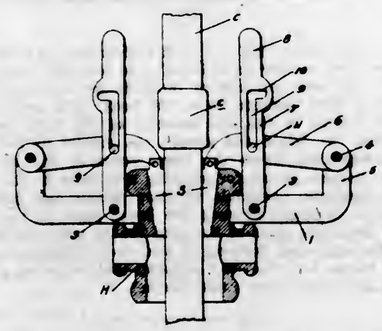


1,425,019. MEANS FOR COOLING A GAS. EUGÈNE JORDAN, Franconville, France, assignor to Societe L'Air Liquide (Societe Anonyme Pour L'Etude et L'Exploitation des Procedes Georges Claude), Paris, France. Filed Apr. 17, 1922. Serial No. 554,176. 2 Claims. (Cl. 62—139.)

1. In a heat interchanger, the combination of a shell having chambers at its opposite ends, a plurality of tubes extending through the shell and communicating with the chambers, one of the chambers having an inlet and the other an outlet for a gas to be cooled, an inlet to and an outlet from the shell for the cooling gas, a plurality of trays disposed one above the other within the shell and having openings to receive the tubes, these openings being of slightly greater diameter than the tubes, and means for introducing liquid to the shell above the trays and for withdrawing the liquid below the trays.

1,425,020. METHOD OF EVAPORATING LIQUORS. EMIL JOSSE, Berlin-Laukwitz, and WILHELM GENSECKE, Bad Homburg, Germany. Filed Apr. 27, 1920. Serial No. 377,141. 3 Claims. (Cl. 127—9.)

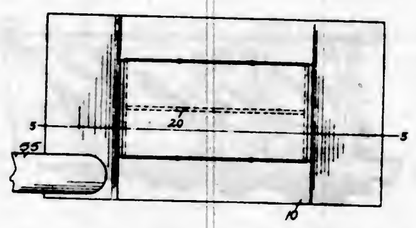
1. Apparatus for evaporating liquids, comprising a container for the liquid, a heating chamber in heat transferring relation to said liquid, means for withdrawing vapor from said container and subsequently returning it to said heating chamber at higher pressure, said vapor serving as heating medium for vaporizing the liquid, and means for controlling the pressure in



said heating chamber and the vapor output of the evaporator, said means comprising a condenser for receiving the fluid discharge from the heating chamber, and a vacuum pump connected to said condenser.

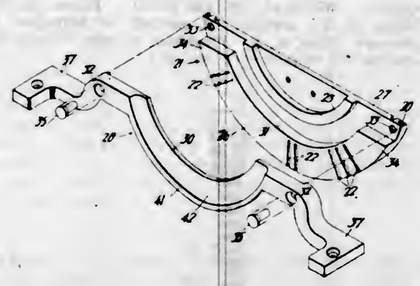
1,425,021. TRANSMISSION BELT. IRWIN F. KEPLER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 1, 1921. Serial No. 497,614. 1 Claim. (Cl. 74—65.)

An endless transmission belt of the side-driving or V-type, said belt having a core, a soft-rubber filler adjacent said core, and a fabric cover, all vulcanized together, and being formed with continuous side wings or flank portion separated by a relatively wide and deep, outer peripheral groove in the fabric cover and the rubber filler.



1,425,022. CASING-HEAD ATTACHMENT. FRANK KINZBACH, Humble, Tex. Filed Feb. 16, 1921. Serial No. 445,405. 2 Claims. (Cl. 24—263.)

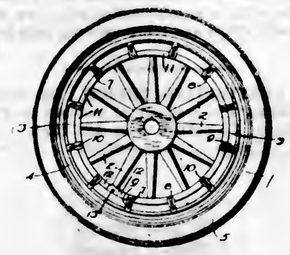
1. The combination with the head of a well casing having downwardly converging faces, of opposed slips insertible downwardly into the head for gripping a casing therebetween, oppositely disposed arms connected to and extending from the head, levers fulcrumed at their outer ends on the arms and overhanging the head, said levers



being connected to the upper ends of the slips, tripping levers pivotally connected to and extending upwardly from the arms, and cooperating means upon the tripping levers and the slip engaging levers for supporting the slips in elevated positions partly above the head.

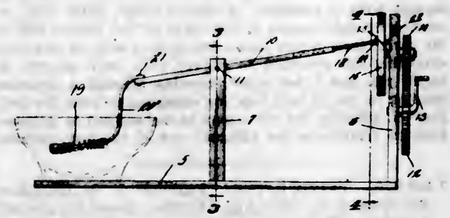
1,425,023. TRAP. ANDREW KUBICKI, Webster, Mass., assignor of one-half to Mike Nalewajk, Webster, Mass. Filed July 8, 1921. Serial No. 483,307. 8 Claims. (Cl. 43—70.)

1. In a trap, the combination with a hollow base, a casing located above it and divided into two compartments separate from each other, said base also having two compartments, one located directly under each of the compartments in the casing and adapted to receive an animal therein from the casing, an outlet directly connected with one end of one of said compartments, and a passage extending around that compartment and connected at one end with the other compartment and at the other end with said outlet.



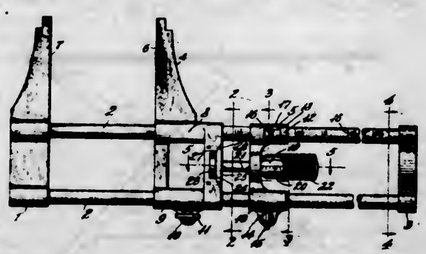
1,425,024. TYPEWRITING MACHINE. ALFRED G. F. KUAOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 5, 1919. Serial No. 315,372. 14 Claims. (Cl. 197—41.)

1. In a typewriting machine, the combination with radially arranged type-bars to print at a common point against a platen, of a segment to support said type-bars, a curved anvil on said segment against which the type-bars may strike, and a cross-bar arranged at the front of said segment to support the latter, said cross-bar having an arcuate portion to fit under said anvil.



1,425,025. CLAMPING DEVICE FOR DEMOUNTABLE RIMS. CARL AUGUST LA COUR, Washington, Nebr. Filed Aug. 27, 1920. Serial No. 406,411. 1 Claim. (Cl. 301—23.)

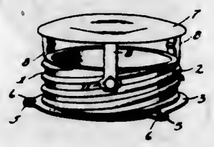
In clamping devices for the demountable rims of vehicle wheels, a flat sectional ring, two of the sections of said ring being smaller than any of the remaining ring sections, said two sections being pivotally connected to the adjacent ring sections and to each other, longitudinally slotted links pivotally connected to the sections of said ring, a wedge ring disposed between said links and the



demountable rim, and screw bolts extending through the wheel felly and through the longitudinal slots in said links whereby the same may be forced against said wedge ring and flat sectional ring.

1,425,026. EGG BEATER. RAYMOND S. LOWER, Geneseo, Ill. Filed Nov. 9, 1921. Serial No. 513,969. 1 Claim. (Cl. 74—14.)

In a device of the character described, a base, a supporting bar on the base, gears carried by the supporting bar, an arm having a bore formed in one end thereof and pivotally supported above the base, a disk supported at one end of the base and having an elongated opening formed eccentrically thereof, a bolt extending through the opening, a head formed with a socket carried by the bolt and adapted to be secured within the elongated opening in various positions of adjustment, a rod having a head positioned in the socket, said rod adapted to move in the bore of the first mentioned rod, and gearing for rotating the disk.

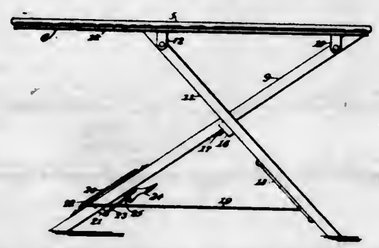


1,425,027. EXTENSIBLE MICROMETER CALIPER. PETER LUSTRIK, Cleveland, Ohio. Filed July 5, 1919. Serial No. 308,893. 5 Claims. (Cl. 33—165.)

1. An extensible micrometer caliper, comprising a rigid frame including two parallel guide members, a bridge permanently connecting said members at one end, a station-

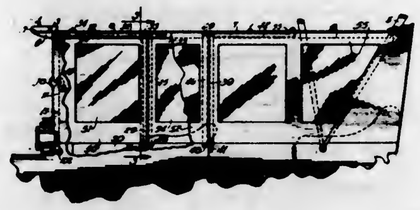
ary jaw permanently connecting said members at the other end, a pair of slides movable on said guide members and permanently retained thereon by said bridge and jaw, one of said slides having a jaw for co-operation with said stationary jaw and lying between said stationary jaw and the other slide, and micrometer adjusting mechanism connecting said slides and lying between said guide members.

1,425,028. VENTILATING DEVICE. DE WITT TAYLOR LYON, Chicago, Ill., assignor of one-half to Frank Mellish, Chicago, Ill. Filed Apr. 18, 1921. Serial No. 462,388. 5 Claims. (Cl. 98—27.)



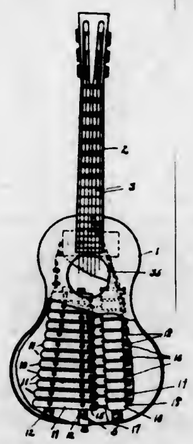
5. A device of the character described comprising a frame cast integrally of metal and having a cylindrical body portion adapted to be secured in the port of a ventilating duct, said body portion being provided with a spirally directed rib exteriorly thereof, a cover for said body portion, said cover being cast integrally of metal and formed with a plurality of spaced apart guide legs extending at right angles to the plane of the remote side of the cover, each of said legs being formed with an inwardly extending rib arranged to engage with said spirally directed rib, and a set screw screwing through a threaded opening in one of said legs for engagement with the body portion, whereby the cover may be maintained in adjusted position relative to the adjacent end of the body portion.

1,425,029. TYPEWRITER. FRANCIS J. MCLOUGHLIN, Brooklyn, N. Y. Filed Aug. 17, 1918. Serial No. 250,367. 1 Claim. (Cl. 197—26.)



In a typewriter a pivotally mounted type bar, a returning spring therefor and a link connecting said spring with the type bar near its base, said link being adapted to act by direct tension at the commencement of a stroke and, near the end of the stroke, as a lever whose fulcrum is the supporting pivot of the type bar.

1,425,030. FOLDING IRONING BOARD. HENRY R. MEYER, Cedar Rapids, Iowa. Filed Mar. 29, 1921. Serial No. 456,561. 3 Claims. (Cl. 68—10.)

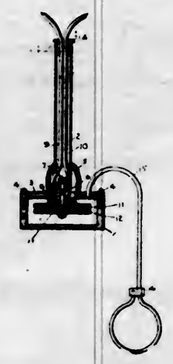


2. An ironing-board having a middle leg hinged to its under side near one end, a pair of legs hinged to said middle leg near the middle, and having a hinged and slidable connection with the under side of the board at the other end, the ends of all the legs being extended to form locking abutments against the board, a tie connecting the single leg with the pair near their lower ends, and means for straining and fastening said tie to lock the legs in rigid supporting position.

1,425,031. WINTER INCLOSURE FOR AUTOMOBILES. NICHOLAS A. MICHNA, Chicago, Ill. Filed Sept. 3, 1920. Serial No. 407,979. 2 Claims. (Cl. 296—45.)

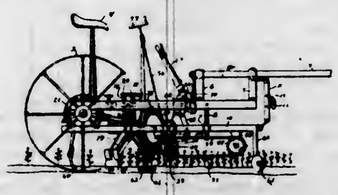
1. In an automobile construction, a horizontal frame member comprising a pair of angle irons, said angle irons having one of their sides disposed in a horizontal plane and their other sides disposed in a vertical plane, the vertically disposed sides being adjacent one another, a second angle iron extending at right angles to said first named angle irons and disposed therebetween and rigidly secured thereto, a pair of vertically disposed angle irons, each being rigidly secured to one of said first named angle irons at its point of junction with said second named angle iron, and auxiliary frames pivotally carried by said first named angle irons, said frames comprising two bars rigidly connected at their adjacent ends, one of said bars being hinged to said horizontal frame member and adapted to swing in a horizontal plane, and the other bar being vertically disposed and adapted to swing in a vertical plane.

1,425,032. MUSICAL INSTRUMENT. PETER MILITO, Utica, N. Y., assignor of one-half to Salvatore Di Giacomo, Utica, N. Y. Filed Dec. 6, 1920. Serial No. 428,494. 6 Claims. (Cl. 84—171.)



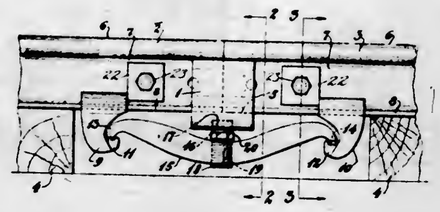
1. A musical instrument having a hollow body part and a neck part, strings stretched from said neck part to said body part, bells disposed within said hollow body part, and electric circuits operably connected to the bells but normally open, each of said strings constituting a part of one of the circuits to operate one of the bells.

1,425,033. VEGETABLE ALBUMINOID AND PROCESS OF PRODUCING IT. ANSIL MOFFATT, Indianapolis, Ind., assignor to Eben H. Wolcott, trustee for associate underwriter and said Moffatt. Filed Aug. 24, 1918. Serial No. 251,251. 4 Claims. (Cl. 99—11.)



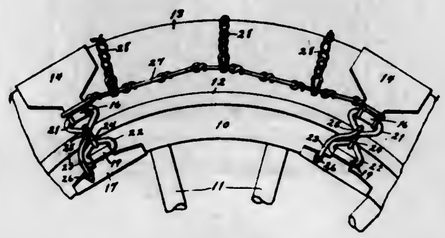
1. The process of producing a vegetable albuminoid food, which consists in submitting vegetable matter, as grains or legumes, to the action of an amylolytic acid, boiling the mixture until all the starch is converted into soluble matter, draining off the resultant liquid containing the amylolytic acid and soluble matter, and washing from the insoluble residue of insoluble albuminoids and fats, the soluble products of the amylolysis.

1,425,034. PORTABLE ELECTRIC LIQUID HEATER. ORAN W. MONTGOMERY, Lakewood, Ohio. Filed May 21, 1921. Serial No. 471,305. 4 Claims. (Cl. 219—41.)



1. A portable electric liquid heater comprising a pair of annular electrodes, spaced and insulated apart, a case for receiving said electrodes, means for insulating said electrodes from said case, a plate covering said case, a series of apertures in said plate allowing for liquid circulation inwardly and outwardly of said case, means for fastening said plate to said case, a handle secured vertically to said plate, said handle serving as a protective support to an insulated conductor adapted to supply current to said heating electrodes, substantially as described for the purpose set forth.

1,425,035. COTTON CHOPPER. WALTER F. MOTTIKA, El Campo, Tex. Filed Apr. 22, 1920. Serial No. 375,882. 9 Claims. (Cl. 97—46.)



1. A device of the character described including a framework, ground wheels, runners depending from the framework and provided to move along the ground surface on opposite sides of a row of plants, furrow forming members depending from the framework in advance of said runners and provided to form furrows along which the runners may travel and a hoe mounted on the framework and movable transversely with respect to said row.

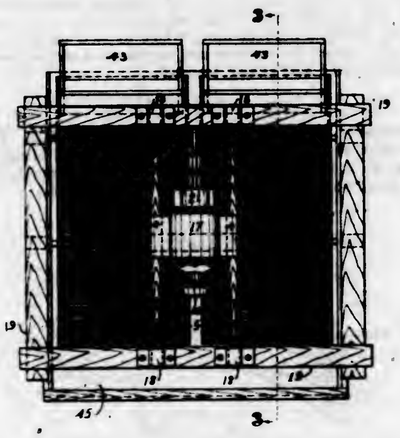
1,425,036. RAIL JOINT. JOHN B. MURRAY, Wilmington, Ill. Filed Nov. 25, 1921. Serial No. 517,601. 2 Claims. (Cl. 238—168.)

1. The combination with two rail sections, of a member having a groove therein adapted to receive the ends of said sections, said member being so fashioned as to abut the under side of the rail tread, a member carried by each section and being spaced from the end thereof, a bar disposed between and carried by said members, and a bolt carried by said bar and having its head adapted to support said first named member.

1,425,037. ANTISKID AND TRACTION DEVICE. FREDERICK W. MYERS, Des Moines, Iowa, assignor of one-half to F. E. Pieper, Des Moines, Iowa. Filed June 11, 1921. Serial No. 476,740. 3 Claims. (Cl. 152—14.)

1. A traction and anti-skid device, comprising a curved mud shoe formed with hooks at its ends, a felloe plate having a plane central portion and wings diverging from the same and terminating in hooks, a link flexibly connecting a hook of said mud shoe to a hook of said felloe plate, a link pivoted on the other hook of said mud shoe, a link pivoted on the other hook of said felloe plate, and a latching lever pivoted on one of said links and adapted to engage the other, said lever being offset laterally between its ends to avoid said hooks.

1,425,038. GARMENT FASTENER. ABRAHAM M. NADELL, Revere, Mass. Filed Oct. 8, 1921. Serial No. 506,339. 1 Claim. (Cl. 24—224.)



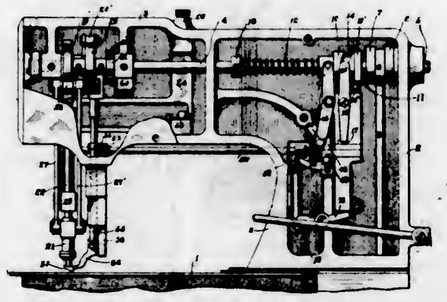
A garment fastening having a body provided with an opening to receive a headed stud and a slot extending from the opening and adapted to receive the neck of the stud, said body having integral therewith a locking portion which is bent back against the body and is formed with a locking edge which extends across said slot, the part of the locking portion adjacent said edge covering the aperture, whereby said locking edge is adapted to engage beneath the head of a stud occupying said slot

thereby to lock the stud in the slot, said locking portion having wings extending internally therefrom beyond the

body, which wings constitute finger pieces by which the locking portion may be separated from the body sufficiently to release the stud.

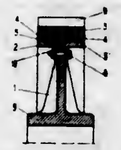
1,425,039. SCREENING MACHINE AND VIBRATING HAMMER THEREFOR. HERAND K. NAJARIAN, Salt Lake City, Utah. Filed June 18, 1921. Serial No. 478,702. 10 Claims. (Cl. 83—56.)

1. A screening machine comprising a support, a rigid frame, a screen supported on said frame, flexible means for yieldingly connecting said frame to said support, a vibrating hammer, yielding means for connecting said hammer to said support, said hammer comprising means for causing it to vibrate in the path of a distorted ellipse, means for transmitting vibrations from said hammer to said frame and rigidly connected to the latter, means cooperating with said motor for receiving vibrations therefrom, said means being out of contact with said hammer when the latter is inoperative but adapted to receive alternately directed blows from said hammer when the latter operates, and transmit the same to the screen frame thereby causing said frame and screen to vibrate in a lineal path twice during each cycle of elliptical vibration of the hammer once in a downwardly and once in an upwardly direction, from the initial position of rest of said screen frame.



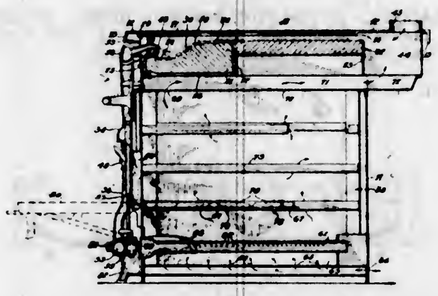
1,425,040. ELECTRIC HEATING IRON. NELS A. NELSON, Bode, Iowa, assignor to Baco Electric Co., Bode, Iowa, a Corporation of Iowa. Filed May 24, 1919. Serial No. 299,630. 11 Claims. (Cl. 219—26.)

1. In a device of the class described, a hollow head having means therein for the creation of an electric arc, said means comprising a longitudinally adjustable carbon, a handle connected to said head, and manually operated



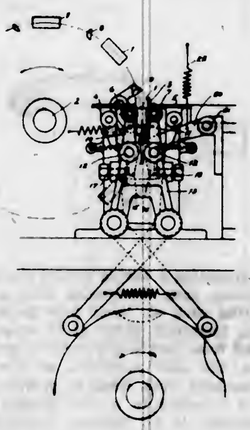
means on said handle for simultaneously adjusting said carbon and automatically controlling the electric circuit leading to the carbons.

1,425,041. PERFORATING MACHINE. DONALD NOBLE, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 29, 1919. Serial No. 334,153. 15 Claims. (Cl. 164—88.)



1. In a punching machine, a punch, means including a stop motion for imparting work piercing and retracting movements to said punch, a presser foot arranged to engage the work during the punching operation, and connections from said stop motion to said presser foot acting to raise said presser foot from the work on stopping the machine.

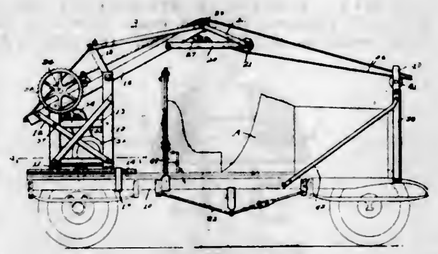
1,425,042. GEAR WHEEL. ADOLFO NUTINI, Verona, Italy. Filed Nov. 17, 1919. Serial No. 338,439. 1 Claim. (Cl. 74—28.)



A toothed wheel or gear, comprising a wheel body consisting of sections contacting along planes passing through the wheel axis and providing a rim having a pair of inwardly-projecting, peripheral shoulders spaced apart to form a groove between them, the bottom wall of said groove being slit along its median line; a toothed ring consisting of sections inserted endwise into said groove; means for forcing said shoulders against the toothed ring sections so as to clamp them in position; and means for fastening the wheel body sections together in assembled relation.

1,425,043. GAS STOVE. HARRY W. O'DOWD, Jersey City, N. J., assignor to William M. Crane Company, a Corporation of New York. Filed Nov. 20, 1918. Serial No. 263,240. 20 Claims. (Cl. 126—39.)

1. A stove including a heating plate, a subjacent burner with a flame port directed downwardly away therefrom, and means underlying the burner and arranged in close proximity to the heating plate for radiating towards said plate the heat produced by said burner.

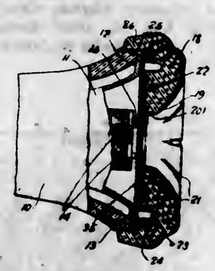


1,425,044. FOLDING DEVICE FOR BAG OR CAPSULE MAKING MACHINES. GUSTAF ÖSTRÖM, Stockholm, Sweden, assignor to Aktiebolaget Gerh. Arehns Mekaniska Verkstad, Stockholm, Sweden, a Corporation of Sweden. Filed Sept. 14, 1920. Serial No. 410,217. 3 Claims. (Cl. 93—51.)

1. In a machine for making bags, capsules or the like from blanks of paper or similar material the combination with mandrels moving in an endless path and reciprocating top folders, between which the mandrel passes and by which the blank is folded round the mandrel, of rollers, bearing against opposite sides of the mandrel and forcing the blank against the said sides, and of a roller holding the blank against the mandrel during the folding operation.

1,425,045. VEHICLE-HANDLING APPARATUS. JOHN D. OWEN, Harriman, Tenn. Filed Sept. 13, 1920. Serial No. 409,869. 2 Claims. (Cl. 212—59.)

1. The combination with a motor operated vehicle, of a vehicle handling apparatus comprising a base adapted to be arranged upon the frame of said vehicle, clamps associated with the base and designed to embrace the sides of said frame, a supporting structure mounted on the base and including a boom, a turn table on said base and supporting said boom, said boom being arranged at the rear of the vehicle, a substantially U-shaped member arranged in advance of the radiator and terminally clamped to the frame of the vehicle, bracing elements connecting the sides of said member with the

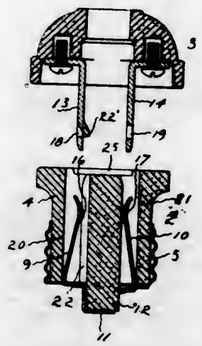


frame, guide pulleys journaled on said member, a rotatable shaft, means for rotating the shaft, a hoisting cable adapted to be wound upon and unwound from the shaft, a pulley journaled upon one end of the boom and over which said cable is trained, arms projecting forwardly from said boom, and a pulley journaled on said arms serving as a guide for said cable.

1,425,046. LIQUID POLISH FOR METALLIC AND OTHER SURFACES. JAMES A. PALMER, Jamaica Plain, Mass. Filed Apr. 26, 1922. Serial No. 556,751. 14 Claims. (Cl. 134—25.)

5. A process or method of making a liquid polish for metallic and other surfaces, which comprises dissolving about 4% of gilsonite in about 18% of commercial petroleum oil with the application of heat; adding about 21.5% of graphite and about 4.5% of carbon black; thoroughly mixing the mixture thus obtained while adding about 18% more of commercial petroleum oil and about 34% of carbon tetrachloride.

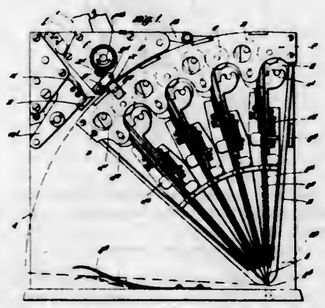
1,425,047. RECEIVER EARPIECE. HERMAN G. PAPE, New York, N. Y. Filed Apr. 15, 1921. Serial No. 461,484. 12 Claims. (Cl. 179—182.)



1. An earpiece having an adherent diaphragm clamping element of distinctly greater pliability than the main body thereof.

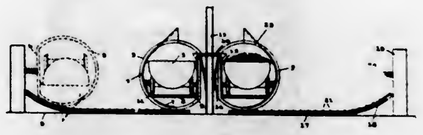
1,425,048. PROCESS OF PRODUCING ALKALI METAL SILICATES IN BLAST FURNACES. SAMUEL PEACOCK, Wheeling, W. Va., assignor of sixty per cent to Chauncey William Waggoner, Morgantown, W. Va. Filed Dec. 16, 1920. Serial No. 431,701. 2 Claims. (Cl. 23—13.)

1. The process of making an alkali metal silicate suitable for glass making purposes, which consists in pro-



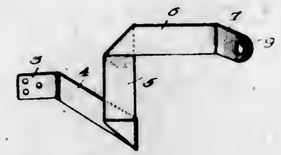
viding a mixture of carbon, silica, and a colorless non-oxidizing alkali metal compound in proportions adapted to produce the desired silicate, charging said mixture in a furnace of the blast type, igniting the charge, and withdrawing the slag produced, substantially as described.

1,425,049. ELECTRICAL ATTACHMENT PLUG. JOHANN G. PETERSON, Hartford, Conn. Filed June 12, 1919. Serial No. 303,612. 1 Claim. (Cl. 173—343.)



An electrical attachment plug consisting of a base and a cap, the base comprising an insulating body having longitudinal passages, only one of said passages being provided with a longitudinal offset portion, resilient contacts seated in said passages each of said contacts being provided with a projection at its free end, the said cap comprising contacts each provided with slots which cooperate with said projections to give a locking effect between the cap and base, the material from the slot of one of said cap contacts being formed into a spur which enters the said offset in the said passage of the base to give a polarized connection.

1,425,050. MACHINE FOR PRINTING AND ISSUING TICKETS AND THE LIKE. FREDERICK PHILLIPS, Brixton, London, England, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 26, 1919. Serial No. 292,901. Renewed Jan. 7, 1921. Serial No. 435,758. 50 Claims. (Cl. 101—69.)

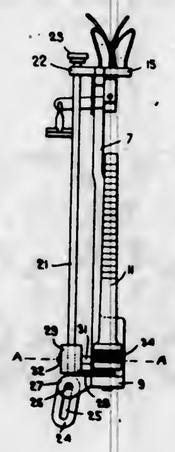


2. A machine for printing and issuing tickets comprising means for supporting and feeding a plurality of ticket strips and printing distinguishing characteristics upon each said strips, and a single set of devices adapted to imprint common subject matter upon all of the tickets including a single delivery passage adapted to receive the printed portion of any one of said strips.

1,425,051. AUTOMATIC ROLLING DUMP. ERSKINE RAMSAY, Birmingham, Ala. Filed Feb. 17, 1921. Serial No. 445,646. 12 Claims. (Cl. 214—51.)

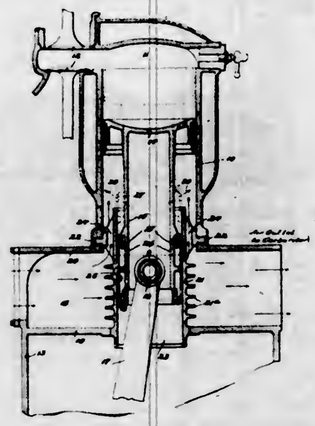
1. The combination with a dump having means to receive and hold a car to be dumped, of a track on which the dump is adapted to roll laterally to dump the car, means to hold the dump in initial position on said track, and means responsive to gravity for causing the dump when released to roll to one side on its track to dump the car and automatically return to initial position.

1,425,052. WINDOW-SHADE BRACKET. EDWARD A. REJSA, Cedar Rapids, Iowa. Filed Aug. 31, 1920. Serial No. 407,123. 1 Claim. (Cl. 156—24.)



Brackets supporting a spring wound shade directly on a window casing, each constructed from a single piece of metal having each an inner foot portion, an angle arm extending therefrom which at its outer end is bent outwardly, and from thence angularly to provide a vertical extension, the said extension, at the end thereof being bent angularly upon itself to provide a front portion which is arranged in a line parallel to the foot but which projects in an opposite direction therefrom, said front having its end bent outwardly and formed with a notch or opening to receive the pintle of the shade thereon.

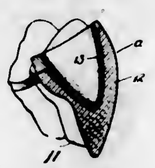
1,425,053. DOFFING DEVICE FOR SPOOLERS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 10, 1917. Serial No. 206,390. 7 Claims. (Cl. 118—18.)



1. In a spooler, a yarn carrier holder, a stud carried thereby to receive and hold the yarn carrier in spooling position, an operating device mounted on the holder adjacent said stud and extended into a position to be readily accessible to the operative, an arm extending from said device beneath the yarn carrier when seated on said stud, a sliding cam connection between said device and said holder, and a spring controlled laterally movable plunger carried by the rod adjacent the butt

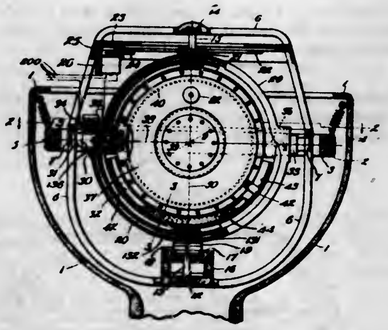
of the yarn carrier, the said cam connection acting to compress the spring as the device is operated to doff the

yarn carrier from said stud, whereby when the yarn carrier is lifted clear of the stud the plunger acts to shove it laterally.



1,425,054. HYDROCARBON ENGINE. HARRY RALPH RICARDO, London, England. Filed Sept. 28, 1920. Serial No. 413,257. 10 Claims. (Cl. 123—171.)

1. In a hydrocarbon engine the combination with the crank case, the cylinder and a piston having an elongated stem and a cross-head, of a tubular crosshead guide having one end in communication with the crank case and the other end in communication with the cylinder and means for circulating air around substantially the entire outer surface of said crosshead guide for cooling purposes.

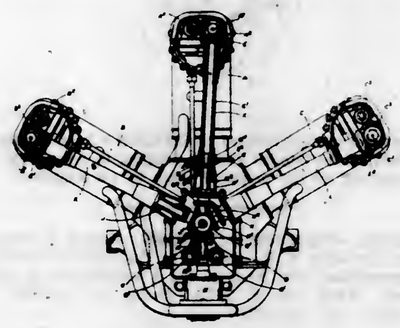


1,425,055. DENTAL CROWN STRUCTURE. JOSEPH ELON ROSE, Portland, Oreg. Filed Mar. 13, 1918. Serial No. 222,052. 7 Claims. (Cl. 32—30.)

1. A dental crown structure comprising an enveloping jacket having the exterior configuration and color of a natural tooth and open at one end so as to be readily slipped over a prepared tooth, and a base of gold having

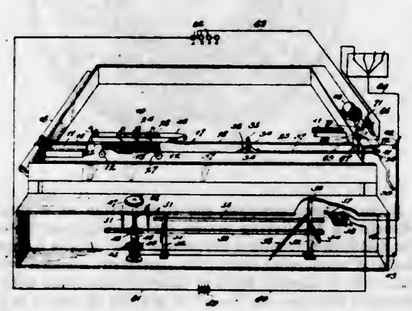
its exterior surface secured to the interior of said jacket and having its interior surface adapted to be secured to the exterior of the prepared tooth by an adhesive.

1,425,056. GYROSCOPIC COMPASS. GEORGE A. ROSSITER, Brooklyn, N. Y., assignor to The Carrie Gyroscopic Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 8, 1919. Serial No. 275,805. 3 Claims. (Cl. 33—204.)



1. In a gyro compass the combination of a directive element; a supporting means for mounting said element for oscillation around a horizontal axis; means for mounting said supporting means for movement about a vertical axis; and a movable mass of mercury associated with said directive element, the center of gravity of which is maintained in its lowest position when either end of said horizontal axis is tipped, substantially as described.

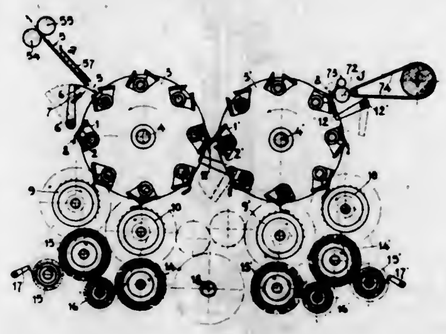
1,425,057. INTERNAL-COMBUSTION ENGINE. ARTHUR JOHN ROWLEDGE, London, England, assignor to D. Napier & Son, Limited, London, England. Filed Nov. 19, 1917. Serial No. 202,795. 9 Claims. (Cl. 123—55.)



2. In an internal combustion engine the combination of three blocks of cylinders arranged so that the axes of the cylinders lie in three planes relatively inclined about the crank shaft axis, a cam shaft mounted on the head of each block of cylinders, a bevel wheel on one end on each cam shaft, a crank shaft, a bevel wheel towards one end of the crank shaft and driven thereby, a second bevel wheel adjacent to the first bevel wheel and similarly driven by the crank shaft, three intermediate shafts through which the cam shafts are driven from the crank shaft all these three shafts lying truly radial with relation to the crank shaft axis, a bevel wheel on the outer end of each intermediate shaft gearing with the bevel wheel on the end of the corresponding cam shaft, a bevel wheel on the inner end of each lateral intermediate shaft

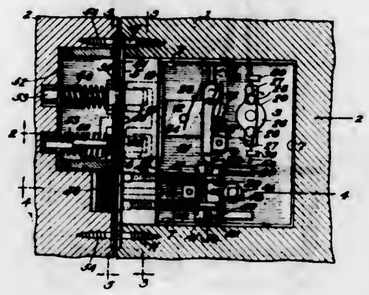
these two bevel wheels gearing with the first bevel wheel on the crank shaft, a second bevel wheel on one of the lateral intermediate shafts and positioned near its inner end, a bevel wheel on the inner end of the central intermediate shaft this bevel wheel gearing with the second bevel wheel on the lateral intermediate shaft, and two

magnetos each having on its shaft a bevel wheel which gears with the second bevel wheel on the crank shaft as set forth.



1,425,058. ROWING RACE. RYUJI SATO and CHIYOSABURO MATSUI, New York, N. Y. Filed Jan. 15, 1921. Serial No. 437,445. 3 Claims. (Cl. 46—56.)

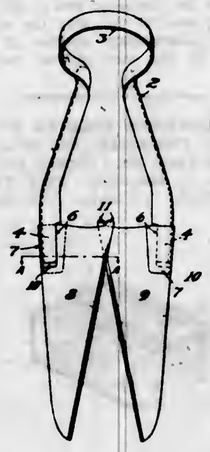
1. In a device of the class described, the combination of a tank, a boat mounted for movement in said tank, manual means for moving said boat in said tank, a slide bar mounted in said boat, manikins mounted on said slide bar, oars pivoted on said boat, operative connections between the manikins and said oars and means for automatically reciprocating said slide bar to cause said manikin to operate said oars upon operation of said manual means.



1,425,059. MACHINE FOR COMBING TEXTILE FIBERS. RICCARDO SCHLEIFER, Milan, Italy. Filed May 17, 1921. Serial No. 470,272. 14 Claims. (Cl. 19—117.)

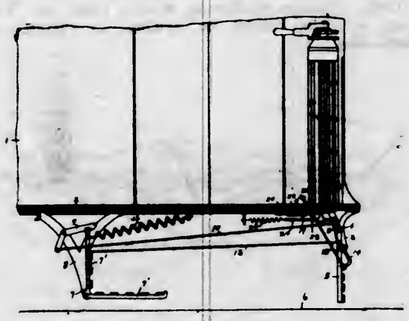
1. In a machine for combing textile fibers, a plurality of rotary drums, a notched driving member fixed on each drum, a carrier mounted on the shaft of each drum, means for oscillating the carriers, a driving pawl mounted on each carrier adapted to engage the notches of the driving member, a locking pawl for each drum adapted to engage said notches, means connecting the locking pawls together, means for oscillating the locking pawls, and means actuated by the movement of locking pawls for oscillating the driving pawls on the carriers, whereby the driving and locking pawls alternately engage the

notches of the driving members during the oscillation of the carriers in one direction or the other so as to effect alternately an intermittent driving and locking of the drums.



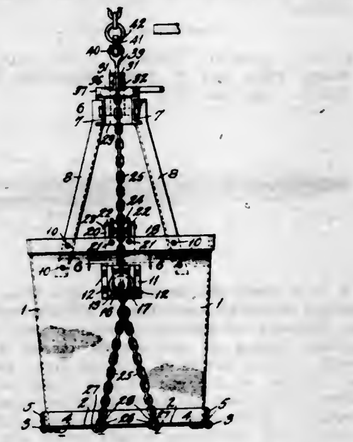
1,425,060. MORTISE LOCK. SAMUEL SEGAL, New York, N. Y., assignor to Segel Metal Products Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 12, 1920. Serial No. 358,221. 18 Claims. (Cl. 70—46.)

4. In a lock for a door, a movable keeper fastened to the door frame and adapted to be moved into inoperative position by the door and to assume an operative position when the door is closed and a locking bolt mounted on said door adapted to extend through said keeper to effect an interlocking of said ear and locking bolt.



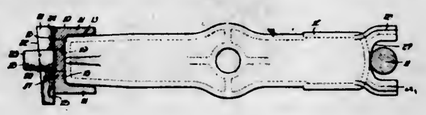
1,425,061. SHEARS. WALTER F. SHERMAN, Elsmere, N. Y. Filed Mar. 8, 1920. Serial No. 364,327. 2 Claims. (Cl. 30—1.)

1. In a shears of the class described, a substantially U-shaped handle the center thereof a spring, the ends thereof flattened to substantially the thickness of the shear blades and slightly wedge shaped; and shear blades notched at one corner and the notch covered by a clip



fastened to the blade so as to form a slightly tapered recess into which an end of the handle is adapted to fit.

1,425,062. SAFETY APPLIANCE FOR STREET CARS. DONALD O. SHIVELY, Houston, Tex. Filed Aug. 5, 1921. Serial No. 490,103. 2 Claims. (Cl. 293—5.)



1. The combination with a street car of a rotatable transverse bearing rod carried by the front end of the car, a fender trip depending from said rod, a fender depending from the car behind said trip formed with wings extending at substantially right angles to each other, said fender being pivotally mounted and extending entirely across the railway track, a latch pivoted to the car, one end of which is upwardly beveled and notched to engage over the edge of one of said wings, and an arm fixed to and upstanding from said rod, a release rod pivoted at one end to the other end of said latch and pivoted at its other end to said arm, a pull string attached at one end to said last mentioned wing of the fender and attached at its other end to the car in front of the fender, a reset rod pivoted at one end to said last mentioned wing, a reset lever pivoted to a suitable bracket carried by the front end of the car the other end of said reset rod being pivoted to the upper end of said reset lever, a push rod working through a bearing in the car floor and pivoted at its lower end to the other end of said reset lever, and whose upper end is formed into a pedal.

1,425,063. SELF-ADJUSTING DUMP BUCKET. GEORGE W. SLAUTER, Dixon, Ill. Filed Dec. 2, 1920. Serial No. 427,894. 9 Claims. (Cl. 294—71.)

1. In a self-adjusting dump bucket the combination with the body thereof having swinging bottom sections, a suspension yoke, bale levers thereon arms rigidly attached to the yoke and to the bucket, and a hanger above the yoke and connected to it by the levers of a cable or chain on each side of the bucket, connected at its lower end with each of the bottom sections and means connecting it at its upper end with the hanger.

1,425,064. REVERSIBLE FULCRUM ARRANGEMENT. ARTHUR SPARROW, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 27, 1921. Serial No. 510,895. 5 Claims. (Cl. 188—232.)

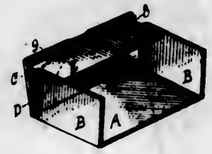
3. In a brake beam, the combination of a compression member having a web and flanges, said web having an opening, a reversible fulcrum post having a portion interposed between said flanges and engaging the web, said fulcrum post having an apertured projection extending through an opening in the web of the compression member, and a wedge at the rear of the compression member extending through the opening in said projection for forcing the above mentioned portion of the fulcrum post into engagement with the web of said compression member for holding the fulcrum post in adjusted position.

1,425,065. GROWING OF YEAST. BERT A. STAGNER, Pittsburgh, Pa., assignor, by mesne assignments, to National Retarder Company, Chicago, Ill., a Corporation of Ohio. Filed July 6, 1918, Serial No. 243,730. Renewed Aug. 30, 1921. Serial No. 497,046. 3 Claims. (Cl. 195—20.)

1. The method of growing bakers' yeast of good color, odor and keeping qualities, and having good baking strength in the manufacture of leavened bread, which comprises supplying to the seed yeast suitable carbohydrate material and the products of hydrolysis of keratin

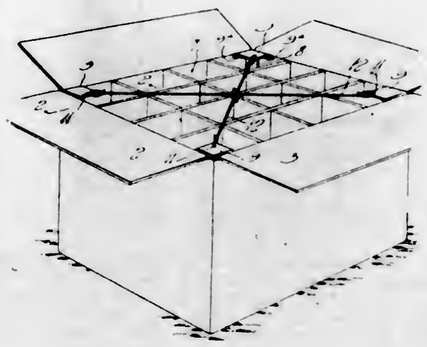
or keratin containing materials as nitrogenous material for the growth of the yeast, the amount and character of such products of hydrolysis being sufficient to enable rapid growth and increase of the yeast; substantially as described.

1,425,066. PENCIL. CHARLES A. STICKNEY, St. Paul, Minn. Filed July 26, 1920. Serial No. 399,171. 3 Claims. (Cl. 120—18.)



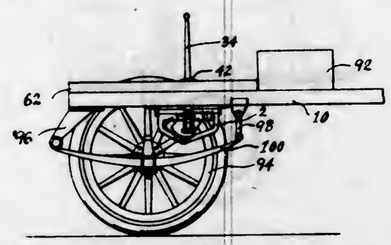
3. In a pencil the combination of a stem having an aperture extending longitudinally therethrough of different diameters at different portions of said stem, said aperture having at one portion thereof an interior thread, a crown having an extended barrel positioned in the aperture at one end of said stem and rotatable therein, said crown having an aperture extending therethrough, an interior shoulder at one end of said aperture, a feed screw positioned in said crown and having a squared head slidable in a squared portion of the aperture of said barrel, a spring positioned between said squared head and said interior shoulder of said barrel, a tip carried by the opposite end of said barrel and having a longitudinal aperture therethrough, with means for gripping a lead carried therein, and a pin carried by the interior end of said screw to force said lead from said barrel as said crown is rotated.

1,425,067. HOSE STAND. BERT E. STONE, Plattsburg, N. Y. Filed Oct. 10, 1921. Serial No. 506,697. 1 Claim. (Cl. 248—29.)



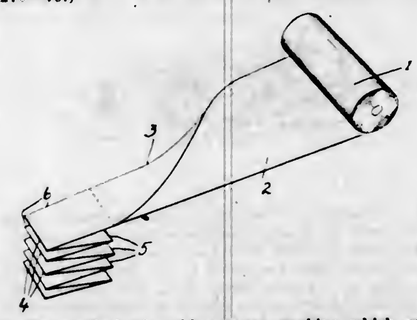
A hose stand including a vertically disposed rod having a slot formed therein adjacent its upper end, a laterally disposed pin carried by said rod and disposed adjacent said slot, an adjusting device formed from a single piece of metal bent between its ends to form a flattened tubular portion and a pair of disk-like parts having teeth around their peripheries for co-action with said pin, a connection passing through said disk-like portions and said slot to permit said device to be lifted for disengaging the teeth thereof from said pin, and a nozzle-engaging member formed from a single length of wire bent between its ends to provide an upstanding arched guide for the discharge end of the nozzle and a pair of resilient jaws for engaging the body portion of the nozzle, the intermediate portion of said member being disposed in the flat tubular portion of said device.

1,425,068. COLLAPSIBLE FOLDING BOX. STAFFORD F. SUTHERLAND, Philadelphia, Pa., assignor to Sutherland Collapsible Paper Box Company, Philadelphia, Pa., a Corporation of Delaware. Filed Feb. 25, 1921. Serial No. 447,665. 7 Claims. (Cl. 229—23.)



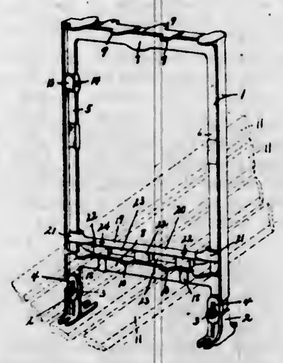
1. A collapsible box having a bottom, foldable side walls connected to the bottom, foldable end walls also connected to the bottom, corner folds connected with the side and end walls and comprising foldable triangular sections, and separate flexible locking flaps attached to the end walls along the free edge of the wall.

1,425,069. CORNER REENFORCEMENT FOR CARTONS. CHARLES B. TAYLOR, Winona Lake, Ind. Filed June 4, 1920. Serial No. 386,568. 1 Claim. (Cl. 229—49.)



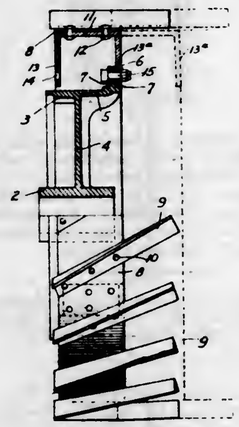
A carton comprising a receptacle, superposed frames in said receptacle providing article receiving cells, a partition strip between said frames, and a reenforcement for said frames within said receptacle, said reenforcement comprising corner posts fitting within the corner portions of said receptacle and engaging the corner portions of said frames, upper and lower plates fitting upon the ends of said corner posts and extending diagonally toward each other across the frames and having side flanges secured to the side faces of said posts, and trusses each being connected with the plates of corner posts at one side of the carton, the trusses being drawn inwardly and having their intermediate portions releasably connected.

1,425,070. CONTROLLER FOR ELECTRICAL VEHICLES. CHARLES A. WARD, Mount Vernon, N. Y. Filed June 11, 1920. Serial No. 388,200. 13 Claims. (Cl. 180—77.)



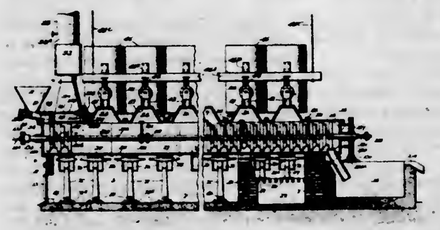
1. Controller mechanism for electric vehicles comprising, in combination with the chassis frame and crossbars spaced upon said frame, supporting brackets at the ends of said mechanism spanning, connected to and suspended from said crossbars.

1,425,071. METHOD OF MAKING PAPER NAPKINS. COURTNEY P. WINTER, New Brunswick, N. J. Filed July 8, 1921. Serial No. 483,213. 2 Claims. (Cl. 270—79.)



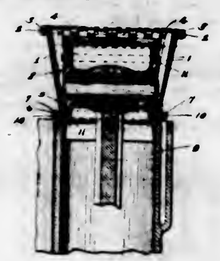
1. The method of making paper napkins which comprises folding a web of paper longitudinally, zig-zag folding said longitudinally folded web to form a pile, and cutting through the pile on the median transverse to the web.

1,425,072. SECTIONAL TABLE. WALTER A. ADAMS, Rochester, N. Y. Filed Apr. 28, 1920. Serial No. 377,238. 4 Claims. (Cl. 45—31.)



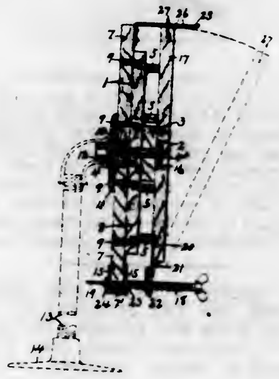
4. In a knock-down table a rigid rectangular frame comprising a pair of uprights and connecting cross bars, a clamping member having its opposite ends bifurcated for slidable engagement with said uprights respectively, and its intermediate portion formed with a series of projecting box-like structures in substantial contact with one of said cross-bars, and means for securing the clamping member to the cross bar.

1,425,073. WHEEL. EDWIN R. BEEMAN, Minneapolis, Minn., assignor to Beeman Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed July 21, 1919. Serial No. 312,377. 7 Claims. (Cl. 301—6.)



7. A wheel comprising a hub, an inner rim connected with said hub and provided with a gear ring, an outer rim, substantially U-shaped clips having flattened middle portions adapted to be seated against the inner face of the outer rim and secured thereto and provided with inwardly projecting arms, said inner rim having outwardly projecting lugs formed thereon provided with seats to receive the ends of said arms for offsetting said outer rim with respect to the plane of the inner rim, and bolts mounted in said arms and lugs for securing them together.

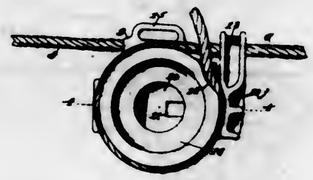
1,425,074. RETORT FURNACE AND CONDENSING APPARATUS FOR THE EDUCTION OF OIL AND FUEL GAS FROM OIL SHALES AND OIL SANDS. CHARLES L. BUCKINGHAM, Denver, Colo. Filed Feb. 1, 1921. Serial No. 441,604. 12 Claims. (Cl. 196—19.)



4 In an apparatus of the character described, the combination with supporting walls enclosing a flue span, of a retort U-shaped in cross section, the sides of which terminate in longitudinal flanges which rest on said walls and support said retort, a cover for said retort having a plurality of gas domes, means for feeding material into one end of said retort, an outlet at its opposite end, rotatable means for continuously advancing said material toward said outlet, heating elements in said flue space, and pipes leading from said gas domes.

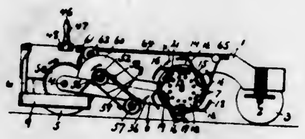
1,425,075. DEVICE FOR PLACING PISTONS HAVING RINGS IN CYLINDERS. GEORGE B. CADY, Canastota, N. Y. Filed Mar. 22, 1920. Serial No. 367,860. 5 Claims. (Cl. 29—90.4.)

1. A device for placing pistons having rings in cylinders comprising a funnel having lengthwise extending sections pivoted at their upper ends so that their lower ends at the small end of the funnel can swing radially to expand and contract to conform to the periphery of the piston, and means for contracting the sections, substantially as and for the purpose described.



1,425,076. REEL. CHARLES D. CATE, Syracuse, N. Y., assignor of one-half to J. Dwight Fisk, Syracuse, N. Y. Filed Dec. 29, 1920. Serial No. 433,776. 6 Claims. (Cl. 242—105.)

4. In a device for holding coiled material, the combination of a main frame having means on one side for attachment to a support and its opposite side provided with a flat bearing face for aliming the edges of a coil, a drum rotatably mounted on the frame adjacent said bearing face and wholly within the marginal edges thereof, stop pins projecting from said bearing face across the periphery of the drum in radially spaced relation thereto, a spindle journaled on the frame at one side of the drum and provided with a threaded end projecting across the periphery of said drum, a nut engaged with said threaded end for axial adjustment thereon, and a movable frame hinged to said nut for tilting and axial movement relatively thereto and toward and from the main frame, and means at the opposite side of the drum for locking and releasing the movable frame in and from its closed position.

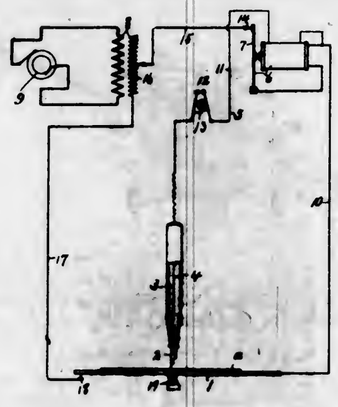


1,425,077. CABLE-TAKE-UP GRIP. ROY E. CHOATE, Cedar Rapids, Iowa. Filed Dec. 16, 1918. Serial No. 266,887. 4 Claims. (Cl. 24—133.)

3. A cable take-up, comprising a fixed member with a section of cable attached thereto, and having an upstanding jaw to engage a segment of cable and a cable-guide lateral thereto, the top of said member being slotted and its end open, substantially as described, and a circular, peripherally grooved disk having a depending

lug to pass through said slot, and a hook entering said end opening, and whereby the disk is held to slide in a direction perpendicular to said jaw, and means connecting with said lug to hold the parts together.

1,425,078. STONE PICKER. EUGENE C. CLARK, Oswego, N. Y. Filed Oct. 4, 1921. Serial No. 505,329. 3 Claims. (Cl. 55—17.)



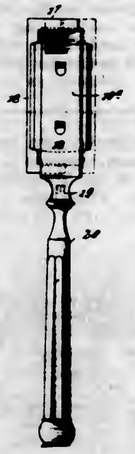
1. A stone-picker comprising a wheeled vehicle adapted to be drawn along and upon the surface of the ground, a rotary drum movable about an axis parallel with that of the wheels, means actuated by the wheels for rotating the drum in a reverse direction to that of the wheels, an endless conveyer at the rear of the drum and operated by a part of said means for receiving stones from the drum, a receptacle under-lying the rear end of the conveyer for receiving stones therefrom, and hook-shaped pick-up fingers projecting from the periphery of the drum in the direction of rotation thereof for picking up stones and depositing them on the conveyer, said pick-up fingers being arranged in rows lengthwise of the drum and in circumferentially spaced relation, said drum having guard-plates hinged to swing inwardly and outwardly between the several rows of fingers, and means for causing said guard-plates to swing outwardly as the several rows of pick-up fingers are successively presented to their discharging positions.

3. In a mechanical stone-picker, the combination of a wheeled vehicle, a rotary drum mounted thereon, means actuated by certain of the wheels of said vehicle for rotating the drum, pick-up fingers projecting from the periphery of the drum in the direction of rotation thereof and arranged in rows lengthwise of the drum in circumferentially spaced relation, all of the fingers of each row being movable endwise on the drum, and alternate fingers of each row having an independent oscillatory motion in the direction of rotation.

1,425,079. ELECTRIC PERFORATING APPLIANCE. RALPH R. CONE, Syracuse, N. Y., assignor to Louis Will, Syracuse, N. Y. Filed Mar. 24, 1919. Serial No. 284,867. 3 Claims. (Cl. 175—265.)

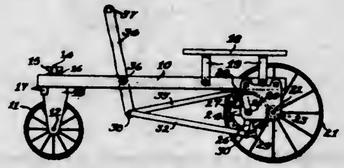
3. In an electric perforator appliance of the character described, a bed-plate of electric conducting material having a smooth unbroken surface of the same material for supporting the sheets to be operated upon, a writing instrument of electric conducting material cooperating with the plate for perforating purposes, and means for

supplying current energy to said plate and writing instrument including a normally open electric switch of which the plate constitutes one member.



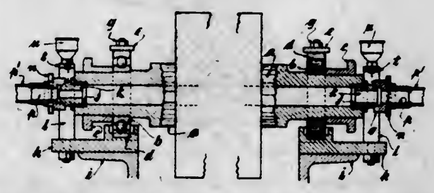
1,425,080. CANDLE EXTINGUISHER. THOMAS CULLEN, Amboy, Ill. Filed Aug. 4, 1920. Serial No. 401,160. 4 Claims. (Cl. 67—24.)

1. In a candle extinguisher, a staff, a cylindrical cap mounted at the upper end of said staff at an angle with said staff, and a tubular drip receptacle, with its opening beneath that of said cap, secured to said staff.



1,425,081. SAFETY-RAZOR-STROPPING DEVICE. PATRICK J. DWYER, New York, N. Y. Filed Sept. 4, 1919. Serial No. 321,644. Renewed Apr. 13, 1922. Serial No. 552,229. 2 Claims. (Cl. 30—25.)

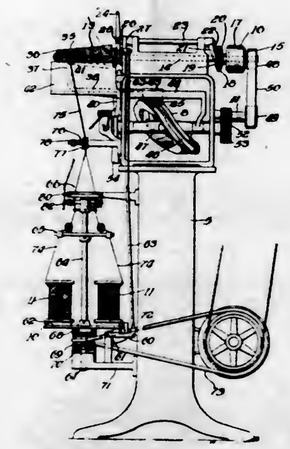
1. A stropping device including a plate, a pair of studs thereon, a second plate having slots to receive the stud and adapted to receive a double edge blade between said plate, the first plate having its ends bevelled, a guard member having parallel ends the inner faces of said ends being grooved to receive the bevelled ends of the first plate whereby the guard may be automatically held in either one position or the other adjacent either



edge of the first plate, and means for pivotally mounting said guard for movement in the manner stated.

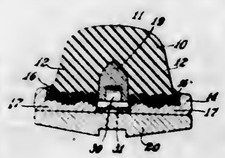
1,425,082. DRIVING MECHANISM FOR VELOCIPEDES. GEORG EKLUND, Winona, Minn. Filed Dec. 10, 1920. Serial No. 429,772. 10 Claims. (Cl. 208—36.)

1. In driving mechanism for a velocipede having a frame and a drive wheel, a spur gear operatively connected to said drive wheel, a tiltable support for a pawl at the periphery of said gear, a pawl having a notch to receive the teeth of said gear and a slot through said pawl to receive a pin, a single pin through said slot connecting said pawl to said support and means for oscillating said pawl whereby said pin will press said pawl to engage the teeth of the gear to rotate the same.



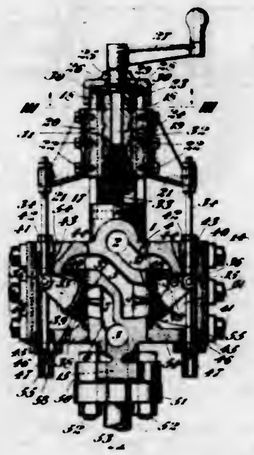
1,425,083. TEXTILE AND LIKE DRYING CYLINDER. ERNEST FARRELL, Salford, England. Filed Dec. 15, 1919. Serial No. 345,089. 2 Claims. (Cl. 285—3.)

1. In combination, a cylinder with hollow trunnions, anti-friction bearings for each trunnion, and means for supporting and positioning said bearings, conduits for conveying steam or other fluid to and from the cylinder, metal-to-metal ball and socket joints between the trun-



nions and conduits, one member of each joint being connected to the trunnion and one to the conduit and the member connected to the trunnion being slightly eccentric on its exterior to the axis of the cylinder, means by which the conduit and the member of the joint secured to the conduit are supported so as to be free to oscillate, and means for yieldingly pressing the conduit towards the trunnion, as set forth.

1,425,084. TWISTING AND WINDING MACHINE. ARNOLD FRIEDLANDER, Milwaukee, Wis., assignor to Phoenix Knitting Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 1, 1920. Serial No. 385,473. 7 Claims. (Cl. 117—26.)



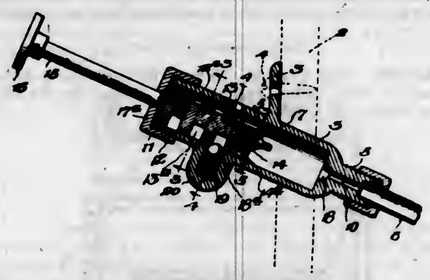
1. In combination, a source of power, means for twisting two or more strands of material into a single coarser strand, means for winding said coarser strand into a roll or cop and a detector for automatically disconnecting said twisting and winding means from said source of power and from each other upon breaking of one of said strands.

1,425,085. METHOD AND APPARATUS FOR MAKING CUSHION TIRES. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 11, 1920. Serial No. 388,090. 15 Claims. (Cl. 18—42.)

1. The method of making cushion tires which comprises assembling a core member with an integral, perforate tire base, building a rubber tire body on the base, over said core member, permanently uniting it with the base by vulcanization, and withdrawing said core member through an opening in the base.

1,425,086. FLUID-PRESSURE-CONTROLLING VALVE. HARRY R. GREB, Johnstown, Pa. Filed Mar. 10, 1920. Serial No. 364,629. 15 Claims. (Cl. 138—16.)

1. In a fluid-pressure controlling valve, a valve seat casing, a valve box attached thereto, a rocker type valve therein, and means for operating said valve.



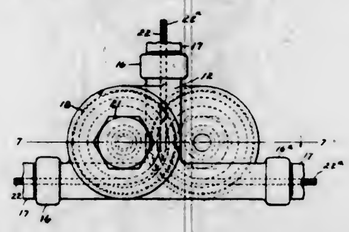
1,425,087. GAME. FRANK H. HAINES and EARL B. PARSONS, Camden, N. J. Filed June 11, 1920. Serial No. 388,254. 2 Claims. (Cl. 46—41.)

1. A device of the class described comprising a box, a base member therein having a diamond shaped figure thereon, a circular depression within the diamond, said base member having a hole at each corner of the diamond, the holes being consecutively numbered, the numbers representing points made and other holes outside of the diamond shaped figure and representing points lost, weighted members or players adapted to enter the said holes, a spherical member adapted to remain in the depression and a grooved path extending from one corner of the base member to the said central base depression.

1,425,088. VALVE-CONTROL DEVICE. OSCAR HAYES, Denver, Colo. Filed Aug. 14, 1918. Serial No. 249,768. 11 Claims. (Cl. 251—25.)

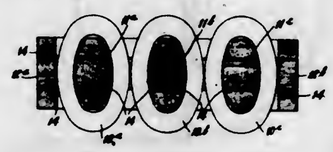
1. A valve control device of the character described comprising a valve casing having an inlet and an outlet, the latter being adapted to be connected with an engine part such as the intake manifold, and a bodily movable valve in the casing provided with a plurality of variably

ported disks adapted to be positioned between the inlet and the outlet of the casing for regulating the supply



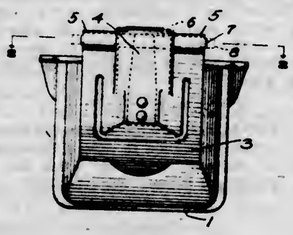
of fluid through said outlet, and actuating means directly connected to the valve and projecting without the casing.

1,425,089. KEY CLASP. JESSE P. HENRY, St. Louis, Mo., assignor to L. B. Tebbetts & Company, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 21, 1921. Serial No. 463,134. 3 Claims. (Cl. 24—3.)



1. A key clasp comprising two U shaped members, the base of one member being attached to the base of the other member and the legs of one member being disposed between the legs of the other member.

1,425,090. CONDUIT FOR POWER-TRANSMITTING CABLES. LOUIS V. HOMAN, South Dartmouth, Mass. Filed June 1, 1920. Serial No. 385,410. 1 Claim. (Cl. 254—190.)



An angular conduit member comprising a hollow body including two body portions forming two pulley chambers, and including screw-threaded annular walls forming openings at opposite sides of the body, and each provided with tangentially arranged tubular conduit nipples, the nipples on each wall being angularly arranged relatively to each other, and adapted to be coupled to conduit tubes; pulley-bearing studs fixed to the said body portions and projecting through the centers of said chambers, pulleys removably journaled on said studs, and adapted to guide flexible cables passing through said nipples; and caps formed to close said openings and confine the pulleys on the studs, said caps being provided with screw threads engaging the screw threads of the said annular walls, so that the caps are detachable to permit access to the pulleys, and the removal of the latter from the studs, the said body portions being offset from each other to locate the said pulley chambers and pulleys in different parallel planes.

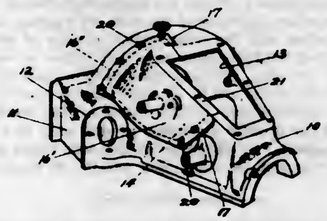
1,425,091. POLYPHASE TRANSFORMER. SAMUEL HERRLICK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed May 28, 1921. Serial No. 473,335. 8 Claims. (Cl. 175—356.)

1. A polyphase transformer comprising coils side by side in the same plane, and a laminated transformed core having all of its laminæ in planes parallel to each other and having a lengthwise portion extending along each end of the coils respectively, and having intermediate portions connecting said lengthwise portions and extending through the coils, and also having end portions located at the outside of the end coils respectively and connecting the said lengthwise portions, the magnetism created in the said intermediate portions of the core all passing in said parallel laminæ, and the cross section of each of said end portions being approximately half that of one of said intermediate portions, the said intermediate and end portions having greater depth of said parallel laminæ in a direction perpendicular to the plane of the coils than width, and the interior dimension of said coils in a direction perpendicular to the plane of the coils being greater than the dimension in a direction parallel to their plane.

1,425,092. JOURNAL-BOX LID. LEIGH W. HOSTETTLER, Tarentum, Pa., assignor to Allegheny Steel Company, a Corporation of Pennsylvania. Filed Nov. 22, 1920. Serial No. 425,637. 4 Claims. (Cl. 64—23.)

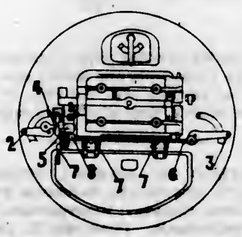
1. A journal-box lid provided with a cylindrical portion adapted to receive a hinge pin and having ears at the end thereof adapted to be bent over the ends of said cylindrical portion to retain a hinge pin within same.

1,425,093. METHOD OF MAKING JOURNAL-BOX LIDS. LEIGH W. HOSTETTLER, Tarentum, Pa., assignor to Allegheny Steel Company, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1921. Serial No. 440,347. 4 Claims. (Cl. 29—148.2.)



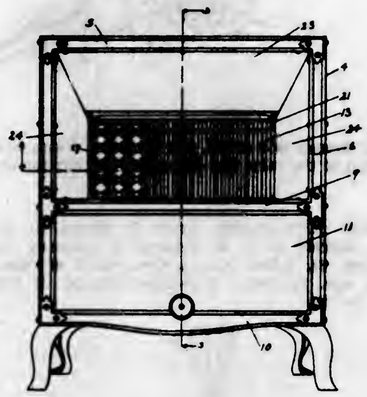
1. The method of constructing a journal box lid with a hinge pin eye of accurate diameter which includes bend-

ing a portion of the body of said lid into an eye of substantially circular formation, distorting a portion of said



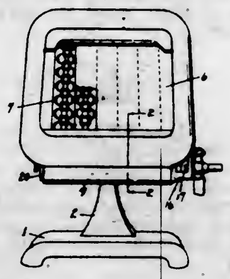
lid adjacent to said body portion and said eye to provide a reinforcing web, and inserting a piece of commercially produced tubing within said eye.

1,425,094. **TRANSMISSION CASING.** WILLIAM FRANKLIN HUDSON, Philadelphia, Pa. Filed Jan. 30, 1922. Serial No. 532,634. 4 Claims. (Cl. 74—56.)



1. In a construction of the character stated a transmission-casing unit having a conventional top-opening and a side-opening in communication therewith a part of which side-opening is formed upon an irregular, curved line, a detachable cover-plate for said side-opening which plate is so shaped that a continuous part or rim thereof seats wholly within said opening and an adjacent, continuous part overlies the casing body to close any space between the parts so seated and means for clamping the cover-plate to place.

1,425,095. **FURNACE FRONT.** JAMES HOWDEN HUME, Glasgow, Scotland, assignor to James Howden & Company, Limited, Glasgow, Scotland. Filed Dec. 4, 1919. Serial No. 342,337. 1 Claim. (Cl. 110—172.)



In combination with a furnace front for forced draught installations, a firing door, two air valves, one at each side of said firing door, two operating handles, one for each valve, and two door locking members, one connected to each handle for preventing the opening of said firing door until both handles are in position to close both valves.

1,425,096. **GAS STOVE.** HUBERT R. HUMPHREY, Kalamazoo, Mich. Filed Apr. 16, 1921. Serial No. 461,945. 7 Claims. (Cl. 126—92.)

7. In a gas stove, the combination of a casing open at the front, a fireback mounted at the rear of said casing, radiants disposed in front of said fireback, a burner associated with said radiants, and top, bottom and side reflectors of substantial depth, said reflectors being disposed relative to the radiants so that the radiants constitute the rear wall of a space inclosed by the reflector.

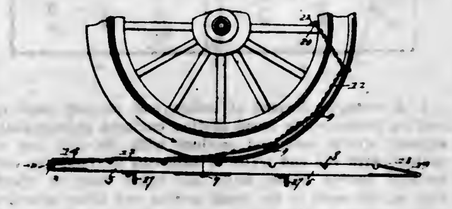
1,425,097. **GAS BURNER.** HUBERT R. HUMPHREY, Kalamazoo, Mich. Filed May 13, 1921. Serial No. 469,138. 9 Claims. (Cl. 158—112.)

3. In a gas burner, the combination of a body member provided with a cylindrical manifold chamber and internal annular ribs spaced therein, a tubular screen arranged in said manifold chamber and coacting with said ribs to provide a plurality of annular delivery chambers, burner tips mounted on said body member opening into said delivery chambers, the outer end of said body member being open to receive said screen, a closure for said opening on which the outer end of said screen is mounted, and a Bunsen tube projecting into said manifold centrally of said screen.

1,425,098. **CONTROLLER FOR OSCILLATING WASHING-MACHINE TUBS.** WARD S. IRELAND and WILLIAM H. MEYER, St. Louis, Mo., assignors, by mesne assignments, to The Davis Sewing Machine Company, a Corporation of Delaware. Filed Oct. 16, 1919. Serial No. 331,166. 2 Claims. (Cl. 259—75.)

1. A washing machine comprising a stationary casing, supports projecting inwardly from opposite sides of said casing and provided with laterally extending arms, bearings formed in said supports, an oscillatory tub journaled in said bearings, and oscillation controlling means pivoted at their outer ends to the side walls of the tub and at their inner ends to said laterally extending arms.

1,425,099. **DRAIN BOARD FOR CLOTHES WRINGERS.** WARD S. IRELAND, St. Louis, Mo., assignor, by mesne assignments, to The Davis Sewing Machine Company, a Corporation of Delaware. Filed Oct. 27, 1919. Serial No. 333,599. 6 Claims. (Cl. 68—32.)

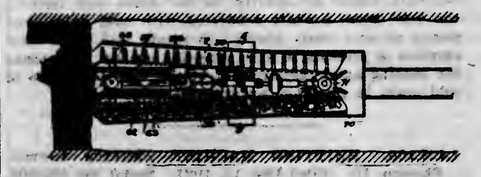


1. The combination with a wringer having a main drain board, of a supplemental drain board adapted to be slipped onto either side of said main drain board so as to extend from either of said sides, and fastening means whereby said supplemental drain board may be secured at either of said sides.

1,425,100. **FUNNEL.** JAMES E. JONES and FRANK C. NEWTON, Syracuse, N. Y.; Gertrude L. Jones, administratrix of said James E. Jones, deceased, assignor to the said Frank C. Newton. Filed Sept. 3, 1919. Serial No. 321,418. 2 Claims. (Cl. 226—37.)

1. In a bottle filler, the combination of a funnel having an outlet tube adapted to be inserted in the mouth of the bottle to be filled and provided with a flange, a plate movable lengthwise of the outlet tube at the underside of the flange for engagement with the mouth of the bottle when the filler is placed in operative position thereon, said plate being moved toward and against the flange by said engagement, a float valve for opening and closing said outlet, means for automatically closing the valve when the filler is removed from the bottle, and means actuated by the plate for operating the first named means to allow the valve to open by its own weight when the filler is supported upon the bottle, said float-valve being operable by the rising of the liquid in the bottle to close the outlet independently of the first and second named means.

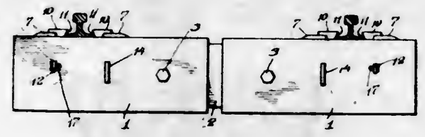
1,425,101. **FOOTING FOR AUTOMOBILES.** WILLIAM JURY, Lansing, Mich. Filed May 25, 1922. Serial No. 563,687. 5 Claims. (Cl. 238—14.)



1. In a footing for automobiles, a base, a flexible element having a looped portion embracing one end of the base and side portions extending longitudinally of the base, and means for securing the ends of the side members to a rim of an automobile wheel.

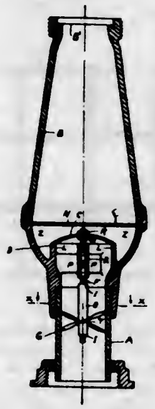
1,425,102. **WALL STRUCTURE.** FREDERICK L. KEPPLER, New York, N. Y. Filed Mar. 11, 1918. Serial No. 221,650. 3 Claims. (Cl. 94—28.)

1. As a new article of manufacture a preassembled building unit, comprising a self-supporting concrete grid, and a plurality of translucent units secured edge to edge therein, and a channeled concrete band integral with the concrete grid surrounding the entire unit.



1,425,103. **MINING MACHINE.** HARRY A. KUHN, Pittsburgh, Pa. Filed May 18, 1914. Serial No. 839,825. 10 Claims. (Cl. 262—9.)

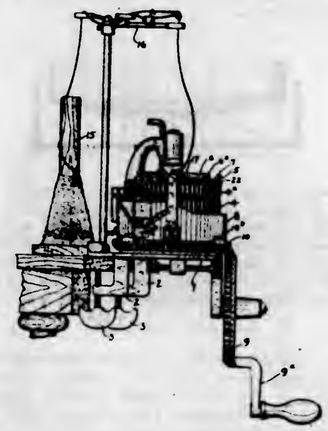
1. In apparatus for extracting coal, a frame supported on power-driven wheels, means to raise the forward end of said frame, an endless chain, means carried by said



chain to form a crevicelike opening in the coal expanded along its lines of cleavage, means carried by said chain to dislodge the coal adjacent to said opening, and means carried by said chain to convey away the dislodged coal.

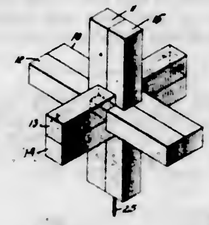
1,425,104. RAILROAD CROSSTIE. ELVIN LANDIS, Massillon, Ohio. Filed Apr. 13, 1922. Serial No. 552,248. 5 Claims. (Cl. 238—31.)

1. A cross tie formed of hollow end metallic sections and an intermediate wood section enclosed substantially entirely within said end sections with its ends out of contact with the end walls of said end sections, the end sections having upper walls the inner ends of which bear on the ends of the wood section and being provided with openings in the upper walls for the reception of rail securing wedges.



1,425,105. APPARATUS FOR REGULATING FLUID AND GAS PRESSURE BETWEEN THE GAS METER AND GAS CONSUMPTION. PROSPERO LAVARELLO FU GIUSEPPE, Genoa, Italy. Filed Mar. 6, 1918. Serial No. 220,887. 2 Claims. (Cl. 50—14.)

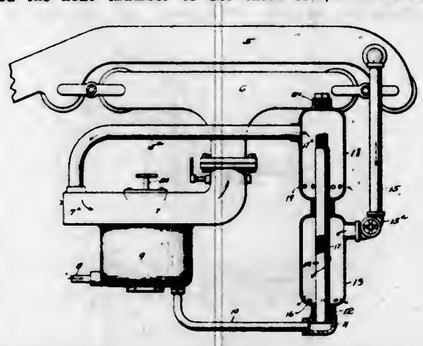
1. In a device of the character described, the combination of an inlet pipe, an outlet pipe in axial alinement with each other, a pair of valve seats in axial alinement with said pipes and serially disposed therein, a valve normally seated by gravity on the valve seat next to the inlet pipe, a shaft connected with said valve, and means on said shaft adapted to rotate said shaft upon exertion of pressure in axial direction against said means for causing axial displacement of the valve from one of said seats in direction towards the other seat.



1,425,106. KNITTING MACHINE. MILTON LAVEEN, Chicago, Ill. Filed Dec. 15, 1921. Serial No. 522,508. 2 Claims. (Cl. 66—12.)

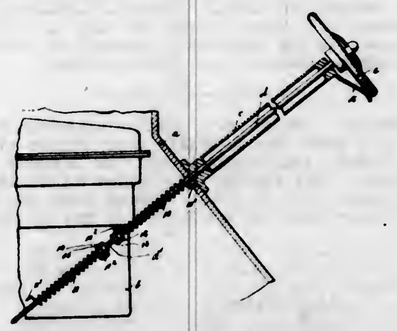
1. In a knitting machine of the type referred to, the combination with a needle cylinder, of a needle oscillator mounted to rotate around said cylinder, and a yarn carrier adjustably fixed on said oscillator, said carrier having an upper perforated guide for opening the latches of the vertical needles and provided with a lower plate for the

horizontal needles, said lower plate set back from the plane of the upper plate in order to clear the said vertical needles.



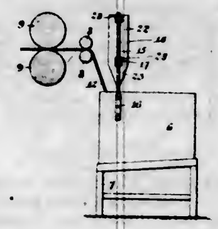
1,425,107. TOY. DAVID LEVINSON, New York, N. Y. Filed Mar. 30, 1921. Serial No. 456,863. 1 Claim. (Cl. 46—41.)

A building block toy, comprising three pairs of quadrangular prisms adapted to be interlocked, all of said prisms but one being provided with notches accommodating portions of the prisms, the members of each pair of prisms extending side by side and at right angles to the other pairs of prisms, the longitudinal axis of each prism pair intersecting the longitudinal axes of the other pairs, and a pin in the side of said notchless prism abutting against the juxtaposed face of its pair, said pin extending out of the side of the notchless prism, thereby forming a wedge to prevent accidental disengagement of said notchless prism from the remaining elements, when assembled, said pin projecting beyond one end of said notchless prism and constituting a spindle on which the assembled toy may be spun.



1,425,108. VAPORIZING ATTACHMENT FOR CARBURETORS. PURD J. LINCOLN, Birmingham, Ala., assignor to Gelders Manufacturing Company, Birmingham, Ala., a Corporation. Filed June 29, 1921. Serial No. 481,273. 5 Claims. (Cl. 48—107.)

1. The combination with a carburetor, of a vapor chamber and a heating chamber, a tube leading through the heating chamber and terminating in the vapor chamber, a connection between the lower portion of said tube and the float chamber of the carburetor, a connection



between the vapor chamber and the air intake portion of the carburetor and elements adapted to lift fuel by capillarity disposed in said tube.

1,425,109. COUNTERBALANCING DEVICE FOR STEERING WHEEL POSTS. PHILIPP LINK, Newark, N. J. Filed July 26, 1921. Serial No. 487,764. 3 Claims. (Cl. 74—33.)

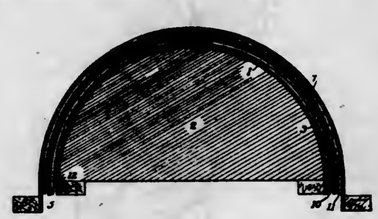
1. In a steering wheel post for motor vehicles, oppositely acting counterbalancing springs mounted around said post and normally holding the post in a position corresponding to the straight position of the front wheels and means for the adjustment of the tension of said springs.

1,425,110. AUTOMATIC LUBRICATING DEVICE FOR ROLLING MILLS. HOWARD N. LITTLE and WALTER B. GORMELY, Lockport, N. Y. Filed May 7, 1921. Serial No. 467,731. 14 Claims. (Cl. 29—17.)

1. The combination with a rolling machine having a pair of rolling-rolls, of a support for a roll of sheet metal

having a portion thereof unrolled and passing between said rolling-rolls, a distributer in contact with the rolled and the unrolled portions of said metal, and means for feeding oil to said distributer.

1,425,111. ALLOY FOR USE IN ELECTRIC HEATING APPLIANCES. GEORGE HARRY LOFTS, Hobart, Tasmania, Australia. Filed Sept. 21, 1920. Serial No. 411,868. 1 Claim. (Cl. 75—1.)

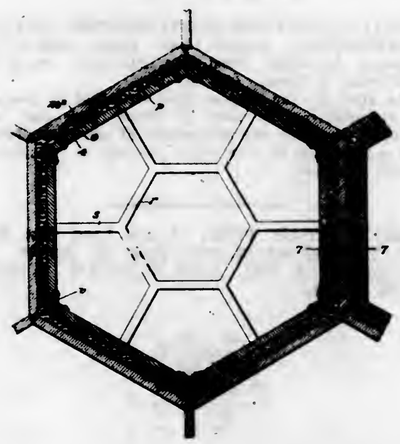


An alloy for the purposes indicated that is composed of an admixture of pure or almost pure zinc with cadmium in about the proportions of ninety-six (96%) per cent of zinc to four (4%) per cent of cadmium as herein explained.

1,425,112. CHAIN PUMP. RAMON LONG, New York, N. Y. Filed Oct. 23, 1919, Serial No. 332,779. Renewed Nov. 5, 1921. Serial No. 513,212. 9 Claims. (Cl. 103—6.)

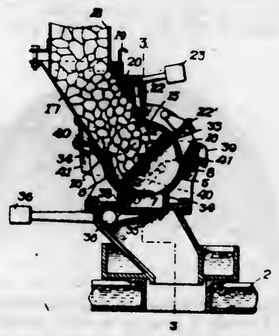
1. The chain pump comprising an upper wheel and a cooperating continuous ladder type chain having one piece wire links formed with connecting body portions and with laterally projecting water carrying portions comprising a plurality of cross-pieces and cooperating substantially contacting side pieces, the corresponding cross-pieces being oppositely directed in alternate links.

1,425,113. PROCESS OF MANUFACTURING CURVED FORMS OF PLYWOOD OR FIBROUS COMPOSITIONS. MALCOLM LOUGHEAD, Santa Barbara, Calif., assignor of one-fourth to Allen H. Loughead, one-fourth to John K. Northrop, and one-fourth to Anthony Stadlman, all of Santa Barbara, Calif. Filed Aug. 12, 1919. Serial No. 317,025. 3 Claims. (Cl. 20—91.)



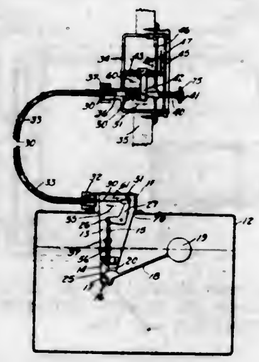
1. The process of manufacturing curved shells, which consists of erecting a primary layer by bending strips of stock to a curved form and securing the ends of the strips in place so that the layer becomes a unit; and then erecting superposed layers, each of strips of the stock, so that each layer is an independent and separate unit; then separating the unitary layers; and then adhesively securing the unitary layers one upon the other in complementary relation.

1,425,114. CONCRETE CONSTRUCTION. EDWARD SYDNEY LUARD, London, England. Filed Feb. 28, 1922. Serial No. 539,999. 7 Claims. (Cl. 61—46.)



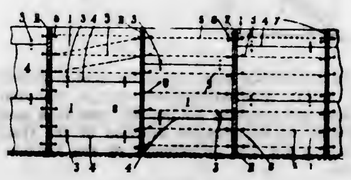
1. A cellular concrete structure comprising outer and inner polygonal shells erected about a common center

and having their sides associated so that the angles of an inner shell are located opposite the flats of an



outer shell and support the latter, and a plastic filling between the said shells.

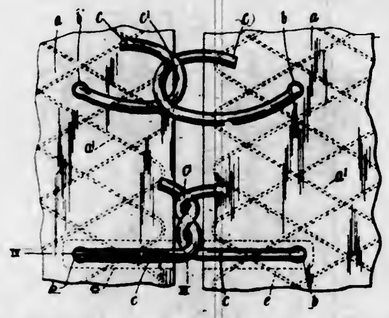
1,425,115. FEEDING MECHANISM FOR GAS PRODUCERS. CHARLES W. LUMMIS, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 10, 1918. Serial No. 249,268. 7 Claims. (Cl. 214—35.)



1. In a fuel feeding mechanism for gas producers, a movable charging member having an opening for the reception and discharge of fuel, a supporting and containing means for said member, providing a passage to the producer chamber for cooperation with said opening, and providing sealing surfaces on opposite sides of said passage of less width than said opening, whereby said passage is unsealed as said member moves into and out of discharging position, and means operable by the movement of said member for closing said passage as said member moves into and out of discharging position.

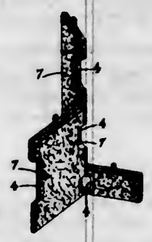
1,425,116. LIQUID-LEVEL INDICATOR. MATTIAS O. LUNDIN, Los Angeles, Calif. Filed Aug. 28, 1921. Serial No. 494,503. 10 Claims. (Cl. 73—82.)

1. In a liquid level indicator of the class described, the combination of: a float actuated cam; a cam follower to cooperate with said cam; means for maintaining said follower in a position against said cam; an indicating device; and link mechanism to transmit the movement of said cam follower to said indicating device.



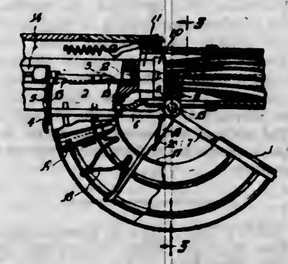
1,425,117. MEANS FOR THE CONSTRUCTION OF CONCRETE SLABS, WALLS, AND OTHER STRUCTURES. FRANCIS GASCOIGNE LYNDE, Belvedere, England. Filed July 15, 1919. Serial No. 311,049. 4 Claims. (Cl. 72—106.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. Concrete slab walls and other structures comprising slabs, rods therein, looped ends on said rods, vertical rods passing through said looped ends, and extending between the junctions of the slabs, grooves in the horizontal edges of said slabs, dowels passing through said horizontal edges and engaging said slabs, and additional metal securing means at the vertical junctions of the slabs the slabs being arranged so that the horizontal junctions in any vertical series of slabs are in staggered relation to the junctions in the adjoining vertical series of slabs.



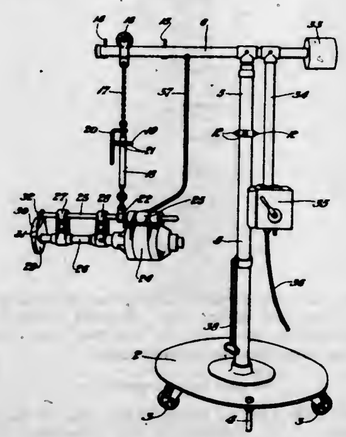
1,425,118. CONCRETE SLAB FOR WALLS OR THE LIKE. FRANCIS GASCOIGNE LYNDE, Belvedere, England. Filed July 15, 1919. Serial No. 311,050. 3 Claims. (Cl. 72—106.)

1. Concrete slabs having metallic reinforcement embedded therein, transverse passages which traverse the concrete and the reinforcement to house connecting wires, grooves in the faces of the slabs to receive the wires,



and depressions in the adjacent ends of the grooves in adjacent slabs to house the knotted or twisted ends of the wires.

1,425,119. CONCRETE SLAB FOR THE ERECTION OF CELLULAR STRUCTURES. FRANCIS GASCOIGNE LYNDE, Belvedere, England. Filed July 15, 1919. Serial No. 311,051. 4 Claims. (Cl. 72—106.)



1. An hexagonal cellular structure comprising concrete or like slabs, oppositely bevelled vertical edges on said slabs the vertical edges of one slab when arranged in juxtaposition to the vertical edges of another slab forming with said vertical edges a recess to receive the vertical edges of a third slab, and a recess in the vertical edges of each slab.

1,425,120. MAGAZINE FOR MACHINE GUNS. JOHN CHARLES REGINALD MCCAUDDEN, Hurstville, near Sydney, New South Wales, Australia. Original application filed June 19, 1920, Serial No. 390,153. Divided and this application filed June 4, 1921. Serial No. 475,070. 3 Claims. (Cl. 89—33.)

1. A machine gune magazine comprising a segmental box casing adapted to carry a large number of loose tapered cartridges in staggered order and to reciprocate with the gun barrel, a slot in the inner curved face of said casing, an externally pivoted feed arm extending through said slot, a spring controlling said feed arm, a platform carried by said feed arm, carrier arms adapted to support said casing, and means on said carrier arms for rapidly detaching the magazine from the gun.

1,425,121. GRINDER. GEORGE H. MCFEATERS, Johnstown, Pa. Filed Jan. 31, 1922. Serial No. 532,990. 3 Claims. (Cl. 51—170.)

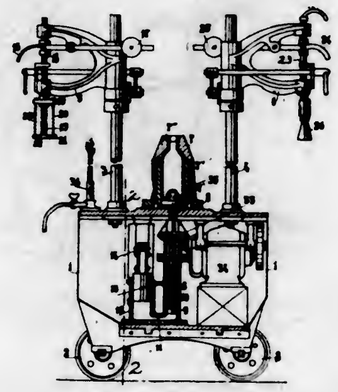
1. A portable grinder comprising in combination, a wheeled base, a vertical standard projecting upwardly from said base, a horizontal supporting beam pivotally mounted intermediate its ends on said standard, a trolley member mounted for horizontal movement on said beam, a flexible supporting element suspended from said trolley, a collar member secured on the lower end of said element and adjustably secured to a horizontally disposed supporting rod, a motor suspended from adjacent one end of said rod, a bearing sleeve projecting from said motor and suspended from said rod, a motor driven shaft within said sleeve, a grinding wheel on the free end of said shaft, means for supplying electric power to said motor, and means for counterbalancing said motor, grinding wheel and associated parts.

1,425,122. BROACHING AND SURFACE FINISHING OF HOLES OR THE LIKE. JAMES MCKECHNIE and THOMAS FENDER, Westminster, London, England, assignors to Vickers Limited, Westminster, London, England. Filed Nov. 7, 1919. Serial No. 336,428. 1 Claim. (Cl. 90—33.)

A method of opening and burnishing comparatively long holes or the like (i. e. holes from two to six feet long or more) as an alternative to the usual method of boring and surface lapping, which consists in using in succession a series of broaches which are relatively short compared with the length of the hole which is to be bored, the first of the series being passed entirely through the hole so as to remove or deal with a certain proportion of the total amount of the metal, the second broach of the series being of such dimensions as to remove or deal with a further proportion of the metal and having its smallest diameter about equal to the largest diameter of the first broach used, the third broach of the series being of such dimensions as to remove or deal with a further proportion of the metal and having its smallest diameter about equal to the largest diameter of the broach previously used, and so on with any further broaches of the series that may be used until the hole or the like has

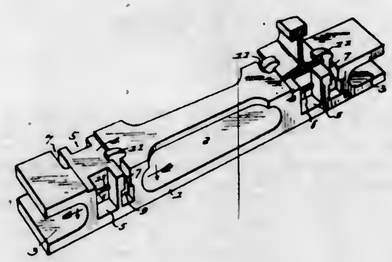
been increased to the desired dimensions, and thereafter in using a broach having a comparatively large number of teeth which is adapted to operate as a burnisher, the di-

ameter of the most forward tooth being of slightly less diameter than that of the most rearward tooth of the broach previously used and the last few teeth thereof being of the same diameter as each other.



1,425,123. IMPULSE TRANSMITTER. RAY H. MANSON, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 29, 1919. Serial No. 320,677. 4 Claims. (Cl. 179—90.)

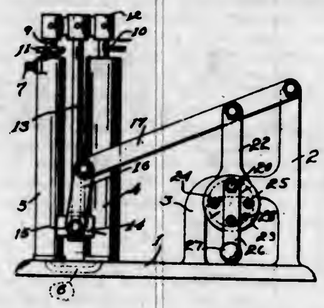
1. In an impulse transmitting device, a circular frame having a central opening, a numeral plate associated therewith, a shaft having a longitudinal opening, a dial secured to said shaft arranged to be manually rotated in a clockwise direction, a spring for rotating said shaft and dial in the reverse direction, a spring assembly supported by said frame and provided with sets of flat contact springs lying in parallel planes, means operative during the reverse movement of said dial for actuating one of said sets of springs and a rod provided with a button on one end and insulation on the other, said rod being movable through the opening in said shaft for actuating a second set of springs.



1,425,124. PRODUCTION OF BOTTLES OR OTHER VESSELS AND APPARATUS THEREFOR. MAURICE MATHY, Liege, Belgium. Filed June 26, 1919. Serial No. 307,027. 2 Claims. (Cl. 49—11.)

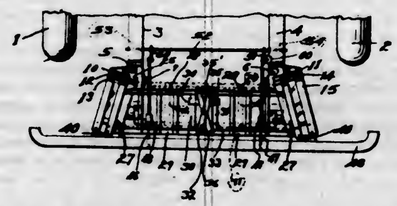
2. A machine for the mechanical manufacture of bottles or other vessels, comprising a frame, a mould fixed on said frame, means for raising the blank inside the mould until it is flush with the upper part of the neck, a pair of movable brackets mounted on the aforesaid frame, a tool supported by one bracket for making a hole in the blank, a compressed air supply pipe supported by the other bracket and terminating in a socket provided with a passage, a tube terminating in a nossle and moving in said passage, and valves arranged on said tube for closing said passage when the nozzle hangs freely and for supplying the pipe with air when said tube is raised within

the socket, said brackets being arranged to permit said tool and said air supplying pipe and its associated tube to be brought one after the other over the mould.



1,425,125. RAIL TIE AND FASTENER. PHILIP G. MOOD, Dugger, Ind. Filed May 17, 1922. Serial No. 561,653. 2 Claims. (Cl. 238—30.)

1. A combined tie and rail fastener comprising a tie body, each end thereof having a depression on its upper face for the reception of the base of the rail, and provided with diagonal opposite perpendicular recesses, the lower ends of said recesses being enlarged, rail holding elements engaging said recesses and having enlargements at their lower ends to engage the enlarged lower ends of the recesses to secure the elements against displacement upwardly, the upper ends of the elements having heads to overlie the base of the rail, and transversely disposed keys engaged through the end of the tie and across the lower enlarged ends of the recesses to retain the enlargements of the elements in position and prevent their outward displacement.

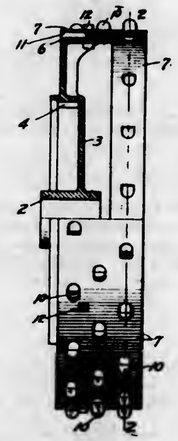


1,425,126. TIRE PUMP. MAX H. MOSES, San Francisco, Calif. Filed Mar. 29, 1921. Serial No. 456,508. 3 Claims. (Cl. 230—27.)

1. A tire pump comprising a base, air cylinders supported thereby, a post at the opposite end of the base from the air cylinders, a lever pivotally mounted on said post and connected with the air pump, a revoluble handle

and an eccentric link operated by the handle for delivering air from the pump.

1,425,127. MOTOR-VEHICLE BUMPER AND FENDER. MAX H. MOSES, San Francisco, Calif. Filed May 16, 1921. Serial No. 469,851. 3 Claims. (Cl. 293—24.)

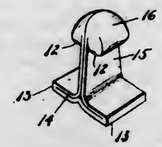


1. A combined bumper and fender for motor vehicles comprising a pair of fixed slides, movable slides supported thereby, a grill work connecting the movable slides, a bumper carried by the movable slides, means to support the movable slides and grill work carried thereby over the fixed slides and means to release the movable slides at will to drop them toward the ground.

1,425,128. METHOD OF MAKING WATCH-CHAIN SWIVELS. FREDERICK W. NITTEL, Attleboro, Mass., assignor to M. S. Company, Attleboro, Mass. Filed May 5, 1921. Serial No. 467,117. 2 Claims. (Cl. 59—9.)

1. The method of making watch chain swivels which consists in first forming a bow with a bottom end extending thereacross, then in swaging the said bottom end to form a pair of spaced depending attenuated webs, then in shaping said webs to form an anchoring ear, a spring engaging teat and a pivot ear the latter perforated, then in attaching the bow to the swivel head with the teat engaged with the spring, the pivot ear with the pivot pin of the swivel and the anchoring ear rigidly attached to the head, and finally in severing the bow to form a tongue movable about the pivot pin and tensioned by said spring.

1,425,129. WHEEL. SPENCER H. PHELPS, Minneapolis, Minn., assignor, by mesne assignments, to Beeman Tractor Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 4, 1919. Serial No. 315,175. 3 Claims. (Cl. 301—40.)



1. The combination, with a wheel rim, of an auxiliary rim comprising a metallic band arranged to encircle the wheel rim and seated thereon and of greater width than the wheel rim to increase the width of the normal tread thereof, said auxiliary rim having a series of lugs pressed outwardly therefrom, said lugs being positioned to enter the soil during the revolution of the wheel and increase the traction thereof and said auxiliary rim having means for securing it to the main rim of the wheel.

1,425,130. MANUFACTURE OF VINYL HALIDES. HERMANN PLAUSON, Hamburg, Germany. Filed Jan. 13, 1921. Serial No. 437,109. 5 Claims. (Cl. 260—166.)

1. The process of producing vinyl polymerisation products which comprises heating under pressure a gas of the acetylene series with a body capable of forming a vinyl ester therewith, and continuing the reaction until a solid polymerisation product is obtained, without preliminary isolation of the vinyl ester.

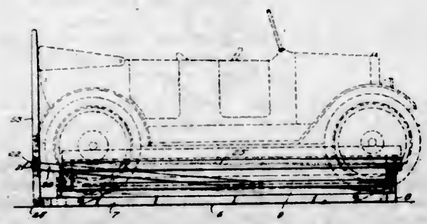
1,425,131. BUTTON. JAMES E. POTTER, Providence, R. I. Filed Feb. 1, 1922. Serial No. 533,410. 1 Claim. (Cl. 24—101.)

A button formed of sheet stock folded to provide base and shank portions of double thickness, the free ends of the shank portions being enlarged providing a hollow tapering head with laterally-projecting shoulders on its under side.

1,425,132. MATRIX CLEANER. RUSSELL F. REED, San Francisco, Calif. Filed Oct. 7, 1919. Serial No. 329,097. 4 Claims. (Cl. 199—62.)

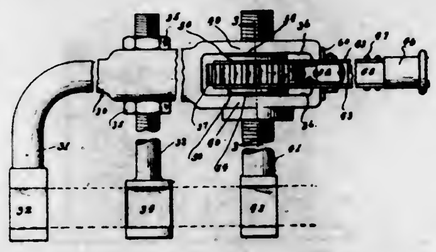
1. A matrix cleaner comprising a frame having a back plate and parallel side fingers, guide ribs formed along

said fingers, a buffing block of plastic material adapted to engage said guide ribs and to be seated between the frame fingers, a pressure plate disposed at the rear of



said block, and adjusting members carried by the frame and acting against the pressure plate to adjust the buffer block in relation to the frame.

1,425,133. STRAIGHT-LINE GUIDE FOR THE HANDLES OF COMPASSES. AUGUST RENZELBERG, Nuremberg, Germany, assignor to the Firm Reisszeugfabrik Eichmuller & Co., Nuremberg, Germany. Filed Oct. 15, 1921. Serial No. 508,047. 4 Claims. (Cl. 33—157.)

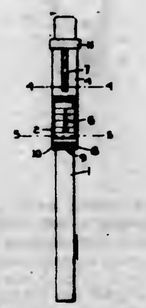


1. A straight-line guide for the handle of compasses, comprising, in combination, disk-shaped heads forming the rotatory ends of the legs of the compasses; a yoke forming the bearing for said heads; a hollow handle forming an elongation of said yoke and a rotary pin in said handle; the lower end of said pin being in frictional contact with said two disk-shaped heads at their circumference, for the purpose set forth.

1,425,134. AUTOMOBILE JACK. SAMUEL J. RICH, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,665. 4 Claims. (Cl. 254—91.)

1. A jack for vehicles comprising a base, a single vertically movable frame mounted on said base, manually operable means for raising said frame with the vehicles thereon, and vertically adjustable members carried by the frame, and adapted to engage with the vehicle to be raised.

1,425,135. RAIL BENDER. HUGH ROGERS, Sullivan, Ind. Filed Dec. 1, 1920. Serial No. 427,590. 1 Claim. (Cl. 153—38.)



In a rail bender having an L-shaped beam with rail-engaging jaws formed at the end of its short arm, a transverse aperture and circular holes communicating therewith adjacent the end of its long arm, a connecting wall being formed at its extreme end, and the intermediate portion of said long arm being provided with an opening running parallel with said holes and with said short arm, the combination with a pair of rail-gripping members having threaded shanks, one of said members engaging in said opening, and nuts for adjustably securing said first member therein, the second member engaging in said holes, a bifurcated operating handle fitting with its prongs in said aperture and around said second member, an internally threaded ratchet wheel engaging with said second member between said prongs, a pawl hinged on said handle adapted to engage with said ratchet wheel, and roller bearings inserted between the internal surface of said aperture and said prongs on the handle, and an arcuate guard plate covering the teeth of said ratchet wheel protruding on one side of said aperture, said guard plate being rigidly secured to said connecting wall and to the body of said L-shaped beam.

1,425,136. MOTOR FUEL. FRIEDRICH WILLIAM ROHRS, Rosedale, Md. Filed Feb. 28, 1921. Serial No. 447,248. 2 Claims. (Cl. 44—9.)

2. A motor fuel consisting of substantially 3% acetone, 9% benzol and 88% petroleum distillate.

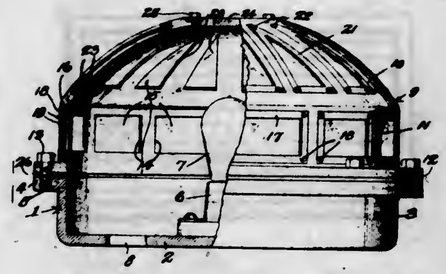
1,425,137. PERPETUAL CALENDAR. JOHN J. ROUND, Wakefield, Mass. Filed Dec. 9, 1921. Serial No. 521,095. 6 Claims. (Cl. 40—108.)

1. A perpetual calendar comprising three co-axial relatively adjustable cylinders bearing respectively a weekly table displaying the names of the days of the week in a predetermined order, a daily table having numerals

indicating the days of the month arranged consecutively in rows and columns in one of which the numerals progressively increase by seven, and a monthly table displaying the names of the months of the year in a predetermined sequence, adjustable interengaging members respectively upon the monthly table bearing cylinder and one of the other table bearing cylinders such that by establishing for a series of months a fixed setting between the cylinder bearing the monthly table and said interengaged table bearing cylinder a correct calendar will be displayed by so adjusting the third table bearing cylinder that the numeral "one" is placed opposite the name of the day of the week corresponding to the name of the first day of the selected month.

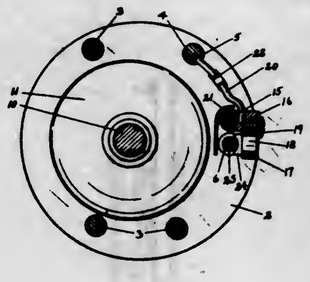
1,425,138. TOILET ARTICLE. WILLIAM HERBERT ROYSTONE, New York, N. Y. Filed Dec. 8, 1921. Serial No. 520,793. 3 Claims. (Cl. 132—82.)

1. In a toilet article, a frame for carrying two compacts of face powder, rouge or the like, back-to-back in abutting relation, said frame comprising a ring or sleeve cooperable with the compacts to surround and support the periphery thereof, and a cover for each end of the ring or sleeve.



1,425,139. SAFETY LIGHT. WILLIAM W. RUMSEY, Milwaukee, Wis. Filed Feb. 28, 1921. Serial No. 448,235. 14 Claims. (Cl. 240—1.)

1. In a roadway signal, the combination of a substantially circular base to be imbedded in a roadway, a substantially concavo-convex transparent dome supported upon said casing, a lighting device projecting into the cavity of said dome and a relatively heavy perforated protector of substantially the same contour of and embracing said dome, said protector being secured to the casing and engaging the peripheral margin of the dome for fixedly retaining the same upon said casing.

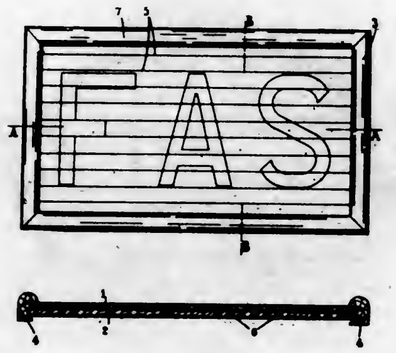


1,425,140. SAFETY LIGHT. WILLIAM W. RUMSEY, Milwaukee, Wis. Filed Apr. 16, 1921. Serial No. 461,834. 5 Claims. (Cl. 240—1.)

1. In a traffic indicator, a hollow body member provided with a domed top portion, said domed top being provided with a plurality of windows and an opening adapted to serve as a hand-hole, said opening being relatively smaller than said domed top, said body being provided also with an opening in its bottom wall for receiving electrical conductors, a hand-hole cover plate,

means connecting the cover plate with the domed top for detachably securing the former to the latter, and a light mounted within said body member.

1,425,141. FISHING REEL. SAMUEL G. RUSSELL, Kalamazoo, Mich., assignor to The Shakespeare Company, Kalamazoo, Mich. Filed Apr. 21, 1921. Serial No. 463,322. 9 Claims. (Cl. 242—84.4.)

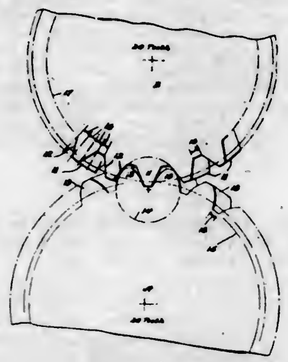


9. In a fishing reel, the combination of a frame, a spool, a traversing shaft, a carriage slide rod disposed adjacent and parallel to said traversing shaft, a line guide carriage slidable on said rod and provided with a pawl socket, a pawl disposed in said socket to coact with said shaft, said carriage being entirely independent of said shaft except as connected thereto by said pawl, a housing for said traversing shaft and carriage slide rod arranged at the inner side thereof and having a top portion overhanging the same, and a line guide member on said carriage projecting upwardly at the front of said housing.

1,425,142. SIGN AND ADVERTISING DEVICE. THOMAS SAFF, London, England. Filed Dec. 10, 1921. Serial No. 521,454. 8 Claims. (Cl. 40—125.)

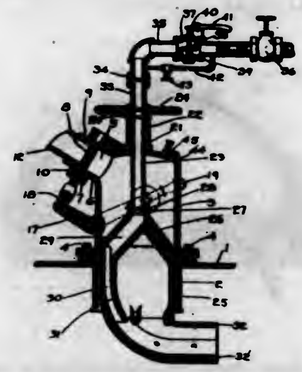
8. In a sign adapted for use without special means for illumination, the combination of a sheet of glass provided with ribs to refract light from a casual source, a sheet of glass adapted for substantial surface contact

with the first sheet of glass and provided with ribs to refract light, a reflecting surface, and means to ren-



der a portion of the ribbed surface of the sheet of glass opaque to display a design.

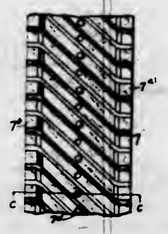
1,425,143. MEANS FOR INJECTING LIQUID OR GASEOUS MATTER UNDER PRESSURE INTO MEAT OR THE LIKE. GEORG SCHEIB, Berlin, Germany. Filed Aug. 29, 1921. Serial No. 496,788. 3 Claims. (Cl. 99—2.)



3. An instrument for injecting a preserving fluid into meat or the like, comprising in combination a bipartite hollow needle having a plurality of lateral apertures in its lower portion; an inverted conical member affixed to the upper end of said portion and serving as connecting means for the two portions needle; a washer arranged upon the other needle portion; and a nut also arranged upon said other needle portion and adapted to be turned down and up upon it, as set forth.

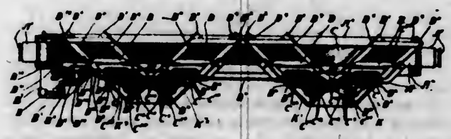
1,425,144. TOOTHED GEARING. HENRY J. SCHMICK, Williamsport, Pa. Filed June 30, 1921. Serial No. 481,561. 8 Claims. (Cl. 74—41.)

1. A gear having each pair of adjacent teeth formed with working surfaces on their opposite faces conforming to arcs of circles with their centers on lines bisecting the spaces between said teeth.



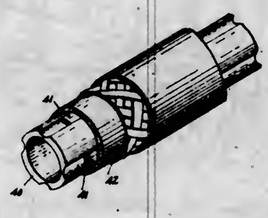
1,425,145. FUEL DISTRIBUTOR. HARRY F. SMITH, Lexington, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 25, 1918. Serial No. 219,069. 12 Claims. (Cl. 110—104.)

4. In a device for distributing fuel in a combustion chamber; fuel distributing means rotatably mounted and terminating in a laterally directed spout located within the chamber; said means being adapted for positioning with the spout pointing in any desired radial direction; and means for forcing fuel from the spout to any desired distance.



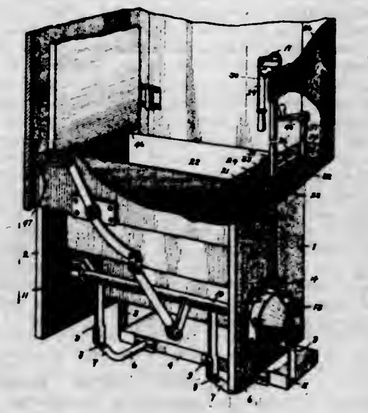
7. In a device for distributing fuel in a gas producer; fuel distributing means, said means being rotatably mounted and extending within said chamber; fluid pressure means associated with the distributing means for controlling the distribution of fuel therefrom; and means associated with the distributing means and the fluid pressure means, for continuously supplying pressure fluid to the distributing means.

1,425,146. RADIATOR CORE. CHARLES F. SPERY and JOSEPH H. SPERY, Chicago, Ill. Filed May 26, 1921. Serial No. 472,656. 2 Claims. (Cl. 257—130.)



1. In a radiator core, a series of water channels, and a series of intermediate spacers having semi-hexagonal bands abutting similar bands of said channels and made with depressed diagonal corrugations extending from the front bands upwardly, said spacers having locating buttons for registration with similar buttons of the water channels, said buttons centrally located in each diagonal corrugation.

1,425,147. MACHINE FOR CONSTRUCTING A LAMINATED COHESIVE INTERLAID FABRIC. LAWRENCE A. SUBERS, Lakewood, and ERNEST MOSMAN, Cleveland, Ohio; said Mosman assignor to said Subers. Filed Dec. 13, 1920. Serial No. 430,445. 15 Claims. (Cl. 154—1.)



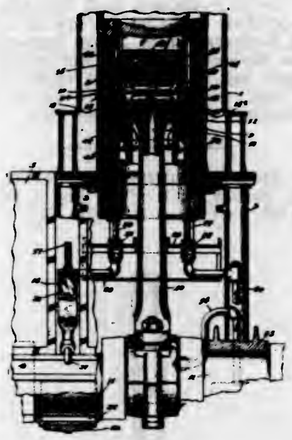
1. In a machine for constructing a laminated cohesive interlaid fabric, the combination of a table, a plurality of band laying devices adapted to interlay bands upon said table in predetermined angular spaced relation, and means for compressing the interlaid bands to form the fabric.

1,425,148. HOSE OF PREDETERMINED ACTION UNDER PRESSURE. LAWRENCE A. SUBERS, Lakewood, Ohio. Filed June 5, 1920. Serial No. 386,758. Renewed Jan. 10, 1922. Serial No. 528,136. 10 Claims. (Cl. 137—90.)

1. A hose comprising layers of fabric composed of series of laminated interwound cohesive bands, the bands of the several layers being of practically the same length per unit length of hose.

1,425,149. AUXILIARY CAR STEP. PETER SWANSON and AXEL CARLSON, Ely, Minn. Filed Mar. 27, 1922. Serial No. 546,969. 4 Claims. (Cl. 105—430.)

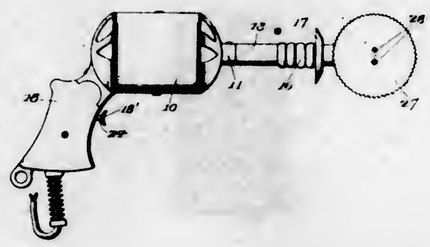
1. Means for controlling the trap door and auxiliary step of a railway car platform, said auxiliary step having a horizontally disposed shaft associated therewith, comprising a vertically disposed shaft extending upwardly above the platform of the car and operatively connected with said horizontal shaft, means cooperatively connecting the horizontal shaft and the trap door, means at the upper end of the vertical shaft for manually operating same, and locking means for the trap door directly controlled from the vertical shaft.



1,425,150. STYLOGRAPHIC FOUNTAIN PEN. RUDOLPH ULLRICH, Newark, N. J. Filed July 1, 1921. Serial No. 481,745. 2 Claims. (Cl. 120—44.)

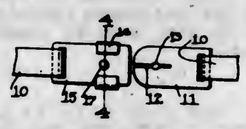
2. A stylographic fountain pen comprising a barrel, a head section fitting therein and having a bore extending therethrough, the remote or upper section of said bore of restricted size and the intermediate portion enlarged to form an annular air chamber with a shoulder at one extremity thereof, the lower portion of the bore of the head counter-bored and internally threaded, the

lowermost extremity of the bore further enlarged and forming an air and ink inlet conduit, a stylus tip provided with an external thread thereon engaging the threaded portion of said bore and forming a cylindrical projection at the rear extremity thereof fitting within the intermediate and enlarged portion of said bore and abutting against the said shoulder, said reduced cylindrical projection and adjacent walls of the bore forming an annular air chamber, said tip provided with an open-ended chamber communicating with the upper and reduced extremity of the bore of the head section and forming in connection therewith a weight-receiving chamber, an end stop extending across but not closing the inner extremity of the bore of the head section, said weight-receiving chamber of fixed and non-adjustable size, and a weight located within said weight-receiving chamber and limited in end play by the fixed and predetermined size of said weight-receiving chamber, and a stylus needle carried by said weight and projecting through the stylus tip, an air inlet duct communicating with said annular air chamber, and a second duct out of alinement with the aforementioned duct and communicating with the chamber of the stylus tip.



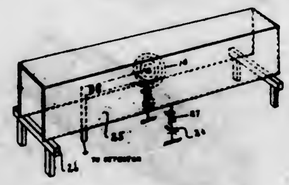
1,425,151. ENGINE-COOLING SYSTEM. HUBERT C. VESHEY, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 10, 1917. Serial No. 147,781. 13 Claims. (Cl. 123—176.)

13. In an internal combustion engine, the combination with a piston containing a cooling chamber, means for circulating cooling fluid, a piston pin mounted in the piston and having within it a circuitous passage one end of which is in communication with the cooling fluid circulating means and the other with the piston cooling chamber, and means for compelling substantially all the cooling fluid for the piston to pass through the circuitous passage in the piston pin.



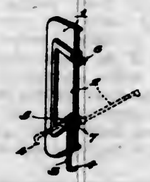
1,425,152. ELECTRICALLY-OPERATED SAW. BURR D. VIERS, Red Lodge, Mont. Filed Feb. 28, 1921. Serial No. 447,004. 1 Claim. (Cl. 143—43.)

In an electrically operated saw, a pistol frame supporting a motor and a drive shaft driven by the motor, a frame on the outer end of the pistol frame, a transverse shaft mounted in the last-named frame and carrying a saw on one end thereof, a transverse bar carried by the same frame and projecting from one side of the frame, an angularly extending arm mounted for longitudinal slidable adjustment on the bar and carrying rollers rotatable on vertical axes, rollers rotatable on horizontal axes



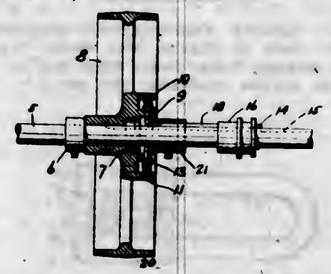
on the said last-named frame, and means for controlling the circuit to the motor.

1,425,153. FRONT FASTENING FOR SOFT COLLARS. HENRY J. VIGNEAULT, Worcester, Mass., assignor of one-half to George N. Vigneault, Worcester, Mass. Filed Mar. 29, 1921. Serial No. 456,527. 3 Claims. (Cl. 24—230.)



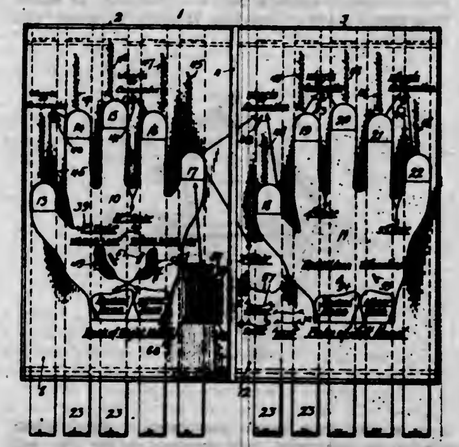
1. As an article of manufacture, a fastening for a soft collar or the like comprising two sheet metal plates, one having a longitudinal slot enlarged at a distance from its end and the other having an integral projection for engaging in said enlargement, and integral side ears on one plate in position for guiding the other.

1,425,154. APPARATUS FOR RECEIVING RADIO-SIGNALS. ROY A. WEAGANT, New York, N. Y., assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 13, 1917. Serial No. 206,883. 2 Claims. (Cl. 250—20.)



1. In a radio signalling apparatus, the combination with an antenna of an open ended inverted trough-shaped screen for protecting the collector from electromagnetic waves moving vertically downward and along a given horizontal line in either direction.

1,425,155. DETACHABLE SHOE BUCKLE. WILLIAM WHITE, Plainville, Mass. Filed May 5, 1921. Serial No. 466,919. 3 Claims. (Cl. 2—167.)

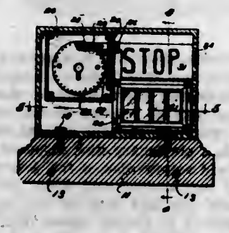


2. In a shoe buckle, an open frame, a member in the frame, means borne by the member to hingedly connect same to the frame and to grip the slipper between same and the frame, and a fastening to connect the member to the frame.

1,425,156. CLUTCH. HARRY J. WIDMAIER, Philadelphia, Pa. Filed Oct. 5, 1920. Serial No. 414,776. 7 Claims. (Cl. 192—67.)

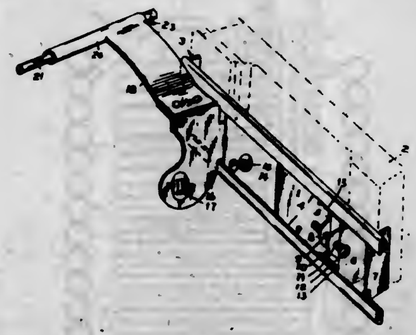
1. A clutch element having a plurality of radially disposed spring-pressed pins, a driven shaft, a fixed member on each side of said pins secured to the shaft, there being a groove between said members in which said pins are adapted to travel when the clutch is disengaged, and a movable member arranged to be moved across said groove into driving engagement with said pins and both fixed members.

1,425,157. DEVICE FOR STUDYING FINGER PRINTS AND THEIR CLASSIFICATION. GRANT WILLIAMS, Patchogue, N. Y. Filed Jan. 24, 1922. Serial No. 531,456. 8 Claims. (Cl. 35—12.)



1. A device of the class described comprising a chart having thereon the representations of the human hands and movable devices for producing in association with said chart, various combinations representing finger print patterns.

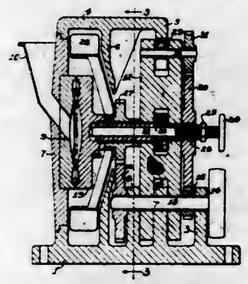
1,425,158. SANITARY MASSAGE PAD. CHARLES WOLFSOHN, Boston, Mass. Filed May 27, 1921. Serial No. 473,083. 6 Claims. (Cl. 128—67.)



1. A massage pad comprising a piece of non-elastic sheet material folded to form a circular member, one face thereof being uninterrupted, the opposite face constituting a flat annular rim and a flexible band surrounding said rim and enclosed between said faces whereby said pad may be detachably positioned upon a rotary member.

1,425,159. THEFT SIGNAL FOR MOTOR VEHICLES. LUDWIG R. ZEPKA, Cleveland, Ohio. Filed July 21, 1921. Serial No. 486,623. 4 Claims. (Cl. 40—66.)

1. The combination with a tiltable motor vehicle wind shield, of a signal casing mounted upon the wind shield frame and including a handle adapted to be grasped for tilting the wind shield, and signaling means within said casing operable for displaying a signal visible through the wind shield.



1,425,160. COMBINATION BLIND AND CURTAIN SUPPORT. EMIL ZWAHLEN, North Braddock, Pa. Filed May 11, 1921. Serial No. 468,464. 4 Claims. (Cl. 156—24.)

8. A fixture for the purpose set forth comprising a body portion having a flange at one end and further formed with a pair of grooved guide members, each of said guide members extending in the same plane throughout and further extending beyond the other end of the body portion, a flanged coupling plate slidably mounted in the extended portion of each of the said guide members, a coupling screw for adjustably connecting the said

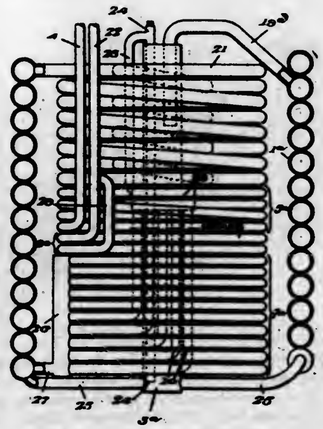


plate to the body portion, a shiftable supporting plate mounted in the guide members against the body portion, an arm connected with the supporting plate and provided with a barrel, and a curtain pole bracket adjustably mounted in said barrel.

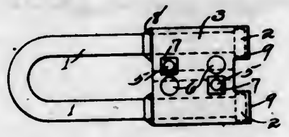
1,425,161. GRINDING MILL. MARCUS O. ANTHONY, New York, N. Y., assignor to Mortimer C. Rosenfeld, Cleveland, Ohio. Filed Oct. 28, 1919. Serial No. 333,876. 2 Claims. (Cl. 83—10.)

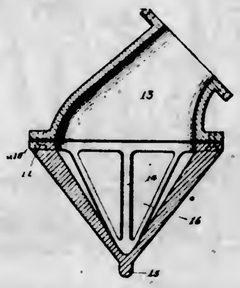
1. A grinding mill comprising a base, a driving shaft rotatably supported on said base, an upright pivotally mounted on said driving shaft, a driven shaft journaled in said upright in parallel relation to said driving shaft, a grinding disk mounted on said driving shaft and rotatable therewith, a stationary disk disposed in operative relationship to said rotary disk, a fan journaled on said driven shaft and surrounding said disks, driving connections between said fan and said driving shaft whereby said fan is driven at a greater speed than said rotary disk, means disposed adjacent the upper end of said upright for oscillating said upright and driven shaft about said driving shaft, and driving connections between said shafts and said oscillating means.

1,425,162. WATER-TUBE BOILER. HARTLEY O. BAKER, Pueblo, Colo., assignor to The Baker Steam Motor Car and Manufacturing Co., Inc., Pueblo, Colo. Filed Mar. 29, 1919. Serial No. 286,002. 4 Claims. (Cl. 122—245.)



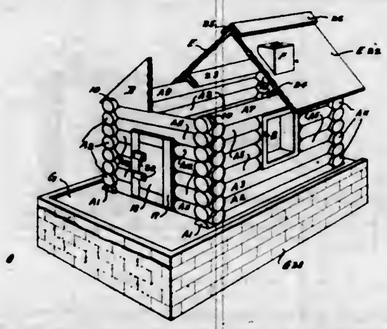
1. A boiler embodying a vertical drum, water heating and steam generating coils surrounding the lower portion of the drum, steam heating coils surrounding the upper portion of the drum, tubing surrounding said coils and constituting a lower water reserve coil and an upper steam reserve coil, the lower portion of the water reserve coil, drum and water and steam generating coils being connected for the flow of water therebetween, the discharge terminals of the steam generating coils being extended upwardly above said steam generating coils and connected to the drum for the flow of steam from said coils into the drum above said steam generating coils, and the steam heating and steam reserve coils being connected one to the other and to the upper portion of the drum.

1,425,163. ELECTRIC STORAGE BATTERY. HANS BARDT, Santiago, Chile, assignor to Sociedad Hidro-Metalurgica, Santiago, Chile, a Corporation of Chile. Filed Sept. 17, 1921. Serial No. 501,421. 3 Claims. (Cl. 204—29.)



2. An electrolyte for storage batteries which consists of a solution of perchlorate of lead.

1,425,164. SAFETY COMBINATION CONNECTION CLAMP. FRED H. BARNEY, Fort Worth, Tex., and DON S. BOWERS, Tulsa, Okla. Filed Nov. 11, 1920. Serial No. 423,344. 3 Claims. (Cl. 287—1.)



2. Safety rod line connections comprising a U-bolt having heads on the ends of the bolt and upset members formed on the U-bolt and spaced from the ends thereof and clamps engaging the U-bolt members between said heads and said up-set members and having extension hoods covering said heads.

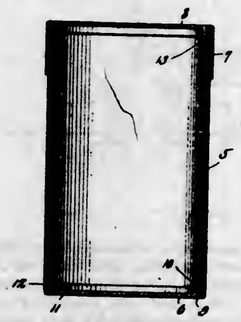
1,425,165. SUCTION NOZZLE. WILLIAM H. K. BENNETT, Chicago, Ill., assignor to American Manganese Steel Company, Augusta, Me., a Corporation of Maine. Filed Sept. 22, 1920. Serial No. 412,053. 5 Claims. (Cl. 37—45.)

1. A suction line nozzle comprising a substantially conical shape body with inlet openings in the side wall thereof and an outlet opening through the base, and a digging point formed by the apex of the body.

1,425,166. TOY-HOUSE CONSTRUCTION. ANDREW H. BERGMANN, New York, N. Y. Filed Jan. 31, 1921. Serial No. 441,842. 5 Claims. (Cl. 46—35.)

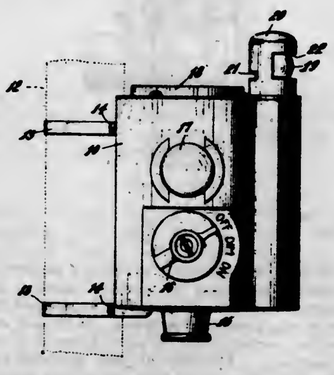
1. An article of the character described comprising intersecting members disposed in vertically offset relation, being arranged alternatingly in longitudinal and transverse directions, and a joint at the intersection of said members including a recess formed across each of the latter in one face thereof and adapted to receive the unrecessed portion of an alternate member, said recess having a notch and a tenon, the arrangement being such that the tenon of one member engages the notch in another member.

1,425,167. MAIL DELIVERY AND RECEIVING DEVICE. CHARLES L. BIGGS, Meredian, Tenn. Filed Dec. 24, 1920. Serial No. 432,894. 9 Claims. (Cl. 258—10.)



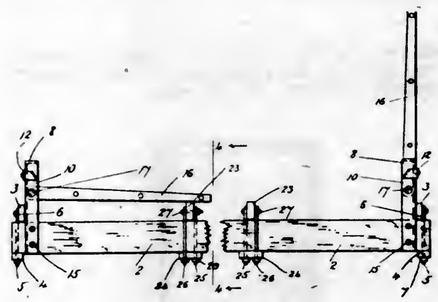
1. A mechanism of the character described comprising a track, a carrier movable over said track, a bag supporting means on said carrier, a bag receiving means on said carrier, a railway car movable parallel with the carrier, and means projecting from said car for supporting a bag to be received by the bag receiving means on the carrier and to remove a bag supported on said carrier for delivery to the railway car.

1,425,168. PAPER CONTAINER. HENRY S. BREWINGTON, Baltimore, Md. Filed Apr. 26, 1921. Serial No. 464,765. 1 Claim. (Cl. 229—5.7.)



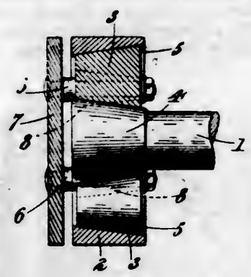
A paper receptacle comprising a cylindrical body, an end closure for said body comprising a disk inside the same and having its edge in contact with the inner surface of the body, and a sealing and securing member for the disk comprising a rigid metallic ring extending over and secured to the edge of the body, and having an inner portion extending into the body in intimate contact with its inner surface, said inner portion terminating in an annular flange which engages the disk, and the inner portion and its flange covering the joint between the edge of the disk and the body of the receptacle, the disk having an annular shoulder concentric with its edge against which shoulder the edge of the flange has a sealing contact.

1,425,169. PAPER CONTAINER. HENRY S. BREWINGTON, Baltimore, Md. Filed May 23, 1921. Serial No. 471,582. 3 Claims. (Cl. 229—5.6.)



2. A paper receptacle comprising a cylindrical body portion having an internal shoulder at one end, and a closure for said end comprising a counter-sunk disk having its peripheral portion seated on the shoulder and in contact with the interior surface of the body above the shoulder.

1,425,170. STEERING-COLUMN CONTROL UNIT. STEPHEN F. BRIGGS and EDWARD N. JACOBI, Milwaukee, Wis., assignors to Briggs & Stratton Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 30, 1916. Serial No. 122,967. 5 Claims. (Cl. 247—1.)

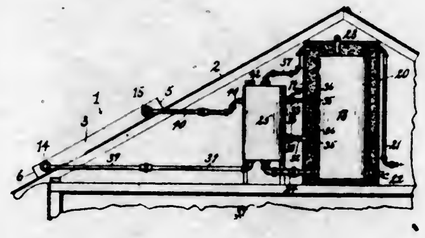


1. A steering column control unit comprising a casing having means for securing it to a steering column of an automobile, a fuse panel within the casing having fuse clips on one side thereof and forming a cable head, a lighting and ignition switch and a signal controlling push button on the other side of the fuse panel and projecting through the casing with connections passing through the fuse panel to the cable head, an electrical measuring instrument on the top of the casing, and an instrument and dashboard illuminating electric lamp mounted adjacent said instrument, said lamp provided with a hood having oppositely disposed light-directing openings, the instrument and light having connection with the cable head, whereby the dash and other parts of the automobile body are relieved of electrical connections.

1,425,171. HAYRACK. EDSON M. BROMLEY, Bristol, Ill. Filed Sept. 3, 1921. Serial No. 498,330. 3 Claims. (Cl. 296—6.)

1. In a hay rack, two side bars, end cross-bars arranged above and below the side bars, an arch-shaped frame having its lower parts arranged between the side bars with its arch-shaped top projecting above them, fastening devices securing all the said parts together, and a foldable end frame pivoted to the side portions of the arch-shaped frame above the said side bars.

1,425,172. GEARING. GERTRUDE MABEL CAMERON-COWBURN, Gosport, England. Filed Dec. 7, 1921. Serial No. 520,532. 1 Claim. (Cl. 74—34.)

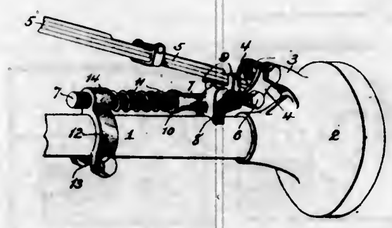


Friction gearing comprising a primary member, a secondary member encircling the primary member, intermediate members constituted of rollers interposed between the primary and secondary members, all of said members having coned coacting faces, a plate disposed in relation to said members, a plurality of pins mounted and projecting laterally from said plate and rollers mounted on said pins and having coned faces to coact with the coned faces of the intermediate members.

1,425,173. CELLULOSE ETHER SOLVENT AND COMPOSITION. STEWART J. CARROLL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 21, 1921. Serial No. 438,989. 6 Claims. (Cl. 134—79.)

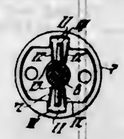
4. A viscous flowable film-forming composition, comprising an alkyl ether of cellulose dissolved in a compound solvent comprising from 82 to 92 parts of ethyl acetate, 7 to 12 parts of ethyl alcohol and 1 to 6 parts of water by weight.

1,425,174. SOLAR-HEAT-COLLECTING APPARATUS. WILLIAM G. CARTTER and EDWARD D. ARTHUR, Arcadia, Calif. Filed Apr. 21, 1919. Serial No. 291,762. 8 Claims. (Cl. 126—271.)



7. A solar heater comprising a copper jacketed coiled pipe adapted to be exposed to the rays of the sun, and having an inlet and an outlet end; a copper bed on which said pipe is positioned and in which it is partly embedded; a heat storage tank; pipes connecting the inlet and outlet ends of said coiled pipe with said storage tank; a non-freezing fluid heat conducting medium filling said heat storage tank and adapted to circulate through said pipes and the coiled pipe connected thereto; a distributor head in the bottom of said heat storage tank; coiled water pipes having their lower ends connected to said distributor head; a water tank; a discharge pipe connecting the bottom of said water tank with said distributor head; water return pipes connecting the upper ends of said coiled water pipes with said water tank, and arranged to enter said water tank at different elevations.

1,425,175. INSEAM MEASURE. ALBERT R. CHILDS, Fremont, Ohio. Filed Jan. 26, 1921. Serial No. 440,034. 2 Claims. (Cl. 33—2.)

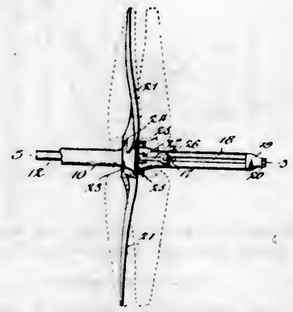


1. A device of the character described including a pair of tubular telescopic members, each of which being formed from a longitudinal sheet of metal having its longitudinal edges beat upon itself, the tubular members being oppositely disposed and one of which being provided with a sight opening, and a graduated scale element carried by the other tubular member and adapted to register with the sight opening.

1,425,176. SHOCK ABSORBER FOR VEHICLES. WILLIAM R. COCHRAN, Delphos, Ohio, assignor of two-thirds to Berien E. Jordan and John C. Jordan, both of Detroit, Mich. Filed Jan. 26, 1921. Serial No. 440,093. 4 Claims. (Cl. 267—29.)

1. As a new article of manufacture, a shock absorber, comprising a plunger provided at one end with a head adapted to rest and be supported on the vehicle axle or casing for the latter and bear against vehicle spring supporting links, a clip carrying said plunger and adapted to be secured to an axle or axle casing, and a spring mounted on said plunger and bearing at one end against the same and at the other end against the clip.

1,425,177. DRIVING CONNECTION. JOHN P. CONSTABLE, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Original application filed Aug. 9, 1915, Serial No. 44,389. Divided and this application filed June 24, 1918. Serial No. 241,672. 6 Claims. (Cl. 64—96.)

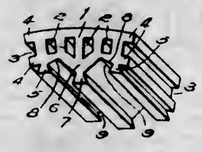


6. The combination of a driven member provided with diametrically opposed recesses opening inwardly, a driving member between said recesses, U-shaped springs having their ends extending into said recesses and engaging the sides thereof, and screws securing said springs intermediate their ends to said driving member, extending into said recesses between the arms of said springs and constituting stops, substantially as described.

1,425,178. CLASP. SIDNEY COWDRILL, Toronto, Ontario, Canada. Filed May 2, 1921. Serial No. 466,125. 1 Claim. (Cl. 24—230.)

A clasp consisting of an elliptical body portion, a transverse opening through said body portion, a groove formed circumferentially around one end of said body portion to and terminating at the opposite ends of said opening, the ends of said opening being slotted at right angles to and communicating with said groove, an engagement member having an attaching eye open at its inner end and having its sides resilient and bent so as to be adapted to be tensionally positioned in said groove, the ends of said engagement member being bent inwardly and of a depth equal to said slotted portion so that said engagement member will have to be positioned at right angles to said slots when desirous of disengaging said engagement member from said body portion and to be engaged against the sides of the said transverse opening nearest the engagement member when in position.

1,425,179. PROPELLER. ALBIN DANIELSON, Brooklyn, N. Y., assignor of one-half to Hilmer Johnson, Brooklyn, N. Y. Filed June 1, 1921. Serial No. 474,137. 4 Claims. (Cl. 170—163.)

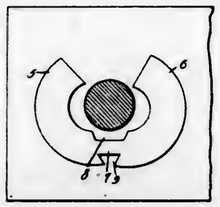


1. A propeller mechanism comprising a driving shaft, trunnions on said shaft, and blades arranged on opposite sides of said shaft and pivotally mounted on said trunnions.

1,425,180. MECHANICAL MOVEMENT. VICTOR R. DESPARD, Hinsdale, Ill., assignor, by mesne assignments, to McGill Manufacturing Company, Valparaiso, Ind., a Corporation of Indiana. Filed Jan. 2, 1917. Serial No. 140,248. 19 Claims. (Cl. 173—35.)

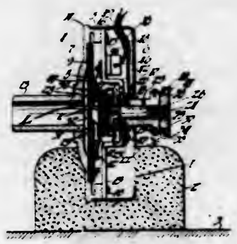
1. In a device of the character described, the combination of a snap-action switch having cooperating switch elements, and a lever universally operable for effecting such action of the switch elements.

1,425,181. INTERLOCKING TILE. FRANK DOCHNAL, Collinsville, Ill. Filed Oct. 31, 1921. Serial No. 511,920. 3 Claims. (Cl. 72—41.)



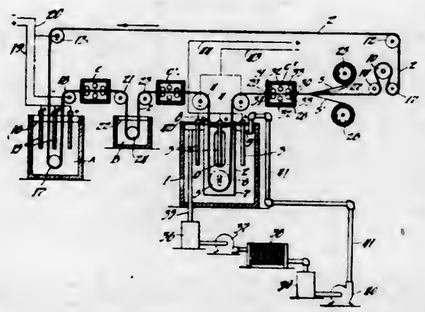
3. An interlocking tile comprising a perforated body having its inner face provided with three facial ribs, the intermediate rib extending beyond the plane of the other two ribs.

1,425,182. DETACHABLE WASHER. SYLVESTER S. DUNN, Clarendon, Tex. Filed Jan. 20, 1922. Serial No. 530,707. 1 Claim. (Cl. 85—51.)



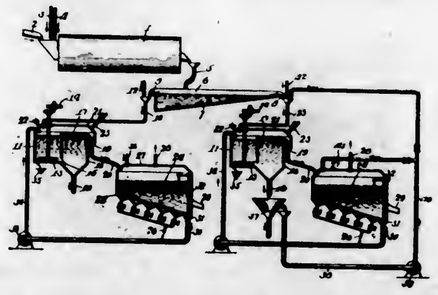
A washer including opposed sections, said washer having a cut out portion formed in the periphery thereof and

having a cut out portion formed in the inner wall thereof, said cut out portions adapted to permit the sections to



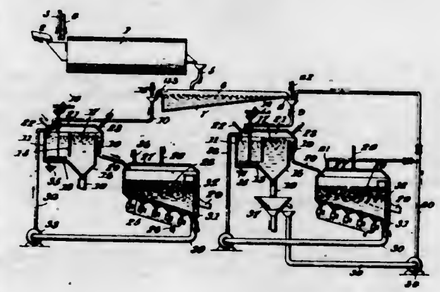
move with respect to each other, and said sections adapted to be moved into close engagement with a bolt.

1,425,183. TRANSMITTER. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J. Filed Oct. 26, 1918. Serial No. 259,749. 7 Claims. (Cl. 179—122.)



1. A microphone transmitter comprising a pair of spaced electrodes, and a loose mass of fine particles or granules of conductive material wholly immersed in a single liquid between said electrodes, substantially as described.

1,425,184. PRODUCTION OF THIN METAL SHEETS OR FOILS. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J. Filed Aug. 26, 1920. Serial No. 406,044. 32 Claims. (Cl. 204—1.)



1. The method which consists in moving an elongated strip comprising an electrode of an electrolytic cell through and then out of the bath of the cell, and stripping from both sides of said strip at a point in the path of movement thereof beyond said bath, the metal deposited thereon in the bath, substantially as described.

1,425,185. SEPARATING PROCESS. RIDSDALE ELLIS, Oak Park, Ill. Filed Apr. 15, 1918. Serial No. 228,623. 54 Claims. (Cl. 83—85.)

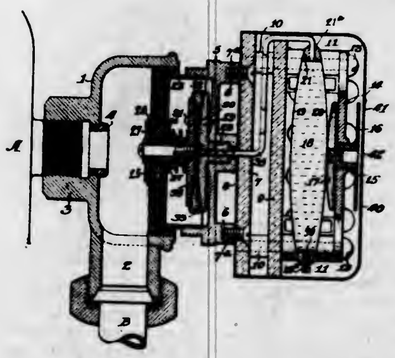
1. The process of concentrating ores which includes mixing the comminuted ore with water and an oily liquid to oil the metalliferous particles, then aerating the mixture to form a froth and separating the froth from the remainder by flotation, and which further includes the addition, intermediate the oiling and aeration treatments, of material adapted to give anions having a greater valence than two for aiding the formation of a froth.

1,425,186. SEPARATING PROCESS. RIDSDALE ELLIS, Oak Park, Ill. Original application filed Apr. 15, 1918, Serial No. 228,623. Divided and this application filed Apr. 2, 1919. Serial No. 287,030. 16 Claims. (Cl. 83—85.)

1. The process of concentrating ores which includes mixing the comminuted ore with oil in the presence of an acid, then aerating the so-oiled ore pulp to form a collective froth and separating the froth from the remainder by flotation and which further includes the addition subsequent to the oiling treatment of material adapted to change the contact potential of the oil to a potential more negative than before for aiding the formation of a collective froth.

1,425,187. SEPARATING PROCESS. RIDSDALE ELLIS, Oak Park, Ill., assignor of five per cent to Paul Carpenter, Chicago, Ill. Filed Aug. 20, 1915, Serial No. 46,456. Renewed Apr. 25, 1921. Serial No. 464,257. 23 Claims. (Cl. 83—85.)

1. The process of concentrating ores whose metalliferous constituents include oxygen compounds of the metal to be separated which includes the separation of the said oxygen compounds from the other constituents of



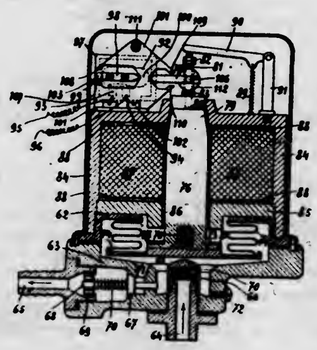
the ore by treating the comminuted ore with a fluid having a selective action for such oxygen compounds, and which further includes the use of a solution containing anions having a valence greater than two and cations having a valence greater than one for increasing the selective action of the fluid.

1,425,188. JEWELRY AND METHOD OF MANUFACTURING THE SAME. HENRY W. FISHEL, New York, N. Y. Filed June 11, 1921. Serial No. 476,797. 4 Claims. (Cl. 29—160.6.)

1. An article of jewelry comprising a body portion, a crimped metal ribbon surrounding the body portion, a gallery surrounding the crimped metal ribbon, the crimped metal ribbon acting as a bridging portion between the body and the gallery.

1,425,189. THERMOSTATICALLY-CONTROLLED VALVE. JAMES LOGAN FITTS, Merchantville, N. J., assignor to Warren Webster & Company, Camden, N. J., a Corporation of New Jersey. Filed Jan. 17, 1921. Serial No. 437,862. 22 Claims. (Cl. 236—42.)

15. In a thermostatically operated valve-controlling device, the combination of a valve casing having a seat, a valve for engagement with said seat, a bonnet or closure for said valve casing, a motor diaphragm supported by said bonnet; the valve being operatively connected with said motor diaphragm, an insulating plate carried by said bonnet, a thermostat chamber in fluid communication with said motor diaphragm, and means carried by the insulating plate for rigidly supporting said thermostat chamber.

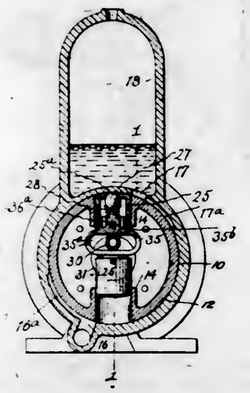


1,425,190. VEHICLE LAMP. HAROLD G. FITZ GERALD, Los Angeles, Calif. Filed Aug. 6, 1919. Serial No. 315,757. 1 Claim. (Cl. 240—7.)

A vehicle lamp comprising a lamp proper having a depending post, and a bracket adapted to support said lamp proper; said bracket having clamping jaws at its one end and having a slotted undercut cylindrical extension in which said post is received, and means for constricting the walls of said extension to frictionally engage said post; there being means for preventing accidental separation of said post and said bracket, and means to check movement of the lamp proper in one

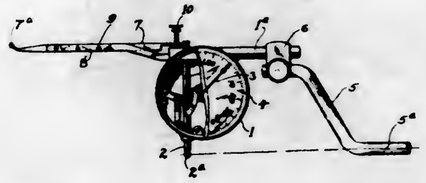
direction in a vertical plane; said last named means comprising a member supported in the slot of said extension.

1,425,191. PUMPING APPARATUS. ANDRÉ GARBARINI, Courbevoie, France. Filed Dec. 26, 1919. Serial No. 347,642. 3 Claims. (Cl. 103—67.)



1. A pumping device comprising a valved chamber, a fluid moving element in cooperative relation therewith and having a part, at least, constructed of magnetic material, and means comprising a source of electrical energy, an electromagnet and current controlling mechanism therefor for intermittently establishing a magnetic field through the magnetic portion of said fluid moving element, whereby the same may be operated independently of any mechanical connection with said source of energy, said current controlling mechanism including a quick throw electric switch and means operated by the movements of the fluid moving element for alternately opening and closing the same at the respective ends of its operating stroke.

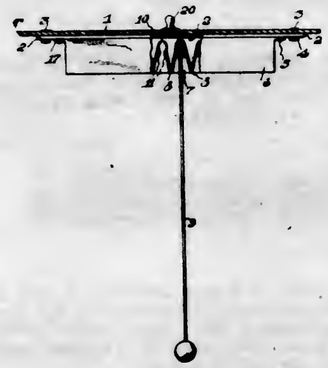
1,425,192. COMPRESSOR. GEORGE A. GASE, Cleveland, Ohio, assignor to The Champion Ice Machine Company, a Corporation of Ohio. Filed July 8, 1920. Serial No. 394,639. 10 Claims. (Cl. 230—31.)



1. In a compressor, the combination of a casing containing a cylindrical chamber which is provided with

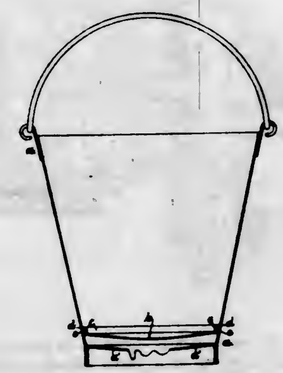
widely separated inlet and discharge ports through its cylindrical wall, a hollow rotor which is rotatably fitted in said chamber and is formed with a radially disposed cylinder, the bore of which extends through the cylindrical wall of the rotor in position to communicate with said inlet and discharge ports, a crank which is fixedly

connected with one side wall of said chamber and which occupies an eccentric position within the rotor, a reciprocating piston in said cylinder, connections between the piston and crank, means to rotate said rotor, a body of liquid within said chamber and rotor and serving as a packing and seal, and means for relieving excessive pressure which may develop in said cylinder.



1,425,193. INDICATING GAUGE. BENJAMIN L. GATES, Chicago, Ill., assignor to Arthur E. Barili, Chicago, Ill. Filed Aug. 28, 1920. Serial No. 406,574. 12 Claims. (Cl. 33—172.)

1. In a dial indicator, a spindle carrying an indicating pointer, a plunger slidable in the indicator casing for rotating said spindle and having both ends projecting beyond the casing, one end of the plunger shaped for contacting with the work to be gauged, an external arm seated in the casing, a differentiating lever pivoted on said arm and engaging the opposite end of said plunger, said lever provided at the outer end with a contacting head.

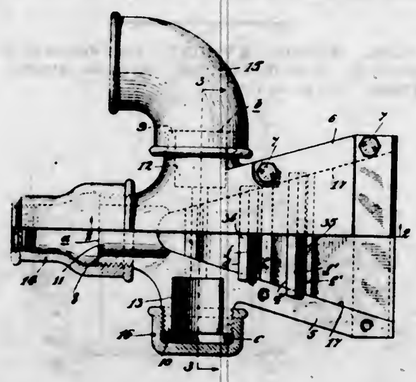


1,425,194. HATPIN PROTECTOR. FREDERICK HENRY GEORGE, Washington, D. C. Filed June 18, 1921. Serial No. 478,570. 1 Claim. (Cl. 132—72.)

A hat pin point protector comprising a box like structure of light spring material, the bottom wall of said box like structure being extended to form fastening flanges, and means for securing said flanges to the crown of a hat, said box like structure being subdivided into funnel shaped compartments having restricted openings in their inner ends adapted to receive the pin point but prevent the passage of the pin therethrough, each compartment being formed with mouths of substantial area, the edges

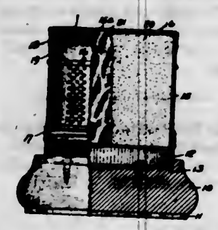
of the mouths being beveled, and gripping fingers pressed inwardly from the walls of each compartment.

1,425,195. BUCKET. EDWIN GRIFFITHS, Maghull, near Liverpool, England. Filed Aug. 10, 1920. Serial No. 402,602. 2 Claims. (Cl. 220—68.)



1. A false bottom for a bucket comprising a disk having a peripheral flange provided with a recess, and a packing ring seated in said recess.

1,425,196. OIL BURNER. ERNEST GROSSENBACHER, Fajardo, P. R. Filed June 22, 1921. Serial No. 479,437. 11 Claims. (Cl. 158—75.)

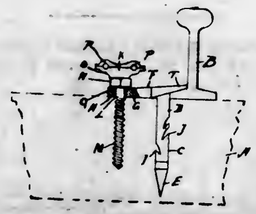


1. An oil burner comprising a casing having inlets for the atomizing agent and oil respectively, and provided with an exit nozzle, said casing further having an interior passage including a mixing chamber in which the atomizing agent and oil are mixed, said passage diverging toward said exit nozzle in one plane and alternately diverging and converging in directions transverse to said plane, and means in said interior passage whereby the stream

of mixed agent and oil is divided into sub-streams and for bringing them together again at high velocity, said

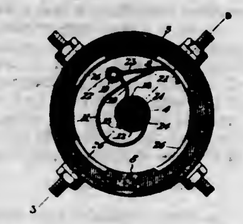
mixture being coincidentally spread in approximately fan-shape toward said exit nozzle.

1,425,197. MOISTURE-ABSORBING DEVICE. JOHN A. HAMLIN, New York, N. Y., assignor to Hamlin Hygrostat Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1921. Serial No. 493,070. 8 Claims. (Cl. 34—1.)



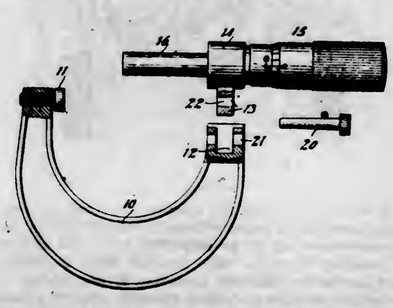
1. A moisture-absorbing device adapted to be placed in the case of a musical instrument, or a like situation, and comprising a base having a depressed top, a socket secured in said depressed top and constituting a catch pan, a foraminous inverted holder, its lower end being open and detachably engaged in said socket, and a previous sack containing a powdered moisture-absorbing substance, said sack and substance being sustained in the holder above the bottom of the pan for the latter to accommodate any siftings from the sack.

1,425,198. DETONATING DEVICE. KARL HAMPEL, Detroit, Mich. Filed Oct. 8, 1920. Serial No. 415,650. 1 Claim. (Cl. 46—46.)



A detonating device comprising a carrier having a reduced cylindrical end, a split sleeve socket carried by the reduced end of said carrier and protruding therefrom, a weight in said socket against the reduced end of said carrier, said socket having a depressed portion engaging said weight, and a detachable cap holder in said socket against said weight and protruding therefrom.

1,425,199. RAILWAY SPIKE. JAMES HARTLEY, Philadelphia, Pa. Filed May 3, 1921. Serial No. 466,416. 1 Claim. (Cl. 85—13.)



In a spike, a plurality of shanks, a head formed integral with said shanks, a plurality of extensions formed with the head, the sides of said extensions diverging from the head toward their outer ends, and an extension formed with the rear portion of the head having a hole for the reception of a wire holder.

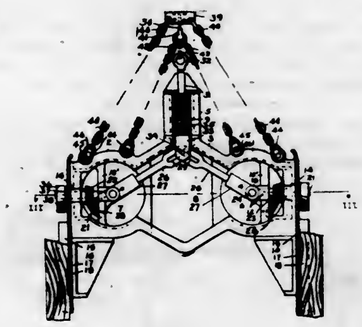
1,425,200. CONTACT BRUSH FOR TIMERS. HARRY T. HASKINS, Denver, Colo. Filed Mar. 22, 1921. Serial No. 454,434. 5 Claims. (Cl. 200—26.)

1. A current distributor brush of the character described, comprising a metal strip bent to form a hub having an arm projecting therefrom, the outer end of which is bent upon itself to form a roll, a spring brush, one end of which is bent to form a sleeve which is pivotally mounted on said roll, means for preventing accidental disconnection of the brush from the roll, and a spring secured at one end to said hub, its opposite end exerting an outward pressure against the under side of said brush.

1,425,201. MICROMETER GAUGE OR CALIPER. ANDREW HETHERINGTON, West Hoboken, N. J. Filed Jan. 21, 1919. Serial No. 272,283. 2 Claims. (Cl. 33—167.)

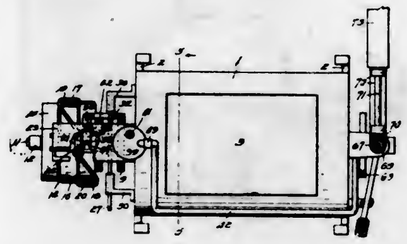
1. A micrometer gauge or caliper, comprising any one of a plurality of frames of different spans, and each provided

at one end with a substantially rectangular socket opening into said ends, the said sockets of the several frames being alike, a single micrometer mechanism having an annular supporting body provided with a rectangular lug adapted to fit and conform to the said socket of any one of said frames, said lug and socket end having coacting and registering tapered apertures, and a locking pin engaging the apertures of the lug and the socket in which the lug is inserted at the time to lock the body in place in the frame.



1,425,202. BORING LATHE. ROBERT L. HIBBARD, Bellevue, Pa. Filed Aug. 26, 1918. Serial No. 251,441. 31 Claims. (Cl. 77—3.)

1. A boring machine comprising a bed, a fixed bar support adjustable thereon, a spaced support also on the bed, a feed screw extending between said supports and rotatively but non-slidably attached to each of them, and a tail stock mounted on the bed between said supports and arranged to constitute a travelling nut relative to said screw.



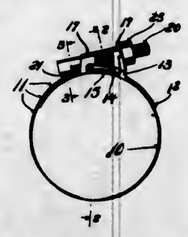
4. A boring machine comprising a bed, a fixed bar support adjustable thereon, a spaced support also on the bed, a feed screw extending between said supports and rotatively but non-slidably attached to each of them and a tail stock mounted on the bed between said supports and having a tapped hole to cooperate with the feed screw, means on one of said supports for driving the screw, and means for temporarily securing the tail stock to the bed to effect an adjustment of the spaced supports and the feed screw.

1,425,203. SAFETY DEVICE FOR MINE CAGES. GEORGE M. JOHNSON, Jeannette, Pa. Filed Feb. 24, 1921. Serial No. 447,593. 9 Claims. (Cl. 187—87.)

5. A safety device for the purpose set forth comprising a spring controlled hanger element normally maintained in an elevated position by an elevating cable and automatically lowered when the cable becomes slack or breaks, a pair of oppositely disposed operating levers having their inner ends connected with said element, gripper elements, and actuating means for said gripper elements, said actuating means having direct toothed engagement with said levers and operated to shift the gripper elements from the levers when these latter are shifted by the vertical movement of said hanger element.

1,425,204. WASHING MACHINE. JOHN JOHNSON, East Alton, Ill. Filed Oct. 11, 1920. Serial No. 416,068. 2 Claims. (Cl. 64—4.)

1. In means for imparting alternate rotation to a clothes cylinder, a gear fixed to the cylinder, a driven shaft, a gear fixed to said shaft and meshing with said first mentioned gear, a pulley fixed to said shaft, a pair of loose pulleys mounted upon said shaft, a pair of drive belts for said pulleys running in opposite directions, a rack member, means for moving said rack member a predetermined distance in one direction, and means actuated by said rack member at the end of its travel in either direction for shifting the belts to reverse the rotation of said driven shaft and meshed gears.

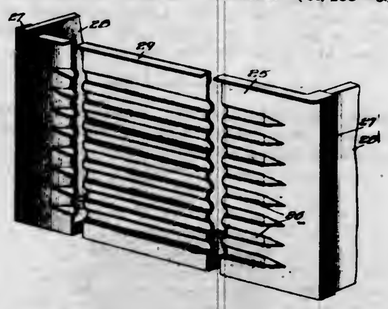


1,425,205. FEED TROUGH. PETER KOETENHOEVEN, Chicago, Ill., assignor, by mesne assignments, to Equipment Devices Company, a Corporation of Maine. Filed Dec. 12, 1921. Serial No. 521,725. 2 Claims. (Cl. 119—12.)

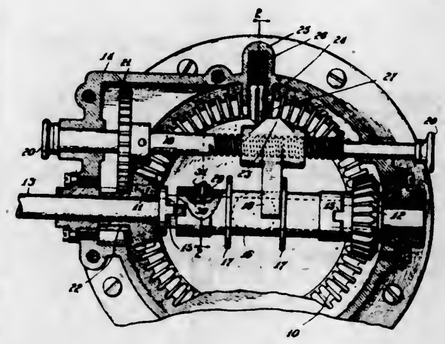
1. In a poultry-car containing coops at opposite sides of an aisle having trough insertion openings in their frames at the aisle, partition members between adjacent coops in the same tier including a semi-cylindrical shell, one of said partition members forming a guide which is outwardly converging with respect to said shell, a slide slidable thereon, a semi-cylindrical trough slidable through one of said openings and means for hingedly mounting on said slide the outer end of said trough near the longitudinal axis of the trough so that the trough will substantially rest in the shell when inserted, and will be raised so as to swing free of the shell when drawn out.

1,425,206. COUPLING. ALEXANDER MASZCZYK, Milwaukee, Wis. Filed Dec. 8, 1921. Serial No. 520,782. 1 Claim. (Cl. 24—19.)

The combination of an annular band having spaced apertures and overlapped ends, a support adjacent one end and rigid therewith, a bolt, a nut threaded thereon and engaging in tightening position with said support, and a detent on said bolt for engaging in said apertures and contracting said band.

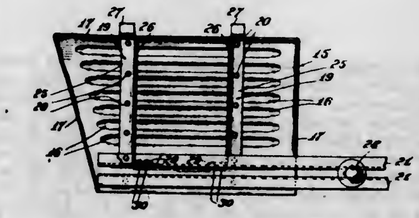


1,425,207. CORRUGATED METAL PLATE. BERT B. MILNER, New York, N. Y. Filed Apr. 29, 1919. Serial No. 293,462. 11 Claims. (Cl. 105—410.)



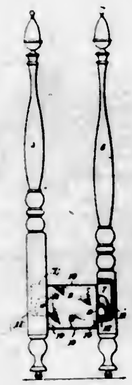
1. As a new article of manufacture, a metal plate having pressed therein adjacently arranged relatively deep, narrow corrugations terminating within the edges of the plates, which plate is of substantially uniform thickness throughout the corrugated portion thereof.

1,425,208. METHOD OF MANUFACTURING CORRUGATED METAL PLATES. BERT B. MILNER, New York, N. Y. Original application filed Apr. 29, 1919, Serial No. 293,462. Divided and this application filed Sept. 5, 1919. Serial No. 321,915. 4 Claims. (Cl. 153—68.)



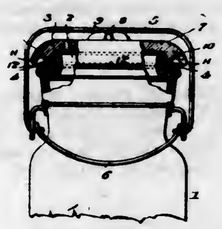
4. Method of forming a plate with parallel corrugations which have tapered terminal portions and flat margins beyond the ends of the corrugations which consists in making the plate with the portions to form the margins of substantially uniform and minimum thickness and with the portions from which the terminals of the corrugations are pressed of thicker metal, and pressing the plates so formed, while hot, between dies to form the corrugations and give the corrugated portion of the plate a thickness substantially equal throughout to the thickness of the margins.

1,425,209. WASHING-MACHINE-DRIVING MECHANISM. WILLIAM F. MORAN, Chicago, Ill., assignor to V. B. M. Company, Chicago, Ill., a Corporation of Illinois. Filed May 22, 1920. Serial No. 383,365. 5 Claims. (Cl. 74—50.)



1. In mechanism of the character described, the combination of a drive-shaft, a pair of gears loosely mounted thereon in spaced relation with each other, a drum-controlling gear arranged in constant mesh with both of said pair of gears, a clutch member slidably mounted on the drive-shaft intermediate of the first mentioned gears and adapted to establish operative relation between said gears and said shaft, a screw-shaft disposed parallel with the drive-shaft and adapted to be rotated through the medium of one of said pair of gears, and a member threaded on said screw-shaft so as to move lengthwise thereof and adapted to control the clutch member, with spring-controlled means adapted to exert lateral pressure on the second mentioned member when the latter reaches a predetermined point in its travel lengthwise of the screw-shaft whereby said member with the screw-shaft will be shifted in the direction of travel of said member.

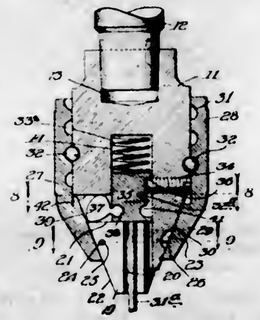
1,425,210. HOPPER-CAR DOOR. WALTER P. MURPHY, New York, N. Y. Original application filed July 29, 1919, Serial No. 314,055. Now Patent No. 1,377,783, dated May 10, 1921. Divided and this application filed Feb. 9, 1921. Serial No. 443,691. 7 Claims. (Cl. 105—280.)



3. In combination with a railway car of the dumping type, formed with a discharge opening, of a door for said opening comprising a metal plate hinged to the car body and provided with a plurality of corrugations which extend transversely with respect to the hinges and are secured thereto at intervals and terminate close to the lateral edges of the plate so as to rigidify the margins of the plate outside the hinges.

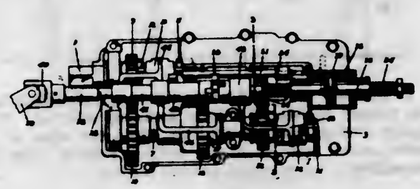
1,425,211. DISPLAY RAIL. JOHN NELSON, Ottawa, Kans. Filed Mar. 29, 1922. Serial No. 547,602. 2 Claims. (Cl. 5—41.)

1. In a display rail for beds, wherein said rail is struck from a single sheet of material, and wherein end hooks are carried by the rail for perpendicularly supporting head and foot members of beds, said rail being of rectangular formation in plan view and having marginal reinforcing flanges.



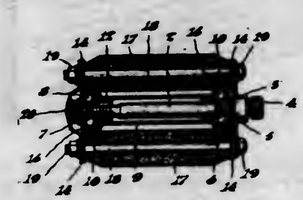
1,425,212. COVER FOR PRESERVING JARS. JAMES H. PAIGE, Manchester, N. H. Filed Aug. 25, 1920. Serial No. 406,013. 2 Claims. (Cl. 215—38.)

2. A cover for preserving jars, provided with inner and outer ridges or corrugations depending from its lower surface, the inner ridge having a crest adapted to engage the upper face of the gasket of the jar, and the outer ridge constituting the outermost edge of the cover and having a rounded part lying in a plane below that of the inner ridge and serving as a guard for the inner sealing ridge and adapted for engagement by the tool or device fulcrumed on the jar for the purpose of removing the cover.



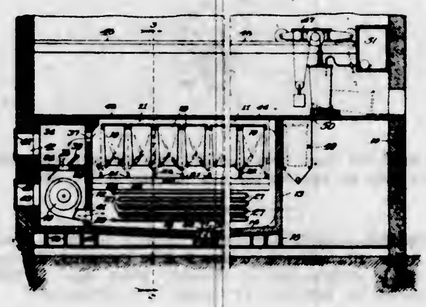
1,425,213. DRILL CHUCK. CARL A. PALMGREN, Chicago, Ill. Filed Aug. 28, 1919. Serial No. 320,501. 18 Claims. (Cl. 279—69.)

1. A chuck comprising, in combination, a body member, tool-clamping jaws thereon, an element on said body member presenting a wedge surface and operating, when shifted on said body member, to engage said jaws and shift the latter into clamping engagement with a tool inserted into the chuck, and means operated by the tool in moving inwardly into the chuck, for moving said



jaws toward the outer end of the chuck and against said wedge surface for forcing the jaws inwardly to tighten the grip of the jaws on the tool.

1,425,214. TRANSMISSION. JOHN PARCO, Jamestown, Calif. Filed July 5, 1921. Serial No. 482,412. 30 Claims. (Cl. 74—58.)



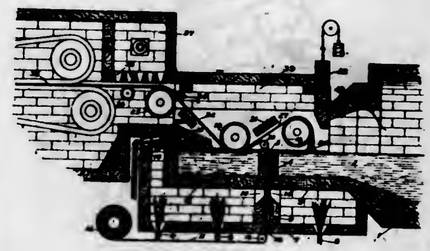
1. A transmission mechanism including a plurality of change-speed gears, superimposed and longitudinally movable sleeves, means between the sleeves and corresponding gears for effecting different driving relations with the movement of said sleeves, a hand-turned operating rod passing through the sleeves, means controlled by the rotation of said rod for selecting any sleeve desired to be moved, and means for then moving said sleeve.

1,425,215. BICYCLE PEDAL. CHARLES A. PERSONS, Worcester, Mass. Filed Sept. 14, 1920. Serial No. 410,254. 3 Claims. (Cl. 208—70.)

1. In a bicycle pedal, the combination of a spindle, a barrel encircling said spindle, a ball cup at each end of said barrel, arms integral with each cup and extending laterally therefrom in opposite directions, a hardened ball lining in each of said cups, and means at opposite sides of said barrel connecting the arms of said cups at the opposite ends of the pedal.

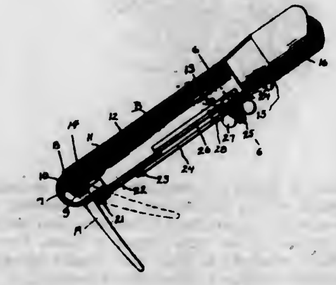
1,425,216. ART OF REFRIGERATION. JULIUS REBSAMEN, Chicago, Ill. Filed Dec. 29, 1920. Serial No. 433,763. 5 Claims. (Cl. 62—160.)

1. In refrigerating apparatus, a liquid container, means for spraying a cooling liquid against the container, cooling means below the container, means for collecting the sprayed liquid and distributing it over the cooling means, means for returning it after cooling to the spraying means, and means for passing air over the cooling means and circulating it about the container.



1,425,217. HAND BAG. FRANK REGULSKI, Brooklyn, N. Y., assignor to Herman Scheuer & Sons, New York, N. Y., a Firm composed of Herman Scheuer, Jacob H. Scheuer, and Alwin J. Scheuer. Filed July 26, 1921. Serial No. 487,756. 3 Claims. (Cl. 190—52.)

1. A hand-bag having an open pocket on its exterior, a purse having a flap inserted in the pocket with the flap suspended over the top edge of the pocket, the purse being free from permanent attachment to the bag, and means for detachably fastening the flap to the pocket.

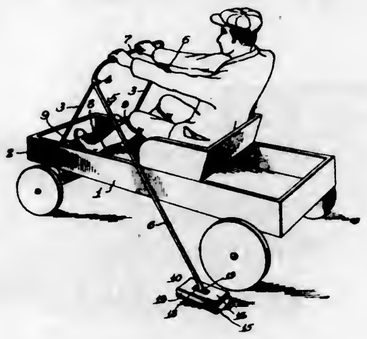


1,425,218. METHOD AND APPARATUS FOR DRAWING WIRE GLASS. CLIFFORD A. ROWLEY, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 17, 1921. Serial No. 445,602. 8 Claims. (Cl. 49—17.)

8. In an apparatus for drawing wire glass, a receptacle containing a bath of molten glass, a series of parallel horizontal cooled rolls mounted above the receptacle, a sheet of glass being drawn laterally from the bath over the first roll, means for feeding in a sheet of wire mesh below this sheet, the sheet and wire being drawn laterally below the second roll and dipping into the molten bath, the sheet then being drawn up over a

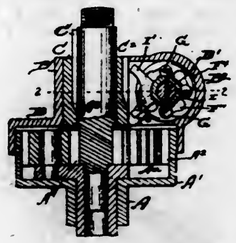
third roll, a drawing mechanism for stretching the sheet horizontally from the third roll, means for cooling the upper side of the sheet between the first and second rolls, and means for cooling the lower side of the sheet between the second and third rolls.

1,425,219. SELF-CLEANING RAKE. STANLEY M. SCARVIE, Decorah, Iowa. Filed June 2, 1920. Serial No. 386,134. 3 Claims. (Cl. 306—11.)



1. A rake having a head, a sleeve provided with slots extending inwardly from an end thereof having flat walls and enlarged portions, a spring within the sleeve normally maintaining the head in engagement with the flat walls, a closure for said sleeve to receive and prevent accidental detachment of the head, said sleeve having a second slot, links pivoted on the sleeve, links pivoted to said links, a securing means pivoting the second mentioned links together and disposed in said second slot and operable to move the first mentioned links against the head.

1,425,220. PROPELLING ATTACHMENT FOR CHILDREN'S VEHICLES. FERDINIC S. SHAGRAVE, Detroit, Mich. Filed Mar. 8, 1920. Serial No. 364,190. 5 Claims. (Cl. 208—38.)



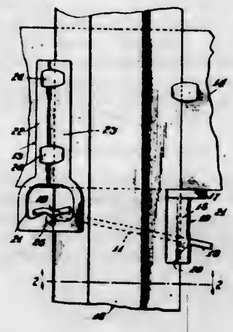
1. A propelling attachment for vehicles comprising a pair of rocker arms adapted to be pivotally attached

to a vehicle, and a substantially U-shaped pusher member providing side legs and a connecting hand-hold por-

tion, said legs being pivotally attached to the upper ends of said rocker arms at points adjacent the hand-hold portion.

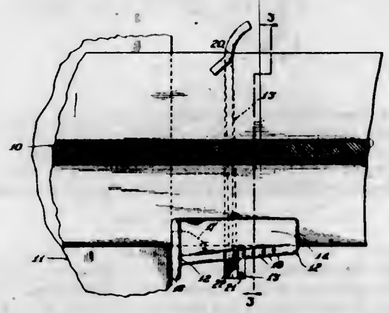
1,425,221. LOCK. CHARLES P. SKUBLIN, Detroit, Mich. Filed June 2, 1921. Serial No. 474,340. 4 Claims. (Cl. 70—47.)

4. In a lock; a casing; a rotatable member including a spindle housed within the casing, a latch member secured to the spindle, a plurality of tumblers each having a peripheral groove at one end, lodged in bores formed in the rotatable member; a fixed disc loosely mounted upon the spindle having a plurality of bores and an arc-shaped slot connected with each bore through which the tumblers may rock,—with one of said openings counterbored to receive the end of the tumbler operating therein; springs adapted to maintain the tumblers at the end of their longitudinal movement and one of said tumblers in the counterbore of the disc member when released from the control of a co-operating key; and a co-operating key having a plurality of pins of varying length adapted to simultaneously force the tumblers inwardly whereby the peripheral grooves of the respective tumblers may be brought into registration with the arc-shaped slots of the disc that the latch member may be rocked upon the operation of the key.



1,425,222. RETURN END AND METHOD OF MAKING SAME. ROBERT ABSALOM THOM, Manchester, England. Filed Aug. 31, 1921. Serial No. 497,273. 6 Claims. (Cl. 29—157.6.)

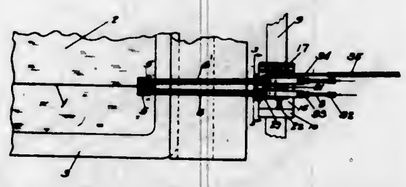
1. The method of making return ends for pipes, which consists in first forging a block of solid wrought metal of the shape of the desired return end, and then drilling two converging holes into the block from one face there-



of until the inner ends of said holes intersect each other and form an angular through passage in the block.

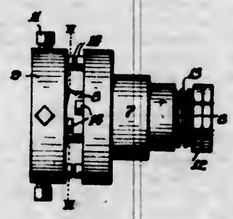
1,425,223. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1920. Serial No. 362,310. 17 Claims. (Cl. 238—329.)

1. In a rail anchoring device, the combination or rail base gripping means adapted to engage with a cross tie to resist longitudinal movement of the rail in one direction, and a separate fastening device for anchoring said rail base gripping means to the tie, whereby longitudinal movement of the rail in the opposite direction is resisted.



1,425,224. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1920. Serial No. 393,595. 19 Claims. (Cl. 238—324.)

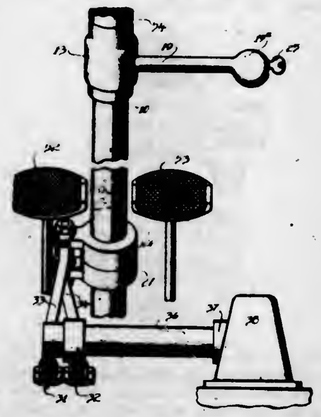
1. A rail anchor comprising rail base embracing members, one being a spring adapted to exert spring pressure on the upper and lower surfaces of said rail base adjacent



opposite edges thereof, which members are capable of different engagements with each other to accommodate the anchor to rail bases of differing contour.

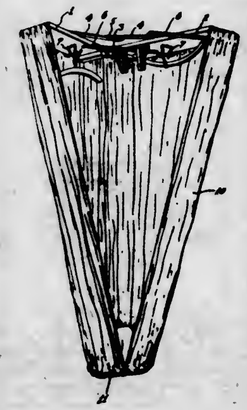
1,425,225. APPARATUS FOR DRAWING SHEET GLASS. JAMES WHITTEMORE, Detroit, Mich., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 2, 1921. Serial No. 449,092. 12 Claims. (Cl. 49—17.)

12. In a glass drawing apparatus, means for drawing a sheet of glass from a mass of molten glass, a pair of idler rools near the source of each edge of the sheet between which the sheet edge is drawn, gears connecting the rolls whereby they are compelled to rotate equally and in opposite directions, means for cooling the rolls, and means for frictionally retarding each pair of rolls.



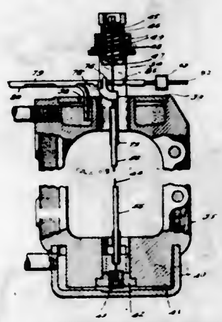
1,425,226. AUTOMATIC CHUCK FOR SCREW MACHINES. CHARLES F. WHITMAN, Detroit, Mich., assignor to Automatic Products Company, Detroit, Mich., a Corporation of Michigan. Filed May 20, 1920. Serial No. 382,889. 2 Claims. (Cl. 10—89.)

2. In a screw machine wherein a rotatable screw blank is adapted to be threaded by a die advancing towards the screw blank, means adapted to advance the die and revolve it at less speed than the screw blank, said means comprising a die chuck member supporting the die, a driven chuck interlocked with said die chuck for rotating it, a spring interposed between portions of said chuck members and maintaining an operative relation between said chuck members, said spring permitting said driven chuck to recede so that the die may be backed off the screw and allow said spring to establish a driving relation between said chuck members.



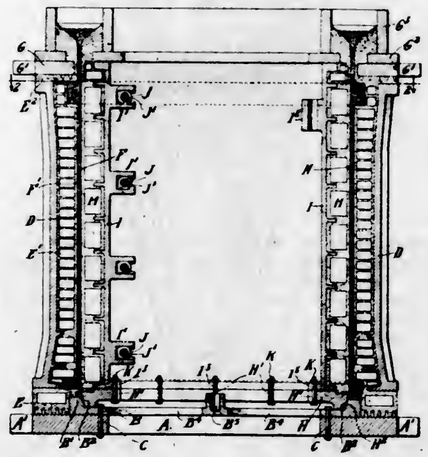
1,425,227. GEAR-SHIFTING MECHANISM. GARRETT W. WOODWARD, Chicago, Ill., assignor to Woodward Automatic Control Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 21, 1921. Serial No. 463,189. 4 Claims. (Cl. 74—89.)

1. In combination, a steering column, a member rotatably carried by said column, a selective sliding gear transmission, sliding gears in said transmission, means for selectively operably connecting said gears to said



member, a lever for turning said member, and means under control of the operator for connecting said lever to said member and for disconnecting it therefrom.

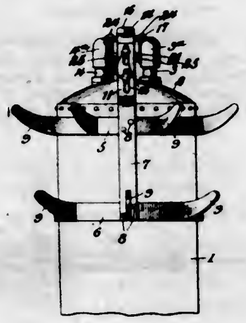
1,425,228. PORTABLE WARDROBE. HELEN S. ALTMAN, Elcho, Wis. Filed Oct. 3, 1921. Serial No. 504,993. 2 Claims. (Cl. 45—118.)



2. A portable wardrobe comprising a top including sections connected and adapted to be spread apart and folded; means for maintaining the sections in spread-apart relationship; a bottom; a foldable fabric body-portion secured to the top and bottom and adapted to be shaped to approximately the form of the sections when open for use; said bottom acting as a weight to extend the fabric body-portion when the top section is suspended; means for suspending the device from a support; said body-portion being provided with an opening for access to the interior of the wardrobe when extended; and guide means associated with the top sections; said fabric body-portion adapted to be folded around and inclose the top and bottom sections when these sections are brought together.

1,425,229. MOVABLE ELEMENT FOR METERS. DONALD J. ANGUS, Indianapolis, Ind. Original application filed May 20, 1918, Serial No. 235,572. Divided and this application filed June 26, 1920. Serial No. 392,038. 12 Claims. (Cl. 234—5.5.)

2. In a meter, a torsion wire, a movable meter element mounted on said wire, a pair of knife blade supports carried by said movable meter element, a knife blade removably resting on said knife blade supports, a marking device mounted on said knife blade, and a record sheet co-operating with said marking device.

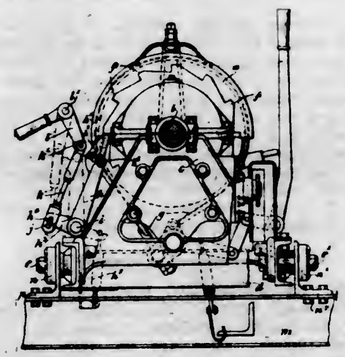


1,425,230. MOLDING APPARATUS. THOMAS P. ANTHONY, Edgewater Park, N. J., assignor to United States Cast Iron Pipe & Foundry Company, Burlington, N. J., a Corporation of New Jersey. Filed June 26, 1920. Serial No. 391,855. 6 Claims. (Cl. 22—166.)

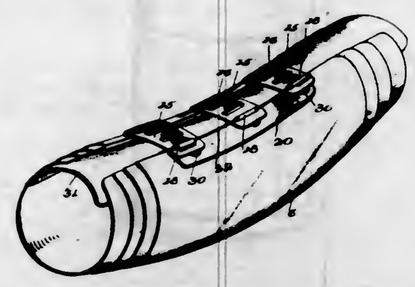
1. Molding apparatus comprising a flask support, a centering ring secured to said support having an upwardly and outwardly flared annular seat for the sand supporting and centering ring of the core, a core center, a sand supporting and centering ring detachably secured to said center and extending beyond the bottom thereof to form a sand support, said ring having its outer edge tapered downwardly and inwardly to fit in the centering ring of the flask.

1,425,231. CLOTHES-DRYING RACK. DAVID B. BAKER, Hoquiam, Wash. Filed Apr. 12, 1921. Serial No. 460,858. 9 Claims. (Cl. 126—342.)

1. In combination with a hot water boiler, a clothes drying rack comprising a band in the shape of an arc of a circle and mounted to move about the boiler, clothes supporting means carried by the band, and means connected with the rack to suspend the same from the top of the boiler and in the longitudinal axis of the latter.

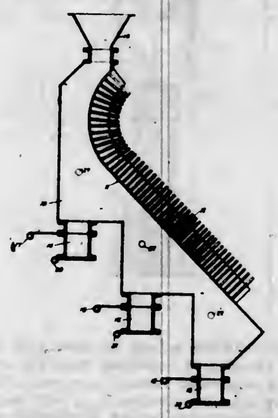


1,425,232. SHEET-METAL ARTICLE. FRANK E. BAYNE, Erie, Pa., assignor to Erie Art Metal Company, Millcreek Township, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1920. Serial No. 356,867. 8 Claims. (Cl. 220—80.)



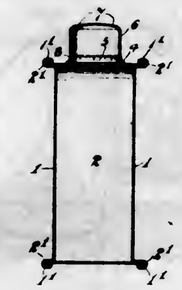
8. An article of manufacture of sheet metal having sides forming a corner; and a corner rib having its edges secured directly to the sides at the sides of the corner, the edges facing outwardly and a reversed loop having folds extending outwardly over the portion secured to the sides, the corner rib being extended forming legs for the basket.

1,425,233. WINCH. ROBERT S. BOLGER, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Original application filed Aug. 14, 1920, Serial No. 403,443. Divided and this application filed Mar. 24, 1921. Serial No. 455,351. 1 Claim. (Cl. 74—16.)



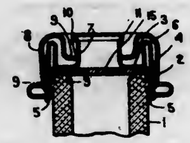
In a winch construction, a drum, ratchet teeth carried therewith, a pawl formed as a bell crank lever and having a nose formed as a separate piece and hinged to its long arm, a pin carried by the short arm of the pawl, and an independent link loosely engaging said pin, said link being pivotally secured to an independent bell crank which is adapted to move the pawl.

1,425,234. BLOW-OUT PATCH. JOHN BORDAS, Miami, Fla. Filed June 19, 1922. Serial No. 569,539. 3 Claims. (Cl. 152—24.)



2. A blowout patch comprising a transversely curved body adapted to be arranged within a tire and consisting of a plurality of layers of material, the ends of which terminate in spaced relation to each other whereby the body is gradually tapered toward its ends, latch plates extending laterally from one side of said body and having spaced openings, and a strengthening and fastening strip secured to one longitudinal edge portion of said body and having aligned ears adapted for movement through said openings whereby the latch plates are connected to said strip, and a locking rod extending through said ears and holding said latch plates in position.

1,425,235. MAGNETIC SEPARATOR. WALTER E. F. BRADLEY, New York, N. Y. Filed Sept. 21, 1918. Serial No. 255,172. 3 Claims. (Cl. 83—71.)

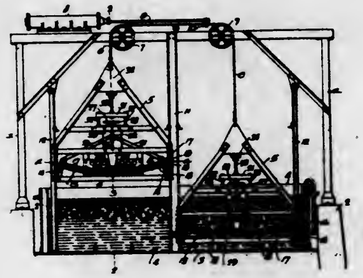


1. A magnetic separator comprising in combination a series of electromagnets with their pole faces directed generally downward and disposed in sequence one after another, means for supplying material to the magnetic influence thereof, and means for energising said magnets in groups of a plurality of relatively displaced cyclic current phases, the algebraic sum of the currents of a group alternating cyclically from a positive value to a negative value and back to positive.

1,425,236. CONTAINER. ALFRED E. BRUNS, Brooklyn, N. Y. Filed Sept. 27, 1919. Serial No. 326,862. 2 Claims. (Cl. 220—42.)

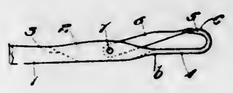
1. A container having a flat side with a hole therein, an upwardly inwardly flaring and straight flange integral with said side and adjacent said hole and a sifter top having an outwardly flaring straight flange engaging said inwardly flaring flange, the outside diameter of the lower end of said inwardly flaring flange being slightly greater than the inner diameter of the sifter top flange at its lower edge and the inside diameter of the upper portion of the sifter top flange being slightly less than the outside diameter of the upper edge of the flange adjacent the hole whereby when said flanges are pressed into engagement with each other the lower edge of said sifter top flange will compress the other flange inwardly and a tight frictional and locking engagement between said two flanges will be maintained throughout their lengths.

1,425,237. BOTTLE STOPPER. OSCAR CARLSON, Boston, Mass. Filed Oct. 18, 1919. Serial No. 331,667. 2 Claims. (Cl. 215—65.)



1. In a bottle stopper, the combination with a seat member to rest on the end of a bottle neck and having integral therewith a plurality of spring fingers to engage the bead of said bottle neck, and also having a headed stem extending therefrom, of a clamping member swivelled on said stem and capable of moving longitudinally thereof without turning thereabout, said clamping member being provided with cam portions which are brought, by the movement of said clamping member longitudinally of the stem, into a position to engage the fingers below the bead, turning movement of the clamping member causing the cam portions to clamp the fingers about the bead.

1,425,238. SPRING FITTING AND QUENCHING MACHINE. AMOS G. COLE and WALTER H. FOSTER, Lewistown, and LAWFORD H. FRY, Yeagertown, Pa. Filed Jan. 16, 1922. Serial No. 529,554. 8 Claims. (Cl. 266—6.)



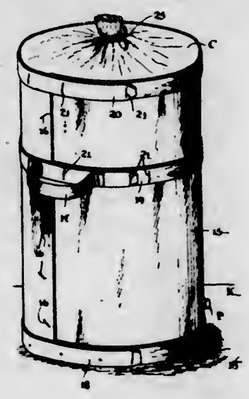
1. The combination in a machine for fitting springs prior to quenching, of two flexible dies; and means for

flexing one of said dies and for holding it in the flexed position, the other die, when one die is moved towards the

other with the blank between them, conforming to the shape of the flexed die.

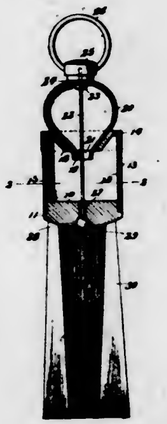
1,425,239. KNITTING-MACHINE NEEDLE AND METHOD OF MAKING SAME. FRED W. COREY, Tilton, N. H. Filed Nov. 6, 1920. Serial No. 422,175. 1 Claim. (Cl. 163—5.)

The method of forming a knitting needle consisting of dieing out the needle from a blank and at the same operation swaging the pointed portion of the needle to make it more dense than the remainder of the needle.



1,425,240. FOURDRINIER MACHINE. ALBERT JOHN DAVIES, Sault Ste. Marie, Ontario, Canada. Filed Mar. 12, 1921. Serial No. 451,693. 30 Claims. (Cl. 92—44.)

1. In a Fourdrinier machine, a deckel-strap; and a frame; in combination with a scraper; means, mounted on said frame, for holding said scraper in engagement with said deckel-strap; and mechanism for disengaging said scraper from said deckel-strap without deranging said mounting means.



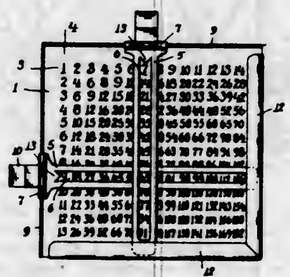
1,425,241. ICE-CREAM CONTAINER. ROBERT KENNON DENT, Akron, Ala. Filed Oct. 18, 1921. Serial No. 508,445. 2 Claims. (Cl. 217—49.)

1. An ice-cream container comprising an outer casing including a body portion of wood veneer and a bottom secured within the body portion, hoops embracing the body portion at its ends and intermediate its ends, flexible handles carried by one of the hoops, an inner casing of waxed paper, and a cover consisting of a sheet of waxed paper of cylindrical form secured at its lower

edges to the upper end of the outer casing, and means for gathering and securing the upper end of the cover to closed position.

1,425,242. HAIR DUSTER. PETER A. DINARDO, Brooklyn, N. Y. Filed Nov. 15, 1921. Serial No. 515,354. 3 Claims. (Cl. 15—136.)

1. A brush including a base provided with a chamber thereon and an opening extending from the chamber to the bristles, a dispensing element exteriorly of the chamber but communicating therewith, a rod supported by said element and a valve carried by the rod for closing the opening and adapted to be dislodged by the element as the contents of the chamber is being ejected.

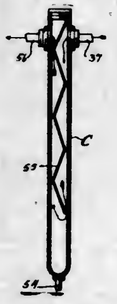


1,425,243. SHIP-HULL CONSTRUCTION. JOHN DUTHIE, Sr., Seattle, Wash. Filed May 16, 1919. Serial No. 297,463. 2 Claims. (Cl. 114—56.)

1. In a ship's double hull with a double bottom, or tank, side bulkheads inboard of the side plating and extending from the deck straight through the tank top and to the bottom, and rigidly connected to the tank top and

bottom, the side plating receding inwardly from the water-line to the bilge where it is spaced from the lower end of the side bulkheads, and to the deck.

1,425,244. CALCULATING DEVICE. ELMER ELSWORTH EASTON, Brockton, Mass. Filed June 21, 1920. Serial No. 390,308. 1 Claim. (Cl. 235—89.)



A calculator comprising a plate bearing thereon sets of figures having a mathematical relationship in rows at right angles to each other, two edges of said plate at right angles to each other being bent up at right angles to the plate, and the opposite edges of the plate being bent over parallel with the plate to form lips, and two indicator blades crossing each other at right angles, each being composed of sheet metal bent to form a head enclosing one of said bent up edges, an actuating thumb piece, and fingers bent beneath the edge of the plate for holding the head on said bent up edge, the end of the blade opposite its head being beneath one of said lips.

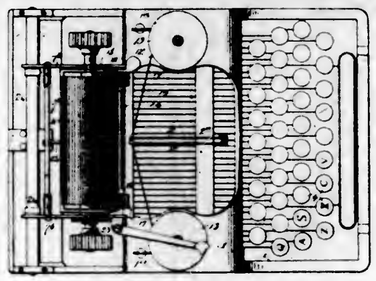
1,425,245. SHOE FASTENER. JOHN ELDRIDGE, Winnipeg, Manitoba, Canada, assignor of one-half to Henry Butler, Winnipeg, Manitoba, Canada. Filed Dec. 3, 1920. Serial No. 428,026. 1 Claim. (Cl. 24—206.)

In a shoe fastener a guide plate presenting a pair of opposing guide flanges and a pair of fastening tongues adapted to fasten the plate to one side of the shoe, a spring latch attached to the plate and provided with a dog operating through one of the guide flanges, an eye adjacent to the dog, and a toothed catch adapted to be received between the guide flanges and with the dog engaging the teeth, said catch being fitted with fastening tongues adapted to fasten the catch to the other side of the shoe and a pulling string attached to the eye.

1,425,246. SEPARATOR. PHILIP FISCHBACHER, Quincy, Ill., assignor to American Sanitary Refrigeration Co., Owensboro, Ky., a Corporation of Delaware. Original application filed July 30, 1919, Serial No. 314,222. Divided and this application filed July 12, 1920. Serial No. 395,488. 1 Claim. (Cl. 183—110.)

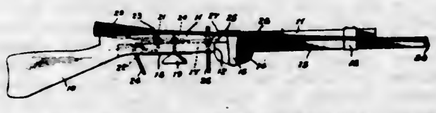
A separator of the character described comprising a vertically disposed chamber provided with a vertical partition extending downward from its upper end, the wall of the separator having an inlet opening at one side of the partition and an outlet opening on the other side of the partition, both of said openings being disposed adjacent the upper end of the separator, said partition being approximately zigzag in vertical cross section and having its opposite surfaces parallel and extending nearly to the lower end of the separating chamber, the crests of the zigzag partition being disposed closely adjacent to the opposite walls of the chamber whereby to impede the movement of foreign particles passing through the separator without impeding the movement of the fluid passing therethrough and whereby to bring the fluid passing through the separator into intimate contiguity with the exterior walls thereof.

1,425,247. PORTIÈRE ROD. CHARLES E. GALBREATH, Chanute, Kans. Filed Jan. 24, 1921. Serial No. 439,452. 1 Claim. (Cl. 156—19.)



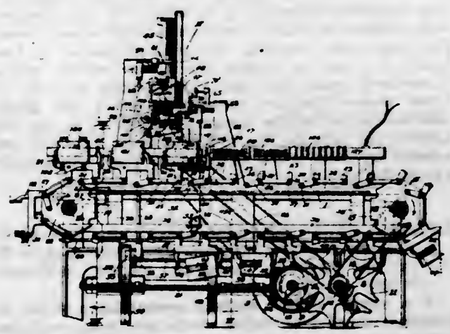
A portière rod comprising two members neatly slidably fitted into and out of engagement with each other, two caps respectively closing the outer ends of said members and arranged to support said members and having means for respectively engaging and being supported by two jambs of a door or window, the tubular member having a relatively small bleed hole communicating with the interior thereof and the atmosphere, and a coil spring mounted in the tubular member and bearing at one end against the adjacent cap and bearing at its other end against the inner end of the other member, substantially as set forth.

1,425,248. STENCIL-MAKING MACHINE. EDWARD E. GOMPERS, LEO WEIL, and PAUL HEIN, New York, N. Y. Filed Apr. 28, 1921. Serial No. 464,030. 5 Claims. (Cl. 197—135.)



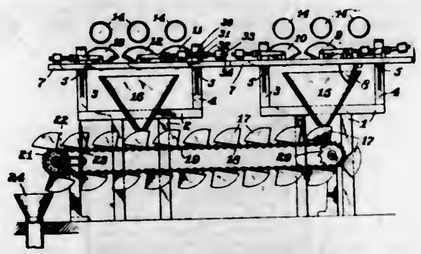
1. A stencil writing machine comprising a frame, a carriage mounted to travel across the frame and provided with a platen, type bars to strike at the front of the carriage, keys to operate the type bars, and a stencil holder supported by the carriage in front of the platen,

said frame having a free and unobstructed space below the holder extending across the frame and open above in register with said holder to permit free lateral travel of the portion of the stencil depending from the carriage,



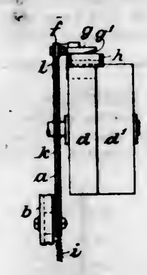
said holder having spaced guiding means to guide the sides of the stencil, the holder being provided with spaced rolls to press the stencil against the platen, and spring means normally pressing the holder and its rolls toward the platen.

1,425,249. MECHANICAL TOY INSECT GUN. CHARLES E. GOODWIN, Seattle, Wash. Filed Sept. 6, 1921. Serial No. 498,786. 3 Claims. (Cl. 124—14.)



2. A mechanical toy insect gun comprising a stock and barrel, an extension barrel member slidably secured to said barrel, a bell secured to said gun, a clapper secured to said barrel adjacent said bell, an elastic secured at its outer end to said extension barrel member, a tassel secured to the inner end of said elastic, and trigger means adapted to release the inner tassel end of said elastic when under tension to allow same to spring forward and to cause said clapper to strike said bell.

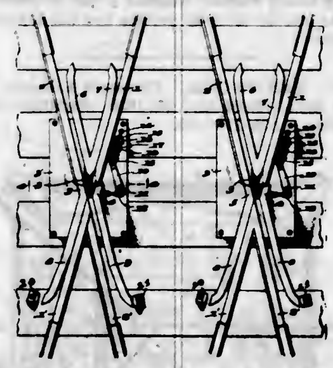
1,425,250. MACHINE FOR APPLYING STAMPS AND THE LIKE TO PACKAGES OR CONTAINERS. GEORGE WILBUR GWINN, New York, N. Y., and JAMES W. LEARY, Allendale, N. J., assignors to Automatic Packing & Labeling Company, Durham, N. C., a Corporation of North Carolina. Filed Oct. 10, 1917. Serial No. 195,769. 33 Claims. (Cl. 216—52.)



1. In a machine for applying stamps, the combination of a table; means for applying paste to a stamp and simultaneously laying the same in adhesive relation with the table and with a portion of such pasted face exposed; package holding means; and means for securing a relative movement between the table and holding means and causing the exposed portion of the stamp and package to contact whereby the stamp will be stripped from the table.

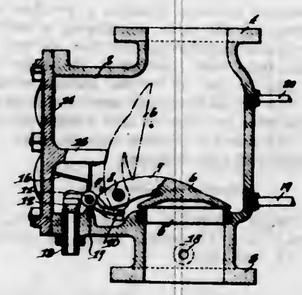
1,425,251. WEIGHING MECHANISM. GEORGE W. GWINN, Edgemere, N. Y., assignor to Automatic Packing & Labeling Company, Durham, N. C., a Corporation of North Carolina. Filed Aug. 23, 1919. Serial No. 319,403. 8 Claims. (Cl. 198—39.)

1. In an apparatus for transporting and delivering weighed charges of material, the combination of a plurality of sets of scale pans; a funnel located below each set; a series of receptacles; means for continuously passing said receptacles beneath said funnels; and means for feeding material to said pans and effecting a dumping of the pans of each series successively, the pans of one series operating in alternation with those of the other.



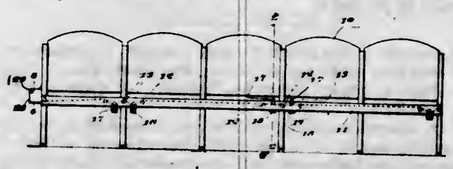
1,425,252. STOP MOTION OF LOOMS FOR WEAVING. HENRY HAIGH, Batley, England. Filed Aug. 1, 1921. Serial No. 489,022. 2 Claims. (Cl. 192—10.)

1. The combination, with a fast pulley, a loose pulley, and a belt guide for moving a driving belt from one pulley to the other; of a stationary support, a friction brake block pivoted to the said support and adapted to bear on the fast pulley, and a finger secured to the brake block and provided with an inclined under surface which bears on the said belt guide and supports the brake block clear of the fast pulley until the belt guide has moved the driving belt from the fast pulley to the loose pulley.



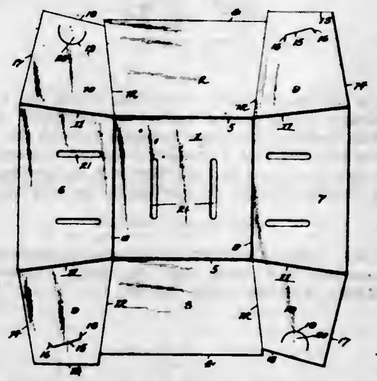
1,425,253. SPRING FROG RAIL. JAMES HARRIS HARDY, Crawford, Miss. Filed Oct. 10, 1921. Serial No. 506,855. 4 Claims. (Cl. 246—380.)

1. A spring rail frog comprising a frog point, a track-rail, a side-track rail, rail segments one of which is normally in alignment with the track or side-track rail, and means connected to the respective rail segments



and parallel with the track-rail and side track-rail, whereby the rail segment of the unused track is moved laterally by the moving train.

1,425,254. SPRINKLER-SYSTEM ALARM VALVE. ERNEST G. HARRIS, North Vancouver, British Columbia, Canada. Filed May 24, 1920. Serial No. 383,897. 5 Claims. (Cl. 169—23.)



1. An alarm valve for a sprinkler system, comprising in combination, a hollow casing adapted for connection to a water service and to the pipe of a sprinkler system, a valve within the chamber seating outward against the water service connection, an alarm service connection between the water service connection and the sprinkler pipe connection, a valve closing the alarm service connection, means permitting opening of the water service valve to a certain extent without opening the alarm service valve, and means whereby opening of the water service valve beyond that limit will open the alarm service valve.

1,425,255. SEAT INDICATOR FOR THEATERS. EDWARD A. HENRICSON, Chicago, Ill. Filed Jan. 17, 1922. Serial No. 529,883. 6 Claims. (Cl. 116—114.)

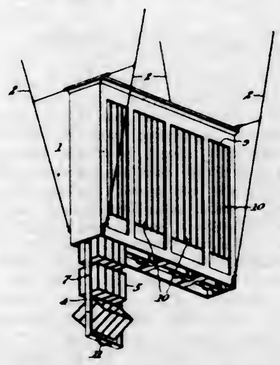
5. The combination with a plurality of chairs having movable seats; of an indicator movable to denote the number of such seats in a predetermined position, a flexible member having an operative connection with the indicator for moving the same in one direction, means for moving the indicator in the opposite direction when a slack is produced in the flexible member, stationary and bodily movable pulleys over which the flexible member is trained, slides carrying the movable pulleys, spring-pressed plungers having operative connections with the slides, and means on the seats for operating the plungers in one direction.

1,425,256. BOX OR CONTAINER FOR BERRIES AND THE LIKE. JOHN PARKER HICKMAN and JOHN PARKER HICKMAN, Jr., Asbury Park, N. J. Filed Dec. 16, 1919. Serial No. 345,202. 4 Claims. (Cl. 229—35.)

1. As a new article of manufacture, a pasteboard box for berries and the like, formed from a single blank cut to provide an integral bottom and surrounding sides and ends, the edges of the bottom being creased to allow the sides and ends to be folded upwardly, and two of the sides being transversely creased to produce flap portions, which flap portions, when the ends and sides are upwardly folded, overlap each other; means carried by such flap portions adapted to engage and hold such flaps in position, the end walls forming a brace which tends to prevent disengagement of such engaging means; and a cover formed as an extension of one of the walls, said cover being provided with outwardly extending flaps adapted to be turned down and passed inwardly into the box and a tongue struck up out of one of the flaps and adapted to enter the opening formed in the adjacent wall of the box and to be curled upwardly over and against the inner face of such wall and to interlock therewith to maintain the cover in position.

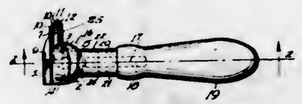
1,425,257. METHOD AND MEANS FOR PROTECTING TREES. SIDNEY HOCKRIDGE, Redlands, Calif. Filed Jan. 7, 1919. Serial No. 269,979. 6 Claims. (Cl. 47—36.)

1. That method of protecting trees which consists in digging away the earth at the foot of the tree to expose



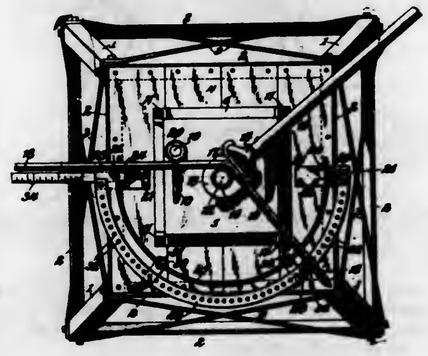
the crown roots, applying a jacket of air hardening material directly upon the trunk of the tree down as far as the crown roots, and replacing the earth previously removed.

1,425,258. TRACTION WHEEL. JOHN I. HOKE, Medina, N. Y. Filed Sept. 5, 1919. Serial No. 321,876. 2 Claims. (Cl. 301—44.)



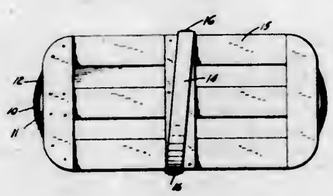
2. In combination with a traction wheel rim having an opening, a lug seated against the periphery of the rim and having a projection extended through the opening and provided with a forward projection engaging the inner face of the rim and provided with an opening, and a key inserted through the opening in the projection.

1,425,259. DISPLAY DEVICE. THOMAS CHARLES HOWE, Louisville, Ky. Filed Apr. 15, 1922. Serial No. 552,869. 9 Claims. (Cl. 211—9.)



1. In a display device, a cabinet provided with aligned vertical openings in its opposite walls, a frame vertically movable in said cabinet, a plurality of article supports carried by said frame and located between said aligned openings, means extending across the upper portions of said openings preventing access to the interior of the cabinet, and means normally retaining said frame in raised position and yieldable to permit downward movement thereof.

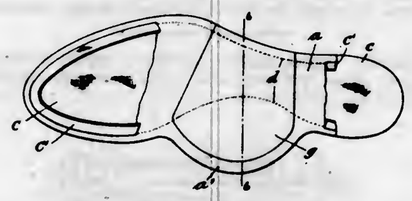
1,425,260. UNIVERSAL CONCAVE SHAVE. GOTTFRID INGELSON, Indiana Harbor, Ind. Filed Nov. 6, 1920. Serial No. 422,238. 3 Claims. (Cl. 145—47.)



1. A device of the character described comprising a blade holder consisting of a substantially flat body portion having a beveled rear edge and a relatively raised portion on its face adjacent to its rear edge, a blade having a cutting edge beveled at the same angle as the rear edge of the body portion and positioned to the rear of the latter, and means for clamping the blade to the relatively raised portion, whereby a gap is provided between the face of the body portion and the adjacent side of the blade.

1,425,261. BAR BENDER. THEODORE KARDONG, Minneapolis, Minn. Filed June 25, 1920. Serial No. 391,649. 12 Claims. (Cl. 153—45.)

1. In a bending machine, a table, a bending head rotatably mounted on the table, comprising a vertical fulcrum pin and a bending shoe spaced from the pin adapted to engage and bend rods inserted in the space between the pin and shoe, a pair of vertical sockets in the table on opposite sides of said bending head, and a roller having a pin insertable in either of said sockets and adapted to form an abutment for bending rods in either a clockwise or counterclockwise direction.

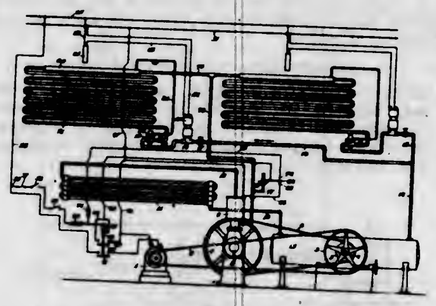


1,425,262. FRUIT BASKET. JOHN B. KENNY, Geneva, N. Y. Filed Mar. 11, 1922. Serial No. 542,927. 7 Claims. (Cl. 217—124.)

1. A fruit basket having a handle arching over the basket, a cover for the basket, and means for holding the cover from endwise movement comprising upwardly extending prongs projecting upward from the inside of the basket adjacent its upper edge and adapted to engage in the cover.

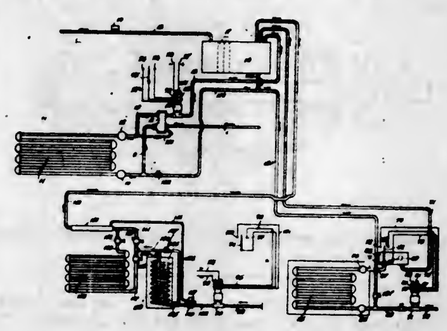
1,425,263. INNERSOLE FOR ARCH-SUPPORTING SHOES. WILLIAM A. KNIPE, Haverhill, Mass. Filed July 8, 1921. Serial No. 483,197. 3 Claims. (Cl. 36—71.)

1. An inner sole for welt shoes, comprising a bottom section having a downturned edge forming a lip to which the upper and welt are attached, a top section forming the interior covering for the shoe bottom, and a re-enforcing section disposed between said top and bottom sections at the shank portion thereof, said top and re-enforcing sections each being continuously extended transversely to a thin edge to form an arch-supporting portion, and said re-enforcing section being skived to a thin edge at its front and rear ends, and means for



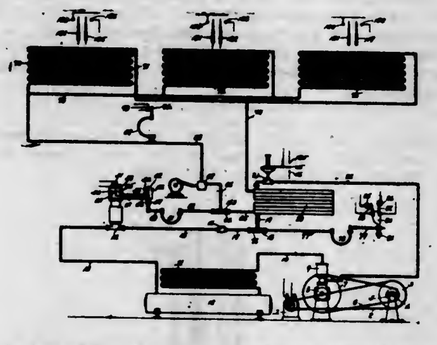
connecting all of said sections consisting of a row of stitches which pass therethrough from top to bottom at the base of said lip.

1,425,264. AMUSEMENT DEVICE. HERBERT B. LOEB, Philadelphia, Pa. Filed June 23, 1921. Serial No. 479,709. 7 Claims. (Cl. 229—6.)



3. A container comprising a plurality of compartments, a cover therefor, said cover bearing the indicia of a clock face, each of the figures thereof being opposite one of the compartments, clock hands on the cover, and means whereby admission may be gained to any of the compartments individually.

1,425,265. REFRIGERATING APPARATUS. ALBERT T. MARSHALL, Hartford, Conn., assignor to Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed Oct. 29, 1919. Serial No. 334,286. 5 Claims. (Cl. 62—4.)

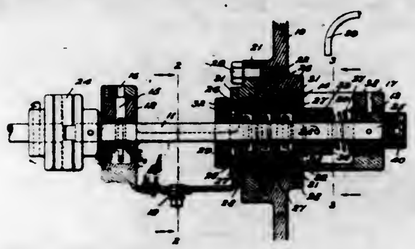


1. In an automatic refrigerating system in combination, a compressor, a plurality of refrigerating coils, a supply pipe leading from said compressor and having a connection to each of said refrigerating coils, a shut-off valve and an expansion valve at the inlet end of each of said refrigerating coils, thermostatic means located in proximity to each refrigerating coil for controlling the shut-off valve connected thereto, thermostatic means located at the outlet end of each refrigerating coil for controlling the expansion valve connected thereto, a common return pipe connecting the outlet ends of said refrigerating coils to said compressor, and means controlled by the pressure in said return pipe for controlling the operation of said compressor.

1,425,266. REFRIGERATING SYSTEM. ALBERT T. MARSHALL, Hartford, Conn., assignor to Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed May 7, 1920. Serial No. 379,648. 3 Claims. (Cl. 62—4.)

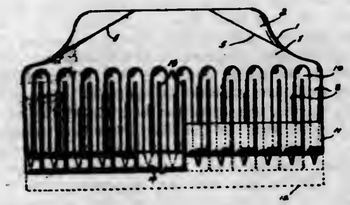
1. An automatic refrigerating system comprising a feed line for high pressure liquid refrigerant, an expansion valve in said feed line, a refrigerating coil connected to the low pressure side of said expansion valve, a float chamber located above said refrigerating coil, and connected to the outlet end of a said refrigerating coil, a float in said float chamber in operative relation to the expansion valve for automatically maintaining the level of liquid refrigerant in the float chamber substantially constant, a suction line leading from the upper portion of the float chamber, and a thermostatically controlled valve in said suction line for regulating the flow of refrigerant in accordance with changes of temperature adajcent to said refrigerating coil.

1,425,267. REFRIGERATING MACHINE. ALBERT T. MARSHALL, Hartford, Conn., assignor to Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed July 31, 1920. Serial No. 400,455. 8 Claims. (Cl. 62—4.)



1. Automatic refrigerating apparatus comprising in combination a mechanically operated refrigerant system, a system for circulating fluid to be refrigerated by said refrigerant system, and means responsive to flow of the fluid in said circulating system for controlling the operation of said refrigerant system.

1,425,268. STUFFING BOX. ROBERT F. MASSA, New York, N. Y. Filed Nov. 20, 1918. Serial No. 263,274 10 Claims. (Cl. 286—7.)



1. Means for transmitting power through a wall, comprising a shaft section passing through the wall, a stuffing box at the point of passage, a bearing for said shaft section at each extremity thereof, and a flexible

coupling at each end of the shaft section immediately adjacent to the bearings, adapted to impart rotary mo-

tion without transmitting longitudinal and lateral thrusts to the shaft section.

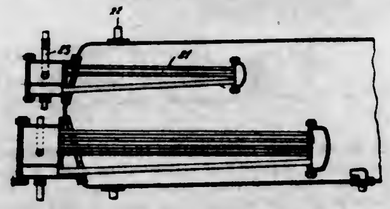
1,425,269. COMB. GRACE V. MILLER, Oakland, Calif. Filed June 16, 1921. Serial No. 478,158. 1 Claim. (Cl. 132—11.)

A hair and scalp cleaning comb, consisting of matched comb members, said members comprising a rear comb member having the back thereof provided with shoulders and having teeth terminating with barbs, and a front comb member disposed on said rear comb member and detainingly held thereon by the shoulders and barbs on the latter member, said front comb member having teeth registering with the teeth on said rear member and normally fitting the barbs on the teeth of the latter member, and a sheet of absorbent material disposed between said comb members, the sheet being slitted between the teeth of the comb members to form of the slitted portions brushes.

1,425,270. MAGAZINE BRACE. SAXTON JOSEPH MORGAN, Albany, Wis. Filed Apr. 28, 1921. Serial No. 465,152. 2 Claims. (Cl. 145—62.)

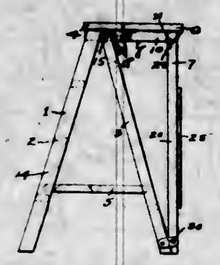
2. The combination with a brace having a relatively long spindle for operatively holding a work engaging tool, of a cylindrical tool magazine mounted concentric said spindle, said magazine being split transversely and having one of its parts securely fixed to said spindle and the other of its parts arranged for removal from said spindle to permit the entrance of tools to said magazine.

1,425,271. DOOR CATCH. FRITZ G. MÜRDEN, Cleveland, Ohio. Filed Apr. 20, 1922. Serial No. 555,781. 8 Claims. (Cl. 16—49.)



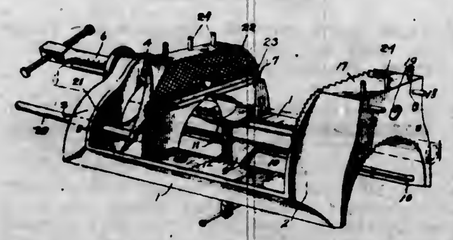
2. A door check, comprising a rod, a casing slidably mounted upon said rod within said housing, a brake shoe movably mounted in said casing, a cam member movably mounted in said casing, and spring means adapted for normally retracting said rod inwardly of the housing, whereby upon starting of said retracting movement by said spring, the rod will move said cam for forcing said brake shoe into engagement with the housing for breaking the retracting movement of said casing inwardly of the housing.

1,425,272. AUTOMOBILE BUMPER. ROY BURTON OLDER, Danville, Ill., assignor to Allith-Prouty Company, Danville, Ill., a Corporation of Illinois. Filed Mar. 23, 1921. Serial No. 454,752. 8 Claims. (Cl. 293—55.)



7. An automobile bumper comprising, in combination, a plurality of horizontally disposed vertically spaced parallel strips, and substantially Y shaped clips rigidly attached to the ends of said strips for uniting the same in a readily portable unitary structure, said clips being adapted for co-operation with means for applying said bumper to a vehicle.

1,425,273. STORAGE HEATER. ROBERT JEWETT PADDOCK, Maywood, Ill., assignor to The Griscom Russell Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1920. Serial No. 359,571. 3 Claims. (Cl. 257—199.)

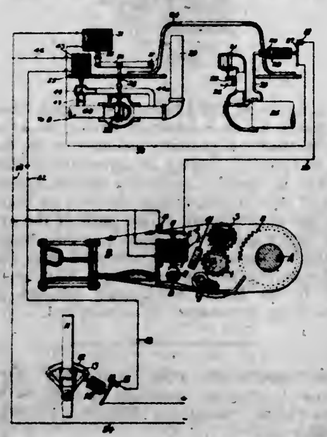


1. In an apparatus of the class described, a reservoir for the liquid to be heated, a heating element comprising a series of tubes projecting into the reservoir for the circulation of the heating medium, said tubes comprising a group of tubes of small bore distributed through the lower portion of the reservoir and having a common intake and a common discharge connection, and a return tube of large cross section connected to the common discharge of the small tubes and having a discharge connection outside the reservoir, a second smaller heating element of identical construction, and an intake opening in said shell for the liquid to be heated, said intake having a nozzle for directing the flow of the incoming liquid around said heating tubes.

1,425,274. EXTENSION-TOP STEPLADDER. JOHN F. PARKINSON, Palo Alto, Calif. Filed Sept. 23, 1920. Serial No. 412,417. 1 Claim. (Cl. 228—17.)

A step ladder comprising a step member having side rails, angle irons each having one of its flanges depending downwardly and secured to the top of one of said rails, a stationary top member secured to the other flanges of said angle irons and normally disposed in a horizontal position, brace members having pivotal connection with the downwardly depending flange portions of the angle irons and arranged adjacent the upper ends of the side rails, an extension top member, angle irons having their horizontal flanges connected with the extension top and pivotal connection between the inner ends of the angle irons carried by the stationary top and the angle irons on the extension top, supporting members for the extension top having their upper ends detachably engaged with the downwardly depending flanges of the angle irons carried by the extension top and their lower ends arranged flush with the lower ends of the brace members for the step portion and stationary top and pivotal connection between the lower ends of said brace and supporting members whereby said step member and its braces, together with the top extension and its supporting members are folded onto each other when not in use and folding braces connecting the step portion and its brace members adapted to be normally disposed in horizontal alignment when said folding brace members are in an operative position and folded inwardly toward each other when not in use.

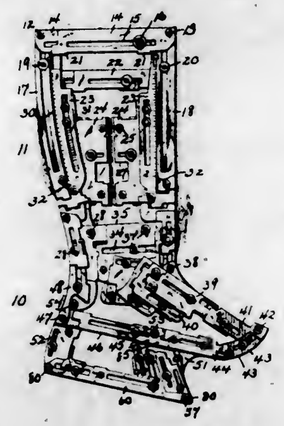
1,425,275. THREE-IN-ONE CLAMP AND VISE COMBINED. CHRISTIAN P. PAULSEN, Seattle, Wash. Filed May 12, 1921. Serial No. 468,890. 1 Claim. (Cl. 81—33.)



In a device of the character described, lateral longitudinally grooved frame bars, an arcuate bearing member connecting said bars at one end, an arcuate jaw member connecting said bars at the opposite end, an arcuate jaw member having sliding engagement with said frame bars and provided with a screw engaging said bearing member, and a clamp member slidable in the grooves of said frame bars and provided with a screw disposed at right-angles to the screw of said sliding jaw member.

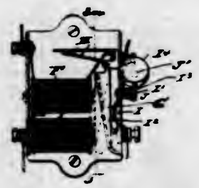
1,425,276. WELL PUMP. JOHN PENROD and ROBERT D. THOMPSON, Okmulgee, Okla. Filed Aug. 24, 1921. Serial No. 494,846. 2 Claims. (Cl. 103—80.)

1. In a pump for well casings, a barrel, a pump rod extending through the barrel and leaving a fluid outlet space between the same and the barrel, a standing valve at the lower end of the barrel, a valved plunger within the lower portion of the barrel connected to said rod, said barrel including a portion engageable by the pump rod upon upward movement of the latter beyond the normal upward limit of its stroke, provided with an internal tapering portion forming a valve seat and having apertures therethrough, a ring shaped tapering valve member around the rod normally seated downwardly on said seat and controlling the several apertures, and means carried by the pump rod to unseat the said valve prior to engagement of the rod with the barrel for lifting the latter.



1,425,277. CONTROLLING MECHANISM FOR LOCOMOTIVE BOOSTER MOTORS. FRANK R. PETERS, New York, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Dec. 31, 1921. Serial No. 522,061. 10 Claims. (Cl. 105—48.)

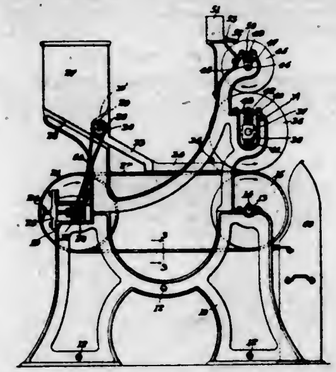
2. A control mechanism for locomotive booster motors comprising in combination, a booster throttle and elec-



trically operated means for opening said throttle the circuit of which is closed upon admission of live operating steam to the main cylinders of the locomotive.

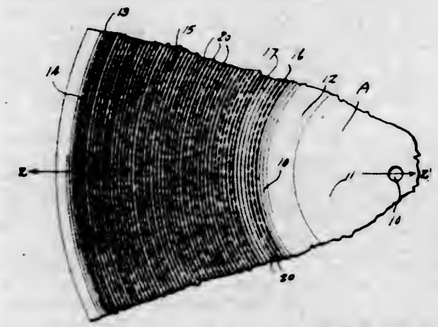
1,425,278. PATTERN FOR SHOEMAKING. JOHN P. PETRARCA, Arctic, R. I. Filed Dec. 9, 1920. Serial No. 429,329. 3 Claims. (Cl. 33—5.)

1. A pattern for shoes comprising a frame for outlining an upper, a frame for outlining a vamp, a frame for outlining a counter, and means for securing the frame for the counter either to the frame for the upper or that for the vamp.



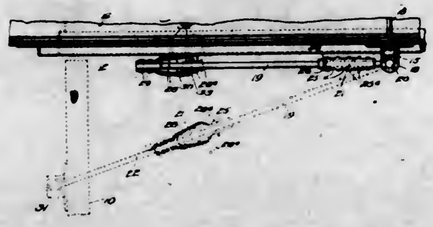
1,425,279. ELECTRIC SIGNAL ALARM. AARON T. PICKETT, Detroit, Mich. Filed Nov. 12, 1919. Serial No. 337,595. 4 Claims. (Cl. 200—106.)

3. In a device of the character described, including a magnet frame, an electro-magnet having an armature, a spring controlled arm pivotally mounted on the frame and adapted to normally overlap the armature of the electro-magnet and be thereby restrained against action of the spring, and said electro-magnet adapted to be energized to carry the armature out of the path of the arm to release the latter and thereby close a circuit to actuate an alarm, and an operating arm connected with the swinging arm whereby the swinging arm may be manually returned to its initial overlapping relation with the armature when the magnet is deenergized.



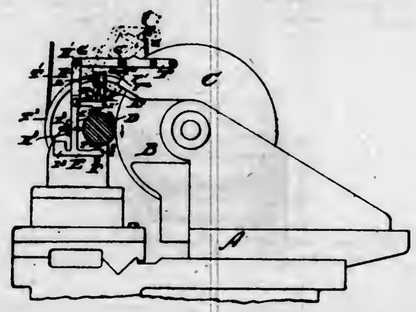
1,425,280. MACHINE FOR MARKING ARTICLES. WILLIAM A. PIERSON, Saratoga Springs, N. Y. Filed Oct. 11, 1919. Serial No. 330,131. 4 Claims. (Cl. 101—37.)

1. In a machine of the class described, a frame, an endless conveyor mounted therein, a printing cylinder, means for yieldingly supporting the printing cylinder, means for yieldingly maintaining the printing cylinder



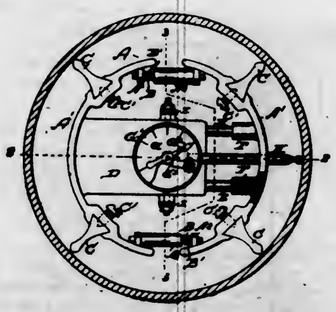
normally in contact with the conveyor, and an inking cylinder, normally maintained in continuous yielding contact with the surface of the inking cylinder.

1,425,281. PHONOGRAPH RECORD. DONALD B. PORTER, San Francisco, Calif. Filed Feb. 10, 1921. Serial No. 443,882. 8 Claims. (Cl. 214—42.)



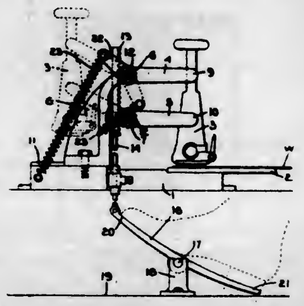
1. A phonographic record having a complete selection thereon and a separately recorded excerpt from a second selection recorded upon the inner zone of the record and connected to the complete selection by a stylus-guiding groove.

1,425,282. DOOR HOLDER. EDWARD POSSON, Chicago, Ill. Filed Sept. 12, 1919. Serial No. 323,399. 6 Claims. (Cl. 292—275.)



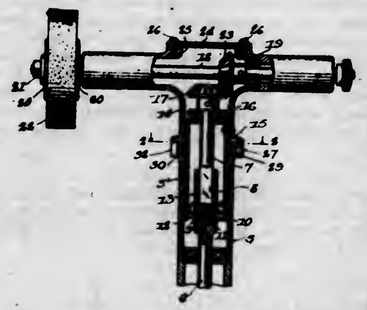
1. In combination, a door, a door casing, a rod pivoted at one end on said door, a second rod pivoted at one end on said casing, a stop member secured to the other end of one of said arms, and a spring secured to the other end of the other of said arms and adapted to engage directly said stop member.

1,425,283. GRINDING GAUGE. FREDERICK J. PRATT, Detroit, Mich. Filed Apr. 2, 1921. Serial No. 458,010. 6 Claims. (Cl. 33—147.)



1. In a device of the character described; a member adapted to partially encircle the element to be measured; a yieldable support adapted for attachment to a grinding machine, in which said member is pivoted; a plurality of adjustable elements mounted in said member adapted to impinge upon the element to be measured; an indicating gauge; a yieldable stylus adapted to bear upon the element to be measured and cooperating with the gauge to effect a gauge reading; and a gem-stone fitted to the end of the stylus to co-operate with the adjustable elements to determine the diameter of the element measured.

1,425,284. GAUGE FOR CYLINDERS. FREDERICK J. PRATT, Detroit, Mich. Filed Mar. 5, 1921. Serial No. 449,710. 6 Claims. (Cl. 33—178.)

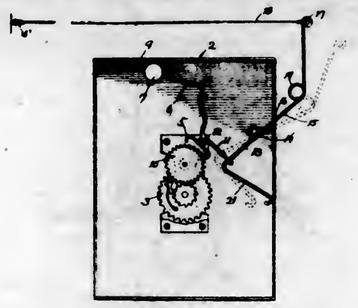


1. In a device of the character described, a divided cylindrical shell, yieldable means connecting the portions of the shell together, radially disposed removable shoes supported in the wall of each portion of said shell, their outer edges being adapted to contact with the wall of a cylinder bore, whereby the central axis of the device may register with the central axis of the cylinder bore, an indicating gauge supported centrally within said shell, and a yieldable stylus adapted for traversing the bore of the cylinder to be tested and to actuate said indicating gauge by its horiosntal movement, whereby variations in the bore of the cylinder may be determined.

1,425,285. MARKING MACHINE. FRED A. PUTNAM, Keene, N. H., assignor to Markem Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 22, 1921. Serial No. 439,257. 2 Claims. (Cl. 101—301.)

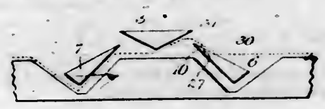
1. In a marking machine, the combination with a bed having a work support and an inking pad located in parallel planes, of a vertical support rising from the bed between the work support and pad, two shafts journalled in said support, an arm rigid with each shaft, said arms having a parallel relation, a printing head pivotally connected to the ends of the arms, a gear on each shaft, a rack meshing with said gears, a treadle connected with said rack, movement of the rack turning the shafts thereby to carry the printing head from the work support on one side of the vertical support to the pad on the other side of the vertical support, and a spring acting on one shaft and normally holding the printing head slightly elevated from either extreme position.

1,425,286. GRINDER. LOUIS QUARLES, Milwaukee, Wis. Filed Jan. 6, 1922. Serial No. 527,292. 6 Claims. (Cl. 51—166.)



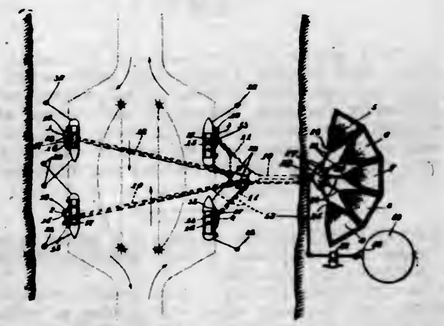
1. In a grinder, the combination of a standard, a grinder head including a housing and grinder shaft, a drive shaft operatively connected to said grinder shaft, interlocking connection elements on said housing and standard engaged and disengaged by a longitudinal movement of the one relatively to the other to vary the angular position of said grinder head and positively locking the same against rotation.

1,425,287. FIRE ALARM. MICHAEL D. S. RICCIO, Jamestown, N. Y. Filed Dec. 8, 1919. Serial No. 343,261. 1 Claim. (Cl. 116—106.)



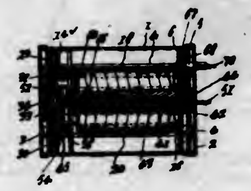
In a fire alarm, a casing, a main spring, a gear train driven from said main spring and including an escapement wheel, an escapement pawl co-acting with said wheel, a hammer lever integral with said pawl and having a tail arm, a spring lever having an outer arm pro-

vided with a coil therein and an inner angularly bent arm engaging said tail arm to hold said hammer lever set against vibration, and a fusible cord connected to said



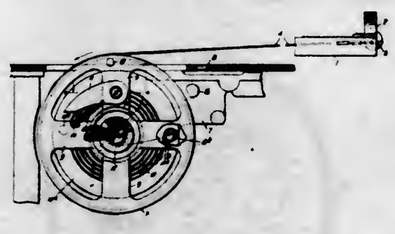
outer arm, the free end of said inner arm having a bearing against the casing to thereby tension said arm and the outer arm of said spring lever being thereafter tensioned adjustably in the tensioning of said cord.

1,425,288. TUCKING MECHANISM FOR KNITTING MACHINES. FRANK W. ROBINSON, Reading, Pa., assignor to The Nolde & Horst Co., Reading, Pa., a Corporation of Pennsylvania. Filed Apr. 24, 1919. Serial No. 292,262. 1 Claim. (Cl. 66—21.)



In a knitting machine comprising series of long butt and of short butt needles, certain of which are provided with relatively long latches; knitting cams including a two-part latch-clearing cam comprising a fixed part operative upon all the needles sufficiently only to clear the loops of the short-latch needles and a movable tucking-cam top-extension part normally spring-pressed toward the needles and adapted to automatically position under the butts of the latter for increasing the latch-bearing movements imparted thereto; and intermittently operated means for positively withdrawing said tucking cam extension.

1,425,289. SYSTEM FOR DISPOSAL OF BILGE WATER AND RECOVERY OF SLUDGE. WILLIAM C. ROBINSON, Baltimore, Md. Filed Feb. 9, 1922. Serial No. 535,193. 9 Claims. (Cl. 210—51.)

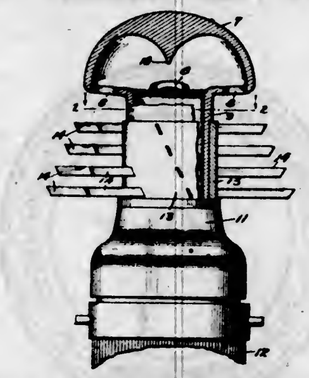


1. A system for the disposal of bilge water and the recovery of sludge and oil from bilge water consisting of a station accessible to navigable water so the ships to be discharged can come along side the same, a settling tank or basin, a pipe connecting the station to the settling tank, means for connecting the pipe to the liquid in the bilge of a boat and means for pumping the liquid from the bilge through the pipe to the settling tank, the settling tank having means for releasing the water from beneath the sludge and oil.

1,425,290. RAZOR-BLADE SHARPENER. AXEL RUDOLPH SALSTROM, Jersey City, N. J. Filed July 8, 1910. Serial No. 309,328. 5 Claims. (Cl. 51—86.)

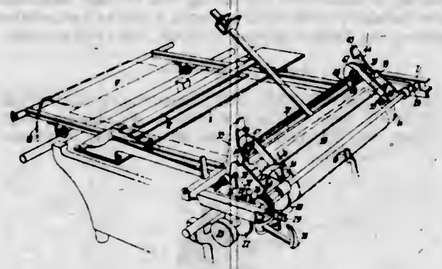
2. A razor sharpener comprising a supporting frame, pairs of sharpening rolls mounted in the frame and disposed at opposite sides of a central supporting space, an oscillating blade holder arranged in said space, means to rotate said rolls, yieldable means associated with the blade rotating means for rocking said blade holder, and means for arresting the movement of the blade holder while permitting of the operation of the rolls.

1,425,291. TYPEWRITING MACHINE. GEORGE A. SEIB, Ilion, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Aug. 30, 1919. Serial No. 320,938. 6 Claims. (Cl. 188—189.)



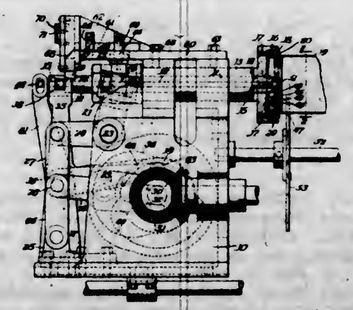
3. In a typewriting machine, the combination of a spring drum, a stop pivotally mounted on said drum, a second stop on said drum, a relatively stationary stop, and a spring normally maintaining said pivoted stop ont of position for co-operation with said stationary stop, said pivoted stop automatically throwing to operative position against said second stop during abnormally rapid movements of said drum.

1,425,292. FLUID TRACTOR MOTOR. SIDNEY C. SLADDEN, New York, N. Y. Filed Feb. 14, 1921. Serial No. 444,992. 7 Claims. (Cl. 137—70.)



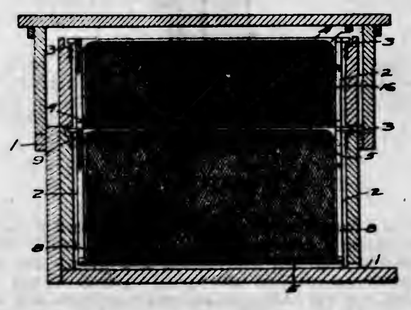
1. An apparatus as characterised comprising a hollow head having an unbroken front wall, and a rear wall having a centrally disposed receiving opening, and a series of delivery openings surrounding said receiving openings

for delivering the fluid from said head in lines approximately parallel to the fluid being delivered to said head;



and rotative means disposed in the path of fluid delivered from said delivery openings to be rotated thereby.

1,425,293. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 18, 1918. Serial No. 262,939. 33 Claims. (Cl. 197—126.)

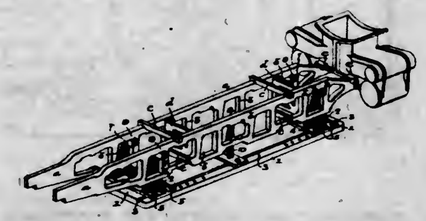


1. The combination with a revoluble platen, of line-spacing mechanism therefor, mechanism for displacing the platen from printing position, and means operable by said displacing mechanism for line-spacing the platen.

1,425,294. NECKING MACHINE. JULIUS A. STOCK, Cicero, Ill., assignor to W. C. Ritchie & Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1921. Serial No. 469,741. 5 Claims. (Cl. 113—48.)

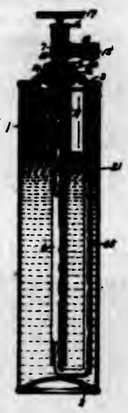
1. In a necking machine of the character described, the combination of a plunger of external size corresponding to the internal caliber of the neck to be formed, an expansible and contractible die adapted to be expanded to a size corresponding to the internal original caliber of the body to be necked adjacent to the neck, means to insert said plunger and die in and withdraw them from the body to be necked, means to expand and contract said die, a cup-shaped die adapted to slide over the end portion of the body to be necked over said plunger and to contract such portion of the body between itself and the plunger to provide the neck, and means to reciprocate said cup-shaped die, such reciprocation being the only movement of the die during the neck-forming operation.

1,425,295. BEEHIVE FRAME. FREDERICK W. SUMMERFIELD, Toledo, Ohio. Filed Feb. 21, 1921. Serial No. 446,828. 3 Claims. (Cl. 6—10.)



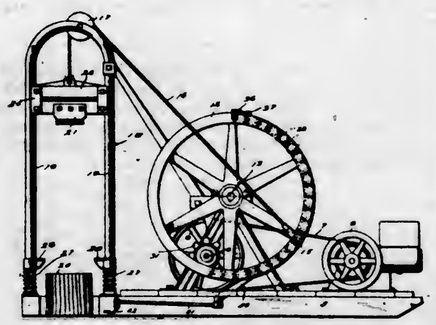
1. In a bee-hive frame consisting of top, bottom and side bars, one of the bars having a T cross section for supporting a comb on the web of the T, the web of the T having cell starting depressions.

2. In a bee-hive frame consisting of top, bottom and side bars, a plurality of the bars having a T cross section for supporting a comb on the web portions of the bars, the webs of the bars having cell starting depressions.



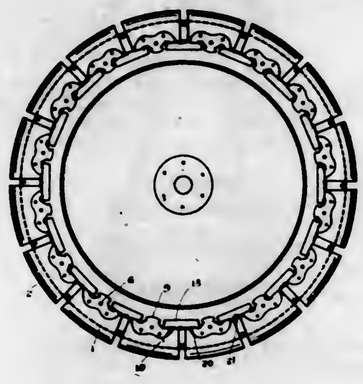
3. In a bee-hive construction a frame having top, bottom and side bars, a bar connecting the top and bottom bars and located between the side bars, the said bars having flanges, combs supported by the bars and secured in position by the flanges the flanges having cell starting depressions.

1,425,296. JIG FOR ASSEMBLING LOCOMOTIVE FRAMES. JOHN P. SYKES, Wallingford, and SAMUEL R. LIMERICK, Philadelphia, Pa., assignors to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 9, 1921. Serial No. 476,183. 7 Claims. (Cl. 29—89.)



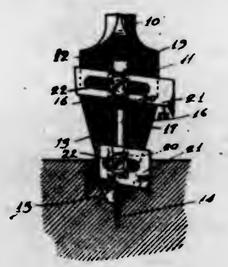
1. The combination in a jig, of a base; saddles mounted on the base, each saddle having two uprights spaced apart, the uprights on one side being arranged to support one side frame of a locomotive, and the uprights on the other side being arranged to support the other side frame of a locomotive and when the two frames are connected together they can be bodily removed from the uprights by a lateral movement.

1,425,297. HAND FIRE EXTINGUISHER. WALTER H. TIBBALS, Syracuse, N. Y. Filed Dec. 17, 1913. Serial No. 807,222. 3 Claims. (Cl. 299—95.)



3. In a fire extinguisher of the class described, a receptacle having a delivery passage in one end and a valve therefor, a main tube leading from said passage into the receptacle, an auxiliary tube having a portion thereof extending into the main tube and turnable therein and another portion extending along the outside of the main tube, said auxiliary tube having an independent endwise movement and provided with a valve for alternately closing and opening communication between the main tube and passage as the receptacle is reversed end for end.

1,425,298. WOOD-SPLITTING MACHINE. ARTHUR RALPH TREAT, Gypsum, Kans. Filed July 13, 1921. Serial No. 484,463. 2 Claims. (Cl. 144—193.)



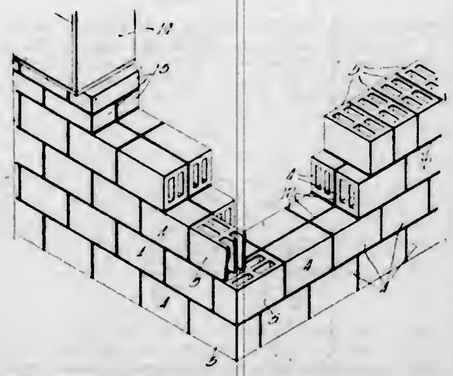
1. A machine comprising a power gear, a mutilated gear having an arcuate series of teeth adapted for engagement with said power gear, a tool having a flexible element connected to said mutilated gear and forming a means whereby to elevate the tool, the line of pull on said flexible element being movable across the axis of said mutilated gear whereby the initial downward movement of said tool moves the arcuate series of teeth into engagement with said power gear, the teeth at one end of said series of teeth being yieldably supported.

1,425,299. TIRE PROTECTOR. GILLES VALIQUETTE, Montreal, Quebec, Canada. Filed Nov. 30, 1921. Serial No. 518,775. 1 Claim. (Cl. 152—16.)

In a tire protector, a fastening for a plurality of tread pieces comprising plates and links, each of said plates having a middle lug with minor guard lugs therefrom and corner lugs inwardly turned at the ends and forming with the said middle lug link recesses, and links each formed of a bent plate having a curved back slotted towards the ends to receive a corner lug in each recess.

1,425,300. COMBINED EXPANSION AND COUNTERBORING BIT. WILLIS F. WALL, Watsonville, Calif. Filed Jan. 25, 1921. Serial No. 439,790. 5 Claims. (Cl. 145—127.)

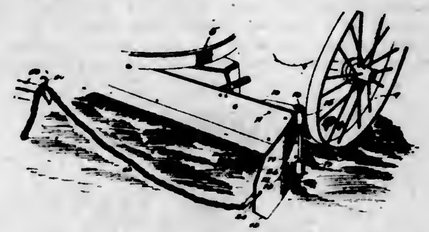
1. A combined expansion and counterboring bit comprising a semi-conical head provided with a lead screw and a cutting flange; and having a longitudinal groove disposed along the axis of the head; a cutter blade; and means operatively connected to the blade and slidably engaging the slot whereby said cutter blade may be adjusted longitudinally and radially.



1,425,301. HORSE-BLANKET RETAINER. WETHERELL FRANCIS WARNSFORD, London, England. Filed Feb. 23, 1921. Serial No. 447,251. 1 Claim. (Cl. 54—79.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

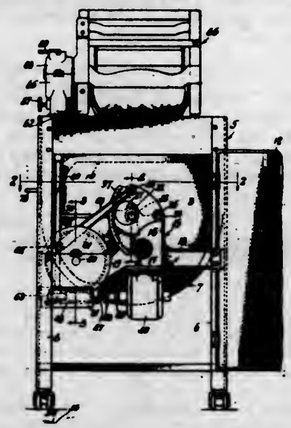
A horse blanket retainer, comprising in combination, a median strap adapted to pass between the legs of a horse, a pair of shoulder straps fastened at one end of said median strap, fastening devices carried on the other ends of the shoulder straps for engagement with a blanket, a pair of lateral extensions on the other end of said

median strap and fastening devices carried on the free ends of said lateral extensions for engagement with the blanket.



1,425,302. BUILDING BRICK. BERNARD F. WEBER, Chicago, Ill. Filed June 28, 1919, Serial No. 306,086. Renewed May 20, 1922. Serial No. 564,622. 3 Claims. (Cl. 72—41.)

1. A composite wall or the like comprising courses of hollow stretcher bricks with corner hollow header bricks all substantially the same size and binder courses of the hollow header bricks, each stretcher and header brick presenting four plane unbroken surfaces, each stretcher brick having a web extending longitudinally therethrough and each header brick having two transverse webs extending from side to side.

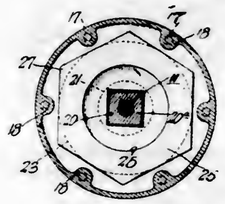


1,425,303. ROAD GRADER. CHARLEY H. WELSH, Norman Township, Grundy County, Ill. Filed July 13, 1921. Serial No. 484,863. 3 Claims. (Cl. 37—7.)

1. An attachment for road graders comprising an attaching plate adapted to be secured to the scraping blade of the grader and having a pair of alined hinge barrels, a wing having a triangular portion bent upon itself and secured to the wing, whereby to form a hinge barrel

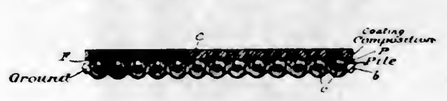
alined with said first and second named hinge barrels, and a hinge pin passed through said first and second named hinge barrels.

1,425,304. GEARING. BRUCE CLARK WHITE, New York, N. Y., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1920. Serial No. 379,011. 8 Claims. (Cl. 74—50.)



1. In combination with a support, a horizontal operating shaft journaled therein, an externally toothed segmental gear fixed on said operating shaft, an internally toothed segmental gear journaled on an axis at one side of and in substantially the horizontal plane of said operating shaft, a horizontal drive shaft located in a plane below and extending transversely with respect to said operating shaft, a worm connected to said shaft, a worm gear journaled on an axis parallel with but below and spaced on one side of the vertical plane of the operating shaft said worm gear meshing with said worm, and a pitman connecting said worm gear with said internally toothed segmental gear.

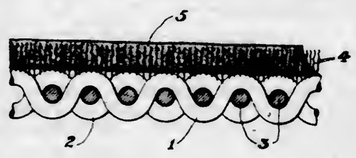
1,425,305. FRICTION DRIVE COUPLING. BRUCE CLARK WHITE, New York, N. Y., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 3, 1920. Serial No. 386,268. 3 Claims. (Cl. 64—106.)



3. A friction drive coupling comprising, in combination with a drive shaft and a driven shaft in line therewith, a casing secured at one end to the drive shaft and open at the other end, a cover fixed to and closing the casing, said cover having a sleeve in which the driven shaft has bearing, a rectangular sleeve fixed to that end of the driven shaft within the casing, said sleeve including a radial flange, a plurality of closely spaced discs arranged

in the casing concentric with the shaft, the alternate discs each being polygonal in outline so that the angles thereof will engage with parts of the casing and be rotated thereby, and each having an enlarged central aperture of a diameter greater than that of the rectangular sleeve so that it may move in any direction in its own plane, the other discs each having a rectangular

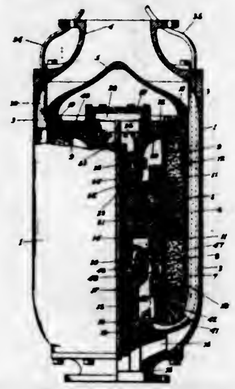
opening through which the rectangular sleeve extends so that said discs are non-rotative with respect to the driven shaft, the end disc of said last mentioned discs engaging against the radial flange of said sleeve, and bolts extending through the cover and engaging the outermost polygonal disc, said bolts providing for the adjustment of the spacing between all of the discs.



1,425,306. COATED FABRIC AND PROCESS OF MAKING SAME. JOHN A. WILSON, Elizabeth, N. J., assignor to The Duratex Company, Newark, N. J., a Corporation of New Jersey. Filed Dec. 12, 1919. Serial No. 344,353. 21 Claims. (Cl. 91—68.)

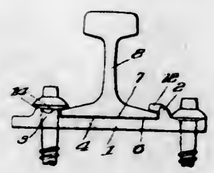
9. The process of making coated fabrics comprising applying a suitable substantially continuous coating to the pile of a pile fabric so as to cover the surface of said pile and extend substantially to the ground of fabric.

19. A coated fabric comprising a fabric base, a substantially continuous coating, and threads secured in said fabric base and having short free bristling portions extending outwardly from said base and embedded in said coating.



1,425,307. COATED FABRIC AND PROCESS OF MAKING SAME. JOHN A. WILSON, Elizabeth, N. J., assignor to The Duratex Company, Newark, N. J., a Corporation of New Jersey. Original application filed Jan. 12, 1920, Serial No. 350,981. Divided and this application filed July 14, 1921. Serial No. 484,786. 10 Claims. (Cl. 91—68.)

1. A coated fabric comprising a fabric base having a singed nap imbedded in a coating of suitable composition applied thereto.

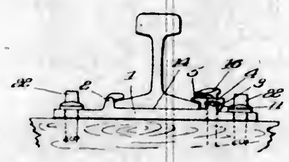


6. The process of making coated fabrics comprising applying a suitable coating to the singed nap of the fabric.

1,425,308. UNIT PUMP AND MOTOR FOR SUBMERGED SERVICE. WALTER R. WOOCK, HERBERT J. WOOCK, and ERIC M. WOOCK, Lodi, Calif., assignors to Superior Manufacturing Company, Lodi, Calif., a Corporation. Filed May 24, 1921. Serial No. 472,281. 7 Claims. (Cl. 103—87.)

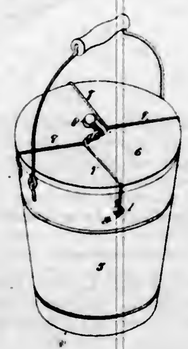
1. A pump comprising a casing structure, a driven shaft turnably mounted therein and provided with an impeller member, upper and lower bearings for the shaft, an oil reservoir, a pipe leading therefrom to the upper bearing of the shaft and another pipe leading thereto from the casing below the lower shaft-bearing, and means for maintaining a constant circulation of oil through said pipes.

1,425,309. TIE PLATE. FRANKLIN E. ABBOTT, Buffalo, N. Y., assignor to Lackawanna Steel Company, Lackawanna, N. Y., a Corporation of New York. Filed Mar. 7, 1916, Serial No. 82,635. Renewed Jan. 13, 1922. Serial No. 529,094. 19 Claims. (Cl. 238—304.)



1. A tie-plate for railways comprising a base having a shoulder on its upper surface, said shoulder being provided with a hook adapted to extend over the edge of the rail flange and engage therewith to prevent upward movement of the rail but spaced therefrom slightly, said hook being shorter longitudinally than the tie-plate and having a curved under surface forming a short surface for engagement with the rail.

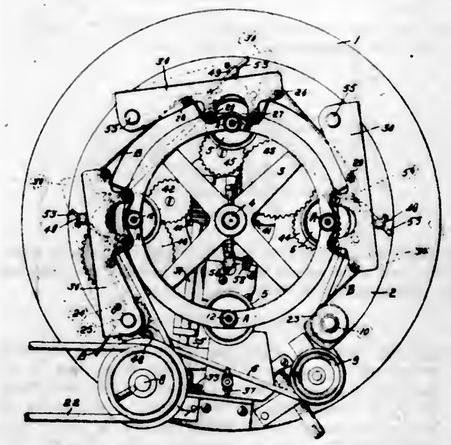
1,425,310. TIE PLATE. FRANKLIN E. ABBOTT, Buffalo, N. Y., assignor to Lackawanna Steel Company, Lackawanna, N. Y., a Corporation of New York. Original application filed May 26, 1911, Serial No. 629,654. Patent No. 1,178,200, dated Apr. 4, 1916. Divided and this application filed Mar. 10, 1916, Serial No. 83,220. Renewed Jan. 13, 1922. Serial No. 529,095. 14 Claims. (Cl. 238—304.)



1. A tie-plate comprising a base, parallel shoulders on the upper surface thereof, one shoulder having a hook

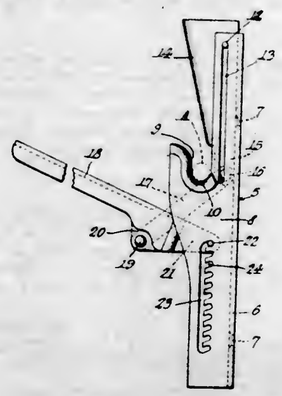
adapted to overhang the edge of the rail-flange, the other shoulder having a wider upper portion and a narrower

neck there below, and a separable clip having a groove to fit the second shoulder and a hook to overhang the adjacent flange edge of the rail.



1,425,311. COVER FASTENER FOR SHIPPING PAILS. JULIUS C. ANDERSEN, San Francisco, Calif., assignor to California Barrel Company, San Francisco, Calif., a Corporation of California. Filed Nov. 30, 1921. Serial No. 518,858. 2 Claims. (Cl. 217—89.)

1. In combination with a shipping pail, of securing wires for holding the cover of the pail against removal during transit, fastening means comprising an enlarged head having a shank bifurcated to form projected uniting members of a length adapted to project beyond the inner surface of a stave for upsetting purposes, said means embracing and holding the terminal end of the securing wires of the pail and adapted to be driven into the pail substantially flush with the outer surface thereof for embedding the terminal end portion of the securing wires in the staves of the pail, and sealing means for uniting the securing wires one to the other.

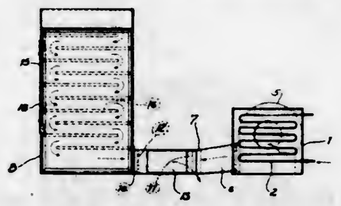


1,425,312. STRIPING MACHINE. HRANT G. ANTARAMIAN, Kenosha, Wis. Filed Sept. 9, 1920. Serial No. 409,119. 5 Claims. (Cl. 51—145.)

1. In combination, a rotatable table, a plurality of rotatable work supports mounted on said table, means for yieldingly holding a strip of abrading material against pieces of work in said holders, mechanism for moving said strip away from and then toward the work, and other mechanism co-ordinated with the aforesaid mechanism to rotate the table through an angular distance

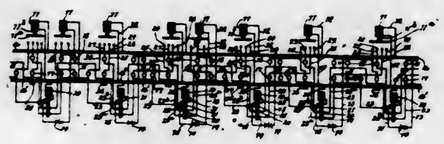
corresponding to the angular distance between two consecutive holders while the strip is being held clear of the work.

1,425,313. CLAMPING DEVICE FOR CLOTHESLINES. CHARLES L. BARTHOLOME, Terre Haute, Ind. Filed May 6, 1922. Serial No. 558,971. 4 Claims. (Cl. 24—136.)



1. A rope clamping device comprising a body portion having stationary jaws, a wedge element movable longitudinally of the body portion toward and away from the jaws, and means to move the wedge element, said means comprising a pivoted lever adjustably mounted upon the body portion to be shifted longitudinally thereof, and a link connecting the lever and the wedge element.

1,425,314. CABINET DRIER. HARRY BENTZ, Montclair, N. J. Filed Apr. 6, 1921. Serial No. 458,983. 4 Claims. (Cl. 34—39.)



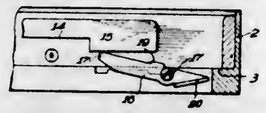
1. A drying apparatus comprising in combination a cabinet having a partition forming two ajacent passage ways within the cabinet connected in series, means for supporting material to be dried within said passageways, means for forcing drying gas through said cabinet, and

means for reversing the flow of gas in said passageways, said means comprising a chamber communicating with both said passageways at the same end, said chamber

having outlet apertures therein, closures for said apertures, and valve means within said chamber for changing the passageway into which the air flows.

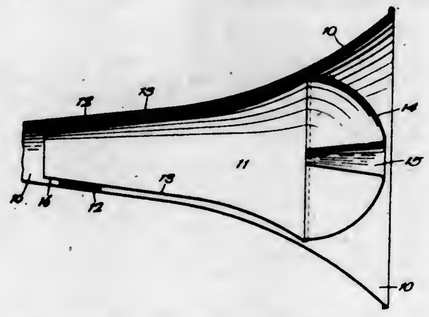
1,425,315. TRACK CIRCUIT FOR TRAIN-CONTROL SYSTEMS. CHARLES W. BREWSTER, New York, N. Y., assignor to Brewster Train Control Co. Inc., New York, N. Y., a Corporation of New York. Continuation of application Serial No. 70,579, filed Jan. 6, 1916. This application filed Dec. 6, 1916, Serial No. 135,286. Renewed July 17, 1918. Serial No. 245,405. 30 Claims. (Cl. 246—63.)

27. A train signal and control mechanism embodying a plurality of series of track magnets included in circuit with a source of energy and affording a plurality of magnetic fields extending within a succession of blocks, combined with vehicle carried means movable within the magnetic fields afforded by said track magnets.



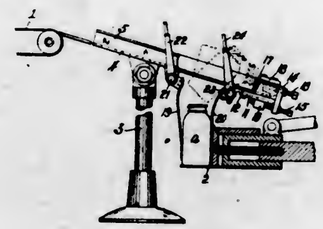
1,425,316. MULTIPLE CONTROL MECHANISM. LAWRENCE R. BUCKENDALE, U. S. Army, assignor to Newton D. Baker, Secretary of War, trustee. Filed Oct. 14, 1919. Serial No. 330,672. 14 Claims. (Cl. 180—17.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A control mechanism for a tracklaying tractor, comprising two separate speed changing controlling units, each unit operated by a shifting lever, a track brake control connected to both of said levers, and a single foot pedal for operating said track brake control, said connection displaced by the shifting of the lever from neutral to prevent application of braking pressure on the mechanism controlled by such lever.



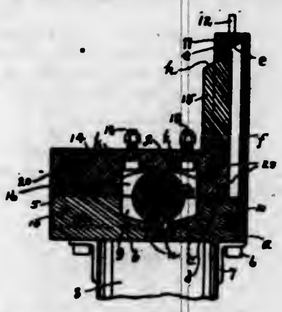
1,425,317. JEWELRY TRAY. CHARLES E. CHAPMAN, Chicago, Ill. Filed Aug. 26, 1921. Serial No. 495,578. 5 Claims. (Cl. 211—28.)

2. In combination, a tray comprising a frame, shelves pivoted therein, a common connecting element pivotally connecting said shelves, a portion of the under side of said common connecting element being provided with teeth, a pivotally mounted locking member disposed on



said tray and adjacent ot said toothed portion, and means for holding said locking member in engagement with said toothed portion.

1,425,318. MUTE FOR MUSICAL INSTRUMENTS. ERNST A. COUTURIER, Laporte, Ind. Filed May 14, 1921. Serial No. 469,548. 5 Claims. (Cl. 84—400.)

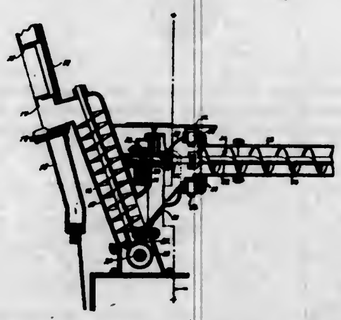


1. In a mute, the combination with a bell-shaped tubular body portion, of an outwardly convexed hemispherical closure for the larger end thereof, and a re-entrant sound delivery tube intersecting the center of said closure and tapering inwardly therefrom, the inner end of said tube terminating in the plane of the maximum diameter of said body portion.

1,425,319. ARTICLE SETTING-UP MEANS. FRED W. DANBERG, Toledo, Ohio. Original application filed Dec. 22, 1919. Serial No. 346,737. Divided and this application filed Jan. 17, 1921. Serial No. 437,699. 7 Claims. (Cl. 193—27.)

1. In an article setting-up means, an inclined trough-like member having an opening intermediate its ends over which an article jumps in sliding down the incline, and a bumper disposed at the forward end of the member in position to stop the forward movement of an article with the center of gravity of the article disposed at the rear of the forward side of said opening whereby the article may be toppled by gravity rearwardly down through the opening and be delivered in upright position to a subjacent surface.

1,425,320. BRIDGE SHOE. ROBERT Z. DRAKE, Omaha, Nebr. Filed Nov. 12, 1921. Serial No. 514,545. 6 Claims. (Cl. 14—16.)

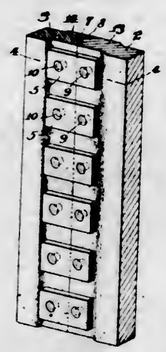


1. In a shoe for the purposes described, a stationary block having a recess and provided with an upright casing, a second block movably disposed upon and having a recess opening on the recess of the stationary block and also having an upright locking-plate engaging in said casing, and a roller disposed in the recesses of said blocks.

1,425,321. REAR SIGHT FOR RIFLES AND LIKE SMALL ARMS. HARRY REGINALD LEYCESTER ETHERINGTON, Pinner, England. Filed Jan. 21, 1922. Serial No. 530,962. 9 Claims. (Cl. 33—53.)

1. A rear sight for rifles and like small arms comprising a body part fixed to the stock of the rifle against either vertical or lateral movement relative to said stock, a pair of slotted elements adapted to slide at a suitable angle to one another in said body part, and means for imparting a sliding movement to said slotted elements independently of one another.

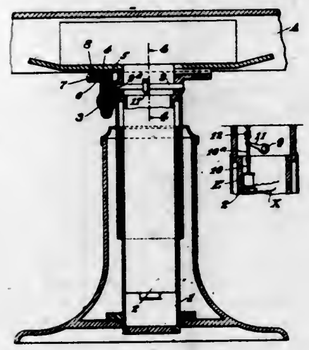
1,425,322. LOCOMOTIVE STOKER. ROBERT E. JACKSON, Princeton, W. Va., and BIRD O. YEARWOOD, Toccoa, Ga., assignors to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Dec. 2, 1920. Serial No. 427,800. 4 Claims. (Cl. 110—104.)



1. A locomotive stoker comprising, in combination, a fuel elevator comprising a conduit having upwardly diverging walls, an elevating member in said conduit, and means to scatter the loose fuel delivered by said elevator within a fire-box.

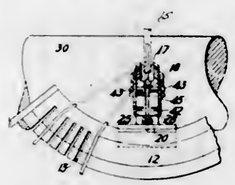
1,425,323. PENCIL. FREDERICK H. KAY, Chicago, Ill. Filed June 2, 1921. Serial No. 474,395. 6 Claims. (Cl. 120—19.)

4. A pencil having in its body a bore, the rear end of which is closed, an impeller freely slidable within the bore, a block and a lead, all slidingly arranged within the bore in the order named, the lead being at the open end of the bore, and means associated with the block for preventing its movement in a rearward direction whereby the impeller may move the lead through the medium of the block by impact in a forward direction only, substantially as described.



1,425,324. SAFE OR VAULT WALL. ANTHONY KENNEDY, Drexel Hill, Pa., assignor to The Hollar Company, Philadelphia, Pa., a Corporation of New York. Filed Nov. 15, 1918. Serial No. 262,636. 1 Claim. (Cl. 109—1.)

A safe or vault wall comprising two wall plates formed of unmachinable metal and having contacting edge portions, the edge portion of one plate having a longitudinally extending rib projecting into a longitudinally extending groove in the edge portion of the other plate and preventing lateral separation of the plates, and a connecting plate arranged against the inner surfaces of

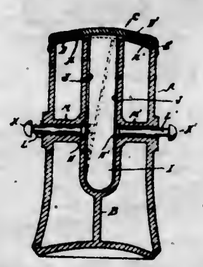


the wall plates and crossing the joint between them, the connecting plate being secured to the wall plates by studs formed integral with the wall plates and riveted in holes in the connecting plate and preventing edgewise separation of the wall plates.

1,425,325. RECLINING-BAR CLAMP FOR BARBERS' CHAIRS. WALTER F. KOKEN, St. Louis, Mo. Filed Dec. 13, 1920. Serial No. 430,389. 1 Claim. (Cl. 155—25.)

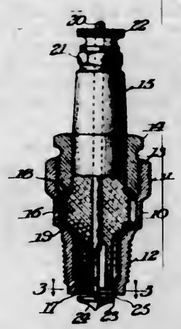
A barber's chair or the like provided with a stem, an adjustable back and an adjustable apron connected so as to move in unison, a reclining bar for controlling the position of said back and apron, a spring pressed clamp for holding said reclining bar in adjusted position, a horizontally-disposed rock shaft journaled in the stem of the chair, co-operating means on said rock shaft and clamp for releasing the clamp when said shaft rocks in one direction, an arm on said rock shaft, a spring that co-operates with said arm to normally hold said rock shaft in a position wherein it has no effect on said clamp, and an electro magnet arranged inside of the stem of the chair and operatively connected with the arm on said rock shaft for moving said shaft in a direction to cause it to release the reclining bar clamp.

1,425,326. TYPEWRITING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 10, 1920. Serial No. 409,323. 17 Claims. (Cl. 197—43.)



1. A type-guide for the types of a typewriting machine, forming a new article of manufacture and comprising a base or attaching portion, a central pair of spaced jaws rising therefrom and forming a central guide-slot, two lateral pairs of spaced jaws carried by the respective jaws of said central pair of jaws and forming lateral guide-slots disposed at a radial angle to the central guide-slot and to each other, and separate means for independently relatively adjusting the jaws of each pair of jaws to vary the width of each of the guide-slots.

1,425,327. FLOTATION PROCESS. ROTER LUCKENBACH, Brooklyn, N. Y., assignor to Luckenbach Processes, Inc., San Francisco, Calif., a Corporation of Nevada. Filed Feb. 9, 1920. Serial No. 357,355. 5 Claims. (Cl. 83—85.)

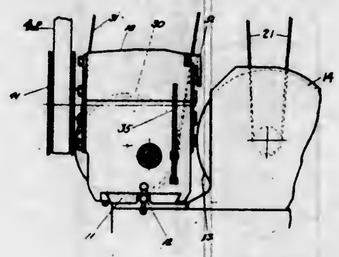


1. The process of concentrating ore by flotation, which comprises adding greasetar product of the distillation of greasewood to the pulp, aerating the pulp to form a froth, and separating the froth from the pulp.

1,425,328. CONDIMENT HOLDER. JOSEPH L. MEDICI and CHARLES O. MEDICI, Detroit, Mich. Filed Feb. 14, 1921. Serial No. 444,798. 5 Claims. (Cl. 65—45.)

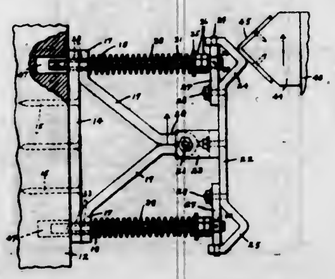
5. A condiment holder, comprising a casing having a partition for dividing the same into a plurality of compartments, a cover having perforated portions arranged above the respective compartments, valves adjacent to said cover for the respective compartments, and a member provided with substantially parallel resilient integral arms secured to said valves for separately operating each in both directions of movement.

1,425,329. SPARK PLUG. ADOLPH A. MELLBLOM, Chicago, Ill. Filed Aug. 26, 1918. Serial No. 251,370. 1 Claim. (Cl. 123—168.)



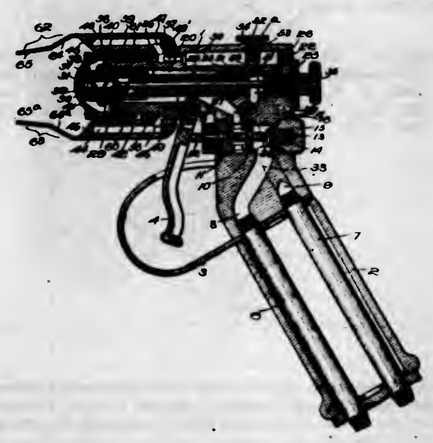
A spark plug having a shell and an electrode having a member secured thereto, said member being arranged with respect to the shell to permit a spark to occur between it and the shell, said member having a concave conoidal deflecting surface.

1,425,330. ALLOY. SVEND M. MEYER and WILLIAM JAMES, Brooklyn, N. Y., assignors to Magno Storage Battery Corporation, New York, N. Y., a Corporation of Delaware. Filed June 23, 1921. Serial No. 479,801. 1 Claim. (Cl. 75—1.)



An alloy comprising, as essential ingredients, in the neighborhood of 50% tin, 25% lead, 17% zinc and 8% antimony.

1,425,331. GRINDING MACHINE. CHARLES W. OLSON, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Feb. 16, 1920. Serial No. 358,986. 8 Claims. (Cl. 51—237.)



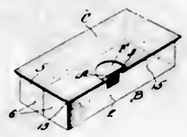
1. In a device of the class described, the combination of a grinding wheel, a revolving head, spring collets carried by said head and movable with said head past the grinding surface of said wheel, devices carried by said head for holding said collets in clamping position during the grinding operation, means actuated by rotation of said head for moving said collets to releasing position after passing the grinding position, rotatable spindles carried by said head and containing said collets, and means for rotating said spindles and collets, said spindle rotating means comprising a gear carried by each spindle, a central shaft and a gear carried by said shaft meshing with the gears on said spindles, the axes of said collets being parallel with said central shaft.

1,425,332. GATE LIFTING AND RELEASING MECHANISM FOR ELEVATORS. ALDEN H. PACKARD, Woburn, Mass., assignor of one-half to J. Donald Robbins, Boston, Mass. Filed Aug. 22, 1921. Serial No. 494,046. 5 Claims. (Cl. 187—62.)

1. A gate lifting and releasing attachment for elevators, comprising a holder having means for rigid attachment to an elevator, a tilting head, a hinge connection between the holder and head permitting the holder to tilt on a substantially horizontal axis, the head being provided at opposite end portions with V-shaped strikers arranged in tandem order, one above and the other below said hinge connection, and means for yieldingly maintaining the head with its strikers in vertical alinement with each other, the upper striker being adapted to engage a projection on a gate and lift the latter when the elevator is ascending, the upper and lower strikers being adapted to be successively displaced by said projection when the elevator is ascending and the raised gate is arrested, and the lower and upper striker being successively displaceable by the projection when the elevator is descending and the gate is closed.

1,425,333. METHOD OF AND APPARATUS FOR APPLYING COATING. LEE H. PARKER, Boston, and HERBERT W. DAY, Wollaston, Mass., assignors to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 9, 1920. Serial No. 415,737. 8 Claims. (Cl. 91—45.)

1. Means for applying coating comprising means to supply coating material, means to subject the same to the action of compressed air, thereby effecting the discharge of the coating material, means to discharge compressed air supplementally upon the discharged coating material at opposite sides of the discharge of coating material, thereby reducing said discharge of coating material to sheet form flaring from the point of discharge therefrom and unconfined at its edges, and means whereby the supplementally discharged air is itself reduced to sheet form flaring from its points of discharge and unconfined from the edges thereof, so as to constitute substantially coincidentally flaring, air-wall sheets for the said flaring sheet of discharged coating material.



1,425,334. TRACTION WHEEL. URBANO PEDROARENA and GEORGE C. HOFFMAN, Gardnerville, Nev. Filed May 9, 1922. Serial No. 559,521. 3 Claims. (Cl. 301—41.)

2. A wheel tire device comprising an annular member adapted to be engaged upon the rim of a wheel, coacting

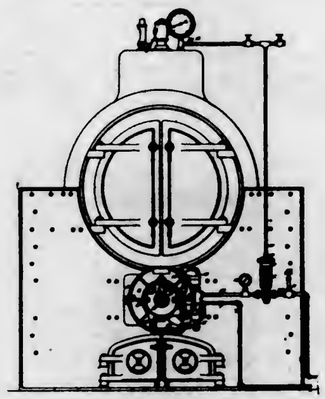
outer annular members in spaced relation and spaced from the inner annular member, a plurality of bracket devices each including a bearing portion having outstanding attachment flanges adapted to be connected to the outer annular members to dispose the bearing portions within the lines of the outer annular members, and an endless member engaging over the bearing portions of the brackets and held from lateral displacement by the attaching flanges.

1,425,335. CARTON. JONATHAN PETERSON, Brooklyn, N. Y., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Jan 28, 1921. Serial No. 440,587. 15 Claims. (Cl 229—43.)

1. A container of relatively thin and flexible fibrous sheet material, comprising a body and a cover, marginal portions of the cover being secured to marginal portions of the body and the combined marginal portions being adhesively secured against adjacent wall portions of the body.

1,425,336. TASSEL. FREDERIC P. PREVOT, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 13, 1922. Serial No. 543,393. 3 Claims. (Cl. 16—122.)

1. A bead chain tassel comprising a tassel head and a tassel group of pendant lengths of bead chain supported thereby, said tassel head comprising a bottom member marginally notched around its periphery to receive the links between adjacent beads at the upper attaching ends of the tassel chains, a centrally apertured cap member resting on said bottom member and serving to confine the chain links in said notches, a tubular element associated with said bottom member and passing upward through the cap member and having its upper end spun over the cap member to hold the latter in position on the bottom member, said tubular member affording a way for a suspension element passing downward therethrough and freely engaging beneath the bottom member to support the tassel.

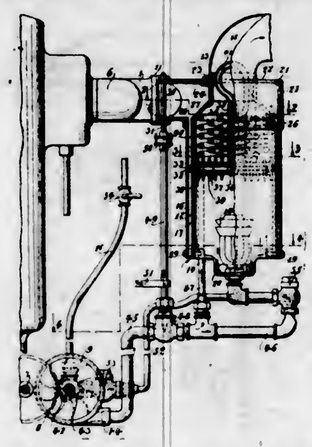


1,425,337. ICE-CREAM REMOVER. JOHN PRISKEY, Detroit, Mich. Filed Oct. 10, 1919. Serial No. 329,875. 3 Claims. (Cl. 107—8.)

1. In a device for blowing molded articles from molds having apertures in their bottoms, the combination with a valve controlled member freely movable laterally and vertically to different positions in a horizontal plane into registration with an aperture in a mold and adapted to conduct air under pressure, of means for sealing the

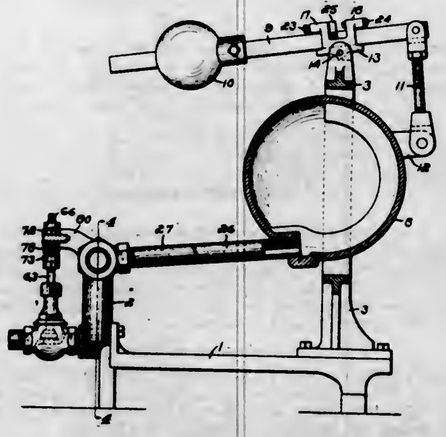
space between said valve controlled member and the bottom of said mold around said aperture.

1,425,338. HIGH-PRESSURE AUTOMATIC BURNER GOVERNOR. WILLIAM R. RAY, San Francisco, Calif. Filed Jan. 23, 1920, Serial No. 353,478. Renewed Jan. 18, 1922. Serial No. 530,230. 13 Claims. (Cl. 158—45.5.)



1. The combination with an oil burner and a pump for delivering oil thereto, of an oil delivery and return pipe line connected with the pump and the burner, a valve on the return line adapted to open or close the flow of oil therethrough and a by-pass valve cooperating therewith for maintaining a back pressure on the return line when the valve is closed.

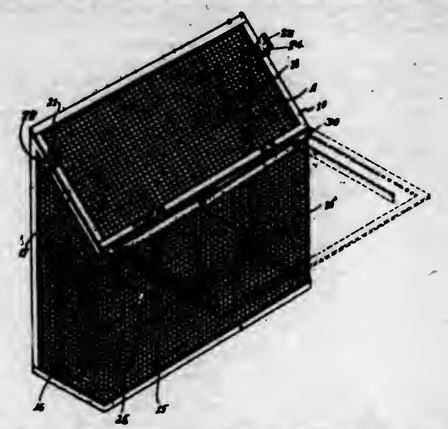
1,425,339. CARBURETOR. ENOCH RECTOR, New York, N. Y., assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed Oct. 16, 1916. Serial No. 125,795. 32 Claims. (Cl. 123—122.)



1. In a device of the class described, an internal combustion engine, a passageway leading to the engine, a carburetor including a nozzle for ejecting fuel into said

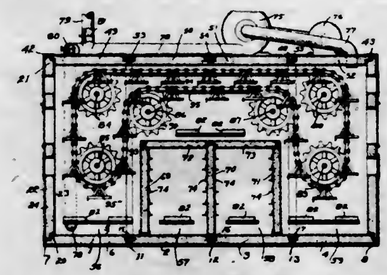
passageway, a conduit for supplying the fuel to said nozzle, a supply pipe leading to said conduit, means for heating said conduit to vaporize the fuel before it is ejected and for heating said passageway and means lead-

ing from the supply pipe and in advance of the heated conduit for diverting some of the fuel to said heating means, a pump driven from the engine for maintaining a pressure in said conduit.



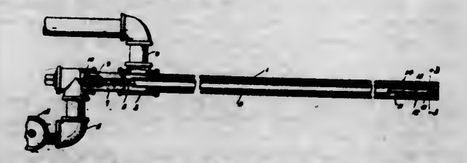
1,425,340. STEAM TRAP. JOHN SABIN, Nashua, N. H., assignor to Nashua Machine Company, Inc., Nashua, N. H., a Corporation of New Hampshire. Filed Feb. 9, 1921. Serial No. 443,670. 18 Claims. (Cl. 137—101.)

1. A steam trap comprising a movable bowl, a tilting lever therefor, and a movable sleeve for said lever in which the latter has capacity for longitudinal movement.



1,425,341. FIRE SCREEN. JAMES E. SANDERS, Gordon, Ga. Filed June 6, 1921. Serial No. 475,547. 2 Claims. (Cl. 126—202.)

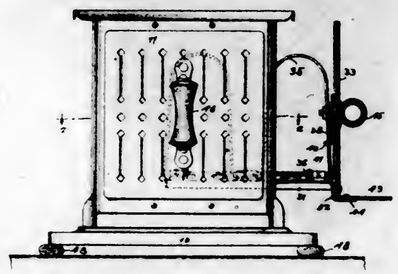
1. In a fire screen for open fireplaces, a body including an open mesh front wall and a top wall, means hingedly securing the inner edge of the top wall to the upper edge of the front wall, supporting arms hingedly secured to the front wall adjacent to the upper edge thereof for movement toward the open mesh front wall for holding articles to be dried in close proximity thereto and for movement away from the front wall for holding the top



wall in a horizontal plane whereby articles to be heated can be disposed thereon.

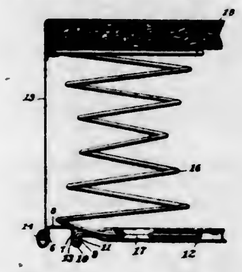
1,425,342. BAKER'S OVEN. WILLIAM F. SCHALLER, San Francisco, Calif. Filed Feb. 19, 1920. Serial No. 359,767. 2 Claims. (Cl. 107—57.)

1. A bakers oven comprising a plurality of slabs joined to form a rectangular enclosure, a plurality of heating elements for heating the enclosure, a fan for circulating air in the oven, a plurality of superposed doors at opposite ends of the oven, a pair of endless chains extending from one end of the enclosure to the other, trays supported by the chains, the chains being arranged to form depending loops at the ends of the oven whereby a plurality of trays may be inspected through the doors at one time means to operate the chains to cause the travel of the material being baked from one end of the oven to the other, a cake oven having walls between the depending loops of the bread carrying chains, doors at the sides of the rectangular enclosure to fill the cake oven, and means to heat the cake oven.



1,425,343. OIL OR GAS BURNER. ALFRED G. SCHUMANN, Baltimore, Md. Filed Apr. 14, 1921. Serial No. 461,299. 6 Claims. (Cl. 158—77.)

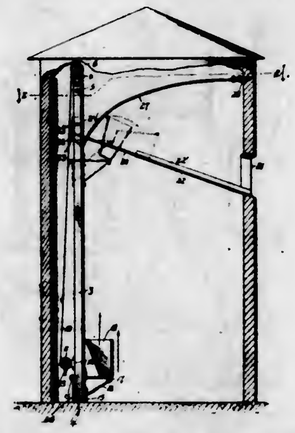
1. A burner of the character specified comprising a nozzle having a central bore closed at its outer end, and



having longitudinal ports exterior to the central bore constricted intermediate their ends, and having openings connecting the bore with the constricted portions of the ports.

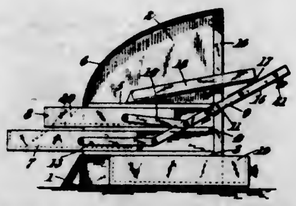
1,425,344. ELECTRIC TOASTER. EDWARD SCHWARTZ, New York, N. Y., assignor to Manhattan Electrical Supply Company, Inc., New York, N. Y., a Corporation of Massachusetts. Filed June 30, 1919. Serial No. 307,614. 6 Claims. (Cl. 219—19.)

1. An electric toaster comprising a pair of upright, laterally spaced, resistance units arranged in vertical zigzag, and means for removably supporting on edge between the same a piece of bread, the upper portions of said resistance units being spaced further apart than the lower portions thereof for the purpose specified.



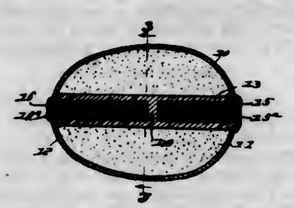
1,425,345. SPRING STRUCTURE. WATSON R. SMITH, Jackson, Mich. Filed Jan. 18, 1922. Serial No. 530,044. 2 Claims. (Cl. 155—180.)

1. In a spring structure, a base frame including spaced inner and outer substantially vertical parallel walls having a connecting web between them, the walls being of substantially the same width and arranged in horizontal alinement, each wall at its lower edge having a flange cooperating with the respective wall to form a groove, said grooves being arranged in horizontal alinement, spring supporting bars having their ends provided with hooks engaging in the groove adjacent the inner wall, springs mounted on said bars, and an upholstering covering for the structure, including a skirt having its marginal edge disposed in the groove adjacent the outer wall, the flange adjacent the outer wall being bendable inwardly toward the outer wall onto the skirt to secure the marginal edge of the latter to the base frame.



1,425,346. SILO. OLE A. STOEN, Balsam Lake, Wis. Filed Sept. 2, 1920. Serial No. 407,821. 5 Claims. (Cl. 214—17.)

1. The combination with a silo having an opening in one side adjacent to the top, of an upright guide positioned within the silo at the side opposite the opening, spaced inclined bars extending from the opening to the guide, a chute supported by the bars and extending from the opening but stopping short of the guide, a carriage mounted to travel along the guide, means to apply



power to move the carriage, a bucket seated upon the carriage and proportioned to pass between the bars at the end of the chute, and a cam positioned to overturn the bucket upon the chute while between the bars.

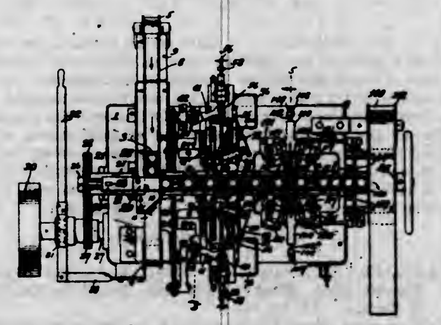
1,425,347. SHOWCASE. GEORGE STRONG, London, England, assignor, by mesne assignments, to Joseph Dixon Crucible Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 19, 1921. Serial No. 485,863. 4 Claims. (Cl. 211—25.)

1. A display case comprising in combination a body, a pair of levers of the first order fulcrumed one on each side of the body, a drawer connected by links to each lever on one side of the fulcrum, a cross member carried on the levers on the other side of the fulcrum, and a tray hinged to said cross member.

1,425,348. VERMIN-DESTROYING NEST EGG. EDWIN T. STUART, West Fork, Ark., assignor of one-half to Charles R. Cauhn, West Fork, Ark. Filed Apr. 11, 1922. Serial No. 551,574. 1 Claim. (Cl. 119—46.)

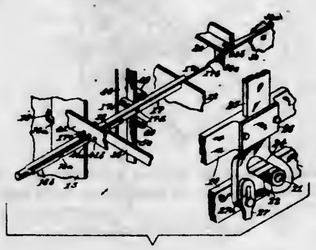
A nest egg having a hollow shell for the reception of a powdered filler and provided with perforations for distributing the same, and a tubular receptacle extending longitudinally through the shell and having open ends for the reception of medicated fillers, the receptacle being provided with an intermediate partition to form separate compartments respectively accessible through opposite ends of the tube.

1,425,349. BOTTLE CLOSURE. THOMAS LUCIEN TALIAFERRO, Chicago, Ill. Filed June 16, 1919. Serial No. 304,485. 2 Claims. (Cl. 215—40.)



1. A bottle closure comprising a metal cap portion having a depending flange, and a plastic rubber sealing member forming a permanent part of the closure and having a ring-shaped portion at its outer edge seating against the lip of the bottle, and a relatively thin portion spanning the mouth of the bottle and preventing the contents of the bottle from coming in contact with the metal parts of the cap.

1,425,350. SHEET-FEEDING METHOD AND MEANS. JAMES C. THOM, Chicago, Ill., assignor to Combination Machine Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 14, 1921. Serial No. 452,391. 25 Claims. (Cl. 271—32.)



1. A stack of labels comprising a series of individual labels of varying dimensions, the labels being provided with registering cut out portions in the edges thereof, the registering cut out portions defining a guide channel means, the distance, in any one label, between the bottom of a cut out portion in a label edge and a predetermined point in an opposed label edge being less than the distance between the corresponding label edges in a label of smallest dimensions in the stack.

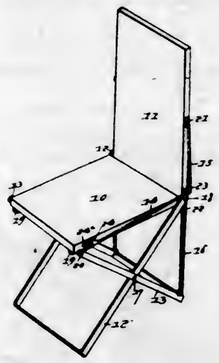
1,425,351. LABELING MACHINE. CHARLES S. WEEKS, South Orange, N. J. Filed Sept. 14, 1921. Serial No. 500,564. 60 Claims. (Cl. 216—12.)

1. In a labeling machine, label-applying means, article feeding means co-operable with said label-applying means, and label wiping means including a plurality of wiping rolls pivotally supported for movement in paths conforming to the contour of the article to be labeled, said label-applying means being operable independently of said label wiping means and said label-applying means operating to apply a label to an article at a different station from the station at which the label wiping means acts upon the article.

1,425,352. VOTING MACHINE. ENOS B. WILLIX, Mount Vernon, Iowa. Filed Dec. 6, 1920. Serial No. 428,474. 12 Claims. (Cl. 235—55.)

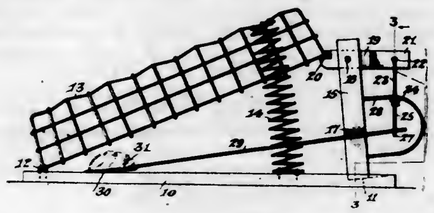
1. In a voting machine having vote-keys slidable to voting position, with projections on their shanks, a series of lock-bars slidable normally behind said projections, and notched to permit the movement of a row of straight-ticket keys while all the other keys are locked.

1,425,353. MOTOR-FRICTION PHONOGRAPH MECHANISM. EDWARD W. WINSLOW, Belle Plaine, Iowa. Filed Apr. 6, 1921. Serial No. 459,076. 19 Claims. (Cl. 192—116.)



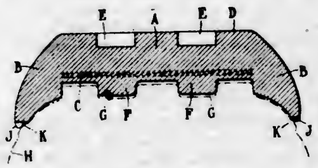
1. Phonograph mechanism including a vertical spindle arranged to support a turn table, a combined friction and brake wheel connected with the spindle for rotating the same, driving mechanism having an adjustable friction pinion engaging the said wheel, a brake element arranged to engage the combined friction and brake wheel, and means for moving the brake element and the friction pinion simultaneously to engage one with the friction and brake wheel and move the other out of engagement therewith to start or stop the spindle.

1,425,354. CONVERTIBLE CHAIR AND TABLE. TILLMAN B. WORTHINGTON, Scotland, Pa., assignor of one-half to Anna Morton Bambrick, Scotland, Pa. Filed Jan. 3, 1922. Serial No. 526,645. 5 Claims. (Cl. 155—43.)



1. A convertible table and chair having seat and back sections of which the latter is longer than the former, pivotally connected intersecting leg frames of which one is pivoted to the seat section and the other is adapted for detachable engagement therewith, links connecting intermediate points of the side edges of the back section

with the upper end of the second-named leg frame, and swinging brace loops carried by the back section for

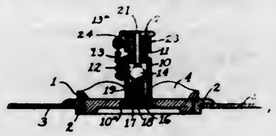


arrangement in bearing contact with the seat section to support the back section in parallelism with the seat section.

1,425,355. ANIMAL TRAP. TSNNEJIRO YAMASAKI, San Francisco, Calif. Filed Jan. 16, 1922. Serial No. 529,428. 2 Claims. (Cl. 43—62.)

1. An animal trap comprising a base support, a cage hinged at one end to the base, a standard bearing on the base and having a stop extending therefrom and an intermediate stop shoulder, a latch member pivoted intermediate the ends to the standard and adapted to engage the free end of the cage when elevated, a trip member adapted to engage the stop of the standard, means for movably coupling the trip member to the latch member, and a bait carrying member bearing beneath said stop shoulder and engaged by the free end of the trip member.

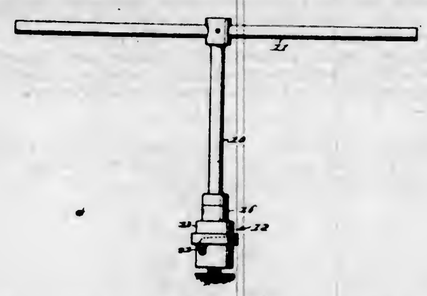
1,425,356. TREAD BAND FOR PNEUMATIC TIRES. GEORGE HENRY ALLDEN, Folkestone, England. Filed May 14, 1921. Serial No. 469,470. 3 Claims. (Cl. 152—16.)



3. The combination in a pneumatic tire, of a cover and a tread band having interengaging projections and depressions, which are of V-shape, and are separate from each other and comprise lateral surfaces lying in planes perpendicular to the axis of the tire, a reinforcing band of non-elastic material incorporated circumferentially in the tread band, the tread band having continuous lateral circumferential surfaces facing inwardly and lying in planes substantially perpendicular to the axis of the tire, and the cover having continuous circumferential surfaces corresponding to and engaging with the circumferential surfaces on the tread band, said tread band and tire cover being provided, respectively, with marks registering with each other when the interengaging projections and depressions are in register with each other.

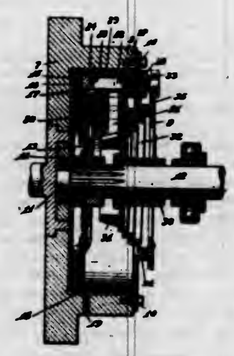
1,425,357. MARKING HAMMER. ALFRED J. ASELIN, Bay City, Mich. Filed July 22, 1921. Serial No. 486,732. 1 Claim. (Cl. 101—29.)

A marking hammer of the class described comprising a hammer body open at its front and rear sides and provided with an opening therethrough communicating with the interior of the body, a stationary axle and independently rotatable marking discs carried thereby between the side walls, said discs having spaced notches on their outer peripheries and adapted to extend below the striking face of said head and independently slidable locking elements engaging said notches in the discs whereby the same may be kept in various arbitrary positions.



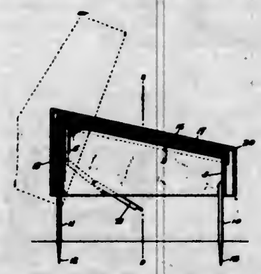
1,425,358. AIR VALVE FOR FUEL TANKS. JACOB A. BAER, Honesdale, Pa. Filed May 10, 1920. Serial No. 380,288. 6 Claims. (Cl. 251—3.)

1. The combination of a valve casing having a counterbored passage therethrough, and an exteriorly threaded end, a valve seat at the junction of the bore and counterbore and a check valve in the counterbore adapted to close against said seat, an interiorly threaded cap adapted to fit the exteriorly threaded end of said casing, said cap having a tube, open from end to end, secured thereto, and adapted to snugly fit the bore or smaller portion of said passage and to press the valve from its seat, said tube having a longitudinal slit in its lower end.



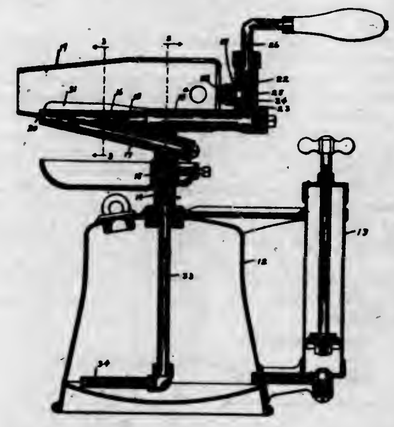
1,425,359. STUD DRIVER. CHARLES ARTHUR BARRY, Detroit, Mich. Filed Dec. 21, 1920. Serial No. 432,249. 5 Claims. (Cl. 81—53.)

1. A stud driver having a chuck consisting of a sleeve provided with cam slots and a conical bearing surface and a core provided with complemental conical bearing surfaces co-acting with that of the sleeve, said core being of transversely sectional construction, and a cross



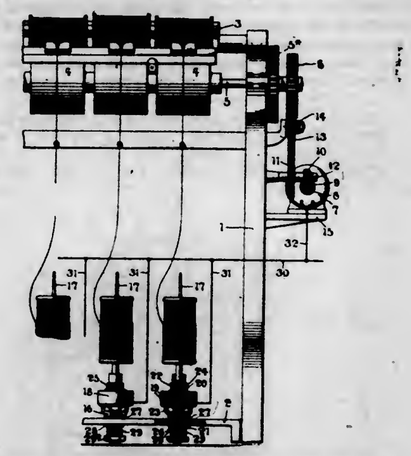
pin carrying the sections of the core and engaged with the cam slots in the sleeve.

1,425,360. CLUTCH. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Engineering Works, Inc., Chicago, Ill. Filed Dec. 3, 1919. Serial No. 344,173. 5 Claims. (Cl. 192—68.)



1. A clutch comprising cooperating friction clutching members, and pressure means including radially endwise shiftable elements carrying transversely shiftable cross heads having an angular surface slidably engaging angular surfaces on one of said members for imparting thrust to said member to effect a clutching engagement between said members.

1,425,361. GRAVE MARKER. VICTOR BERGUD, Pelican Rapids, Minn. Filed Aug. 11, 1921. Serial No. 491,549. 4 Claims. (Cl. 189—213.)

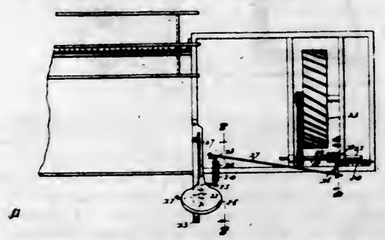


1. A marker of the class described comprising an inner casing, supporting standards attached to said casing, a frame superposed on the top of said casing and an outer protecting cover for said casing and frame.

1,425,362. BLOWTORCH. FORREST E. BINGHAM, New Bedford, Mass. Filed May 19, 1921. Serial No. 470,839. 4 Claims. (Cl. 158—33.)

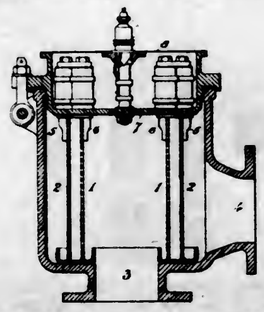
1. A blow torch comprising a fuel tank; a substantially T-shaped conduit including an upright shank portion fixed to the tank and having a vertical bore, and a substantially horizontal head portion constituting a gas producer, arranged substantially at right angles with the shank portion, and having an angular bore and upwardly projecting fins; and a substantially horizontal combustion chamber having a longitudinal opening in its lower side, occupied by a part of the head portion and by said fins, the longitudinal axis of the chamber being above said head portion so that the latter and the fins are heated by flame in the combustion chamber, to vaporize liquid flowing through said angular bore without objectionably obstructing the path of the flame.

1,425,363. SPINNING MACHINE. EDWARD E. BRADLEY, Stonington, Conn., assignor to The Atwood Machine Company, Stonington, Conn., a Corporation of New Jersey. Filed Jan. 25, 1919. Serial No. 273,088. 1 Claim. (Cl. 118—43.)



In a spinning machine, individual electric motor driven spindles, means coacting with said spindles for self balancing them, and electric motor driven feed rolls, the motors for the spindles and feed rolls being synchronised.

1,425,364. TREATMENT OF CELLULOSE ACETATE PRODUCTS. JOHN FREDERICK BRIGGS, Spondon, near Derby, England, assignor to American Cellulose and Chemical Manufacturing Company Limited, a Corporation of Delaware. Filed Apr. 16, 1921. Serial No. 461,978. 12 Claims. (Cl. 8—5.)

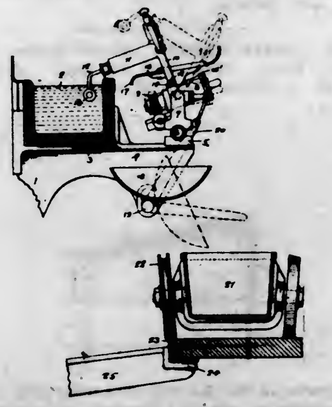


4. Process for the treatment of threads or filaments of cellulose acetate lower than triacetyl cellulose, or of fabrics of or containing the same, said process consisting in subjecting said goods in an aqueous bath to saponification at a temperature between about 70° and about 75° C. with a quantity of alkaline saponifying agent capable only of effecting by its exhaustion an amount of saponification corresponding to not more than about 10 per cent of the original weight of the cellulose acetate threads or filaments, the alkaline saponifying agent being employed in a concentration of between about 0.1 per cent and about 0.5 per cent.

1,425,365. ATTACHMENT FOR BINDERS. OSWALD E. CALLAWAY, Dallas, Tex. Filed Nov. 29, 1920. Serial No. 427,166. 1 Claim. (Cl. 56—323.)

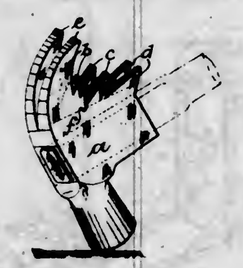
In combination with an agricultural machine having a cutting mechanism and a ground wheel, means for controlling the communication of motion to the cutting mechanism and consisting of a drive shaft driven from the ground wheel, a driven shaft for connection to the cutting mechanism, a clutch operatively connecting the two shafts and having a shiftable or movable element, a vertically reciprocable post provided at its upper end with an operator's seat, a bracket mounted on the frame of the machine, a rock shaft journaled in said bracket and formed with cranks at its opposite ends of which one is pivotally connected to the lower end of the post, a clutch lever pivotally mounted on the frame of the machine and operatively connected with the movable member of the clutch, and a link having its terminals connected respectively to the clutch lever and the remaining crank of the rock shaft, whereby the reciprocation of the seat vertically may effect engagement and disengagement of the movable clutch element for the purpose specified.

1,425,366. MAGNETIC STRAINER APPARATUS FOR SEPARATING SOLIDS FROM LIQUIDS. EDWARD BROOKS CHAPMAN, Whitley Bay, England. Filed Nov. 9, 1921. Serial No. 514,036. 7 Claims. (Cl. 210—164.)



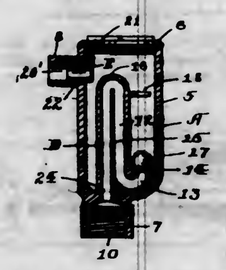
1. A magnetic strainer, comprising a body having a liquid inlet, a liquid outlet and an open top, a cover for said top, perforated plates extending downwardly from said cover, and polar members having straight limbs arranged parallel to said perforated plates and adapted to produce magnetic fields across which the liquid flows from the inlet to the outlet, the said perforated plates being collectively removable through the open top and the polar members being similarly nested for collective removal in the same way, substantially as described.

1,425,367. HAIRPIN. GEORGE TRUMAN CHASE, Utica, N. Y. Filed Oct. 19, 1920. Serial No. 417,878. 1 Claim. (Cl. 132—50.)



A hair pin consisting of a single length of material having tines provided with a plurality of angularly disposed outwardly directed shoulders, second angularly disposed outwardly directed shoulders between said shoulders and the insert end of the pin, the first mentioned shoulders projecting farther from the median line of the pin than the second mentioned shoulders, portions converging toward the insert end of the pin intermediate the shoulders, elongated portions at the free ends of the tine converging toward the head of the pin portions converging toward the insert end of the pin intermediate the elongated portion and adjacent shoulders, and an elongated loop forming the head of the pin having sides converging from the first mentioned shoulders movable relatively to each other to move the second and third mentioned portions into contact at their junction.

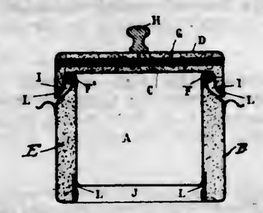
1,425,368. APPARATUS FOR SPINNING ARTIFICIAL SILK. JAMES CLAYTON, Sebakwe, Babbicombe, England, assignor to The Viscose Company, Marcus Hook, Pa., a Corporation of Pennsylvania. Filed Oct. 12, 1920. Serial No. 416,535. 9 Claims. (Cl. 18—8.)



1. In apparatus of the type described, a movable spinning nozzle, a pump delivering liquid thereto, disconnectable driving gear for the pump, and an operative connection between the nozzle and pump driving gear to disconnect the latter on the operative movement of the spinning nozzle in one direction.

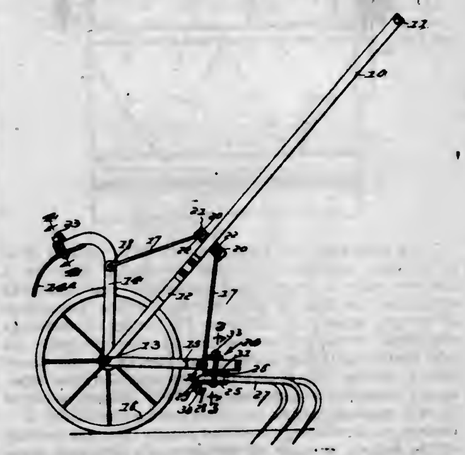
1,425,369. CARPENTER'S HAMMER. ARTHUR BERTRAM COLEMAN, Gosnells, near Perth, Australia. Filed Nov. 22, 1920. Serial No. 425,820. 1 Claim. (Cl. 254—26.)

A hammer having the usual primary nail drawing claws projecting from the end thereof and also formed with a plurality of rearwardly extending supplemental pairs of claws arranged in stepped disposition and having nail grooves therein increasing in depth from the minimum depth in the pair of claws adjacent to the usual claws to the maximum depth of the groove in the rearmost pair of claws, whereby the extraction of nails is effected by engagement of each nail throughout its length to obviate bending of the nail during extraction.



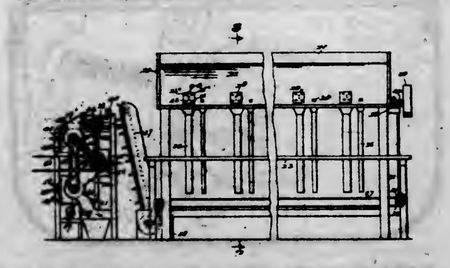
1,425,370. AIR EXHAUST FOR VAPOR-HEATING SYSTEMS. ARTHUR P. CROSBY, Minneapolis, Minn., assignor of one-half to William T. Price, Minneapolis, Minn. Filed Jan. 24, 1921. Serial No. 439,420. 3 Claims. (Cl. 137—113.)

1. A return seal for a vapor system, comprising, a casing having ports in communication with a radiator and with a return pipe, a siphon mounted in said casing and communicating with said return pipe and having a restricted passage in the upper wall of the arch of the siphon above the level of the liquid when siphonic action begins and through which passage air is sucked from the radiator intermittently to break the siphon, a check valve in the radiator port adapted to automatically check flow into the radiator and a check valve in the lower end of the short leg of the siphon adapted to prevent the liquid in the siphon from entirely exhausting.



1,425,371. SAUCEPAN. HENRI GASTON GROSGUN DESMAREST, Paris, France. Filed Mar. 5, 1919. Serial No. 280,847. 7 Claims. (Cl. 53—11.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

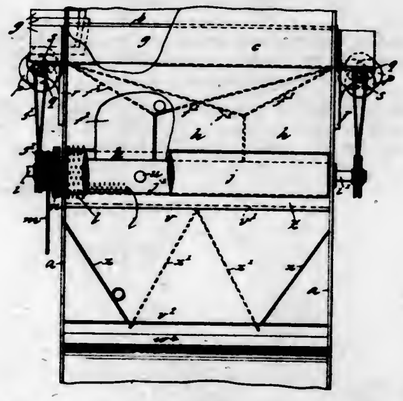
1. A cooking utensil comprising a vessel adapted to receive the food to be cooked, and a heat-insulating casing therefor extending below the exposed bottom of said vessel, but forming therewith an air chamber which



serves to minimize heat radiation from the exposed bottom of said vessel when resting upon a table or the like.

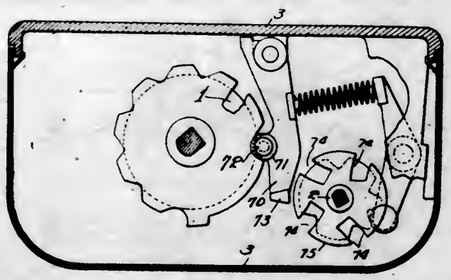
1,425,372. HAND GARDEN PLOW. JOSEPH E. DITTEMORE, Blackwell, Okla. Filed Sept. 16, 1920. Serial No. 410,709. 2 Claims. (Cl. 97—42.)

2. A cultivator having a harrowing element consisting of teeth, an assembly plate having at its rear edge an upturned lip provided with openings for the shanks of said teeth and at its forward edge with a rolled or bent portion having registering openings for the reception of terminal angularly disposed studs on the shanks of the teeth, a locking plate spanning the shanks between said lip and bit, bolts passing through the assembly plate and through the locking plate to maintain the teeth in their proper position, and means for connecting the assembly plate to the cultivator.



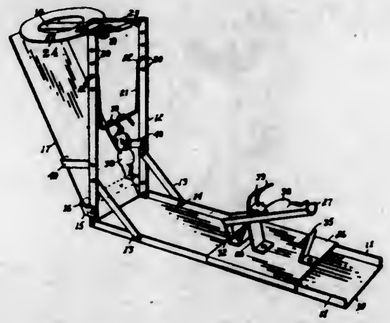
1,425,373. OKRA MACHINE. JAMES N. ECONOMOS, Daphne, Ala. Filed Nov. 15, 1921. Serial No. 515,307. 13 Claims. (Cl. 130—30.)

1. An okra conditioning apparatus having the cutting or heading mechanism, a cleaning mechanism for receiv-



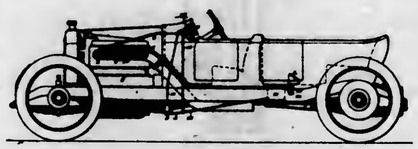
ing and removing foreign matter from the whole okra, and separate conveyers for respectively receiving the heads and whole okra from the cutting mechanism, the latter of which is arranged to convey to the okra cleaning mechanism.

1,425,374. APPARATUS FOR SORTING OUT AND DELIVERING BODIES OR LIDS OF TINS OR THE LIKE. VALENTINE C. H. ELGY, Surrey, England. Filed July 31, 1920. Serial No. 400,333. 5 Claims. (Cl. 113—114.)



1. In apparatus for sorting hollow-ware articles from a confused assemblage thereof, arranging them in a position with a desired end uppermost and delivering same, the combination of a hopper for the assemblage of articles having an outlet at its bottom, a vertically depending throat communicating at one end with the said outlet, partitions dividing the interior of the throat into a number of vertical passages and slotways alternately disposed, a reciprocating blade slidably mounted in each passage, means for reciprocating the blades in a manner to alternately enter and recede from the interior of the hopper, a series of compartments arranged below the slotways, each compartment communicating at its upper end with one of said slotways and having at its lower end a sloping floor and a discharge outlet and means for arranging said articles in the said desired position after they descend through the discharging outlets of the compartments and for directing them in the said positioned condition to a point of delivery.

1,425,375. CONTROLLING DEVICE FOR ELECTRIC LOCOMOTIVES. SIDNEY W. FARNHAM, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 22, 1916. Serial No. 73,597. 7 Claims. (Cl. 191—3.)

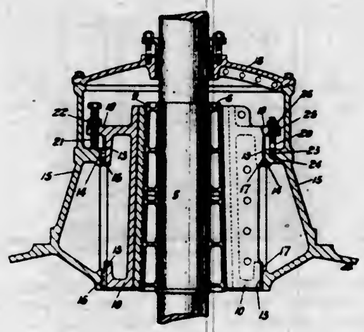


3. The combination with an electric motor of a motor circuit, a controller for controlling said motor circuit, a casing for said controller, two sources of electric supply, a device within the casing of the controller for connecting the motor circuit with either of said sources of electric supply and means for controlling said latter device from the exterior of the casing.

1,425,376. GAME APPARATUS. ELBERT W. FORD, Jamestown, N. Y. Filed Apr. 2, 1921. Serial No. 457,842. 9 Claims. (Cl. 46—59.)

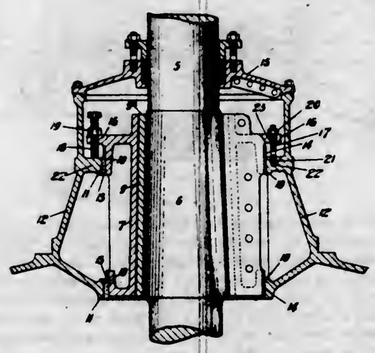
1. A game apparatus comprising a base plate having parallel tracks thereon, an inverted U-shaped frame pivotally attached to said parallel tracks near one end of said base plate, detachable braces between said tracks and said frame to support the same in an upright position, said frame having a lengthwise series of holes in each leg thereof, a wire trapeze sprung into said holes to adjustably and swingingly support the same in said frame, a spring shooter slidably mounted on said tracks on said base plate to adjust said shooter as to distance from said trapeze, and a hook projectile to be thrown by said spring shooter endeavoring to hang the same on said trapeze.

1,425,377. HEATING SYSTEM FOR MOTOR CARS. JOHN F. GRISSINDORFER, Sacramento, Calif. Filed May 8, 1919. Serial No. 295,619. 1 Claim. (Cl. 237—12.3.)



The combination with the engine of an automobile, of a steam generating pipe placed within the exhaust manifold, a sight feed, a water supply tank, a pump for delivering water from the tank to the sight feed, a needle valve in the sight feed to regulate the quantity of water passing through the sight feed, a pipe connecting the sight feed with the steam generating pipe in the exhaust manifold, and delivering regulated quantities of water thereto, a radiator having separate steam inlet and outlet connections, and a pipe connecting the inlet connection of the radiator with the steam generating pipe in the exhaust manifold.

1,425,378. BEARING FOR HYDRAULIC-TURBINE SHAFTS. EUGENE U. GIBBS, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1921. Serial No. 499,097. 5 Claims. (Cl. 64—55.)



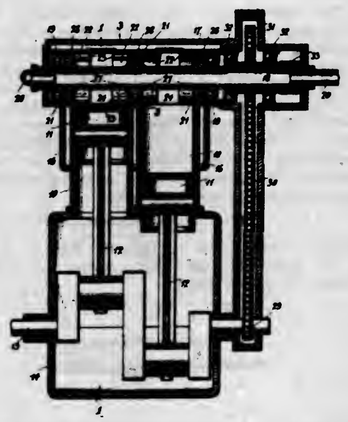
1. In a bearing of the class specified, the combination with a shaft, of a sleeve having an inner longitudinally straight bore to snugly receive the shaft and an outer

tapered surface, and an adjustable bearing frame completely surrounding the sleeve and formed with a plurality of longitudinally disposed inner grooves with

space strips of wood secured therein, the space strips having their inner edges tapered similarly to and bearing upon the outer surface of the sleeve.

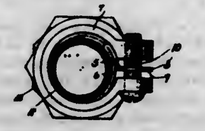
1,425,379. BEARING FOR HYDRAULIC-TURBINE SHAFTS. EUGENE U. GIBBS, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed Sept. 7, 1921. Serial No. 499,098. 4 Claims. (Cl. 64—55.)

1. In a bearing of the class specified, the combination of a shaft having an intermediate tapered section forming an integral part thereof, an outer fixed frame, and an intermediate frame slidably adjustable in the fixed frame and having an inner regularly tapered side formed with longitudinal grooves extending the full lengths thereof and surrounding the tapered section of the shaft and provided with wood strips with inner tapered edges directly bearing upon said tapered shaft section.



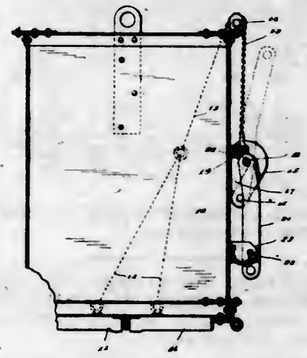
1,425,380. CHASSIS FOR MOTOR-CYCLE SIDE CARS. THOMAS GORDON, Perth, Western Australia, Australia. Filed Aug. 21, 1920. Serial No. 405,192. 3 Claims. (Cl. 208—45.)

1. In a chassis suspension for cycle side cars, a frame, a side car having a floor resiliently supported on said frame and an auxiliary spring having an upwardly and rearwardly curved form and rollers carried at the ends



of said spring and adapted to make supporting contact with the floor of said side car.

1,425,381. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ANDRÉ LÉON P. GUÉRET, Paris, France. Filed Dec. 28, 1918. Serial No. 268,689. 3 Claims. (Cl. 123—80.)

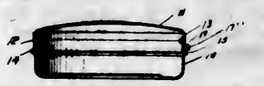


1. In an internal combustion engine, the combination with a cylinder, of a valve casing having inlet and exhaust ports and a space communicating with said cylinder, and a rotary valve in said casing comprising a shaft and a pair of valve members thereon, said members being located at opposite sides of the space in said casing, and having oppositely disposed, thin, flexible, annular flanges having symmetrically arranged notches in their edges constituting ports cooperating with the ports in said casing.

1,425,382. SQUEEZE CONNECTOR. GEORGE L. HATHEWAY, New York, N. Y., assignor to The Rattan Mfg. Co., New Haven, Conn., a Corporation. Filed Oct. 3, 1921. Serial No. 505,151. 2 Claims. (Cl. 247—26.)

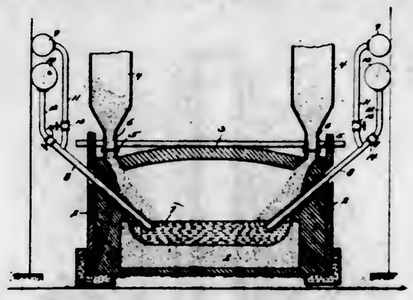
1. A reducing device for squeeze connectors consisting of a longitudinally bowed portion, and a straight portion at an angle to the bowed portion and formed with a clearance slot.

1,425,383. DUMPING BUCKET. WILLIAM H. INSLEY and ALVIN C. RASMUSSEN, Indianapolis, Ind., assignors to Insley Manufacturing Company, Indianapolis, Ind., a Corporation of Indiana. Filed June 21, 1920. Serial No. 390,356. 3 Claims. (Cl. 294—71.)



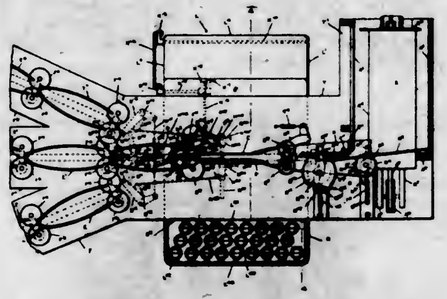
1. The combination with a bucket having a discharge opening and a closure therefor movable in the direction of opening under the action of the supporting load, of a support for said closure, comprising a pair of pivotally-connected links, one connected to the bucket and the other to the closure, a shiftable operating member arranged for movement independent of said links, said operating member and links having interengaging portions limiting the independent movement of the operating member at opposite ends of such independent movement, substantially as described.

1,425,384. CORD TIP. JAMES P. KELLY, New York, N. Y. Filed Dec. 24, 1921. Serial No. 524,560. 7 Claims. (Cl. 24—143.)



1. A cord tip device comprising a headed pin with a shank for embracing one side of the end of a cord, said pin having another portion for extending transversely through the cord and a tip portion connected to the transversely extending portion and adapted to embrace the side of the cord opposite the shank of the pin, and a sleeve for embracing the shank and tip of the pin and abutting against the head of the pin.

1,425,385. BOX OPENER. EDWIN JAMES KENDALL, Beaver Cove, British Columbia, Canada. Filed May 26, 1921. Serial No. 472,631. 1 Claim. (Cl. 220—43.)

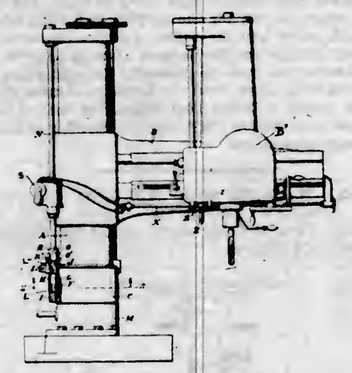


A box section, a cover section for slidable connection therewith, one of said sections having a stop engageable by the free edge of the other section, the last mentioned section at said free edge being slit inwardly to provide a laterally and outwardly disposed tongue to accommodate an opening instrument between the same and said stop, said tongue having a terminal lip disposed opposite and substantially parallel to the outer wall of the last mentioned section to reinforce the last mentioned section against contracting strain incidental to twisting of said instrument.

1,425,386. METHOD OF REDUCING ORES. EDWARD C. KING, Los Angeles, Calif. Filed Oct. 28, 1920. Serial No. 418,906. 7 Claims. (Cl. 75—17.)

1. The hereindescribed method of reducing metal ores which comprises introducing an oxidizing agent and carbonaceous material into the interior and below the surface of a molten bath of metal produced from such ore, and concurrently feeding ore to be reduced to the surface of such bath.

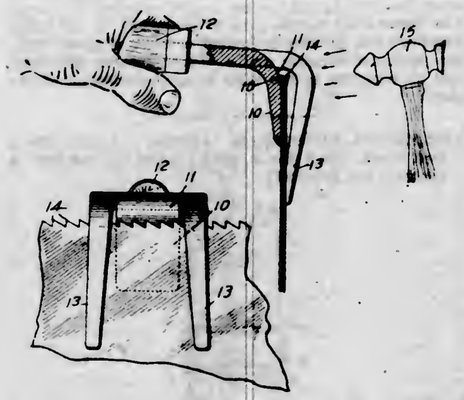
1,425,387. MAIL DISTRIBUTOR. GEORGE M. KITSMILLER, Norfolk, Va., assignor of one-half to Louis Larson, Norfolk, Va. Filed July 12, 1921. Serial No. 484,080. 17 Claims. (Cl. 214—11.)



1. In a mail distributor, the combination of a receptacle adapted to receive unassorted mail; a rotatable cam adapted to remove a single piece of mail from said receptacle; a second rotatable cam adapted to forward the piece of mail so removed; means adapted to rotate said cams alternately; a key adapted to be depressed; and means operated by the depression of said key adapted to control said rotating means.

4. In a mail distributor, the combination of an unassorted mail receptacle; a plurality of assorted mail receptacles arranged in series; independent mail forwarding means associated with each series; a trough adapted to receive a piece of mail from said unassorted mail receptacle and deliver same to any one of said mail forwarding means and a plurality of keys arranged in series, the keys in each series being adapted to adjust said trough to deliver a piece of mail to the corresponding one of said forwarding means.

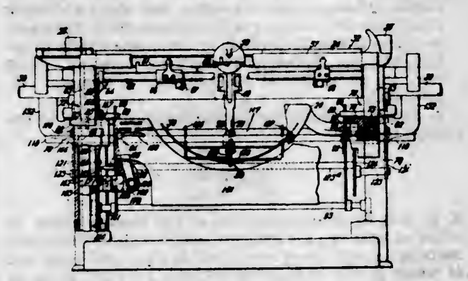
1,425,388. SAFETY INSERTABLE AUXILIARY LEVER FOR AIR CLAMPS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 18, 1921. Serial No. 461,145. 14 Claims. (Cl. 77—28.)



1. A safety-mechanism combining two relatively movable elements; a device for locking said elements together;

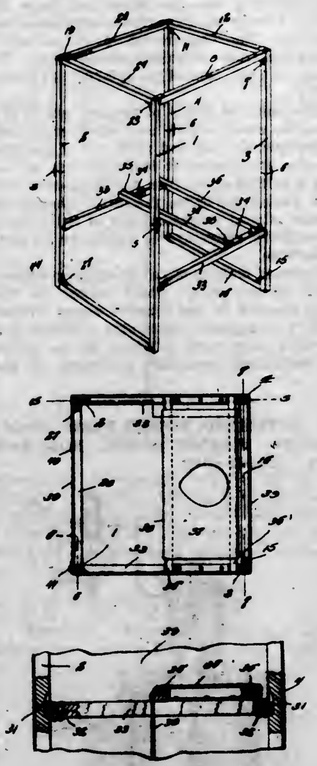
a source of power; a member adapted to be moved by said power; a lever for turning-on and turning-off said power to control the power actuation of said member; a connection between said member and said device; and a second

lever adapted to be positioned to enable it to actuate said device by manual force applied to said second lever, the parts being so constructed that said connection will be severed when said second lever is in its operative position.



1,425,389. SAW SET. HERMAN KUEHN, New Auburn, Wis. Filed Apr. 25, 1921. Serial No. 464,180. 2 Claims. (Cl. 76—73.)

1. A saw set comprising an anvil member and means for retaining the saw against the anvil member, the anvil member provided with a plane face for the saw blade and an anvil surface for the saw teeth, the anvil surface receding from the plane face with an increasing angularity relative to the plane face.



1,425,390. TYPEWRITING MACHINE. ALFRED G. F. KUSOWSKI, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 1, 1920. Serial No. 378,205. 44 Claims. (Cl. 197—60.)

1. In a typewriting machine, the combination with a main frame and type-actions therein, of a carriage, rails for said carriage, a subsidiary frame including said rails detachably mounted on said main frame to enable another subsidiary frame to be mounted thereon, a plurality of releasable devices for detachably holding the subsidiary

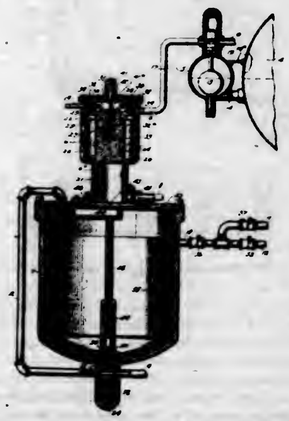
frame on the main frame, and connections between said devices for operating all of said devices concomitantly to render them effective or ineffective.

1,425,391. PORTABLE CLOSET. HERBERT W. LA MUNYON, Cheyenne, Wyo. Filed Nov. 23, 1920. Serial No. 426,002. 1 Claim. (Cl. 4—32.)

In combination with sectional collapsible frame and a fabric covering therefor, including a door of a pair of spaced parallel horizontal cleats secured adjacent the lower end of said frame, plates secured to the upper face of said cleats and having flanged ends, bars arranged transversely on the cleats and contacting with the flanged ends of the plates, a fabric secured to the bars and having an opening formed therein, and an apron projecting from one end of said fabric and extending beyond one of said bars.

1,425,392. NEW LIQUID PHOSPHORIC ESTERS AND PROCESSES OF MAKING SAME. AUGUST LEOPOLD LASKA, Offenbach-on-the-Main, and HANS HEINRICH CHRISTIAN PRILLWITZ, Frankfort-on-the-Main, Germany, assignors to The Corporation of Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Apr. 12, 1921. Serial No. 460,762. 8 Claims. (Cl. 260—98.)

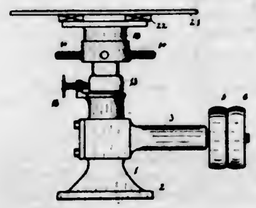
1. As new products the liquid phosphoric esters of the general formula



R, R_1 and R_2 meaning radicles of the benzene series, of which at least two are different, and of which at least one contains an alyki group in a position, other than para, and of which in the highest one contains an alkyl group in para position relating to the oxygen-atom, the liquid phosphoric esters being separated, when saponified, into phosphoric acid on the one side and into mixtures of phenols of the benzene series on the other side, being viscous, almost colourless oils of little fluorescence, liquid at ordinary temperature, which can be distilled at reduced pressure.

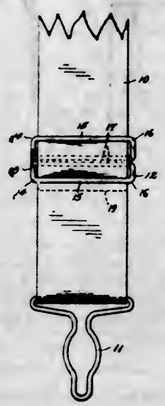
1,425,393. NEW MIXED PHOSPHORIC ESTERS AND PROCESSES OF MAKING SAME. AUGUST LEOPOLD LASKA, Offenbach-on-the-Main, and HANS HEINRICH CHRISTIAN PRILLWITZ, Frankfort-on-the-Main, Germany, assignors to The Corporation of Chemische Fabrik Griesheim-Elektron, Frankfort-on-the-Main, Germany. Filed Apr. 12, 1921. Serial No. 460,763. 11 Claims. (Cl. 260—98.)

7. As new products mixed phosphoric esters of phenols of the benzene series which are, when saponified, separated in phosphoric acid and mixtures of phenols of the benzene series containing at least 25–30% of a phenol, containing a methyl group in a position, other than para, relating to the oxygen-atom, the mixed phosphoric esters being viscous, almost colourless oils of little fluorescence, liquid at ordinary temperature, which can be distilled at reduced pressure.



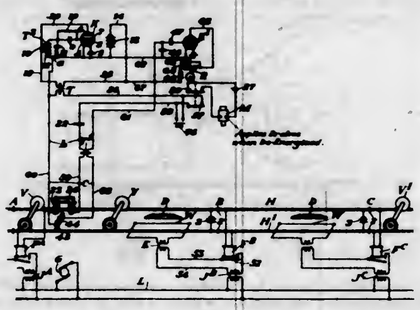
8. A process of making mixed phosphoric esters of phenols of the benzene series, which consists in treating a mixture of phenols of the benzene series containing at least 25–30% of a phenol containing a methyl group in a position, other than para, relating to the oxygen-atom, with a phosphorus compound according to the usual method.

1,425,394. AUTOMATIC BOILER FEED. JOHN S. LEE, Newton, Iowa. Filed Nov. 18, 1920. Serial No. 424,925. 8 Claims. (Cl. 103—54.)



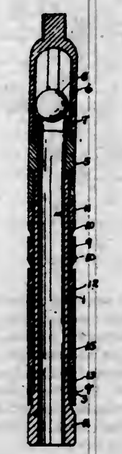
2. In an automatic boiler feed, the combination of a trap casing for holding water, steam connections for normally maintaining said water under pressure, a pump cylinder connected with said trap casing for receiving water forced from said trap casing by steam pressure therein, valve mechanism to prevent the retrogression of said water from said pump cylinder into said trap casing, a plunger movable relatively to said pump cylinder and engaging the water therein for the purpose of forcing said last mentioned water into the boiler, a piston connected with said pump plunger for the purpose of actuating the same, steam connections from the boiler to the said pump plunger for enabling steam from the boiler to actuate said piston, and means including float mechanism controllable by the water level within the boiler for opening and closing said steam connections.

1,425,395. MACHINE FOR MOLDING CHOCOLATE AND SIMILAR PRODUCTS. LOUIS LEVY, Paris, France. Filed Dec. 30, 1919. Serial No. 348,398. 5 Claims. (Cl. 259—91.)



1. In a chocolate jolting machine, the combination of a frame, a shaft mounted in the frame, a disk mounted on the shaft, said disk having on its edge a plurality of cams, one of which terminates a greater distance from the center of the disk than the other of said cams, a table located above the frame, and a stem depending below the frame and terminating in the path of movement of the cams, whereby when the disk is rotated, a series of minor vertical jarring movements and a violent jarring movement will be imparted to the table in each revolution of the shaft.

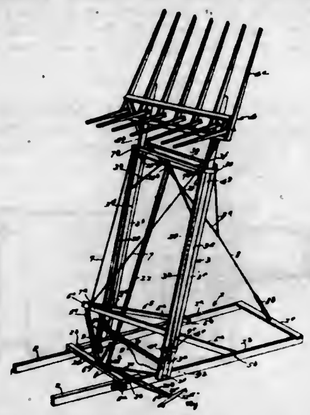
1,425,396. SLIDE BUCKLE. ARTHUR J. LEWIS, Stratford, Conn. Filed Apr. 3, 1922. Serial No. 548,898. 4 Claims. (Cl. 24—200.)



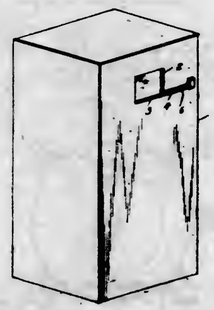
1. A slide buckle including a pair of loops having side bars connected at one end and free at the opposite ends, intermediate bars extending from the free ends to and over the connecting member, the side and intermediate bars being in substantially the same plane, and the connecting member having its central portion offset laterally from said plane.

1,425,397. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LLOYD V. LEWIS, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Original application filed Nov. 25, 1918, Serial No. 263,969. Divided and this application filed Mar. 24, 1921. Serial No. 455,139. 8 Claims. (Cl. 246—63.)

2. Railway traffic controlling apparatus comprising a vehicle, a circuit thereon supplied with alternating current, and containing inductance and capacity, a relay supplied with current from said circuit and effectively energized when the inductance in such circuit has a given value, devices located in the trackway for changing the value of the inductance in said circuit to a sufficient extent to effectively de-energize said relay, trackway means for energizing said relay independently of said circuit, and governing means on said vehicle controlled by said relay.



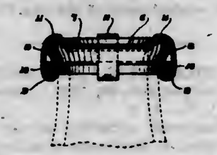
1,425,398. PUMP PLUNGER. GERALD R. LIVERGOOD, Houston, Tex. Filed July 29, 1921. Serial No. 488,311. 7 Claims. (Cl. 103—63.)



5. In a pump plunger the combination of a tubular body, scraping cups at each end thereof, and resilient expanding rings clamped between said cups on said body.

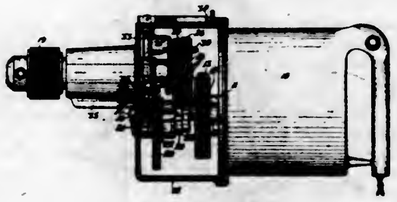
1,425,399. HAYSTACKER. ALBERT T. LOFTSGAARDEN, Powell, Wyo. Filed Mar. 12, 1921. Serial No. 451,739. 7 Claims. (Cl. 214—141.)

1. A hay stacker including a base provided with side bars, an elevator frame connected to said base, an elevator carried by said frame, means for simultaneously swinging said frame and extending said elevator relatively to said frame, and extension blocks provided with clips designed to engage the side bars of the base.



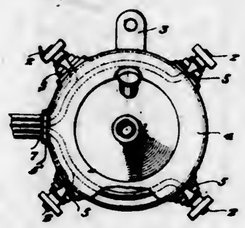
1,425,400. BANK-DEPOSIT RECEIVER. JAMES K. LOWE, Denison, Tex. Filed Nov. 1, 1921. Serial No. 512,004. 5 Claims. (Cl. 232—44.)

1. A depositary comprising a box having an opening for receiving the deposits, a sliding door for closing the receiving opening and a plate movable with the sliding door and adapted to be brought opposite the receiving opening when the same has been uncovered by the sliding of the door to one side.



1,425,401. BOTTLE CLOSURE. THOMAS MCNAMEE, Philadelphia, Pa. Filed Feb. 28, 1922. Serial No. 539,984. 1 Claim. (Cl. 215—38.)

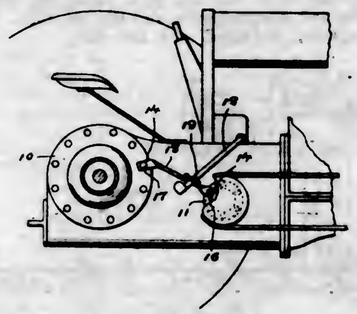
The combination with a bottle having a neck rim of a closure fashioned with a concentric dished portion adapted to fit within the upper part of the bottle neck, a peripheral flange for gripping the outer surface of the



bottle neck, diametrically opposed tongues integral with the peripheral flange, and a resilient gripping ring held in place by said tongues, the aforesaid tongues being folded backwardly upon themselves to provide retaining loops for the resilient ring and the free ends thereof being clinched on to the upper edge of the closure.

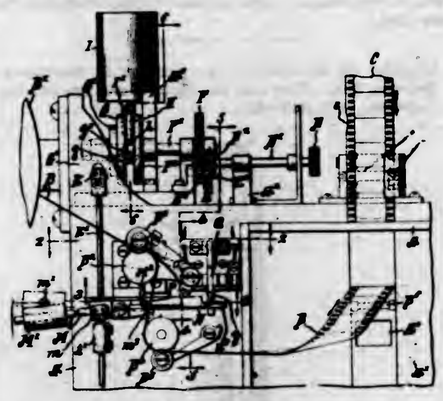
1,425,402. COMBINED DRILL AND VALVE GRINDER. PHILIP MACKENZIE, San Francisco, Calif. Filed June 30, 1920. Serial No. 393,021. 8 Claims. (Cl. 29—26.)

1. In a machine tool, a rotary driving element, a chuck, a spur gear on the chuck spindle, a pair of reciprocating pawls alternately engageable with the spur gear for imparting oscillating movement thereto, a spur gear for driving said pawls, and a sliding gear alternately engageable with said spur gears for transmitting continuous rotary motion from the driving element to the chuck or oscillating movement from the driving element to said chuck.



1,425,403. TIMER COVER. JOHN MAJEMPSEY, Kansas City, Kans. Filed May 11, 1920. Serial No. 380,638. 2 Claims. (Cl. 200—24.)

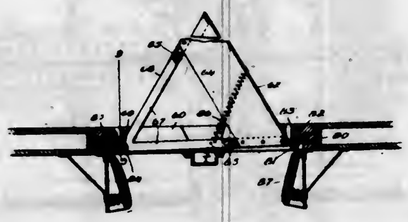
1. In combination with a timer box having a cylindrical and conical part and an actuating ear and the conductors connected therewith, a ring member of angle shape in cross section fitting over the cylindrical part of said box and having its inner edge engaging the conical part thereof, said member having openings therein for receiving the terminals and their conductors and the actuating rod ear on the box and another opening through which the four conductors pass from the ring member, the portions of the conductors in the ring member being located in the space formed by the upper flange of the member and the conical part of the box.



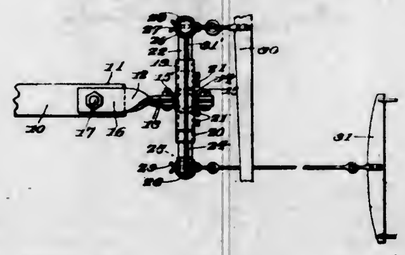
1,425,404. CLUTCH LOCK. ALFRED NILE MERRILL, Oxford, N. J. Filed Feb. 19, 1921. Serial No. 446,327. 1 Claim. (Cl. 74—81.)

The combination with a tractor having a bolt secured differential housing, a bolt secured belt pulley housing spaced therefrom and a clutch pedal operating between said housings, of a support formed of a flat strip of metal having its ends bent to provide for contact with the outer vertical faces of the differential and clutch pedal housings and an intermediate substantially horizontal portion, said ends being apertured to receive the bolts of said housings and an L-shaped substantially horizontally movable hook having one end pivotally secured

to the support upon the horizontal portion and its other end adapted for engagement with the clutch pedal to hold the latter against movement in one direction.



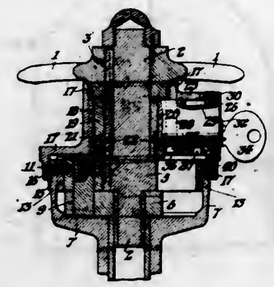
1,425,405. AUTOMATIC ELECTRIC FILM CUTTER. ARTHUR WILHELM MILLER, Roselle Park, and WALTER LOUIS CONKLIN, Boundbrook, N. J., assignors to Pathé Exchange, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 12, 1921. Serial No. 499,963. 23 Claims. (Cl. 95—75.)



1. In a cinema film printing apparatus, means for cutting the positive film, comprising a spring operated shears, means for normally holding said shears in the open position, means for passing the positive film between the blades of said shears independent means for feeding the negative film, an electric circuit and means controlled thereby for releasing said shears, and a circuit closer controlled by the negative film for automatically closing said electric circuit.

1,425,406. MAIL-BAG RECEIVER. DANIEL W. MILLIGAN, Washington, D. C., assignor to Automatic Mail Exchange Co., Washington, D. C., a Corporation of Delaware. Filed Apr. 26, 1920. Serial No. 376,827. 6 Claims. (Cl. 258—22.)

1. The combination of a railway car having an opening in the side thereof and also having a sill below said opening and a cap above the same, said sill and cap being provided with sockets and with comparatively narrow arcuate channels connecting said sockets with the outer side of the car, said car also having posts at opposite sides of said opening and recesses in the inner corner portions of said posts, a reversible receiving member provided adjacent to two corners thereof with pivot members for co-operation with said sockets and channels, said pivot members with flattened portions for passage through the channels, springs projecting within the sockets, and having rounded nipples, each pivot member having a recess for engagement with its respective nipple, a rod connected with said receiving member at one corner thereof, bolts journaled in the posts and having arms, springs operating on the bolts to normally maintain the arms thereof in the recesses of the posts, said arms being each adapted when extended from its respective recess to co-operate with the said rod of the receiving member, and a retractile spring interposed between the receiving member and the car and adapted to draw the receiving member inwardly through the said opening.



1,425,407. DRAFT EQUALIZER. IRVIE D. MITCHELL, Ross, Iowa. Filed June 23, 1921. Serial No. 479,907. 1 Claim. (Cl. 278—3.)

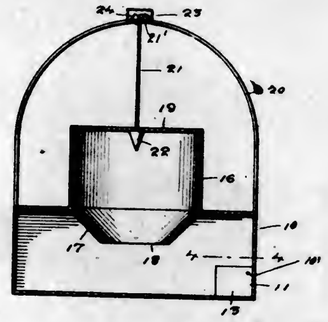
A draft equalizer comprising a clevis, a vertical shaft rotatably supported in the clevis, the upper and lower ends of the shaft having horizontal and oppositely extending tubes, a shaft slidable in each tube and having a right angularly extending terminal arm, the arm of one shaft extending upwardly while the arm of the other shaft extends downwardly, and means on the said arms for connection with draft animals.

1,425,408. AUTOMOBILE LOCK. JAMES A. MURPHEY, Philadelphia, Pa. Filed Apr. 5, 1921. Serial No. 458,796. 5 Claims. (Cl. 70—129.)

1. The combination with a normally rotary element and a stationary element of a vehicle; of two members respectively rigidly connected with said elements; said member connected with said stationary element having a lock casing socket; the other of said members having a locking recess arranged to register with said socket when said rotary member is turned; and a key lock including a body fitted to said casing socket and a bolt which may be set by the key of said lock to prevent disengagement of said lock and thus prevent relative

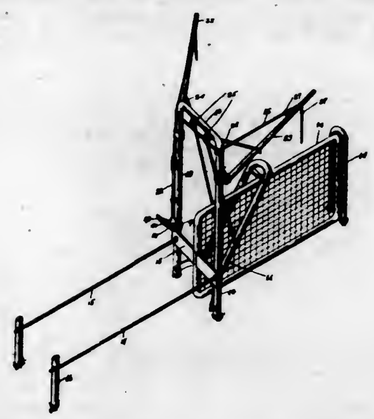
rotation of said members; whereby said lock is prevented from turning with said rotary element and thus continuously maintained in a position accessible to the operator.

1,425,409. PLOW ATTACHMENT. WILHELM NEHLS and AUGUST LEMKE, Maseppa, Minn. Filed Aug. 9, 1920. Serial No. 402,140. 1 Claim. (Cl. 97—32.)



Two plow shares arranged one in advance of the other, and the forward share elevated above the rear share, a beam for each share, the beam for the rear share resting on the beam for the forward share, said first mentioned beam having on its lower face a longitudinal tongue, and the second beam having on its upper face a socket in which the tongue is received, a plate arranged against one of the sides of the beams, said plate being of a length greater than the combined thickness of the beams, a U-bolt straddling the beams and passing through diagonally opposed openings in the plate, nuts engaging the arms of the U-bolt for forcing the same and the plate against the beams, plates disposed transversely over the upper and lower faces of the beams, and adjustable means connecting said plates and in contacting engagement with the sides of the beams.

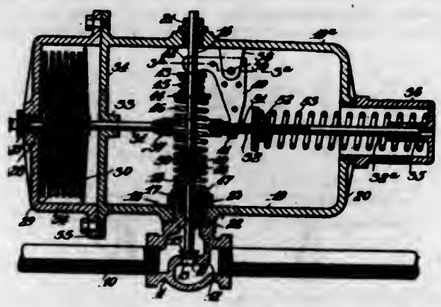
1,425,410. TRAP. MARY J. NEWMAN, Fort Smith, Ark. Filed Oct. 17, 1921. Serial No. 508,096. 3 Claims. (Cl. 43—69.)



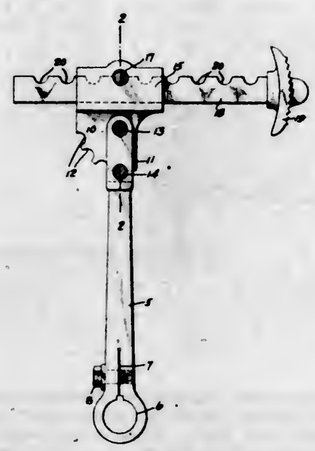
1. A trap of the character described comprising in combination, a receptacle having an opening in the top thereof, a cylindrical portion arranged above the receptacle and received by said opening, said cylindrical portion including a flange arranged within the receptacle and converged toward the center of the receptacle to provide a restricted opening at the lower end of said

cylindrical portion for the purpose specified, a plate closing the upper end of the cylindrical portion and

susceptible of tilting movement in any direction, and means for normally holding said plate in a horisontal position.



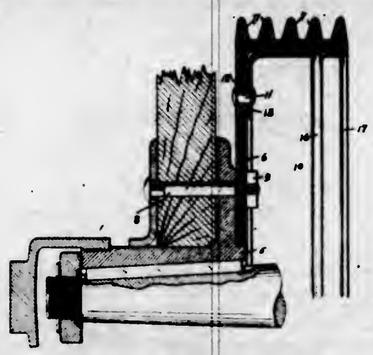
1,425,411. FARM GATE. CHRIS NIELSEN, Ruthven, Iowa. Filed Nov. 11, 1920. Serial No. 423,286. 2 Claims. (Cl. 39—64.)



1. The combination with a gate, of an upright frame, a lever pivoted to the lower portion of the upright frame and also pivoted to the upper central portion of the gate, means for swinging the lever to move the gate longitudinally, a cross piece fixed to one end of the gate and having two openings therein, two wires fixed to the upright extended through said openings in substantially horizontal positions, supporting posts for the outer ends of said wires, said wires being extended in horizontal positions parallel with the opposite sides of the gate whereby when the said lever is moved one end of the gate will be tilted upwardly and the other end will be guided in substantially a horizontal position during its longitudinal movement.

1,425,412. VALVE MECHANISM. HARRY Y. NORWOOD, Rochester, N. Y., assignor to Taylor Instrument Cos., Rochester, N. Y., a Corporation of New York. Filed Mar. 7, 1919. Serial No. 281,199. 5 Claims. (Cl. 137—139.)

1. In an automatic valve, the combination with a valve housing having a valve seat and a valve therefor, of a substantially rectangular frame carried by said valve housing, a stem for said valve extending laterally through said frame and provided with a spring counterbalancing said stem and valve, a pressure sensitive device at one end of said frame having an element extending longitudinally therethrough and provided with a spring for regulating said device, a bell crank pivotally mounted on said frame in connection with said element and spindle and cushioning means to absorb the shock of seating of said valve.



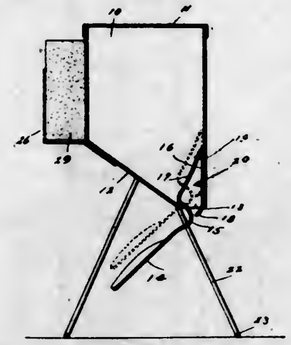
1,425,413. ADJUSTABLE FOOT PEDAL. VICTOR W. PAGE, New York, N. Y. Filed May 7, 1921. Serial No. 467,548. 3 Claims. (Cl. 74—87.)

1. In combination with a foot lever, a housing carried by one end thereof, means for adjustably positioning said housing relatively to the foot lever, a notched bar slidably mounted in said housing, and a bolt extending transversely of said housing and lying within one of the notches of the notched bar to prevent movement of the notched bar longitudinally of the housing, said bolt also serving to grip the housing about the notched bar.

1,425,414. BRAKE DRUM. VICTOR W. PAGE, New York, N. Y. Filed June 4, 1921. Serial No. 475,152. 4 Claims. (Cl. 188—218.)

3. A device of the character described comprising a brake drum provided with an internal annular channel and an annular face defining its open side, and a lining for said brake drum, said lining being spun into the

annular channel and shaped to conform to the angular face defining the open side of said drum.



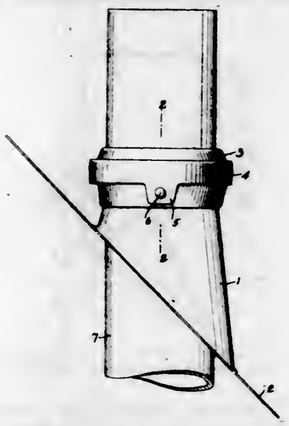
1,425,415. WRENCH. ALBERT PARTIN, Talkeetna, Territory of Alaska. Filed Nov. 12, 1918. Serial No. 262,180. 1 Claim. (Cl. 81—161.)

In a wrench, a shank provided with a threaded portion, one side of the shank being cut away at the threaded portion to form a plane surface, a jaw carried by one end of the shank, a second jaw provided with a bore through which the shank passes, the jaws having work-engaging portions on each side of the shank, providing independent tools for engaging round and flat surfaces, respectively, a sleeve having a bore receiving the shank and provided with a segmental threaded portion within the bore for engaging the threads of the shank, said sleeve also having an annular channel within one end of the bore, the channel having a curved wall, the second named jaw having a portion of reduced diameter, and this jaw including an annular flange presenting a curved surface for engagement with the channel in the bore, the adjacent end of the sleeve cooperating with the reduced portion, and a spring surrounding the shank beyond the sleeve and engaging the end of the sleeve, for retaining the jaws in closed position when the threaded elements are disengaged.

1,425,416. DISPENSING HOLDER. FRED F. PRIHODA, Charleston, W. Va. Filed Nov. 27, 1920. Serial No. 426,749. 2 Claims. (Cl. 211—8.)

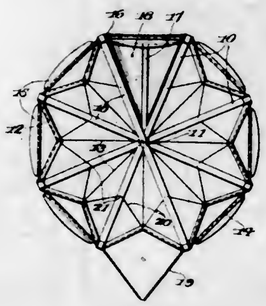
1. In combination, a receptacle having inclined bottom and an opening extending transversely thereof, a dispensing device including an inverted substantially V-shaped portion arranged within the receptacle for sliding movement, and a tray projecting forwardly from the bottom, one wall of the portion arranged within the receptacle normally closing the opening in the bottom thereof, means for associating the device with the receptacle, and an article receiving channel formed on said device and adapted to receive an article when the device is moved within the receptacle, and delivering the article upon the tray when moved in an opposite direction.

1,425,417. BOTTLE CARRIER. AUGUST MARSHALL PRUITT, Cleveland, Ohio. Filed Dec. 10, 1921. Serial No. 521,467. 3 Claims. (Cl. 215—100.)



1. A bottle carrier comprising a collar adapted to be engaged upon the neck of a receptacle, said collar being formed of resilient material and having its ends terminating in lateral extensions, and a clamping device permanently pivotally connected with one of said extensions and engageable over the other whereby to clamp the collar upon the receptacle, said clamping device comprising a body having its intermediate portion formed inclined whereby to constitute a cam engaging one of said lateral ends of the collar with its terminal portion formed with a finger engaging loop.

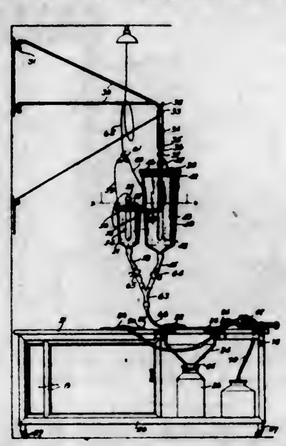
1,425,418. ADJUSTABLE ROOF COLLAR. OSGOOD MORRILL REDLON, Bath, Me. Filed Apr. 6, 1921. Serial No. 458,918. 4 Claims. (Cl. 285—31.)



4. An adjustable roof collar of the character described, comprising a flared or truncated conical casing, a roof plate at the lower end of said casing, a pipe projecting upwardly through said casing, a calking ring around

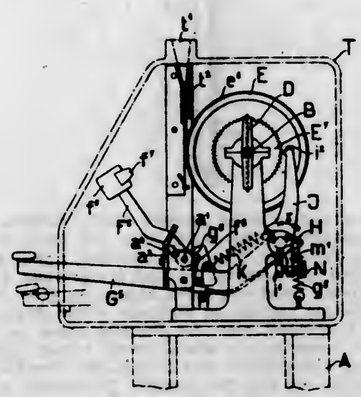
the pipe and around the upper end of the casing, a hard metal ring around the outside of the calking ring and

having an internal taper fitting snugly against the calking ring, and rivets at opposite sides of said rings pivotally connecting them to said casing.



1,425,419. KITE. CHESTER CAMERON REID, New York, N. Y. Filed Jan. 10, 1922. Serial No. 528,162. 2 Claims. (Cl. 244—22.)

1. A kite comprising a plurality of crossed and connected ribs, a thread connected to the outer ends of the ribs and extending therebetween, a second thread secured to the ends of the ribs and extending therebetween, threads secured to the first named threads at points intermediate the ends of the ribs and to the center of the kite in such a position that the said peripheral thread is drawn inwardly between the ribs, and a plurality of vibrating aprons secured to the second peripheral thread between the ends of the ribs.

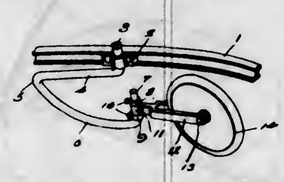


1,425,420. MEDICAL APPARATUS FOR USE IN PROCTOTHERAPY. OSCAR BATO SCHELLBERG, New York, N. Y. Filed Apr. 22, 1921. Serial No. 463,703. 4 Claims. (Cl. 128—227.)

1. A device of the character described comprising a bracket, a rectangular frame having a portion thereof bent at right angles to the main portion to provide means for supporting a plurality of containers, a container suspended in one portion of said rectangular frame, a container rigidly supported in the other por-

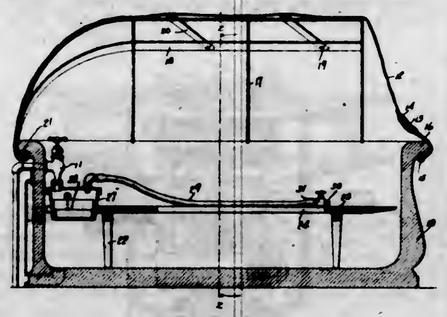
tion of said rectangular frame, and means for adjustably supporting said frame relative to the bracket, substantially as described.

1,425,421. WEIGHING MACHINE PROVIDED WITH A PRINTING APPARATUS. HERMAN SCHRÖDER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Apr. 26, 1921. Serial No. 464,764. 4 Claims. (Cl. 234—1.)



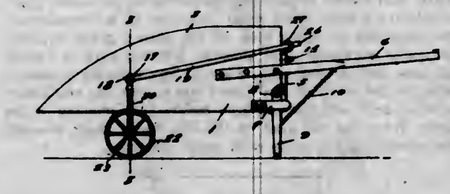
1. In a weighing machine provided with a printing apparatus, a type drum, said drum being adjusted in accordance with the weight of the material to be weighed, a toothed locking wheel rotatable with said drum, an elastic coupling between said type drum and weighing machine, a locking member projecting between the teeth of said locking wheel and spring means for holding said locking member in the path of said teeth.

1,425,422. COLTER. ELMER J. STROUP, Utica, Ill. Filed Nov. 26, 1921. Serial No. 517,978. 1 Claim. (Cl. 97—43.)



A colter mount for cultivators, comprising a member formed to provide a straight shank which is clamped

to the beam of the cultivator, said member having an arm extending from the shank parallel with the beam and directed toward the front of the cultivator, said arm having its end rounded upon itself and extended at a curvature in an outward and downward direction

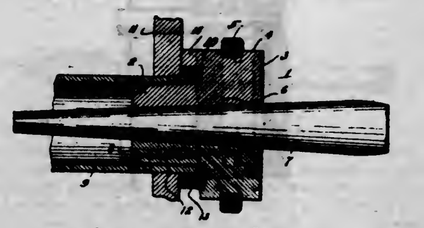


to provide a second deflecting arm, said last mentioned arm having its end formed with an upwardly directed stem, spaced collars on the stem, binding means for the collars, and said stem designed to have arranged thereon and to be received between the collars the eye portion for the hanger of the shaft of a disk colter.

1,425,423. VAPOR BATH. JOSEPH THOMAS, Aberdeen, Wash. Filed Jan. 5, 1922. Serial No. 527,153. 5 Claims. (Cl. 4—18.)

1. A vapor bath including in combination a tub and a stand adapted to be positioned within said tub, said stand including a slab at one end thereof formed with cutout portions adjacent its side edges, said slab being formed with a bifurcated end portion, and a receptacle carried by said end portion, said slab and said receptacle being positioned at a substantial distance from the bottom of the tub.

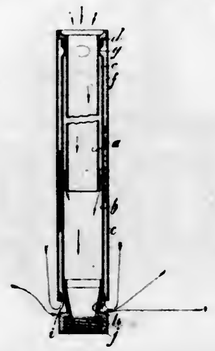
1,425,424. COMBINED BARROW AND SCRAPER. ERNEST A. TRANSMEIER, Lawrence, Kans. Filed July 16, 1921. Serial No. 485,344. 2 Claims. (Cl. 37—33.)



1. In a combined barrow and scraper, a body having a handle at the rear and closed end thereof, legs pivotally supported at the said rear end of the body, spring means influencing the legs above the bottom of the body, latching means holding the legs vertically and depending below the bottom of the body, a bail having its arms journaled on the sides of the body and having extensions from the said sides provided with axles and wheels mounted on said axles, said bail being of a length to straddle the sides and closed end of the body, a spring influenced catch at the said rear end of the body for holding the bail thereon.

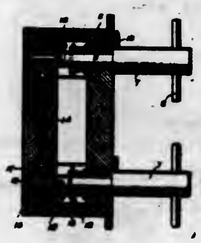
1,425,425. TOY HOUSE. FRANK J. VARNUSKA, New York, N. Y. Filed Aug. 31, 1921. Serial No. 497,151. 2 Claims. (Cl. 46—35.)

1. A toy building comprising a base, vertical posts carried by said base, side walls for the building formed of side members of various lengths, door and window sections adapted to be positioned in the side walls of the building, stringers connecting the upper ends of the vertical posts of the building and a roof for said building, said roof comprising two members hingedly secured together on their inner face, and a ridge pole rigidly carried by said members and overlapping the joint between said members, substantially as described.



1,425,426. TUBE SETTING AND SPREADING TOOL. JOHN H. VOGT, Jr., Columbus, Ohio. Filed Feb. 7, 1921. Serial No. 442,960. 1 Claim. (Cl. 153—80.)

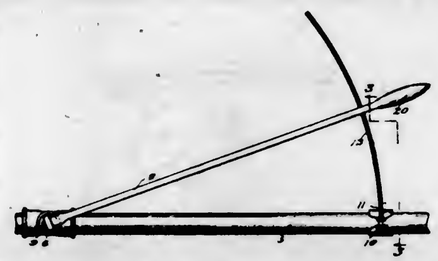
In a tube setting and spreading tool for boilers, a plurality of interfitting, circularly arranged separable sections, formed to include when assembled a relatively enlarged circular head and a reduced longitudinally extending expansible sleeve, said sleeve being disposed to be received within the open end of a boiler tube and upon being expanded to spread the end of said tube into holding relation with a boiler sheet, means surrounding the head of said tool for maintaining said sections in assembled relation, the said tool being provided with a longitudinally extending tapering opening capable of receiving a tapering expansion member, whereby upon the movement of said expansion member longitudinally and inwardly of the tool the circumference of said sleeve will be expanded, and a plurality of projections extending longitudinally from said head and provided upon alternate sections, the said projections being disposed to extend parallel to the longitudinal axis



of the tool and to engage with the outer surface of the boiler sheet, whereby upon the expansion of the section longitudinal movement on the part of a tube will be precluded.

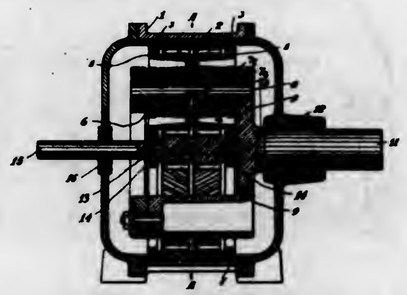
1,425,427. RETURN-PIPE CONNECTION FOR HOT-WATER TANKS. ALFRED RICHARD WATSON, Bembridge, Isle of Wight, England. Filed Dec. 28, 1921. Serial No. 525,465. 2 Claims. (Cl. 126—361.)

1. A device adapted to be fitted in a hot water tank and connected to the return pipe thereof in which an inlet is provided at the top of the device and another inlet near the bottom so that water flowing downwardly from the higher inlet towards the return pipe will have a suction effect on the inlet near the bottom.



1,425,428. ELECTRIC LOCK. HARRY DORMIN WETHLING, Orange, N. J. Filed Feb. 9, 1921. Serial No. 443,661. 3 Claims. (Cl. 200—43.)

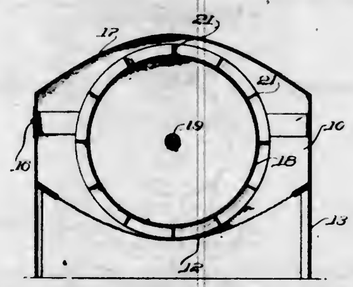
1. An electric lock including a casing, an electrical conductor within said casing, switches interposed within said conductor, said switches each including a freely movable body, means associated with said body for contacting with the end of said conductor to close the circuit, operating elements for said switches, stems secured to said operating elements and extending through said casing, means associated with each of said stems for rendering the same capable of being coupled with the body of the switch, and means co-operating with said stems to cause the same to offer resistance to being operated.



1,425,429. VALVE FOR OIL SYSTEMS. NATHANIEL DU BOIS WHITNEY, Milford, Conn. Filed Apr. 15, 1922. Serial No. 553,122. 1 Claim. (Cl. 137—139.)

A valve for fuel lines comprising a valve member, an operating rod secured thereto, an arcuate rack member adjustably secured to said fuel line and presenting its rack teeth in the direction of said lever, and a knife edge

formed on that edge of the operating rod adjacent the rack and adapted to engage the teeth of the rack member to retain the operating rod and valve in adjusted position.

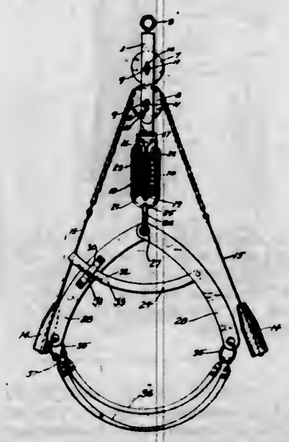


1,425,430. PLANETARY GEAR. OSCAR RAGNAR WIKANDER, Pittsburgh, Pa., assignor, by direct and mesne assignments, to The Skayef Ball Bearing Company, Hartford, Conn., a Corporation of Connecticut. Filed May 6, 1918. Serial No. 232,768. 8 Claims. (Cl. 74—34.)

1. Planetary gearing, comprising the following parts in combination, a stationary internal gear, a plurality of planet gears meshing with said internal gear equally spaced apart with a maximum angularity not exceeding 120°, a sun-gear meshing with the planet gears, a high speed shaft rigidly connected to the sun-gear and yieldingly supported so as to be capable of radial adjustment when rotating, a low speed shaft connected to and driven by the planet gears, flexible operating means for each of the planet gears and for transmitting direct and radial forces equally between the individual planet gears and low speed shaft, said means permitting the plurality of planet gears to relatively shift their axial positions in a circumferential direction to cause each of the planet gears to automatically maintain equal meshing relation with the internal gear and the sun-gear, whereby the working pressures between the teeth of the planet gears and the stationary internal gear and the sun-gear insure transmission of the power from the sun-gear to the low speed shaft through the several planet gears with equal efficiency.

1,425,431. MECHANICAL COLANDER. ELIZABETH WILSON, Plattsmouth, Nebr. Filed Oct. 17, 1921. Serial No. 508,138. 1 Claim. (Cl. 146—9.)

A device of the character described comprising a rectangular open topped casing formed in opposite sides with slots extending downwardly from the open edge, supporting legs at the ends of the casing, a partially elliptical bottom for the casing formed of wire screen, a cylindrical drum having a shaft seating within said slots, one end of the shaft being provided with a crank handle, and said

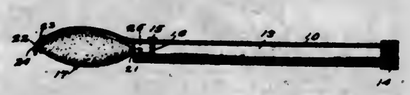


drum being movable downwardly into engagement with said screen bottom, the slots permitting actuation of the drum in spaced relation to the bottom, said drum being formed at its ends with flanges and having its periphery formed with radial ribs connecting said flanges.

1,425,432. SERVICE DEVICE. HECTOR ZOIA, Cleveland, Ohio. Filed Sept. 8, 1921. Serial No. 499,221. 4 Claims. (Cl. 65—53.)

1. A dish holder comprising an open annular shell having an inwardly directed channel about its upper edge and an outwardly directed channel about its lower edge, and a ring seated in each of said channels, said rings adapted to engage grooves in superimposed and subjacent dishes, respectively.

1,425,433. SPINAL-VIBRATING APPARATUS. THOMAS L. ZOOK, Los Angeles, Calif. Filed Mar. 2, 1921. Serial No. 449,090. 11 Claims. (Cl. 46—09.)

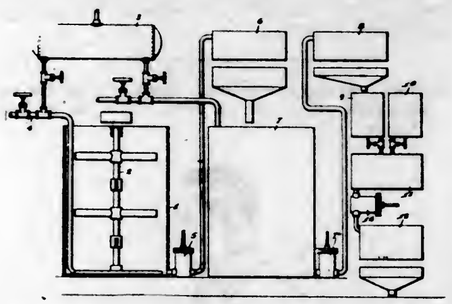


1. A device of the character described comprising members movable relative to one another, suspension means for one of said members, supporting means secured to the other member, said members having pulleys in juxtaposition and normally drawn toward one another by the weight carried by the supporting means and actuating means extending between said pulleys for vibrating the same and said movable members.

1,425,434. SLEEVE HOLDER. SEIKICHI ABE, Los Angeles, Calif. Filed Apr. 18, 1922. Serial No. 555,446. 5 Claims. (Cl. 24—15.)

1. A sleeve holder consisting of two members adapted to be telescoped one within the other and providing a space in which may be clamped a portion of a tucked sleeve, and a clamping device adjustable to lock the fabric in place between the telescoped members.

1,425,435. ROTATABLE BRUSH. GEORGE B. ALLEN, Atlanta, Ga. Filed Apr. 11, 1919. Serial No. 289,247. 1 Claim. (Cl. 15—25.)

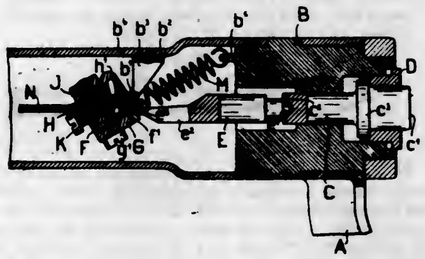


In a rotary tooth brush, the combination with a tubular handle having a rotatable shaft mounted therein, a cleaning element connected to said shaft and adapted to be rotated thereby, a coupling member mounted at the outer end of said cleaning element, of a rigid guard carried by said tubular handle and arranged adjacent said cleaning element, the outer end of said guard terminating at one side of the axis of said brush and short of the outer end of said coupling member, and a resilient bearing plate for said coupling member secured to said guard and narrowing toward its outer end and being curved inwardly and terminating approximately in alinement with the axis of the brush and provided with an opening to rotatably receive said coupling member.

1,425,436. PROCESS OF MAKING PIGMENTS. LE ROY BAKER, St. Louis, Mo. Filed July 16, 1919. Serial No. 311,296. 2 Claims. (Cl. 134—78.)

1. The process of making pigments which consists in first taking a solution of zinc sulphate, subjecting said solution to air and steam under pressure in the presence of an insoluble metallic peroxide and an insoluble metallic monoxide; second filter pressing the resulting solution;

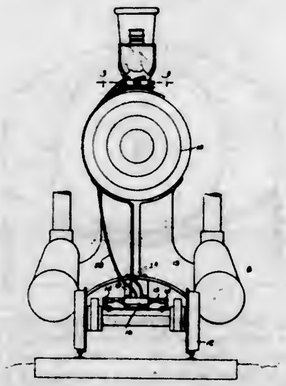
third subjecting such solution to steam and air under pressure; fourth filter pressing the last mentioned solution; fifth mixing the last mentioned filtered solution with a



solution of barium sulphide in equal molecular proportions; sixth filter pressing the last mentioned resulting solution.

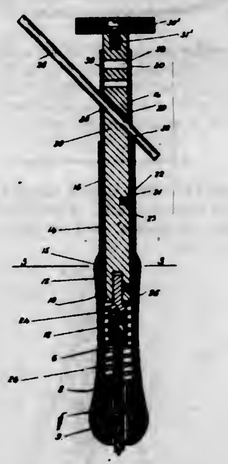
1,425,437. PROCESS OF MAKING PIGMENTS. LE ROY BAKER, St. Louis, Mo. Original application filed July 16, 1919, Serial No. 311,296. Divided and this application filed Aug. 13, 1920. Serial No. 403,209. 3 Claims. (Cl. 134—78.)

1. The process of making pigments which consists in subjecting a solution of zinc sulphate to the action of air under pressure and steam in the presence of a slightly soluble metallic peroxide and a lead mono-oxide, filter pressing said solution, and lastly precipitating said solution with a solution of barium sulphide.



1,425,438. MEASURING INSTRUMENT. MAX BARTHOLDY, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Sept. 2, 1921. Serial No. 497,988. 4 Claims. (Cl. 33—172.)

1. A measuring instrument having a lever provided with a body, knife-edges forming bearings for said lever, a plate projecting beyond said body and forming bearing surfaces for said knife-edges, said body having an adjustable spring arm forming part of one of said bearing surfaces.

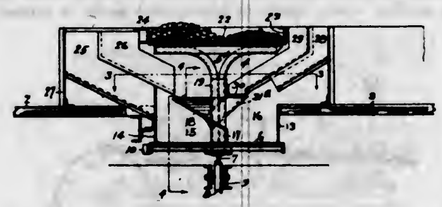


1,425,439. DIRIGIBLE HEADLIGHT. HARRY EXETER BEASLEY and WALTER BYRD, Victoria, British Columbia, Canada. Filed May 10, 1921. Serial No. 468,442. 2 Claims. (Cl. 240—62.)

1. A dirigible headlight including means for oscillating a headlight, an operating cylinder for moving said means, said operating cylinder providing a central chamber formed with an intake opening, discharge openings in said operating cylinder, said cylinder being also provided with outlet openings, valves mounted within said cylinder and arranged between said intake and discharge openings, valve stems secured to said valves and projecting beyond the ends of said cylinder, said valve stems

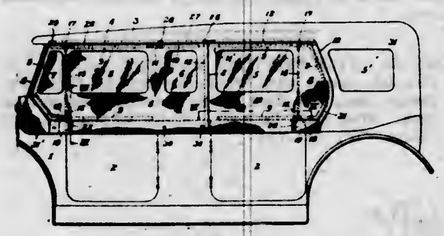
being formed with a reduced portion, and grooves normally permitting communication between said outlet openings and the discharge openings forming a part of said cylinder.

1,425,440. ELECTRODE HOLDER. WILLIAM C. BRIAWINGER and ROBERT F. MORGAN, Wilkes-Barre, Pa., assignors to W. H. Nicholson & Co., Wilkes-Barre, Pa., a Corporation of Pennsylvania. Filed Dec. 27, 1921. Serial No. 524,930. 5 Claims. (Cl. 219—14.)



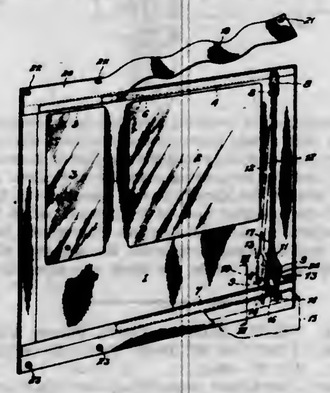
1. In an electrode holder, a supporting tube, a spring-pressed rod slidable in the said tube, said rod and tube being provided with means for holding an electrode, and a plate of insulating material secured to the outer end of the said rod and affording a means for retracting it to free the electrode.

1,425,441. PICKING TABLE. ROSS M. BICKLEY, Pittsburgh, Pa., assignor to Heyl & Patterson, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1919. Serial No. 340,340. 5 Claims. (Cl. 83—54.)



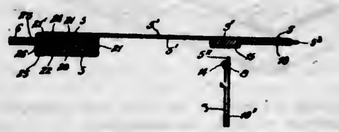
1. An annular picking-table comprising an upper and lower deck, a partition dividing the lower deck into a

plurality of annular compartments, and means for directing different kinds of refuse picked from the same



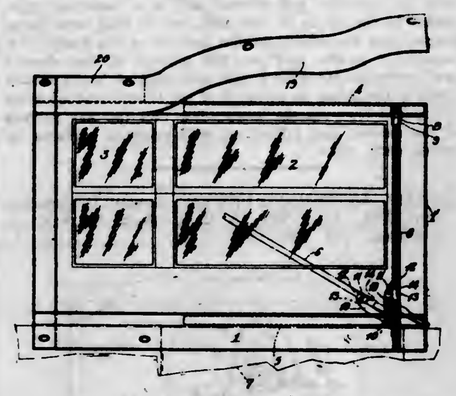
zone of said table into their respective compartments in said lower deck.

1,425,442. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed Oct. 2, 1919. Serial No. 327,952. 12 Claims. (Cl. 296—139.)



1. The combination, in an enclosed vehicle provided with a suitable body having an entrance and a door for said entrance and a canopy, of a construction of the side inclosure thereof comprising a rigid three-sided frame and enclosing material supported by said frame; and means for mounting the frame upon the vehicle door so as to open and shut with the latter, comprising a single supporting rod and a socket attachment therefor secured to the door.

1,425,443. AUTOMOBILE CURTAIN. GEORGE E. BISHOP, Cleveland, Ohio. Filed Jan. 16, 1920. Serial No. 351,826. 9 Claims. (Cl. 296—139.)

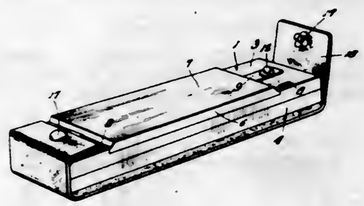


1. A vehicle side curtain comprising, suitable fabric; a strengthening frame for said fabric consisting of rigid tension members, and a vertically-disposed stretching member having two separable parts respectively pivoted to two of said tension members so as to be angularly movable relatively to said fabric, one of said parts comprising relatively pivoted upper and lower sections; and supporting means for the curtain secured to the upper of said relatively pivoted sections.

1,425,444. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed July 22, 1920. Serial No. 398,138. 9 Claims. (Cl. 296—139.)

1. The combination, in an enclosed vehicle having an entrance and a door for the lower part of said entrance, of a construction of the upper door-section of the inclosure consisting of, a glass outlook; a wooden frame bounding said outlook; sheet metal strengthening members covering one face of said frame and extending interiorly thereof to form a rest for one side of said outlook; means retaining said outlook against rest; suitable fabric covering said frame and sheet metal members and exteriorly overlapping the same; and rods for removably mounting the inclosure upon the vehicle door.

1,425,445. AUTOMOBILE INCLOSURE. GEORGE E. BISHOP, Cleveland, Ohio. Filed Jan. 9, 1922. Serial No. 528,100. 4 Claims. (Cl. 296—139.)

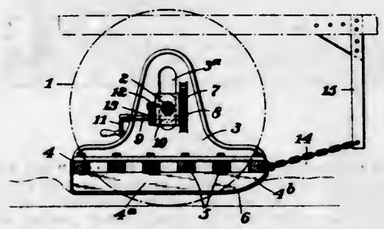


1. An automobile inclosure adapted to be mounted upon the automobile door, comprising suitable curtain fabric; strengthening members disposed longitudinally of the fabric; a vertically-disposed combination swivel and shortening member pivotally secured at one point to said fabric and at another point separably secured to said fabric, the part of said stretching member which is pivotally secured to said fabric being formed with a tubular section having a transverse recess and a communicating longitudinal recess, a portion of said shortening member consisting of a supporting rod formed with a pin intersecting said recesses, said tubular section receiving said rod.

1,425,446. COMBINATION RAZOR CASE, HONE, AND STROP. ROSSER E. BROWN, Olean, N. Y. Filed June 1, 1921. Serial No. 474,100. 1 Claim. (Cl. 51—181.)

In an article of the class described, a stock, a hone disposed against the face of the stock, a strop extending

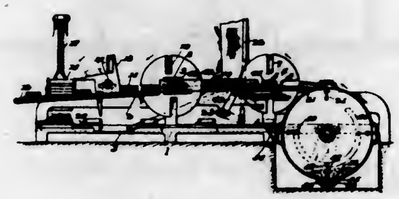
over the other face of the stock, fastening elements carried by the ends of the strop, plates disposed against the said face of the stock and having portions overlapping



and binding the ends of the hone, and companion fastening elements securing the said plates to the stock and engageable by the fastening elements upon the strop.

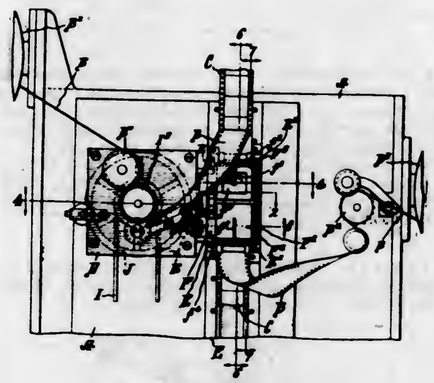
1,425,447. PIN INSERTER AND REMOVER. LOWELL M. BRUNDAGE, Thompson, Pa. Filed June 7, 1921. Serial No. 475,756. 5 Claims. (Cl. 81—3.)

1. A tool of the class described, comprising a pair of jaws pivotally connected intermediate their ends and having cooperating gripping surfaces at one end, each of said jaws having a flat portion integrally connected with the opposite end thereof and in a plane at right angles to the plane of said jaw, one of said jaws being longer than the other, the flat portion of the longer jaw forming a handle and the flat portion of the shorter jaw overlying the longer jaw and adapted to be moved towards the latter by pressure of the thumb, and a spring interposed between the longer jaw and the flat portion of the shorter jaw for urging said gripping surfaces towards each other.



1,425,448. ANTIMIRING DEVICE. HERRON G. CARROLL, Ayr, Nebr. Filed Nov. 15, 1920. Serial No. 424,180. 1 Claim. (Cl. 280—150.)

An anti-miring attachment for tractors comprising a broad flat sled member having end standards provided with elongated slots to receive the tractor axle, racks carried by said standards, brackets adapted to be secured to the axle, shafts journaled in said brackets, gears carried by said shafts and engaging said racks, means for operating said gears, and means for locking them against movement.

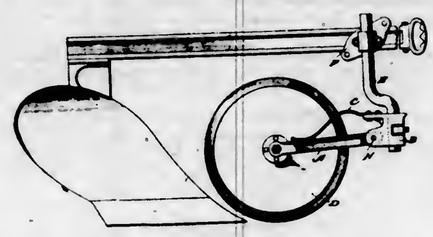


1,425,449. MOLD-HANDLING APPARATUS. EDWARD D. CARY, New York, N. Y. Filed Jan. 8, 1921. Serial No. 435,853. 15 Claims. (Cl. 25—2.)

1. The combination of a brick machine of a mold handling and conveying apparatus comprising means for delivering the molds in succession to the brick machine for filling, means for discharging the molded articles from the mold, means for delivering the empty molds to a sanding wheel, means to receive said molds in reverse

position from the sanding wheel, and mechanism for operating said last mentioned means to deliver the reverse molds in proper position to the first mentioned means.

1,425,450. FILM-PRINTING MACHINE. GASTON L. CHANIER, Jersey City, N. J., assignor to Pathé Exchange, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 12, 1921. Serial No. 490,952. 13 Claims. (Cl. 95—75.)



1. Apparatus for printing cinema films, comprising a partition with a light aperture therein, manually operated means for pressing the two films together in front of said aperture and for separating same as and when desired, feed mechanism for simultaneously passing the negative film and the positive film to be printed while in contactual relation past said aperture, and means for causing said feed mechanism to move the negative film only past said aperture while the films are separated.

1,425,451. PLOW. MARCELO CONTI, Buenos Aires, Argentina. Filed Nov. 29, 1920. Serial No. 427,187. 1 Claim. (Cl. 97—43.)

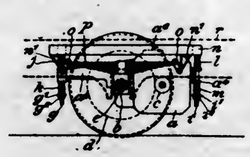
A plow attachment comprising, in combination, a sleeved fitting adapted for connection to a plough beam; a vertical standard extending at its upper end through said fitting and supported thereby; a sleeve mounted on the lower end of said standard; a fork pivoted at its front end to the lower rear portion of the last-named sleeve; a rolling colter journaled in the free rear ends

of the branches of the fork; and a spring attached at its front end to said last-named sleeve above the point of

pivotal connection of the fork thereto and bearing at its rear end upon the rear portion of said fork so as to yieldingly press the latter and the colter downward.

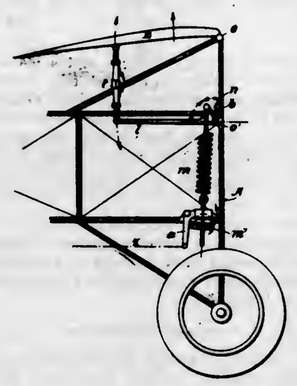
1,425,452. LENS. THOMAS W. COOPER, Montclair, N. J. Filed Sept. 24, 1921. Serial No. 502,857. 2 Claims. (Cl. 88—54.)

1. A bifocal lens formed of one piece of glass having upper and lower distance fields and a reading or near field interposed between said distance fields, said reading or near field extending clear across the lens at a point below the medial line thereof.



1,425,453. MATCH SCRATCHER. JOHN N. DELL, San Francisco, Calif. Filed Apr. 14, 1921. Serial No. 461,329. 1 Claim. (Cl. 44—48.)

A match scratcher comprising an open ended cylinder having an elongated slot, a screen abrading surface within the cylinder to enable matches to be lighted thereon through the slot, perforated ears extending laterally from the cylinder to connect the same to a suitable support, and upwardly projecting ears at the top and bottom of the cylinder to direct sparks from the matches struck away from the scratcher support.



1,425,454. SUSPENSION DEVICE FOR ELECTRIC TRACTION MOTORS. CHARLES ROGER DEMOLE, Geneva, Switzerland. Filed May 23, 1922. Serial No. 563,115. 5 Claims. (Cl. 105—139.)

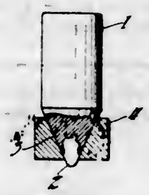
1. A suspension device for electric traction motors comprising in combination an intermediate frame bearing on the axle boxes by means of springs and supporting the motor, the connecting means between the motor and its supporting frame comprising springs which are adjustable in such a manner that their tension is adapted to counterbalance the force acting on the bearings by which the motor is connected to the shaft which it

drives, and which force is due to the weight and torque of the motor, whereby to diminish the wear of the bushes of said bearings.

1,425,455. MEANS FOR STABILIZING AEROPLANES. SALVATORE DE SANTIS, Naples, Italy. Filed Apr. 30, 1920. Serial No. 377,926. 1 Claim. (Cl. 244—29.)

In a flying machine, a pivoted stabilizing wing, a spring, a lever mechanism with which the spring is connected, and means for adjustably connecting the lever mechanism with the wing.

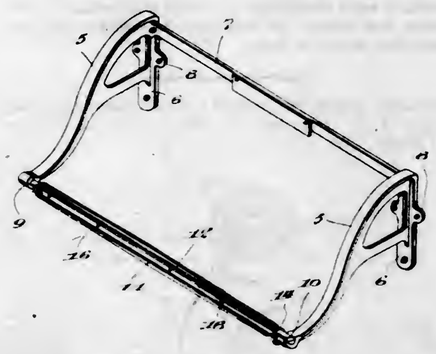
1,425,456. MEDICINE BOTTLE. NATHANIEL DIAL, New York, N. Y. Filed Sept. 30, 1919. Serial No. 327,527 1 Claim. (Cl. 215—55.)



In combination, a stopper, a disk fixed to one end of the stopper and a handle formed on the edge of the disk and extending in the same direction with the stopper.

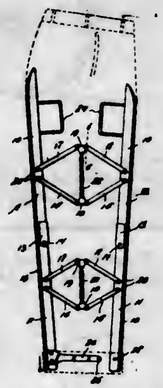
1,425,457. FOUNDRY MOLDING MATERIAL. FREDERICK G. DOKKENWADEL, Coshocton, Ohio. Filed Feb. 23, 1921. Serial No. 447,234. 1 Claim. (Cl. 22—188.)

The herein described foundry molding material comprising molluskite, 3 parts; and graphite, 1 part.



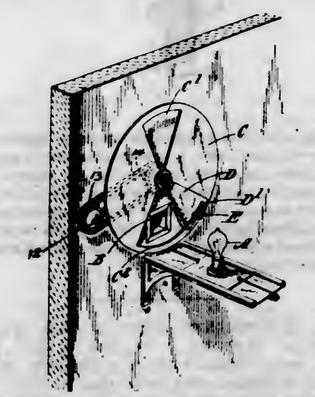
1,425,458. STYLUS MOUNTING. THOMAS A. EDISON, Llewellyn Park, West Orange, N. J., assignor to New Jersey Patent Company, West Orange, N. J., a Corporation of New Jersey. Filed Dec. 11, 1919. Serial No. 344,093. 4 Claims. (Cl. 274—38.)

1. The method of reinforcing a stylus mounting comprising a holder having a reduced end portion and a stylus partially enclosed in the holder and projecting from the end of said portion, which consists in forming a collar with an opening therethrough the wall of which conforms to said reduced end portion, heating said collar, and then forcing the same while hot onto the reduced end portion of the holder, substantially as described.



4. A stylus mounting comprising a holder having a reduced end portion, a stylus partially enclosed in said holder and projecting from the end of said portion, and a collar shrunk on the said reduced end portion, substantially as described.

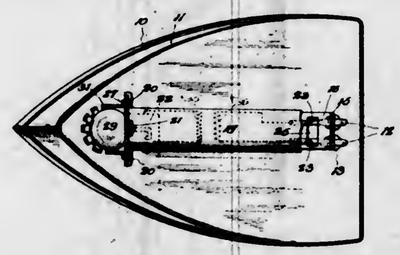
1,425,459. TOWEL RACK. OTTO H. EGGERT, Chicago, Ill. Filed May 19, 1921. Serial No. 470,759. 1 Claim. (Cl. 45—13.)



A towel-rack comprising a pair of laterally spaced bracket arms having attaching means at their inner ends and bearings at their outer ends, the bearings of one of the arms being open, a towel-supporting cross bar supported and secured at its ends in said bearings, a towel-clamping bar extending parallel to the supporting bar, said supporting bar being spaced intermediate its ends from the clamping bar and having end portions which are offset inwardly toward the clamping bar for engagement thereby, said clamping bar seating removably in the bearings, and the offset end portion of the supporting bar which seats in the open bearing projecting from said bearing, and a lock applied around said projecting offset end portion and the contiguous end portion of the clamping bar.

1,425,460. PRESSING DEVICE. HOWARD A. ELLIOTT, Altoona, Pa. Filed Dec. 5, 1921. Serial No. 520,082. 3 Claims. (Cl. 223—19.)

1. A trouser stretcher comprising a pair of opposed stretcher members, toggles connecting said members, each toggle including opposed pairs of links having their corresponding outer extremities pivotally connected with said member, plates arranged between the adjacent extremities of said links and pivotally associated therewith, a tongue projecting from each plate, and a spring terminally connected with said tongues, whereby said stretcher members are susceptible of self adjustment within a trouser leg for the purpose specified.



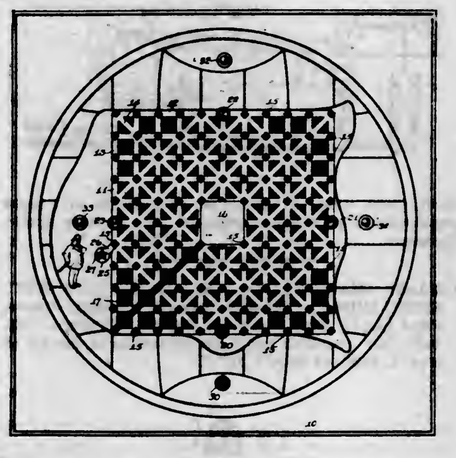
1,425,461. APPARATUS FOR PRINTING MOTION-PICTURE FILMS. HENRY RIEGEL EVANS, London, England; Adele Kean Evans executrix of said Henry Riegel Evans, deceased. Filed June 1, 1915, Serial No. 31,331. Renewed Jan. 7, 1922. Serial No. 527,800. 5 Claims. (Cl. 95—75.)

1. In printing apparatus for motion pictures, the combination of an exposure window, means for moving past said window a film having different sets of pictures

thereon to be reproduced in colors, a source of light the rays from which are directed upon said window, and means for so varying the printing effect of the light falling upon said window that it passes through a periodically recurring cycle of changes which synchronize with the changes of the pictures of the different sets appearing at the window.

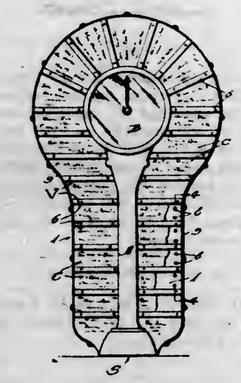
1,425,462. PILOT SIGNAL FOR ELECTRIC HEATING DEVICES. RAY P. FARRELL and CLAUDE E. MOON, Oxnard, Calif. Filed Oct. 16, 1920. Serial No. 417,383. 3 Claims. (Cl. 177—311.)

1. In an electric iron, the combination of circuit posts with a heating element of the iron, handle bracket arms carried by the iron, a transformer having primary and secondary windings, said primary winding being electrically connected with said posts, a pilot lamp in circuit with the secondary winding of the transformer, a casing for said transformer adapted to fit between said arms, said casing having lugs engaging said arms and bolts for holding said arms and casing together.



1,425,463. SAFETY RAZOR. JOSEPH WILLIAM FISCHER, Brooklyn, N. Y. Filed Oct. 5, 1920. Serial No. 414,826. 4 Claims. (Cl. 30—12.)

1. In a safety razor, a base provided with a supporting member having a raised portion terminating short of its rear edge, a blade adapted to rest upon the raised portion and provided with a back having members of different widths overlying the blade, the members of the back being of the same thickness as the raised portion and either adapted to rest on the supporting member and abut against the rear end of the said raised portion, a clamping member engaging a back member of the blade and the blade adjacent to its cutting edge, means for securing the clamping member in position, and a handle for supporting the base.

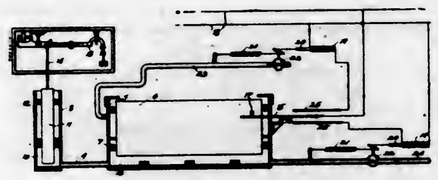


1,425,464. GAME. JOSEPH WILLIAM FISCHER, Brooklyn, N. Y. Filed Feb. 26, 1921. Serial No. 447,990. 4 Claims. (Cl. 46—21.)

1. A game comprising a game board and members adapted to be moved over the said board by the players, the board having a main field provided with intersecting vertical, horizontal, and diagonal pathways for the said members to be moved on, a barrier extending across a portion of the said field from the border of the said main field, spaced starting stations at the said main field and of which one is located to one side of the

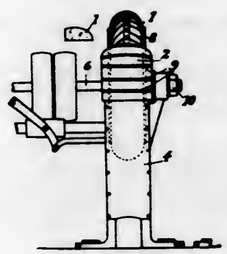
said barrier and is for one of the said members to start from; the remaining stations being for the other members to start from, and a goal on the other side of the said barriers.

1,425,465. WEIGHING-SCALE ATTACHMENT. KENNETH GRAY FISHER, Tacoma, Wash. Filed Nov. 15, 1920. Serial No. 424,240. 2 Claims. (Cl. 40—125.)



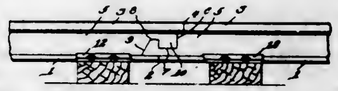
1. A device of the class described comprising a signboard for attachment to a public weighing scale, said board comprising a pair of symmetrical half-sections having their inner edges shaped to fit snugly against the edges of the scale, brackets for retaining said sections together, and means carried by said brackets for retaining the sections in position on the scale.

1,425,466. SCALE. JOHN FRAME, Searsport, Me. Filed Oct. 5, 1920. Serial No. 414,783. 5 Claims. (Cl. 265—43.)



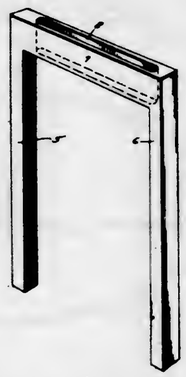
1. A scale, including a pair of connected tanks, a platform within one of said tanks, a float within the second of the same, a scale associated with said float, said tanks being adapted to receive fluid for permitting a suspension of both said platform and float within their re-

spective tanks, and mechanism connected with said platform and controllable thereby for permitting the intro-



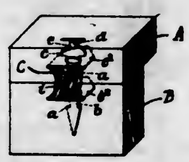
duction and escape of additional fluid within said tanks proportionate to the movement of the members within the same.

1,425,467. MACHINE FOR UNGRAINING AND SOFTENING HIDES. CLAUDIUS FRANSON, Annonay, France. Filed Apr. 11, 1921. Serial No. 460,605. 2 Claims. (Cl. 149—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. A cutter carrying cylinder for machines for softening hides and blades arranged on the periphery thereof, said blades being arranged in opposing sets with the blades of each set substantially parallel and extending from one edge of the carrier in a straight line at an angle to the axial plane of the carrier and projected at their inner ends beyond the corresponding inner ends of the other set of blades, the operative edges of the blades curving from the side edges of the carrier toward the peripheral center thereof.

1,425,468. RAIL JOINT. CHARLES W. GASKEY, Greensburg, Pa. Filed Jan. 9, 1922. Serial No. 528,023. 1 Claim. (Cl. 238—236.)

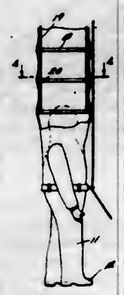


In a rail joint, the combination of the contiguous end portions of two rails, both of the said rails having the ends of their bases square and opposed to each other, and both rails having mitered opposed ends on their heads and the upper portions of the webs, and one of the rails having a notch in front of its mitered web portion and a tongue in front of said notch and extending beyond the square end of the base, and the other rail having a tongue on its web to take into the notch of the first-named rail and also having a notch back of the said tongue to receive the said tongue of the first-named rail, whereby the rails may be moved laterally into interlocked and alined relation and cannot be disconnected or moved relatively to each other except by a reverse lateral movement.

1,425,469. ELECTRIC STORAGE BATTERY. WALTER LAWRENCE GILL, San Bernardino, Calif. Filed Sept. 30, 1920. Serial No. 413,749. 4 Claims. (Cl. 204—29.)

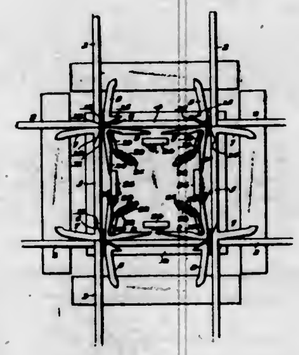
2. A separator for storage batteries of inverted U shape consisting of a transverse connecting head and a pair of legs depending from the opposite ends of said head, said legs and said head being of uniform width throughout and said head having an opening formed therethrough, the space between said legs being free and unobstructed throughout the width of the separator and said separator being of a thickness to bear against the confronting faces of adjacent plates throughout the height and across the top portions of said plates.

1,425,470. JOINT BINDER. EDOUARD CHARLES GLARDON, Hamburg, Germany. Filed Aug. 9, 1920. Serial No. 402,490. 6 Claims. (Cl. 217—70.)



1. In a joint binder the combination with a U-shaped clamp, the two shanks of which are perforated and adapted to enter the two members to be secured together, of a nail adapted to be driven into the said two members and through the perforation of the shanks, an extension provided at the head portion of the nail for receiving the blows of a hammer or other instrument used in driving home the nail, said extension being weakened at its base, substantially as described and for the purpose set forth.

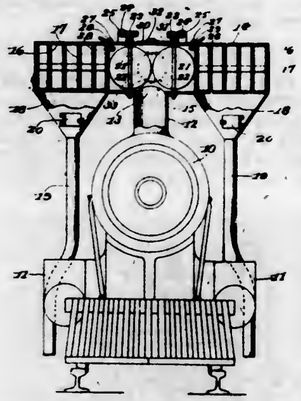
1,425,471. APPARATUS FOR SUBMARINE WORK. ARTHUR B. HANSEN, New York, N. Y. Filed Apr. 14, 1920. Serial No. 373,752. 1 Claim. (Cl. 61—68.)



An apparatus for submarine work including a waterproof suit having an open upper end and a continuous flexible and collapsible tubular extension communicating

with said upper end, spaced annular braces secured within said extension that maintain the same distended when submerged, a flexible connection between the upper and lowermost braces constituting a means for limiting the relative separation of said upper and lowermost braces whereby the weight of the suit and diver is supported

by the flexible connection, the intermediate braces having eyes through which said connection is trained to prevent relative twisting of the braces and the extension, a belt secured around the intermediate portion of the suit, and a forwardly presented eye carried by the belt adapted to receive the intermediate portion of an adjustable hauling line.

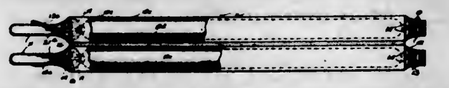


1,425,472. RAILWAY CROSSING. JAMES HARRIS HARDY, Crawford, Miss. Filed Oct. 25, 1921. Serial No. 510,273. 5 Claims. (Cl. 246—380.)

5. A railroad crossing including intersecting main line rails, guard rails at each main line rail intersection, movably supported guard rail sections, and resilient toggle means connected with the movable guard-rails for automatically throwing and locking the latter in one position or another according to the direction in which the joint of the toggle passes its dead center.

1,425,473. SPARK CONDUCTOR. WADE H. HATCHER, Stuart, Va. Filed Apr. 5, 1922. Serial No. 549,890. 3 Claims. (Cl. 183—34.)

1. A spark arrester and conductor for a locomotive comprising a transverse conduit mounted on the upper end of the stack of a locomotive and communicating therewith, means in the ends of the conduit for grading the cinders, means below and connected with the conduit



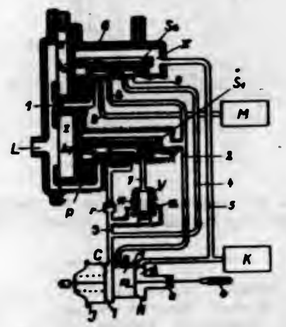
for receiving the cinders, and means for controlling the flow of smoke and cinders to the opposite ends of the conduit.

1,425,474. STEREOTYPING FLONG. ALFRED GEORGE HAWKINS, Hornsey, England, assignor of one-half to Associated Newspapers Limited, London, England. Filed Mar. 21, 1921. Serial No. 454,198. 5 Claims. (Cl. 91—68.)

1. A stereotyping flong having incorporated in the basic material a proportion of casein.

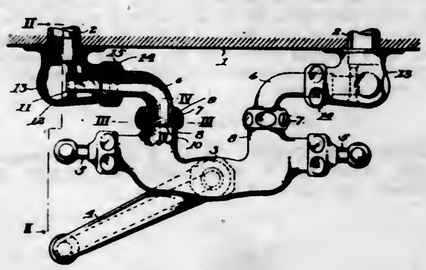
1,425,475. LIFE BELT. MARY HEATH, Yonkers, N. Y., assignor to Irving E. Letner, New York, N. Y. Filed Jan. 11, 1921. Serial No. 436,504. 3 Claims. (Cl. 9—17.)

1. As a new article of manufacture, a belt of the class described including an inflatable body, an inflating tube on the body adjacent to an end thereof, the tube projecting beyond the end of said body, a billet at that end of the body adjacent to the inflating tube and presenting a longitudinally disposed pocket for receiving said tube, and a coacting member on the body at the opposite end from the billet to engage the latter for fastening the belt about the wearer.



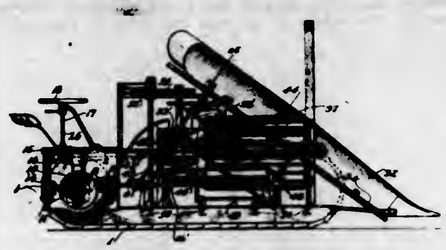
1,425,476. SPARK PLUG. FRANK A. HENKLS, Pomona, Calif. Filed Aug. 3, 1920. Serial No. 400,928. 2 Claims. (Cl. 123—169.)

1. The combination in a spark plug, of a metallic bushing chambered at its inner end, a main electrode extending through and insulated from said bushing, and steel



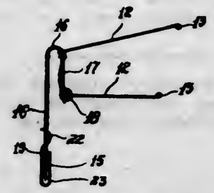
bristles disposed in a plane extending at right angles to the length of the bushing and main electrode, interposed between said bushing and electrode at the mouth of the chamber and carried by one of said elements and separated by a gap bordered by free bristle ends all in the same plane from the other element.

1,425,477. TRIPLE VALVE FOR SINGLE-CHAMBER COMPRESSED-AIR BRAKES. WILHELM HILDEBRAND, Berlin-Lichtenberg, Germany, assignor to Handel Maatchappij H. Albert De Bary & Co., Amsterdam, Netherlands, a Dutch Company. Filed Aug. 26, 1921. Serial No. 495,513. 2 Claims. (Cl. 303—39.)



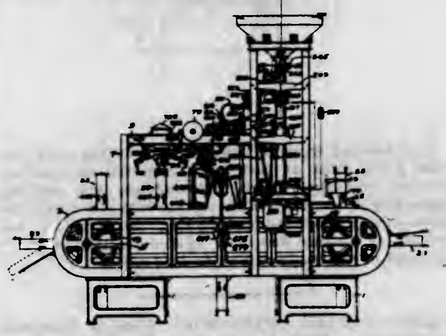
1. In a triple valve for a single chamber compressed air brake, a slide valve for controlling the operation of applying the brake and a second slide valve for controlling the operation of releasing the brake and two pistons for operating respectively the said slide valves, means whereby one side of each of said pistons is subjected to the pressure in the main train pipe the other side of one piston to one chamber of the auxiliary air reservoir and the other side of the second piston to the other chamber of the said auxiliary air reservoir, substantially as and for the purpose specified.

1,425,478. ADJUSTABLE MIXING FAUCET. OTTO G. HITCHCOCK, Erie, Pa., assignor to Hays Manufacturing Co., Erie, Pa., a Corporation of Pennsylvania. Filed April 14, 1922. Serial No. 552,708. 5 Claims. (Cl. 277—18.)



1. A mixing faucet, comprising a mixing chamber, a discharge spout therefor, fittings adapted to be attached to separate inlet pipes, and means connecting said mixing chamber and fittings permitting longitudinal adjustment therebetween but preventing relative rotary movement.

1,425,479. CANE-HARVESTING APPARATUS. CLAUDE C. HOBSON, Kenwood Park, Iowa, assignor of one-half to Oto O. Hobson, Vinton, Iowa. Filed Feb. 11, 1921. Serial No. 444,140. 10 Claims. (Cl. 56—17.)

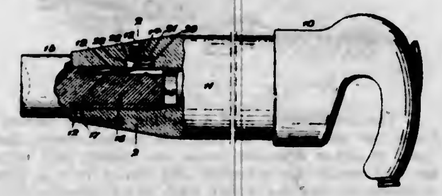


1. In an apparatus for extracting juices from the cane, the combination of a support adapted to be advanced over the field, cane cutting mechanism mounted thereupon, and means mounted upon the support and adjacent thereto for pressing and thereby extracting the juices from the can subsequent to the cutting operation.

1,425,480. BOUTONNIÈRE HOLDER. ALBERT HOFFMANN, Corona, N. Y. Filed May 1, 1922. Serial No. 557,589. 3 Claims. (Cl. 24—6.)

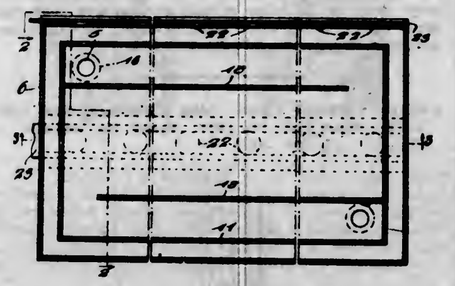
1. A boutonnière support comprising an inelastic pliable wire having rounded ends, a pin having means for engaging said wire intermediate its length, and means for securing said pin when adjusted.

1,425,481. BAG-FILLING MACHINE. CHARLES H. HOWARD, Saugus, Mass., assignor to Paper Products Machine Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 26, 1918. Serial No. 259,882. 31 Claims. (Cl. 93—6.)



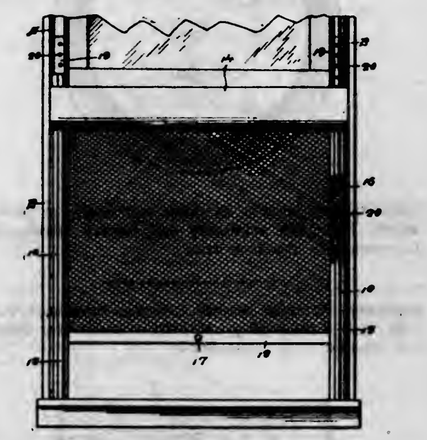
1. A machine of the character described, comprising, in combination, means to introduce a charge of material into a container, means automatically to apply a cap to the charge in the container, and means automatically to

secure the upper end portions of the container to the outer face of said cap to close the container.



9. A machine of the character described comprising, in combination, a holder for a bag having spaced side walls positioned to receive a bag therebetween, said walls having their upper ends substantially flush with the upper folded end of the bag, cover sections pivotally mounted upon the upper ends of said walls and positioned to fold downwardly about their pivots and towards each other to impart a similar folding movement to upwardly extending portions of the bag, and means for automatically moving said sections to the folded position.

1,425,482. RETAINING DEVICE FOR A RIVETING SET. THOMAS J. JAMES, Philadelphia, Pa., assignor to Thomas Thompson, Philadelphia, Pa. Filed Nov. 10, 1919. Serial No. 336,989. 1 Claim. (Cl. 121—32.)



The combination with the barrel of a riveting hammer provided with a bore, the bore being formed with a longitudinal channel on one side and with a recess diametrically opposite the channel, the walls of the recess forming shoulders, of a tool holder including a longitudinal rib engaging the channel and itself having a longitudinal channel diametrically opposite the rib, a resilient element in the channel last named, an engaging device on the resilient element and proportioned for reception within the channel last named prior to movement into the recess for engaging the shoulders, the recess being proportioned to permit of limited longitudinal movement of the tool holder, and a spring mounted element countersunk in the body of the barrel and movable radially of the tool holder for forcing the engaging device into the channel to free the tool holder.

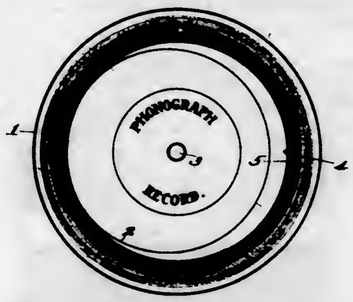
1,425,483. AUTOMOBILE HEATER. WILFRID JEAN, Lowell, Mass. Original application filed July 21, 1919, Serial No. 312,190. Divided and this application filed Apr. 22, 1920. Serial No. 376,112. 2 Claims. (Cl. 257—136.)

2. An automobile heater comprising a shallow casing provided at its upper edge with a lateral flange, a grating secured to said flange, a relatively small shallow casing within said first named casing, a plurality of horizontal bars secured to the upper side of said relatively small casing and bent upwardly at the ends thereof to form supporting arms, the upper ends of said arms being bent laterally outward and secured between said grating and the lateral flange of said first named casing, said relatively small casing having an exhaust gas inlet and an exhaust gas outlet.

1,425,484. WINDOW SCREEN. AMANDA JENKINS, Winamac, Ind. Filed Mar. 21, 1921. Serial No. 454,089. 1 Claim. (Cl. 156—39.)

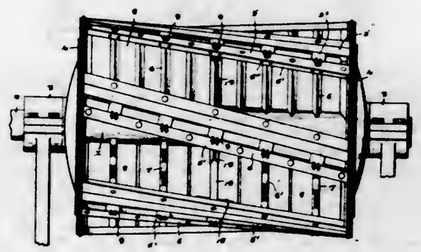
A window screen device comprising a casing secured transversely of the window frame at the intermediate portion thereof, a spring roller within said casing, a sheet of wire screen secured to and adapted to be wound upon said roller, a pair of upright channeled guide members located at opposite sides of the window frame and extending throughout the lengths thereof, rigid strips slidable within said guide members and each carrying spaced pins arranged longitudinally thereof, the side edges of unwound portions of the screen extending into said guides with the mesh of the screen engaged upon adjacent pins, said guides having their forward walls offset to define grooves for the accommodation of the pins, and a stiffening bar at the lower edge of the screen and provided with a handle.

1,425,485. FASTENING DEVICE FOR WEARING APPAREL AND THE LIKE. SAMUEL EVERETT JOHNSTON, Edinburgh, Scotland. Filed June 14, 1921. Serial No. 477,523. 5 Claims. (Cl. 24—224.)



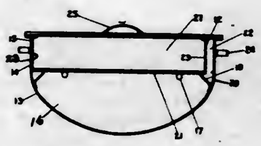
1. In a fastening device, in combination, a stud member, a socket member, spring gripping members forming part of said socket member and having upwardly curved mutually approaching surfaces, a transverse member formed integral with said spring members and extending transversely across the same and means for attaching said socket member to a garment by sewing.

1,425,486. PHONOGRAPH RECORD. THOMAS DOUGLAS JONES and JOHN H. BARR, Kansas City, Mo.; Mary Barr executrix of said John H. Barr, deceased. Filed Feb. 7, 1921. Serial No. 443,002. 2 Claims. (Cl. 274—42.)



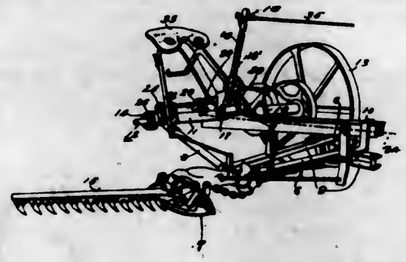
1. A phonograph disk record provided on its face within the space surrounded by the sound reproducing grooves,

with a scoring or groove for receiving the needle of the tone arm after the needle has completed its inward



travel in said grooves, to cause said needle to move inwardly and then outwardly and impart corresponding movements to the tone arm.

1,425,487. WATER MOTOR. GEORGE JORGENSON, Fargo, N. Dak. Filed May 13, 1921. Serial No. 469,293. 3 Claims. (Cl. 170—152.)



1. A wheel of the class described comprising a shaft, end pieces carried thereby, longitudinally extending strips secured to the peripheries of the end pieces and arranged in groups, two rows of posts extending between the shaft and the strips of each group and hinged doors for closing the spaces between the posts of the front row and arranged to contact with the posts of the rear row when in open position.

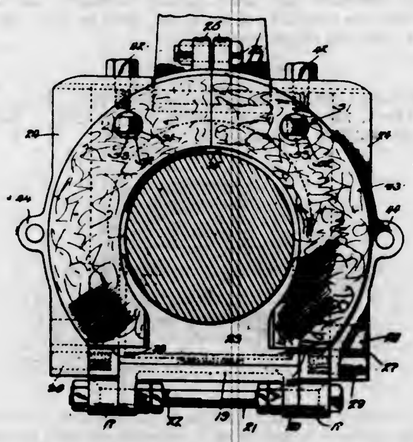
1,425,488. ASH SIFTER. GEORGE KABUSECK, Hartford, Conn. Filed Oct. 29, 1921. Serial No. 511,332. 2 Claims. (Cl. 83—60.)

1. In combination in an ash sifter, a body, a container for being received within said body, and a cover for said body, said body comprising a relatively elongated upper portion and having a rounded bottom that merges at the upper ends with the end walls of said upper portion, said container fitting loosely within said upper portion and being appreciably shorter in overall length than the distance between said end walls so as to permit of relative endwise movement, and cooperating supporting means on said upper portion and container for permitting of such endwise movement responsive to a rocking movement of the sifter structure while supported by said rounded bottom.

1,425,489. MOWING MACHINE. CHARLES ROBERT KEAGLE, Joliet, Ill. Filed Apr. 26, 1920. Serial No. 376,738. 8 Claims. (Cl. 56—273.)

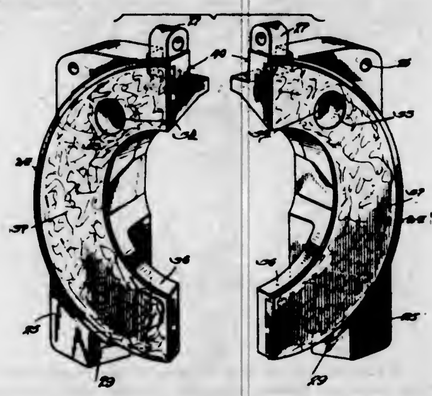
1. The combination with a mowing machine having a cutter bar adapted to be raised to an inoperative position; of power operated means for raising said cutter bar and means for releasing said device from a point in advance of and not within reach of an operator of the mower.

1,425,490. VANITY-CASE PARTITION. WILLIAM G. KENDALL, Newark, N. J. Filed Dec. 1, 1920. Serial No. 427,583. 2 Claims. (Cl. 132—83.)



1. A vanity case partition comprising a base and an upstanding partition portion, the latter of two-ply form, and rests at the ends of the said upstanding partition portion comprising tongue parts folded back against the outer faces of the plies of said portion and above the upper edge of the portion being extended outwardly and upwardly in opposite directions.

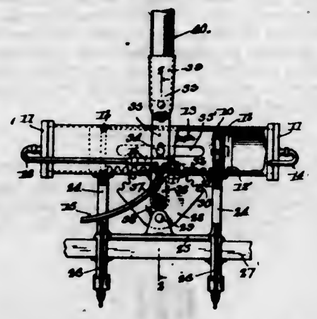
1,425,491. BRIEF CASE. MAX KLOMSERS, New York, N. Y. Filed July 21, 1921. Serial No. 486,420. 4 Claims. (Cl. 190—43.)



1. In a brief case, an edge strip for connecting the front and back walls formed with thickened pressed corners shaped to collapse when folding.

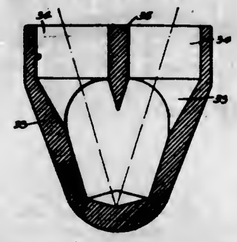
1,425,492. LOCOMOTIVE DRIVING BOX. ARTHUR T. KUEHNER, Elkridge, Md. Filed July 12, 1920. Serial No. 395,691. 15 Claims. (Cl. 64—25.)

15. A journal box including a box body provided adjacent its outer side with pedestal flanges, a face plate detachably seating against the outer side of the box body and provided at its lower end with yokes overhanging the face plate at its inner side to coact with said flanges for limiting the plate against upward movement, and means coacting with said yokes locking the plate against outward movement away from the box body.



1,425,493. LOCOMOTIVE DRIVING BOX. ARTHUR T. KUEHNER, Elkridge, Md. Filed July 17, 1920. Serial No. 397,000. 6 Claims. (Cl. 64—25.)

1. A journal box including a box body, a face plate secured to the outer side of the box body and providing a continuous annular hub bearing, and means extending through the box body connecting the face plate therewith and retractable to permit removal of the face plate in a plane parallel to the adjacent face of the box body.



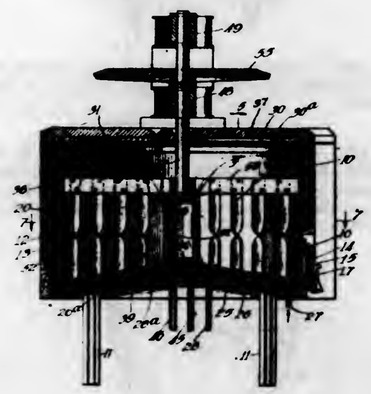
1,425,494. PNEUMATIC PUMP. AUGUST KUETHER, Milwaukee, Wis. Filed Mar. 21, 1921. Serial No. 454,116. 7 Claims. (Cl. 230—27.)

1. In a pump, the combination of a cylinder, a pair of pistons in said cylinder, a connection between said pistons, a slot in said cylinder intermediate said pistons, a member extending through said slot and cooperating

with said connection to reciprocate said pistons, and a lever pivotally connected with said member to actuate the same.

1,425,495. RETURN END AND METHOD OF MAKING SAME. ROBERT ABSALOM THOM, Manchester, England, assignor to The Superheater Corporation Limited, London, England. Filed Aug. 26, 1919. Serial No. 320,054. 6 Claims. (Cl. 29—157.6.)

1. A return end or coupling for pipes, comprising a weldless block of wrought metal having a passage formed of two substantially parallel holes adapted for connection with the pipes, said holes being separated by a bridge piece formed integral with the block, and two holes arranged at an angle to each other and communicating with each other at one end and operatively connected with the aforesaid holes at the other end.

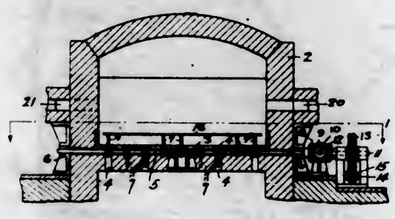


1,425,496. GEARING. ERNEST R. HUNTLEY, Milwaukee, Wis., assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed July 6, 1920. Serial No. 394,075. 9 Claims. (Cl. 74—36.)

1. In a gearing of the class described, the combination of a wheel and a rotatable member having its axis of ro-

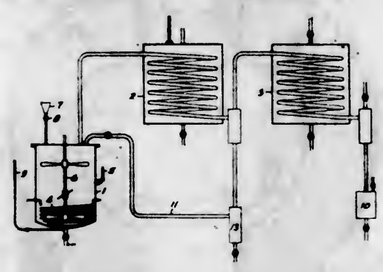
tation transverse to that of the wheel, said wheel having its periphery convex in cross section and provided with a set of teeth, each tooth being on a line of constantly increasing angularity with the axis of said wheel, and said member having its crown face concave and provided with teeth for meshing with said wheel teeth, each tooth of said wheel having complete bearing on the corresponding tooth of said member only when positioned at proximately the middle point of said member tooth.

1,425,497. APPARATUS FOR MANUFACTURING DEXTRIN. JOSEPH J. MERRILL, Chicago, Ill., assignor to Corn Products Refining Company, a Corporation of New Jersey. Filed Nov. 2, 1917. Serial No. 199,867. 9 Claims. (Cl. 127—10.)



1. In apparatus for the manufacture of dextrin, the combination of a dextrinizing vessel and a rotary agitator therein provided with a plurality of blades, the upper and lower end portions of each blade standing at an angle to each other and the corresponding end portions of the blades being substantially parallel one with another, whereby one set of end portions acts upon the material positively and moves the same in one direction and the other set acts upon the material positively and moves the same in the opposite direction.

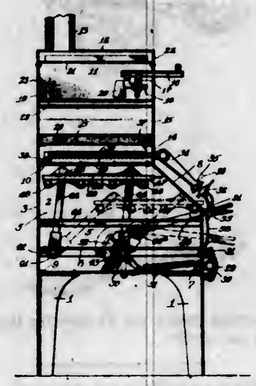
1,425,498. CIGAR AND CIGARETTE HOLDER. RICHARD F. GREENWOOD, Brooklyn, N. Y., assignor to Apex Specialties Corporation, a Corporation of New York. Filed Dec. 10, 1921. Serial No. 521,358. 5 Claims. (Cl. 131—10.)



3. A cigarette holder embodying, in combination, a two-piece outer member, comprising a sleeve and an end-receiving cap removably secured thereto, said outer member having between its ends a bore increased in diameter and at each end of said increased bore having a communicating bore reduced in diameter, one of which contracted bores is formed in the sleeve and the other in the removable cap; and a one-piece inner member releasably retained in sliding engagement with the outer member by said cap, and comprising a mouth-piece and plunger having a draft bore; said inner member having between its ends a portion increased in diameter to fit within the said enlarged bore in the outer member and to be releasably confined therein by said removable cap, and a spring abutting at one end against the enlarged portion of the inner member and at the other end against the cap.

1,425,499. HEAT-TREATING APPARATUS. HARRY A. LEWIS, Norristown, Pa. Filed Oct. 23, 1919. Serial No. 332,607. 9 Claims. (Cl. 214—18.)

9. In heat-treating apparatus the combination of a furnace having a false bottom, a plurality of rows of slots formed in the said false bottom, shafts mounted beneath the said rows of slots and transversely to the individual slots, means for rotating the said shafts, and discs eccentrically mounted on the said shafts and adapted when the said shafts rotate to project up through the said slots and to directly engage and support the work during a portion of their movement, the discs on each shaft being set alternately at two different angles on their shaft, and the discs on each shaft being staggered with relation to the discs on the adjoining shafts.



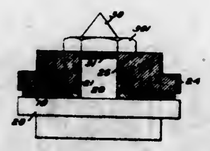
1,425,500. MANUFACTURE OF ACETIC ANHYDRIDE. HOWARD W. MATHESON and GEORGE E. GRATTAN, Shawinigan Falls, Quebec, Canada, assignors to Shawinigan Laboratories Limited, Montreal, Quebec, Canada. Filed Apr. 25, 1918. Serial No. 230,807. 9 Claims. (Cl. 23—24.)

1. A process for the manufacture of acetic anhydride, which comprises passing acetylene through acetic acid of 96% to 100% concentration at a temperature of from 60° centigrade to 200° centigrade in the presence of a finely divided salt of mercury.

1,425,501. HOTEL BROILER. HENRY C. MAUL, Detroit, Mich., assignor to The Michigan Stove Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 8, 1919. Serial No. 316,098. 13 Claims. (Cl. 126—41.)

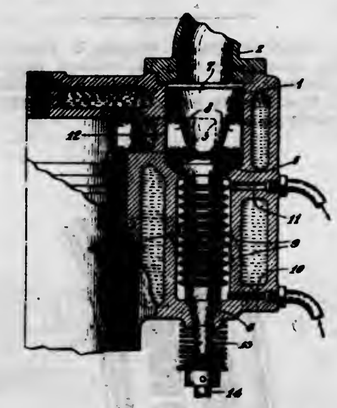
1. A cooking range having uninterrupted side walls so that ranges may be placed in contact side by side, a front inclined wall provided with an opening, a burner unit for the cooking range and entirely in front of said range, said unit comprising an inverted U-shaped manifold adapted to be supported in a plane parallel to said front inclined wall and receive gas at either end thereof, said manifold extending along the upper and side edges of the front

wall opening, and a plurality of burners carried by the top of said manifold and disposed in a plane at an obtuse angle to the plane of said manifold.



REISSUES.

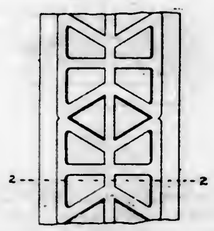
15,428. LOCKING DEVICE FOR AUTOMOBILE WHEELS. ARTHUR M. CUMMINGS, Aberdeen, Md. Filed Mar. 28, 1922. Serial No. 547,545. Original No. 1,390,674, dated Sept. 13, 1921, Serial No. 319,492, filed Aug. 23, 1919. 9 Claims. (Cl. 70—90.)



1. An anti-theft device for use with automobiles provided with pneumatic tires, comprising means adapted to be locked to a tire for preventing inflation of the tire through its valve and for preventing displacement of the device from a fixed position, said means comprising a pair of pivotally connected members adapted to embrace the tire and a socket for completely receiving and inclosing the valve end of the inflation valve tube.

15,429. FLANGED ARTICLE. EDGAR C. GEORGE, Norwood, Ohio, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 15, 1921. Serial No. 485,041. Original No. 1,309,799, dated July 15, 1919, Serial No. 4,793, filed Jan. 27, 1915. 52 Claims. (Cl. 173—311.)

45. The method of producing a laminated article of manufacture having a plane portion and a substantially cylindrical continuous portion assembled from initially plane laminæ and wherein the individual laminæ extend throughout said plane portion and into said cylindrical portion, and in said cylindrical portion are circumferentially discontinuous and staggered with respect to the discontinuities of the other laminæ, which comprises distorting the initially plane laminæ to form said substantially cylindrical continuous portion.

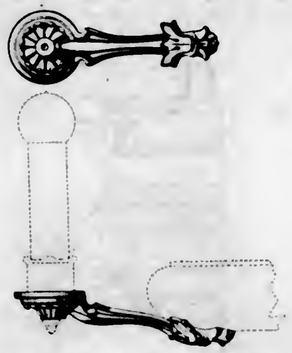


15,430. ROTARY VALVE. JOHN GOOD, Garden City, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Feb. 27, 1922. Serial No. 539,777. Original No. 1,329,521, dated Feb. 3, 1920, Serial No. 74,554, filed Jan. 27, 1916. 8 Claims. (Cl. 123—177.)

8. A rotary valve for combustion engines comprising a casing and a rotary valve member therein, said casing and member being provided with opposed, parallel dry-running, ported-surfaces concentric to the rotary axis and closely related to each other in pressureless and frictionless contact whereby said surfaces seal the port passage without the presence of lubricant, and self-centering, endwise-seating journal means for said rotary member adapted to maintain the surfaces in said relation and comprising two bearings spaced apart in the direction of the rotary axis and arranged so that displacement of said valve member, as the effect of wear, occurs principally in the direction of said axis.

DESIGNS.

61,335. ELASTIC TIRE TREAD. EDGAR O. BLEKKE, Sioux City, Iowa. Filed Mar. 26, 1920. Serial No. 369,095. Term of patent 3½ years.



The ornamental design for an elastic tire tread as shown.

61,336. VEHICLE TIRE. WERTUS G. CURRENT, Willoughby, Ohio, assignor to The Buckeye Rubber Products Company, Willoughby, Ohio, a Corporation of Ohio. Filed Nov. 14, 1921. Serial No. 515,189. Term of patent 7 years.

The ornamental design for a vehicle tire as shown.

61,337. ARM FOR LIGHTING FIXTURES. WILFRED B. GODDARD, San Francisco, Calif. Filed July 28, 1921. Serial No. 488,248. Term of patent 3½ years.

The ornamental design for an arm for lighting fixtures substantially as shown.

"GEM"

Particular description of goods.—Button Machines, Button Molds, and Button Dies.
Claims use since 1912.

Ser. No. 161,563. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EMANUELE J. MESSINEO, New York, N. Y. Filed Mar. 31, 1922.

The portrait appearing on drawing is that of applicant.

Particular description of goods.—Liniment for Rheumatism, Neuralgia, Gout, and Analogous Inflammatory Ailments.

Claims use since Mar. 25, 1922.

Ser. No. 161,737. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

43

Particular description of goods.—Loopers for Overseaming and Overedging Sewing Machines.

Claims use since 1905.

Ser. No. 161,738. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

44

Particular description of goods.—Loopers for Overseaming and Overedging Sewing Machines.

Claims use since 1908.

Ser. No. 161,739. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

48

Particular description of goods.—Loopers for Overseaming and Overedging Sewing Machines.

Claims use since 1905.

Ser. No. 161,740. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

53

Particular description of goods.—Loopers for Overseaming and Overedging Sewing Machines.

Claims use since 1908.

Ser. No. 161,741. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

56

Particular description of goods.—Loopers for Overseaming and Overedging Sewing Machines.

Claims use since 1915.

Ser. No. 161,742. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

57

Particular description of goods.—Loopers for Overseaming and Overedging Sewing Machines.

Claims use since 1913.

Ser. No. 161,743. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

58

Particular description of goods.—Loopers for Overseaming and Overedging Sewing Machines.

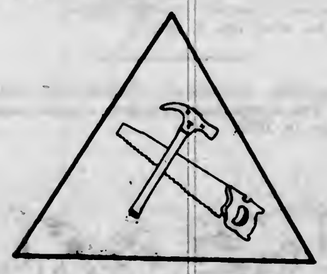
Claims use since 1915.

Ser. No. 161,744. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE MERROW MACHINE COMPANY, Hartford, Conn. Filed Apr. 4, 1922.

62

Particular description of goods.—Loopers for Overseaming and overedging Sewing Machines.

Claims use since 1915.



Ser. No. 161,832. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) GENERAL STEEL & RUBBER STAMP CO., Boston, Mass. Filed Apr. 6, 1922.

KNO-UR-AUTO

Particular description of goods.—Steel Stamps.

Claims use since Oct. 1, 1921.

Ser. No. 161,930. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) MANNING ABRASIVE COMPANY INCORPORATED, Troy and New York, N. Y. Filed Apr. 8, 1922.

Particular description of goods.—Abrasives—Namely, Flint Paper, Flint Cloth, Combination Flint-Cloth Paper, Garnet Paper, Garnet Cloth, Combination Garnet-Cloth Paper, Artificial Abrasive Paper, Artificial Abrasive Cloth, Combination Artificial Abrasive-Cloth Paper, Emery Paper, Emery Cloth, Combination Emery-Cloth Paper.

Claims use since Mar. 1, 1922.

Ser. No. 161,950. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COLUMBUS E. WILLIAMS, Concordia, Kans. Filed Apr. 8, 1922.

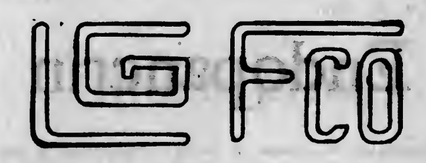
COLUMBUS E. WILLIAMS.

DYNAMITE INSECTICIDE
and
GERMICIDE

No claim is made for the exclusive use of the words "Insecticide" and "Germicide" apart from the mark shown. The portrait shown is that of applicant, Columbus E. Williams.

Particular description of goods.—Disinfectants and Insecticides.

Claims use since Dec. 13, 1921.



Ser. No. 161,973. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARBON CHASE CO., Long Island City, N. Y. Filed Apr. 10, 1922.

Particular description of goods.—Chemical Carbon Remover.

Claims use since March, 1922.

Ser. No. 161,986. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE LOUIS G. FREEMAN CO., Cincinnati, Ohio. Filed Apr. 10, 1922.

Particular description of goods.—Machinery Used in the Manufacture of Shoes.

Claims use since February, 1922.

DIGESTALAC

Particular description of goods.—Laxative Compound for Aiding Digestion.
Claims use since Feb. 1, 1922.

Ser. No. 162,446. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARL V. POHLSON, doing business as The Pohlson Galleries, Pawtucket, R. I. Filed Apr. 17, 1922.

FAIRY CRYSTALS From the SEA

Particular description of goods.—Chemical Preparation for Use on Burning Material to Color the Flames.
Claims use since Apr. 1, 1922.

Ser. No. 162,447. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARL V. POHLSON, doing business as The Pohlson Galleries, Pawtucket, R. I. Filed Apr. 17, 1922.

The Logwood Fire

Particular description of goods.—Chemical Preparation for Use on Burning Material to Color the Flames.
Claims use since Apr. 1, 1922.

Ser. No. 162,454. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) RUTLAND FIRE CLAY CO., Rutland, Vt. Filed Apr. 17, 1922. Under section 9 of the act of Mar. 19, 1920.

RUTLAND

Particular description of goods.—Water Glass Egg Preserver.
Claims use since sometime in 1913.

Ser. No. 162,482. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CLINTON D. CRAIG, Whitefield, N. H. Filed Apr. 18, 1922.

AMEX

Particular description of goods.—Medicinal Preparation for External and Internal Inflammation.
Claims use since about June 15, 1921.

Ser. No. 162,488. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STEPHEN A. FITZGERALD, Brooklyn, N. Y. Filed Apr. 18, 1922.

FITZGERALD

Particular description of goods.—Massaging Liniment.
Claims use since Mar. 1, 1921.

Ser. No. 162,499. (CLASS 37. PAPER AND STATIONERY.) A. G. MACKEY, doing business as The Automac Company, Washington, D. C. Filed Apr. 18, 1922.

AUTOMAC

Particular description of goods.—Bill-File Holders, Pad and Memoranda Holders for Desks and for Attachments to Telephones and Automobile Steering Columns and Parts Thereof.
Claims use since Feb. 20, 1922.

Ser. No. 162,505. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PROFESSIONAL PRODUCTS CO., Pasadena, Calif. Filed Apr. 18, 1922.

LOCA-HEAL

Particular description of goods.—Salve for Skin Diseases—viz, Eczema, Ringworm, Blackheads, Pimples, Barber's Itch, Poison Oak, Herpes, and Other Skin Irritation.
Claims use since Mar. 1, 1920.

Ser. No. 162,569. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PROFESSIONAL PRODUCTS CO., Pasadena, Calif. Filed Apr. 19, 1922.

KORRECTO

Particular description of goods.—Internal Remedy for Indigestion.
Claims use since Dec. 1, 1920.

Ser. No. 162,579. (CLASS 37. PAPER AND STATIONERY.) ROSB & FRANK CO., New York, N. Y. Filed Apr. 19, 1922.

SUPERB

Particular description of goods.—Tissue Paper Mainly Used for Carbonizing Purposes.
Claims use since Apr. 28, 1914.

Ser. No. 162,590. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STANDARD OIL COMPANY (Incorporated in New Jersey), Bayonne, N. J. Filed Apr. 19, 1922.

Marcol

Particular description of goods.—White Mineral Oil Primarily Used in the Preparation of Cold Creams.
Claims use since Apr. 4, 1922.

Ser. No. 162,642. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OXZYN COMPANY, New York, N. Y. Filed Apr. 20, 1922.

DIXIE-GLOW

Particular description of goods.—Face Powders, Face Creams, Perfumes, Toilet Waters, Rouges, Hair Tonics, Hair Oils, Dentifrices, Tooth Powders, Nail Polishes, Deodorizing Preparations, and Sachet Powders.
Claims use since Oct. 22, 1921.

TRADE-MARK REGISTRATIONS GRANTED

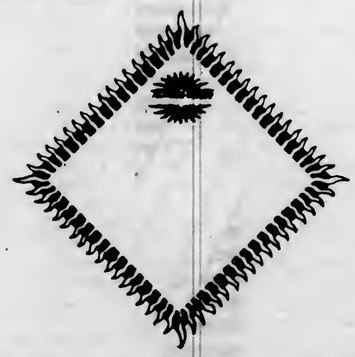
[ACT OF MARCH 19, 1920, SEC. 1 (b)].

AUGUST 8, 1922.



THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION.

157,613. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE ARCADE MANUFACTURING COMPANY, Freeport, Ill. Filed Nov. 14, 1921. Serial No. 155,333.

CRYSTAL

Particular description of goods.—Coffee Mills.
Claims use since December, 1900.

157,614. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE B. & K. SPECIALTY COMPANY, Paterson, N. J. Filed Mar. 21, 1921. Serial No. 145,003.

Particular description of goods.—Receptacles Containing a Fire-Extinguishing Liquid and Mounted on a Bracket.
Claims use since Jan. 1, 1921.

157,615. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE CINCINNATI-BICKFORD TOOL COMPANY, Oakley, Cincinnati, Ohio. Filed Apr. 7, 1921. Serial No. 145,819.

CINCINNATI
BICKFORD

Particular description of goods.—Metal-Drilling Machinery.
Claims use since Jan. 1, 1920.

157,616. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) CLAYTON MFG. CO., Bristol, Conn. Filed May 24, 1921. Serial No. 148,124.

FERROMETAL

Particular description of goods.—Scissors and Shears.
Claims use since about Apr. 13, 1921.

157,617. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE CLEVELAND PNEUMATIC TOOL COMPANY, Cleveland, Ohio. Filed Feb. 15, 1922. Serial No. 159,349.

POCKET-IN-HEAD

Particular description of goods.—Certain Pneumatic Tools Consisting of Riveting Hammers.
Claims use since about May, 1916.

157,618. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JOSEPH FLEISCHER, doing business as the Fleischer & Co., New York, N. Y. Filed Apr. 17, 1922. Serial No. 162,395.

FITWELL

Particular description of goods.—Hair Nets.
Claims use since September, 1917.

157,619. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) INTERNATIONAL SILVER COMPANY, Meriden, Conn. Filed Dec. 5, 1921. Serial No. 156,279.

LASHAR

Particular description of goods.—Certain Unplated Flat Tableware Made from Composition Base Metal.
Claims use since 1907.

157,620. (CLASS 37. PAPER AND STATIONERY.) C. P. LESH PAPER COMPANY, Indianapolis, Ind. Filed Apr. 29, 1922. Serial No. 163,094.

NORWAY

Particular description of goods.—Writing, Printing, and Book Paper.
Claims use since September, 1900.

157,621. (CLASS 37. PAPER AND STATIONERY.) C. P. LESH PAPER COMPANY, Indianapolis, Ind. Filed Apr. 29, 1922. Serial No. 163,095.

SUREFOLD

Particular description of goods.—Writing, Printing, and Book Paper.
Claims use since July, 1915.

157,622. (CLASS 37. PAPER AND STATIONERY.) C. P. LESH PAPER COMPANY, Indianapolis, Ind. Filed Apr. 29, 1922. Serial No. 163,096.

ROANOKE

Particular description of goods.—Writing, Printing, and Book Paper.
Claims use since September, 1909.

157,623. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) LINK-BELT CO., Chicago, Ill. Filed July 11, 1921. Serial No. 150,240.

>TWYNCONE<

Particular description of goods.—Clutches.
Claims use since July, 1919.

157,624. (CLASS 37. PAPER AND STATIONERY.) BENJAMIN W. MACH, Chicago, Ill. Filed May 14, 1921. Serial No. 147,730.

NeverStuck

Particular description of goods.—Penholders.
Claims use since May 1, 1921.

157,625. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) PERFECTION TIMING GEAR COMPANY (NOT INC.), Chicago, Ill. Filed July 11, 1921. Serial No. 150,250.

PERFECTION

Particular description of goods.—Timing Gears for Automobiles.
Claims use since October, 1920.

157,626. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) M. W. ROBINSON CO., New York, N. Y. Filed Feb. 28, 1922. Serial No. 159,980.

CAREW'S

Particular description of goods.—Mechanics' Tools—viz. Nippers.
Claims use for about 20 years.

157,627. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) SEATTLE-ASTORIA IRON WORKS, Seattle, Wash. Filed Aug. 10, 1921. Serial No. 151,641.

TROYER-FOX NON-SPILL SANITARY DOUBLE SEAMER

Particular description of goods.—Can Heading and Sealing Machines.
Claims use since about Jan. 6, 1920.

157,628. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) STETTAUER, HARRIS & RAPHAEL, New York, N. Y. Filed Feb. 9, 1922. Ser. No. 159,108.

Particular description of goods.—Cotton Fabrics in the Piece.
Claims use since Aug. 15, 1918.

157,629. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) WALLACE & TIERNAN CO. INC., Newark, N. Y. Filed June 30, 1921. Serial No. 149,879.

CHLORINATOR

Particular description of goods.—Chlorine Control Apparatus.
Claims use since February, 1913.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

Court of Appeals of the District of Columbia.

IN RE PRESCOTT AND RUMMLER.

No. 1460. Decided February 6, 1922.

1. PATENTABILITY—TIRE-CHANGING DEVICE.

To incorporate in a single structure a demountable wheel, a demountable rim, and a Q. D. rim, *Held* to involve invention.

2. CLAIMS—ALLOWANCE OF A LARGE NUMBER DISAPPROVED.

Where a single claim completely covers an applicant's contribution to the art, *Held* that there is no reason for allowing a large number of claims and thus inviting controversy and litigation.

Mr. Robert F. Rogers for Prescott and Rummler.

Mr. T. A. Hostetler for the Commissioner of Patents.

ROSS, *J.:*

Appeal from a decision of the Patent Office rejecting claims 1 to 6, inclusive, 13, 18, 22, 23, 24, and 26 to 31, inclusive, in an application. Claim 28, in our view, fairly covers what applicant has done, and therefore is here reproduced:

28. In a wheel equipment standardizing device, the combination with a hub, of a disc body removably mounted on said hub and having an integral seat for fully supporting a tire rim, and a quick-detachable tire rim removably mounted on said seat, whereby a tire may be removed either alone, or with the rim as a unit, or with the rim and body as a unit.

In their specification applicants say:

Heretofore passenger motor cars have been equipped with one of three distinct types of wheels; one type having nondemountable bodies and nondemountable rims, another having nondemountable bodies and demountable rims, and the other having demountable bodies and nondemountable rims. Some car users prefer one type, some another. To meet the demands of the trade it has heretofore been necessary to manufacture several sizes of each type, and this necessitated the manufacture of as many sizes of tires, with numerous oversizes. The cars of each maker are supplied with wheels of one of the above mentioned types as standard equipment. In so far as the wheels are concerned, each car satisfies only one of the three classes of users. To satisfy the other classes the wheels must be changed. To change the type of wheels on a built car involves not only the cost of the new wheels but the cost of refitting their hubs. This is an expensive proceeding which takes time and is usually a source of considerable annoyance, but it has been unavoidable. * * * The present wheel obviates all of these difficulties by including in a practical single wheel organization the heretofore distinguishing features of all three types, the wheel being capable of use in either of the three ways without change, loss of time, or additional cost. * * * The present wheel is in a broad sense a practical wheel of a new type, which, since it is capable of use without change on all passenger cars and in either of the three ways desired, may be termed a universal type.

The question at issue was thus tersely stated by the Commissioner:

The gist of this case appears to be whether or not it is invention to provide a wheel with three "tire-changing systems," and thus so fit out a car that the buyer may obtain as standard equipment his preference of tire-changing device. The three "systems" are demountable wheels, demountable rims, and Q. D. or quick-detachable rims, each of which is in common use and is preferred by some operators.

In applicants' combination certain material capabilities of three wheels of the prior art are combined. While it is true that each element of the new combination is old, we do not think it may be said that each of these elements functions independently of and without reference to the others, for in combination they form a unitary structure wherein each element necessarily supports and supplements the others. Through the combination a new result is effected, namely, a wheel possessing certain essential characteristics of three wheels of the prior art. In this respect the case differs from *Grinnell Washing Mach. Co.* v. *Johnson Co.* (247 U. S., 426; 254 O. G., 225). Although the question is close, we incline to the view that the idea involved something more than mechanical ability. In such a case we resolve the doubt in favor of the applicant. *In re Huff* (48 App., D. C., 258; 259 O. G., 886). Inasmuch, however, as claim 28 completely covers applicants' contribution to the art, there is no reason for allowing a large number of claims, and thus inviting controversy and litigation.

The decision therefore will be affirmed as to claims 1 to 6, inclusive, 13, 18, 22, 23, 24, 26, 27, 29, 30, and 31, and reversed as to claim 28.

Affirmed in part and reversed in part.

U. S. Circuit Court of Appeals—Eighth Circuit.

LACLEDE-CHRISTY CLAY PRODUCTS CO. *v.* CITY OF ST. LOUIS.

Decided April 24, 1922.

[280 Fed. Rep., 83.]

PATENTS—NO. 986,455, CLAIMS 1 TO 3, FOR FURNACE ARCH, HELD ANTICIPATED.

Girtanner patent, No. 986,455, claims 1 to 3, for a furnace arch having parallel I-beams on which are brackets from which tile are suspended by tongue and groove arrangement, *Held* void for anticipation.

APPEAL from the District Court of the United States for the Eastern District of Missouri; Charles B. Faris, judge.

Suit in equity for infringement of a patent by Laclede-Christy Clay Products Company against the City of St. Louis. From a decree dismissing the bill (270 Fed., 338), complainant appeals. Affirmed.

Mr. Thomas H. Sheridan and *Mr. Thomas F. Sheridan* (*Mr. Jesse McDonald* on the brief) for the appellant.

Mr. James A. Carr (*Mr. Henry S. Caulfield* and *Mr. Joseph J. Gravely* on the brief) for the appellee.

Before SANBORN, STONE, and LEWIS, Circuit Judges.

LEWIS, *Cir. J.*:

This suit is for infringement of rights alleged to belong to appellant under Girtanner's Letters Patent 986,455, issued March 14, 1911, on application of January 8, 1910, for a furnace arch. On final hearing the district judge, in a well-considered opinion (270 Fed., 338), sustained the defense of anticipation as to the involved claims 1, 2 and 3, and dismissed the complaint. The three claims are so nearly alike that we adopt the course of appellant in setting out only claim 3 as the most specific and best to consider:

> In a furnace arch, the combination with a pair of I-beams extending across the furnace, of brackets supported by said I-beams; each of said brackets comprising a pair of separate end-pieces one extending at the front, the other at the rear of said I-beams, and a separate center piece extending between said I-beams; flanges on the lower edges of both said end-pieces and said center piece, and tiles provided with grooves to receive said flanges.

Broadly speaking, the claim contains three elements separated above by semicolons, as will be seen; the first and third of which seem without doubt to have been embodied in prior patents set up in the answer. Stimmel's patent, 944,296, issued December, 1909, on application of March 18, 1909, for improvement in tops for furnaces, does not call for I-beams but "main supporting elements" in his claims, and his specification and drawings show three I-beams extending across the furnace, one at the front, rear and center as supports for the tile-carrying elements; Girtanner's earlier patent, 910,809, issued January 26, 1909, for arch for furnaces, has one I-beam transverse the center, supporting integral brackets extending both rearward and forward,—both are of flat-arch type. Further, Green and Gent's patent, 676,606, issued June 18, 1909, for arch for furnaces, calls for "a plurality of transverse girders which rest at their ends on the side walls of the furnace," and Poppenhusen's patent, 783,132, issued February 21, 1905, shows three transverse supporting girders. The purpose of the transverse I-beams or girders in all cases is to give support to the burden of the underhanging fire brick or tile. Thus as to the first element, there was not only anticipation by Stimmel, Green and Gent and Poppenhusen in the use of more than one transverse support, but also we agree with the trial court that the question whether two (or more) I-beams (or girders of other form) should be used, as called for in the three patents last-noted and in Girtanner's second, rather than one as called for in his first patent, is a question answered by mechanical suggestion when it is desired to make the arch longer.

Again, as to the third element, it seems to us there is nothing new in the patent in suit; for Girtanner's first patent has the grooved tile fitting into lateral extensions of pendent portions of the brackets, and Green and Gent call for—

> beams attached to the lower edges of the said girders and extending beneath the same, said beams being provided with lateral flanges, and firebrick provided with lateral grooves in their side faces near their upper surfaces, adapted to engage said flanges of the beams, said firebrick being suspended from said beams with their upper surfaces below and free from all contact with said girders.

This is identical barring choice of terms; one says I-beams and brackets, the other girders and beams, for the same thing. And Poppenhusen shows—

> beams (brackets) provided with flanges at their lower edges which engage grooves in the adjacent side faces of firebrick.

The obvious purpose in all was to position the fire brick in the top of the furnace between the suspending members and direct heat contact, as a shield.

The second element opens the field of contention. Along with it attention is called to the specification:

> It will be evident that with my construction a flat arch of any desired length can be readily supported, and at the same time the separate parts of the arch can be readily renewed in case of injury.

It is insisted that Girtanner's first patent called for one transverse I-beam which supported integral brackets extending rearward and forward over the length of the arch, while the structure disclosed in his second patent, which calls for two I-beams spaced apart, with brackets in three separate pieces, one extending forward from the front I-beam, one extending rearward from the rear I-beam, and one between the two, demonstrates inventive genius in devising means for lengthening the arch. But a plurality of transverse supports was disclosed, as noted, in prior patents, and Girtanner lengthened the arch in the same way by using two beams instead of one. That was anticipated, if patentable; though we think it wholly within mechanical suggestion. Ordinarily, the making of two or more parts out of a thing that had theretofore been used in one part, and using the separate parts to serve the purpose that had been served before the division is not invention. (*Howard* v. *Detroit Stove Works*, 150 U. S., 164; 14 Sup. Ct., 68; 37 L. Ed., 1039; *D'Arcy* v. *Staples & Hanford Co.*, 161 Fed., 733; 88 C. C. A., 606; *Mueller Mfg. Co.* v. *Mfg. Co.* (D. C.), 164 Fed., 991; *Gen. Elec. Co.* v. *Heat & Motor Co.* (D. C.), 205 Fed., 42.)

However, where a discovery embodies coacting elements, although they be old, yet, if when brought together in a way not theretofore known, they produce by their interaction a new and useful result, the combination is patentable (*Regent Mfg. Co.* v. *Penn. Elec. Mfg. Co.*, 121 Fed., 80, 83; 57 C. C. A., 334); and if one of the elements in the combination be removed or changed so that their interaction is then in another way (in obedience to a different cooperative law), there is nevertheless invention, although the same result is attained; for in that case

a different idea of means expresses the discovery, and the new is not an equivalent of the old. (1 Robinson on Patents, sec. 254.) But the inquiry in such a case is always one of fact, whether the change or rearrangement of those elements has, in their coaction, produced the old result in a different way; and here we fail to find that it has done so. The three elements in combination, whether the brackets be integral or in three parts, were utilized for the same purpose, and perform the same function in the same way and produce the same result for which they were used in other prior patents. Whether integral or in separate parts, the one useful purpose of a bracket, so-called, was to engage the tile and hold them suspended between the fire and the supporting elements. But in all the patents that have been mentioned this purpose was successfully attained in the same way.

The principal insistance is on the latter part of the quotation from the specification. It is said that fire brick or tile at the rear end of the furnace are subject to the greatest heat, that they are liable to give way and the end of the bracket may become damaged or burned off, and that repair is made easy by simply removing that part of the bracket and putting in a new part, leaving undisturbed the remaining parts. We think the answer to this, and all other claims based on a tile-supporting bracket of cantilever form, is McKenzie's patent, issued August 9, 1904, for fire arch for furnaces, in which claim 1 reads:

> In a fire arch of the class described, the combination of beam mechanism arranged transversely across the furnace, a plurality of brackets attached thereto and extending inwardly therefrom, a plurality of beams longitudinally disposed and removably attached to the inwardly extending brackets and provided with grooves in the lower portion thereof, and a plurality of fire brick or tile provided with portions engaging the grooved mechanism of the longitudinal beams to permit the easy insertion or removal of said tile mechanism, substantially as described.

The claimed purpose to be attained (easy repair and renewal of brackets) appears to be as readily attainable by the use of one as by the use of the other, that is, the means in the two patents are equivalents; and McKenzie was first.

Affirmed.

PATENT SUITS.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 12, 1922.

Rainbow Ale Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Keystone Fruit Products Company, of 106 West Second Street, Cincinnati, Ohio, for registration of a trade-mark and trade-mark registered February 26, 1907, No. 60,913, to the Rainbow Ale Company, of 34 Madison Avenue, Atlanta, Ga., and a notice of such declaration sent by registered mail to said Rainbow Ale Company at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Rainbow Ale Company, its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 13, 1922.

Monte W. Burd, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Marshall Field & Company, of 219 West Adams Street, Chicago, Ill., and Hunter Mfg. & Com. Co., of 58 Worth Street, New York, N. Y., for registration of certain trade-marks and trade-marks registered March 20, 1906, No. 50,537, and February 14, 1905, No. 44,106, to Monte W. Burd, of 631 West Main Street, Louisville, Ky., and a notice of such declaration sent by registered mail to said Monte W. Burd at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Monte W. Burd, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 11, 1922.

Harry Pennington, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of William F. Huff, 1445 West 25th Street, Los Angeles, Calif., for patent and the application of Harry Pennington, 614 Ninth Street, Wichita Falls, Tex., for patent, and a notice of such declaration sent by registered mail to Pennington at his last address of record, 3640 Stratford Avenue, Highland Park, Dallas, Tex., having been returned by the post office undeliverable, notice is hereby given that unless said Pennington, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 11, 1922.

Gilmour Bros. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Cumberland Tobacco Works, Inc., of Nashville, Tenn., for registration of a trade-mark and trade-mark registered Jan. 30, 1894, No. 24,141, to Gilmour Bros. Co., Owensboro, Ky., and because of prima facie evidence in the record to the effect that Gilmour Bros. Co. is no longer in business, notice is hereby given that unless said Gilmour Bros. Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 29, 1922.

Omnia Chemical Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of S. Pfeiffer Mfg. Co., 3947 Laclede Avenue, St. Louis, Mo., for registration of a trade-mark and trade-marks registered February 14, 1905, and October 31, 1905, No. 44,182 and No. 47,235, respectively, to the Omnia Chemical Co., of New York, N. Y., and a notice of such declaration sent by registered mail to said Omnia Chemical Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Omnia Chemical Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Interference Notices.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 21, 1922.

Gilmour Bros. Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Cumberland Tobacco Works, Inc., of Nashville, Tenn., for registration of a trade-mark and trade-mark registered Jan. 30, 1894, No. 24,141, to Gilmour Bros. Co., Owensboro, Ky., and because of prima facie evidence in the record to the effect that Gilmour Bros. Co. is no longer in business, notice is hereby given that unless said Gilmour Bros. Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 19, 1922.

Omnia Chemical Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of S. Pfeiffer Mfg. Co., 3947 Laclede Avenue, St. Louis, Mo., for registration of a trade-mark and trade-marks registered February 14, 1905, and October 31, 1905, No. 44,182 and No. 47,235, respectively, to the Omnia Chemical Co., of New York, N. Y., and a notice of such declaration sent by registered mail to said Omnia Chemical Co. at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Omnia Chemical Co., its assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., August 4, 1922.

Samuel Broom and Otto L. Meyer, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Roggen Bros. & Co., of 649 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered July 28, 1896, No. 28,667, to Samuel Broom and Otto L. Meyer, of 44 White Street, New York, N. Y., and a notice of such declaration sent by registered mail to Samuel Broom and Otto L. Meyer at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Samuel Broom and Otto L. Meyer, their assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING,
Acting Commissioner.

Adverse Decisions in Interference.

PATENT NO. 1,313,486.

On July 15, 1922, a decision was rendered that Richard B. Iseman was not the first inventor of the subject matter covered by claims 1 and 5 of his Patent No. 1,313,486, subject, "Traveling automobile turntables," and no appeal having been taken within the time allowed such decision has become final.

PATENT NO. 1,325,193.

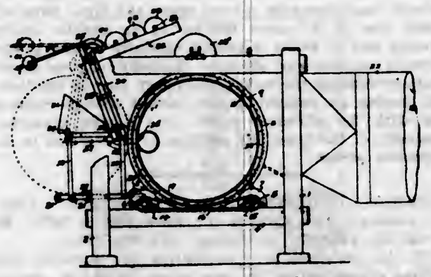
On July 11, 1922, a decision was rendered that Adolph Fuchs was not the first inventor of the subject matter covered by claim 3 of his Patent No. 1,325,193, subject, "Automobile signal," and no appeal having been taken within the time allowed such decision has become final.

Amendments.

RULE 73. In every amendment the exact word or words to be stricken out or inserted in the application must be specified and the precise point indicated where the erasure or insertion is to be made. All such amendments must be on sheets of paper separate from the papers previously filed, and written on but one side of the paper. Erasures, additions, insertions, or mutilations of the papers and records must not be made by the applicant.

Amendments and papers requiring the signature of the applicant must, also, in case of assignment of an undivided part of the invention, be signed by the assignee. (Rules 6, 107.)

Condition of Applications Under Examination at Close of Business August 5, 1922.



(Total number of applications waiting action, excluding Trade-Mark division, 67,926; Trade-Mark division, 8,044. Oldest new case, Apr. 21; oldest amended, Apr. 18, 1921. The dates given are 1921 except where * indicates 1922.)

Room No.	Divisions, Examiners, and subjects of inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

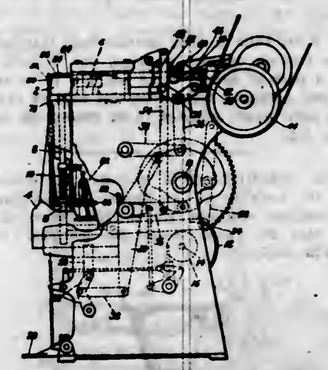
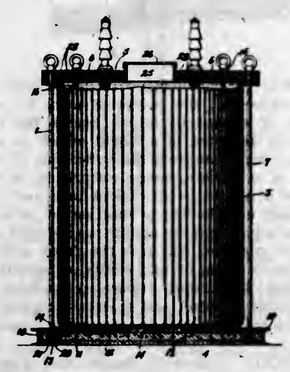
PATENTS



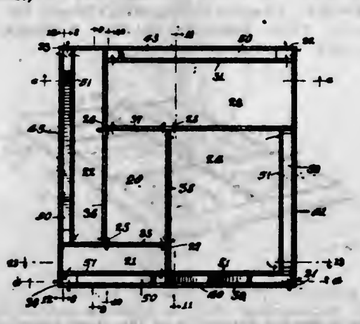
GRANTED AUGUST 15, 1922.

1,425,502. LINT CLEANER AND BATTING MACHINE. FREDERICK ALDER and JOHN C. ROGERS, Houston, Tex. Filed Dec. 17, 1920. Serial No. 431,505. 8 Claims. (Cl. 19—156.)



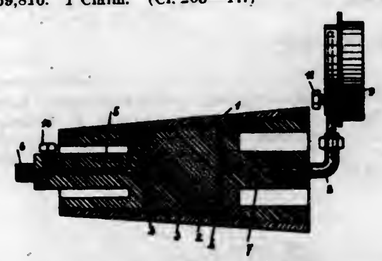
1. A device of the character described, including a framework, a drum mounted to revolve therein, an inlet chute arranged to deliver lint cotton to the drum, a lint roller arranged to receive the bat from said drum around which the bat is wound into a roll in rolling contact with the drum, and a dumping track along which said lint roller traveds from the drum as the roll increases in diameter.

1,425,503. UPPER-FORMING MACHINE. ARTHUR BATES, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 19, 1920. Serial No. 382,530. 23 Claims. (Cl. 12—97.)



1. In a machine for shaping an upper over a shoe form, co-operating members arranged to engage the margin of the upper respectively on its outer and inner faces round an end of the form and movable lengthwise and laterally of the form with the margin of the upper so held between them as to permit it to slip as the members move inwardly, and controlling mechanism to cause said members after a determinate movement inwardly over the form to mold a portion of the margin between them to produce a flange at an angle to the bottom face of the form.

1,425,504. TRANSFORMER CONSTRUCTION. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Oct. 17, 1919. Serial No. 331,324. 4 Claims. (Cl. 72—13.)

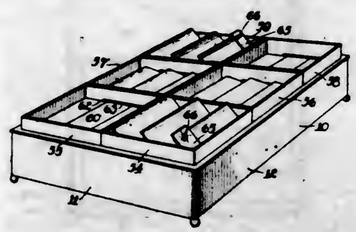


1. The combination with a sheet metal tank having a cover, of a supporting base for said tank comprising a metal frame set with a slab of reinforced concrete, and clamping rods extending between said base and cover to clamp said tank on said base.

1,425,505. APPARATUS FOR RECORDING, REPRODUCING, AND AMPLIFYING SOUND. CHARLES BLIESBERGER, New York, N. Y., assignor to A. Alexander Thomas, New York, N. Y. Continuation of application Serial No. 241,624, filed June 24, 1918. This application filed Sept. 20, 1919, Serial No. 325,256. Renewed Dec. 23, 1921. Serial No. 524,507. 12 Claims. (Cl. 274—2.)

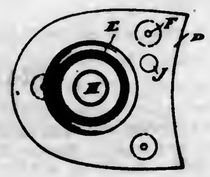
1. In apparatus for recording and reproducing sound, walls forming a sound receiving chamber, and walls forming a plurality of adjacent sound-developing compartments, the receiving chamber having means of communication with the adjacent compartments and said compartments having means of communication with the outer air.

1,425,506. APPARATUS FOR MEASURING THE VALUE OF THE EFFORTS AND OF THE DEFORMATIONS TO WHICH ORGANS ARE SUBMITTED WHEN WORKING. LOUIS RODOLPHE WALTER BOULASSIER, Paris, France. Filed Apr. 8, 1921. Serial No. 459,810. 1 Claim. (Cl. 265—47.)



An apparatus for measuring the efforts and the deformations produced in the course of work by means of the variation of a capacity which causes the variation of the internal pressure of a liquid which is not compressible and which transmits the indication of the effort to the hand of a pressure gauge comprising in combination with the gauge an outer conical tube and a conical mandrel in said tube having a long hollow cavity in its surface extending around the middle part of said mandrel, two transverse passages one near the front end and the other near the rear end of said cavity, a central conduit extending from said front transverse passage to the front end of said mandrel and a second central conduit extending from said rear transverse passage to said gauge.

1,425,507. STUD. JAMES E. BRADY, New York, N. Y. Filed July 30, 1920. Serial No. 400,196. 2 Claims. (Cl. 72—115.)

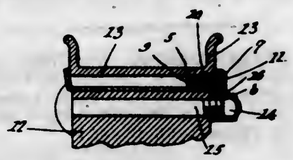


1. In a building stud, in combination, two concavo-convex members having their concave faces oppositely directed, a series of openings within said members, and screen means carried by the extremities of said members for maintaining the studs in vertical position.

1,425,508. MOVING DISPLAY APPARATUS FOR JEWELRY. CHARLES E. CHAPMAN, Chicago, Ill. Filed Sept. 17, 1921. Serial No. 501,370. 8 Claims. (Cl. 211—28.)

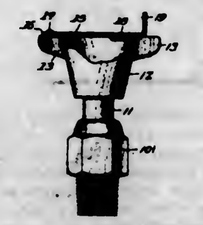
1. In a display apparatus of the class described, the combination with a supporting frame, of a lever mounted therein for oscillation in a vertical plane, a plurality of display platforms horizontally and tiltably mounted side by side on said frame crosswise of and above said lever for unitary movement, means carried by the lever and separably co-acting with one of said platforms to tilt the same upwardly and means to oscillate the lever.

1,425,509. RESILIENT HEEL. WALTER HENRY CLARKE, Toronto, Ontario, Canada. Filed Jan. 24, 1921. Serial No. 439,350. 1 Claim. (Cl. 36—35.)



As a new article of manufacture, a rubber heel comprising complementally formed upper and lower lifts, the lower face of the upper lift having an annular groove therein and a socket arranged centrally of the groove defining an annular shoulder inwardly of the groove and surrounding the socket, the upper face of the lower lift having an annular groove formed therein registering with the aforesaid groove, and a stud projection centrally of the lower lift adapted to be received in the aforesaid socket.

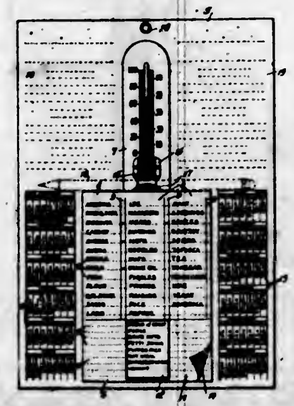
1,425,510. UNDERCOATING COMPOSITION. LOUIS CROSSMAN, New York, N. Y. Filed Feb. 8, 1922. Serial No. 535,065. 12 Claims. (Cl. 134—79.)



12. An under-coating composition for surfaces comprising approximately for each gallon, ¼ gallon acetone, ¼ gallon wood alcohol, ¼ gallon benzole, 2 ounces celluloid, 1 ounce shellac, ½ ounce amyl-acetate, and ½ ounce acetic acid.

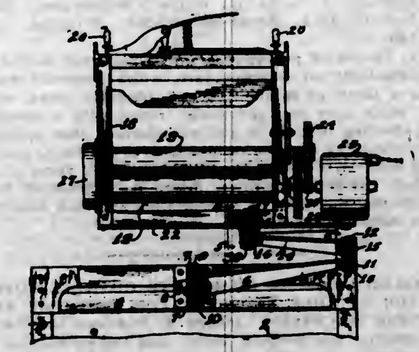
1,425,511. RIM-LUG SHIM. JESSE TEMPLE CURTIS, Bement, Ill. Filed Jan. 26, 1920. Serial No. 354,159. 3 Claims. (Cl. 301—20.)

1. In a lug shim, a body portion bent intermediate its ends to provide opposed sections, one of said sections having a pair of spaced arms adapted to be positioned over a lug, a tongue formed on one edge of the opposed section, said tongue adapted to fit within the bolt opening of a lug.



1,425,512. PRIMING CUP. AUGUST C. DOBRICK, Chicago, Ill., assignor to The Imperial Brass Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 28, 1919. Serial No. 300,871. 2 Claims. (Cl. 123—187.5.)

1. In an apparatus of the class described, the combination with a priming cup having a receiving chamber, of a spring metal cover pivoted to one side of the top of said chamber so as to move only in a plane parallel

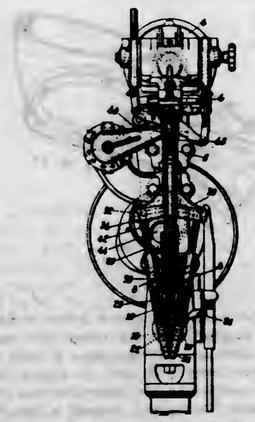


to the top of the receiving chamber, and having a segmentally shaped projection on the under side, thereof adapted to fit into the further side only of the chamber top from the pivot to hold the same from accidental movement while permitting it to be turned on its pivot when desired, the projection being entirely within the chamber when the cover is closed.

1,425,513. ADVERTISING NOVELTY. JOHN JOSEPH DONOVAN, New York, N. Y., assignor of one-half to F. C. List, Honesdale, Pa. Filed May 23, 1918. Serial No. 236,244. 1 Claim. (Cl. 283—2.)

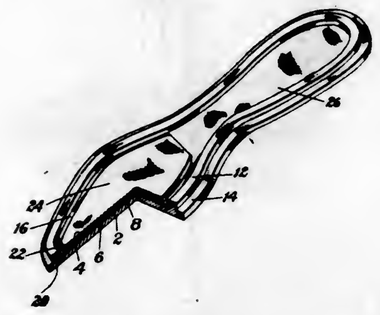
A device of the character specified, comprising a support in the form of a foundation card, and a pad of sheets held on the card intermediate the side edges thereof, and spaced apart from the side edges, the sheets having similar printed data thereon similarly arranged, and the card having printed thereon at opposite sides of the pad between same and the side edges of the card in regular order the twelve tables of a monthly calendar, the sheets having checking spaces in connection with the printed data, and having other spaces for receiving dates to be ascertained from the calendar to identify the sheets.

1,425,514. WRINGER SUPPORT. HAROLD W. EDEN, Chicago, Ill. Filed July 21, 1919. Serial No. 312,349. 3 Claims. (Cl. 68—32.)



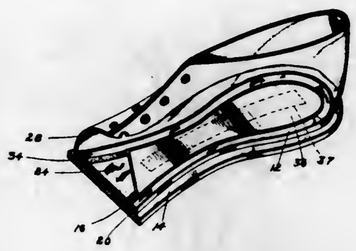
3. The combination with a polygonal support, a bracket pivoted to one side of said support, an arm pivoted to said bracket and swingable over either end of said support, and a wringer pivoted on said arm.

1,425,515. WINDOW SCREEN AND SASH LOCKER. CLAUDE ELLIS, Springville, N. Y. Filed June 3, 1921. Serial No. 474,644. 3 Claims. (Cl. 292—288.)



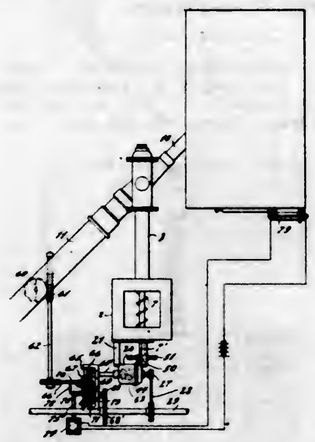
1. In a sash and screen locking device, the combination of two telescoping members, a rigid laterally projecting integral finger carried by one of said members and adapted to engage a frame of a window sash, and releasable means for securing said members together in different extended positions, an end of the other of said members being adapted to engage the frame of another window sash.

1,425,516. FASTENING-INSERTING MACHINE. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 23, 1918. Serial No. 224,186. 16 Claims. (Cl. 1—18.1.)



10. In a fastening inserting machine, fastening inserting mechanism arranged in close juxtaposition to each other to drive fastenings through a shank stiffener member and into a shoe sole to secure a shank stiffener in place, means for operating the inserting mechanisms to drive said fastenings substantially simultaneously in order to secure the stiffener in place at one operation of the machine, and a single means for adjusting the mechanisms to vary the spacing between driven fastenings in accordance with variations in the width of shank stiffeners.

1,425,517. SHOE SOLE. GEORGE FERGUSON, Wollaston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 13, 1918. Serial No. 266,578. 5 Claims. (Cl. 36—32.)

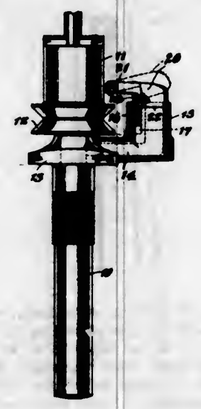


5. As an article of manufacture, a shoe sole comprising a composite sole-shaped blank molded to provide on its upper marginal surface a sewing rib which projects above the upper surface of the sole inside thereof through the shank and heel seat portion and which is substantially flush with the upper surface of the central portion of the sole through the forepart.

1,425,518. SHOE AND METHOD OF MAKING IT. GEORGE FERGUSON, Wollaston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Dec. 13, 1918, Serial No. 266,578. Divided and this application filed Jan. 17, 1920. Serial No. 352,024. 14 Claims. (Cl. 12—142.)

1. The method of making a rubber soled turned shoe which consists in placing with its tread face upon the bottom of the first last a sole comprising a body portion of vulcanized rubber compound and an upper layer of fabric, there being molded on the upper face of the sole and extending around the margin thereof a flat feather, inside the feather a sewing rib, inside the rib a gutter, and inside the gutter a filler portion, the top of the filler portion being substantially flush with the top of the rib and the bottom of the gutter being located at a level at least as low as that of the feather, sewing an upper wrong side out to the rib of the sole thus supported, turning the shoe right side out and completing the manufacture of the shoe, including placing a lining member of sheet material in the bottom of the shoe with the under face of said member in contact with the top of the rib and the top of the raised filler portion of the sole.

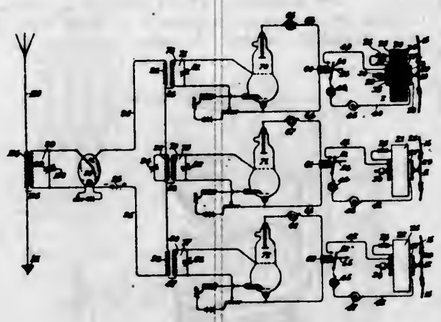
1,425,519. AUTOMATIC STOKER. HANNIBAL C. FORD, New York, N. Y., assignor to Ford Instrument Company, Inc., a Corporation of New York. Filed Mar. 30, 1917. Serial No. 158,509. 4 Claims. (Cl. 110—104.)



4. In an automatic stoker, a conduit for supplying air to a furnace, a conduit-controlling valve, means for supplying fuel to the furnace, a main drive shaft, variable speed mechanism for driving the fuel-supplying means from said shaft, a reversible connection extending to said valve to reversely operate the same and to said mechanism to regulate the speed thereof said connection including a shaft, gears loosely mounted on the last named shaft, and provided with clutch members, an intermediate clutch member drivingly combined with the same shaft, a connection from said main shaft to said loosely mounted gears to drive them in opposite directions, and thermostatically controlled means for shifting said intermediate clutch into engagement with one or the other of said loosely mounted gears.

1,425,520. PROCESS FOR PRODUCING PATTERNED TEXTILE FABRICS AND THE RESULTING PRODUCT. HENRY GIESLER, Brussels, Belgium, assignor to Heberlein & Co., A. G., Wattwil, Switzerland. Filed Nov. 10, 1914. Serial No. 871,283. 8 Claims. (Cl. 139—9.)

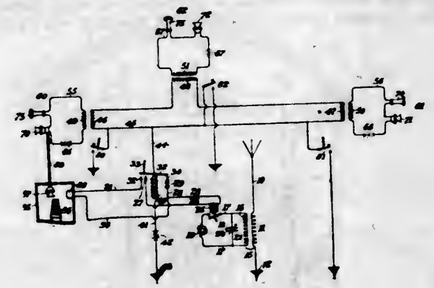
1. Process of producing fancy or patterned fabrics of substantially all vegetable yarn, which comprises weaving a fabric of substantially all vegetable yarns, some of which have been previously treated with a chemical so affecting them as to aid carbonization, then applying a neutralizing agent to certain areas of the fabric including both the treated and untreated vegetable yarns of the fabric and according to the design to be produced, then subjecting the fabric to carbonization and then removing the carbonized yarns.



1,425,521. DOFFER GUARD AND OIL-WELL COVER FOR SPINDLE SUPPORTS FOR SPINNING AND LIKE MACHINES. JOSEPH R. GLENNON and LOUIS DUPUIS, New Bedford, Mass.; said Dupuis assignor to said Glennon. Filed June 8, 1921. Serial No. 475,915. 17 Claims. (Cl. 118—65.)

1. In a device of the class described, the combination of a bolster casing, an oil well post extending therefrom, a substantially L-shaped doffer guard mounted at its lower end on said post and shiftable thereon from operative to inoperative position relative to a spindle whorl,

and an oil well cover mounted on and supported by said guard and shiftable from an operative to an inoperative position relative to the oil well.

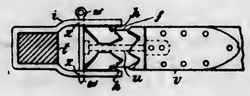


1,425,522. SYSTEM FOR SOUND TRANSMISSION. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed June 7, 1917, Serial No. 173,331. Renewed Dec. 8, 1921. Serial No. 520,992. 6 Claims. (Cl. 250—2.)

1. The combination with a plurality of sound transmitting devices arranged to transmit respectively a plurality of series of groups of sound waves having different wave frequencies and different group frequencies respectively, of means responsive to radiant energy for selectively controlling said devices.

1,425,523. TRANSMISSION SYSTEM FOR RADIANT ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed June 22, 1917, Serial No. 176,309. Renewed Jan. 7, 1922. Serial No. 527,777. 19 Claims. (Cl. 250—17.)

1. The combination with means for transmitting energy, of means including a switch for controlling said transmission means, sound producing means controlled by said switch for announcing the operation of said switch,

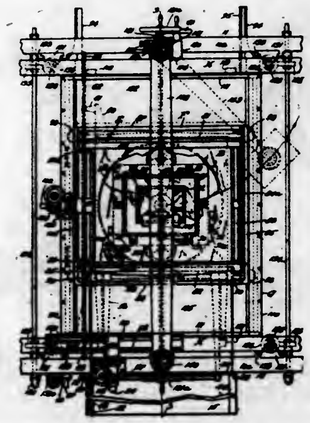


a distant station for operating said controlling means, and means for transmitting sound from said producing means to said distant station.

1,425,524. CAGE PERCH. WILLIAM HENRY HARRISON, Brooklyn, N. Y. Filed Oct. 11, 1920. Serial No. 416,012. 2 Claims. (Cl. 119—26.)

1. A washable cage perch for captive birds for the combined purpose of supporting the bird and maintaining its claws in normal condition, comprising an elongated member having provisions for sustaining it in an elevated position, and having both an extensive flat top surface and an extensive cylindrical top surface, both said flat and cylindrical top surfaces being of abrasive material to abrade the bird's claws from different angles.

1,425,525. COUPLING. WALTER JOHN HOLLICK, Manchester, England. Filed May 19, 1919. Serial No. 298,242. 8 Claims. (Cl. 287—1.)

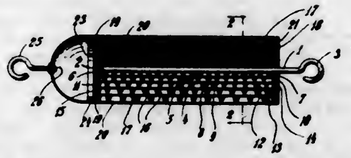


1. A coupling device comprising two relatively movable elements to be coupled, one of the elements having a member with a zig-zag cam groove therein extending transversely of the direction of relative movement and also exit and entrance slots therein leading to spaced sections of the groove, the other of the elements having a member with a cam follower for engagement with the slots and groove whereby upon relative movement of the elements in opposite directions the follower will enter the cam groove by means of one slot to couple the elements and upon continued relative movements of the elements in opposite directions will be released through the other slot, and means for locking the elements against relative movement when the cam follower is in the cam groove intermediate of the slots to thereby prevent uncoupling of the elements.

1,425,526. PHOTOGRAPHIC PRINTING APPARATUS. WILLIAM C. HUEBNER, Buffalo, N. Y., assignor to Huebner-Bielstein Patents Co., Buffalo, N. Y. Filed June 25, 1919. Serial No. 306,572. 20 Claims. (Cl. 95—73.)

1. In a photographic printing apparatus, the combination of a carriage supporting a transparent printing plate

in a horizontal position, a holder for supporting a sensitized plate horizontally above said printing plate, a support in which said holder is adjustable horizontally for placing different portions of the sensitized plate opposite the printing plate, and means for lowering and raising



said support to place the sensitized plate into and out of contact with the printing plate, said printing plate carriage being movable horizontally for carrying the printing plate from its operative position beneath the sensitized plate and supporting it in an accessible position at one side of the sensitized plate.

1,425,527. HAIR WAVER. HARRY H. KLEIN, New York, N. Y. Filed June 21, 1921. Serial No. 479,184. 6 Claims. (Cl. 132—43.)

1. An endless piece of wire twisted upon itself to form a hair waver.

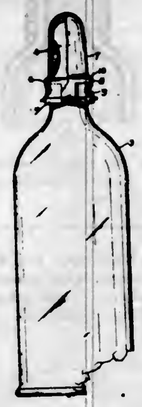
1,425,528. TENSION-CONTROLLING DEVICE. WILLIAM LIND, New York, N. Y. Filed June 29, 1921. Serial No. 481,271. 5 Claims. (Cl. 280—33.14.)

1. In combination, a plunger, a coiled spring of certain elasticity wound around said plunger, a shoulder on said plunger engaged by one end of said spring, a hollow tube enclosing said spring and plunger, an inside projection on one end of said tube engaging the other end of said spring, a coiled spring of different elasticity wound around said tube, an outside projection on the other end of said tube engaging one end of said last mentioned spring, a second hollow tube enclosing said last mentioned spring, and an inside projection on one end of said second tube engaging the other end of said second mentioned spring.

1,425,529. WELDING. LEWIS G. MCCLINTOCK, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed June 1, 1921. Serial No. 474,171. 6 Claims. (Cl. 113—112.)

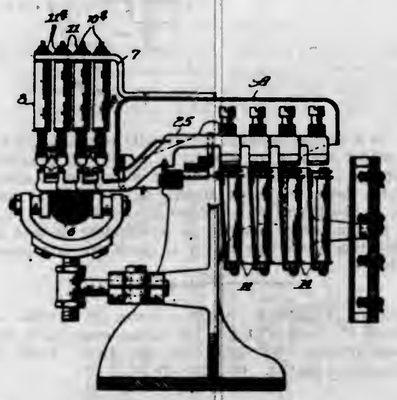
1. The method of welding sheet metal which consists in assembling the sheet ends extending in the same general direction and with the edges to be welded bent over to oppositely face each other, engaging the sheet ends by spacing means to space apart the oppositely facing edges without engagement of said edges, and heating and welding said edges.

1,425,530. PROCESS FOR THE TREATMENT OF LEATHER WITH INDIA RUBBER. ALEXANDER MCLENNAN, Ross, England. Filed Jan. 21, 1922. Serial No. 530,978. 5 Claims. (Cl. 149—6.)



5. In a process for impregnating leather with india rubber, treating the leather for impregnating the leather with rubber; and when the leather is impregnated with the rubber treating the leather with an element for vulcanizing the rubber which has become embedded in the leather.

1,425,531. NUT WARMING AND VENDING MACHINE. CHARLES W. MABEY, Indianapolis, Ind. Filed Sept. 24, 1921. Serial No. 502,952. 3 Claims. (Cl. 211—8.)



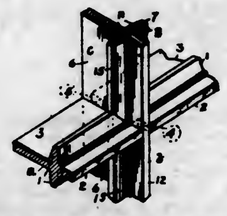
1. In a vending machine, a rocking drum having an opening through which the drum is filled when the opening is at the top of the drum and through which the contents of the drum is discharged when the position of the opening is reversed, means for locking the drum in its filled position, means made effective by the presence in it of a coin for unlocking the drum, and manually operated means comprising a pull-chain wrapped on the drum for rocking the drum to empty it when unlocked.

1,425,532. SANITARY CAP. GEORGE M. MARR, Brooklyn, N. Y. Filed June 14, 1921. Serial No. 477,401. 3 Claims. (Cl. 215—11.)

1. A sanitary cap for bottle nipples having a plurality of projections from the open end thereof adapted to temporarily engage the nipple to secure the cap thereon.

1,425,533. ELECTRIC SELF-PLAYING VIOLIN. BERTIS E. MILLS, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 9, 1921. Serial No. 499,475. 4 Claims. (Cl. 84—11.)

1. In an automatically-played stringed instrument in which a string is fingered by fingering-devices and played by a sounder, the combination with the string of a damper-device normally bearing against it in advance of the fingering-devices, and means for withdrawing the damper from engagement with the string for playing of the sounder thereon as an open string.



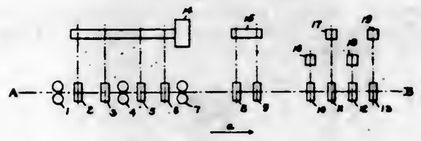
1,425,534. RENEWABLE GRIP HANDLE. JOSEPH MOSHER, Chicago, Ill. Filed Dec. 17, 1920. Serial No. 431,444. 3 Claims. (Cl. 190—58.)

1. A renewable grip handle comprising a metallic strip having its ends bent to form hooks, retaining humps integral with the hooks and provided with a leather

cover, said cover having elongated portions passing around the hooks, and adapted to be fastened in position.

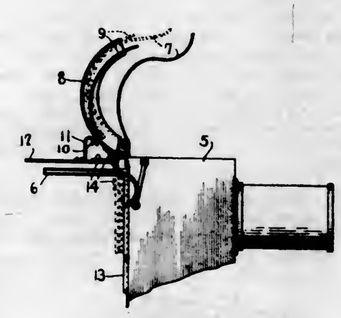
1,425,535. SASH. HARRY R. MOYER, Thornburg, Pa. Filed Mar. 7, 1921. Serial No. 450,345. 8 Claims. (Cl. 189—36.)

1. In a metal sash, a mullion having oppositely-extending webs and continuous lateral glass ledges integral with the webs, the webs having opposite notches in their edges, a second mullion crossing the first mullion and composed of two bars, one bar comprising a web continuous at one edge which is seated in one notch and carrying lateral flanges at the other edge, the said bar having a transverse slot open in the latter edge to receive one web of the first mullion and the said lateral flanges being cut away to form seats for the said ledges the other bar comprising a channel having a central web on the side opposite the flanges of the channel, the flanges being cut away to pass the said glass ledges, the base of the channel being cut away to form seats for the said ledges, the web being seated in the remaining notch in the first mullion, and the said flanges being bent beneath the said ledges.



1,425,536. MECHANIC'S TOOL OF THE HANDSAW TYPE. AIMÉ NEBON, New Bedford, Mass. Filed Jan. 17, 1922. Serial No. 530,004. 2 Claims. (Cl. 33—75.)

1. The combination of a blade and a handle thereon, a rotary chambered body alongside of the blade and con-

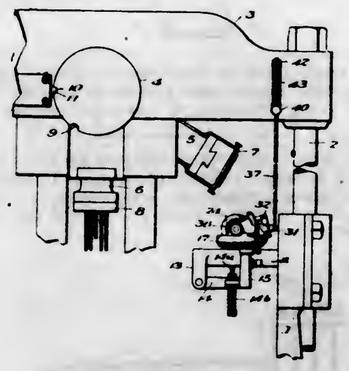


nected therewith, and having an annular inclined wall, a toothed disk in the chamber of the body and fixed to the blade, a movable cap retained in the chamber of the body, a spring tending to force the cap outwardly, and a spring pressed dog carried by the cap and arranged to cooperate with said inclined wall of the body.

1,425,537. CONTINUOUS HOT MILL. HENRY G. O'BRIEN, Warren, Ohio, assignor to The Trumbull Steel Company, Warren, Ohio, a Corporation of Ohio. Filed Sept. 4, 1919. Serial No. 321,660. 1 Claim. (Cl. 80—35.)

A hot mill for rolling metal including a plurality of roughing-roll stands and a plurality of finishing-roll stands, a common motor driving the rolls of the several roughing-roll stands, a plurality of motors corresponding in number with the finishing-roll stands and connected operatively, one to each of said finishing-roll stands.

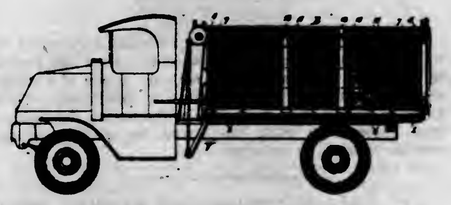
1,425,538. MOTION-PICTURE MACHINE. PERCY W. PALMER, Edgerton, Wis. Filed Aug. 13, 1918. Serial No. 249,633. 1 Claim. (Cl. 88—17.)



The combination with a motion picture machine; of a film guard thereon, provided with an opening adjacent its inner end, a fire shutter pivoted to said guard at its inner end, resilient means for normally retaining said shutter in its closed position, a trigger fulcrumed within said guard and having its inner end bent at right angles to form a finger, said finger projecting through the opening in said guard, and a hook secured to the inner end of the fire shutter and engaging the finger on said trigger, as and for the purpose described.

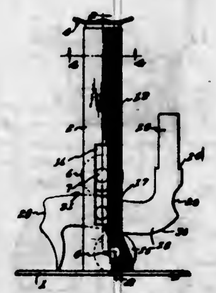
1,425,539. HEADED STOPPER. JAKOB A. PAULSEN, Jersey City, N. J. Filed Mar. 18, 1920. Serial No. 366,819. 1 Claim. (Cl. 215—11.)

The combination in a bottle having a neck and a cap adapted to fit on said neck, of a nipple, and a stopper having an aperture therethrough, the top of the stopper projecting from the bottle when in place whereby when the cap is applied to the bottle, the nipple is clamped between the top of the stopper and cap across and closing the aperture in the stopper, said stopper being concave near the top thereof and the nipple being spaced from said concave portion.



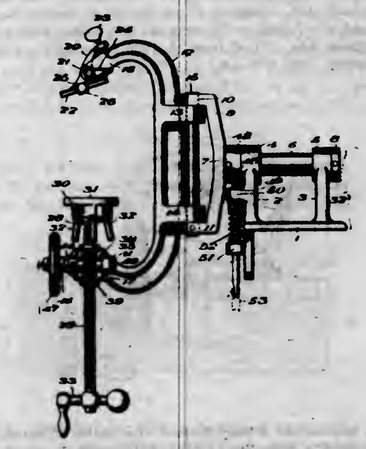
1,425,540. HEEL-NAILING MACHINE. GEORGE M. PETTENGILL, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed June 4, 1918. Serial No. 238,087. 8 Claims. (Cl. 1—35.)

1. In a heeling machine, a vertically reciprocating heel-lift holder adapted to support a heel-lift in a position oblique to the vertical and facing downward, a cement-applying device arranged directly in the path of movement of the lift as it is carried downward in said position by the holder, and means independent of said lift, for insuring a constant supply of cement to said cementing device.



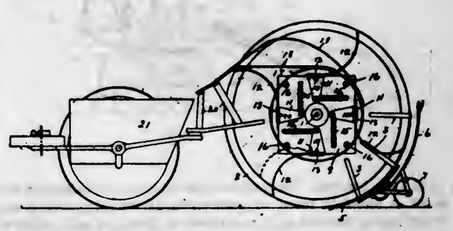
1,425,541. VEHICLE BODY. JACOB H. PRESS and IRVING F. AVERY, Chicago, Ill., assignors to Jacob Press Sons, Chicago, Ill. Filed Oct. 16, 1920. Serial No. 417,337. 2 Claims. (Cl. 296—28.)

1. In a vehicle body, a frame, a box having a bottom resting on and secured to said frame, upwardly extending



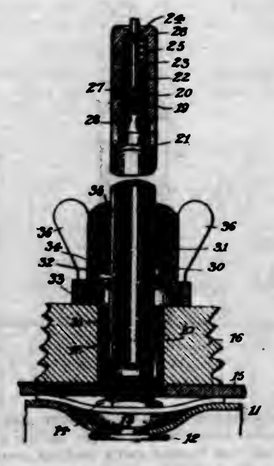
corner stays secured to the bottom adjacent its corners, an endgate at the forward end of the box, the stays at the forward corners having inwardly extending flanges to which the ends of the endgate are secured, and angle members having one side of the angle secured to the inner face of the endgate and having the other side of the angle projecting inwardly of the box substantially parallel to the body of the corner stays to co-operate therewith to support the sidewalls of the box.

1,425,542. VEHICLE JACK. PROSPER J. RAYMOND and GEORGE ADAMS, Detroit, Mich. Filed Apr. 30, 1920. Serial No. 377,758. 5 Claims. (Cl. 254—114.)



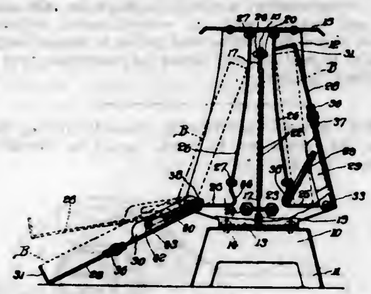
1. In a vehicle jack, a body member provided with a base, a member vertically reciprocable in the said body member, a roller rotatably mounted in the lower end of the said reciprocable member, a roller rotatably mounted in the lower end of the body member, two opposite sides of the body being provided with slots, a lever having an end bent at approximately a right angle, each opposite face therefor forming an ogee curve, and engaging the respective roller, and a pivot pin centrally positioned between the ends of the ogee curved portion and riding in the slots in the said body member.

1,425,543. WOOD-HEEL-CLAMPING DEVICE. FRED A. REARDON, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed Nov. 22, 1918. Serial No. 263,705. 6 Claims. (Cl. 12—125.)



1. In a heel nailing device, a clamp-frame, a supporting frame therefor, a heel-clamp member mounted upon the clamp-frame, a rod provided with a screw-threaded portion and mounted for endwise sliding and rotary movement in the clamp-frame, means for turning said rod, a second heel-clamp member operatively connected to and partaking of the movements of said rod toward and from the first-named clamp-member, a pinion mounted in said clamp-frame and meshing with the screw-threaded portion of said rod, means for turning said pinion to impart endwise movement to said rod, and means for restraining said pinion against turning.

1,425,544. STONE GATHERER. OTIS F. REITER, Baltimore, Md. Filed Oct. 19, 1920. Serial No. 418,049. 3 Claims. (Cl. 55—17.)

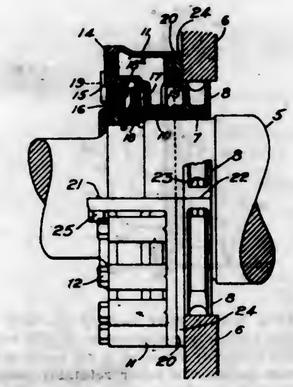


1. In a stone gatherer, a rotatable axle, a wheel fixed to each end of said axle, a series of downwardly and forwardly curved raker teeth operatively supported rearward of the axle, a plate secured near each end of said axle and rotatable therewith, a plurality of bars each having its ends pivoted to said plates, a series of lifting teeth carried by said bars, and a series of conveyer bars upon which the raker teeth discharge disposed in staggered relation to the raker teeth, said conveyer bars being downwardly inclined at the front ends to allow the stones to fall therefrom.

1,425,545. LOCKING DEVICE FOR VALVE STEMS. WILLIAM R. ROYKA, Wilkes-Barre, Pa. Filed July 20, 1921. Serial No. 486,120. 10 Claims. (Cl. 152—12.)

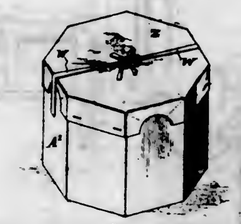
1. In a device for the purpose described, in combination, a wheel felloe, a valve stem extending through the felloe and having an unthreaded portion exposed beyond the felloe, and releasable means cooperating with said unthreaded portion of the valve stem to lock the latter in the felloe.

1,425,546. TOASTER. THOMAS C. RUSSELL, Chicago, Ill. Filed Dec. 1, 1921. Serial No. 519,077. 7 Claims. (Cl. 53—5.)



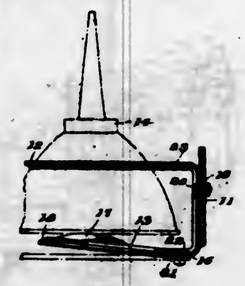
1. In a toaster, the combination of a heat producing element, a shelf in front of said element for supporting material to be toasted, a tray hinged in front of said shelf to support the material and carry it on to the shelf when the tray is swung up, and a discharge member resting on said shelf and connected with said tray to be controlled thereby, said discharge member being at the rear of the shelf behind the lower edge of the material when said material is in toasting position on the shelf, and said member being slid forwardly on said shelf when the tray is swung down to shift the lower end of the material on to the tray so that said material may slide down the shelf and reverse itself.

1,425,547. SASH-CORD COUPLING. JOHN A. RYAN, Rochester, N. Y. Filed Mar. 26, 1921. Serial No. 455,899. 6 Claims. (Cl. 16—256.)



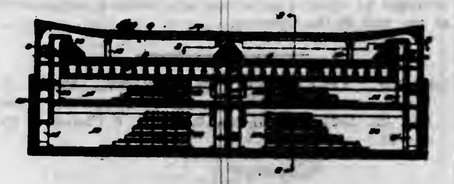
5. The combination of a sash weight and a coupling member therefor comprising a weight having a curved depression on one side thereof and a vertical opening leading through the center of the top of said weight into the depression formed in the side thereof, a sleeve, teeth formed along the seam of said sleeve, an outwardly curved neck depending from said sleeve, a semi-cylindrical flange formed on the end of said neck, said sleeve being adapted to project into the vertical opening in said weight and said neck being adapted to snugly hold said semi-cylindrical flange against the curved wall of the curved depression in said weight, the weight of said sash weight on said coupling member operating to rigidly hold said coupling member in said sash weight.

1,425,548. PACKING. HENRY F. SCHMIDT, Pittsburgh, Pa., assignor to The Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Feb. 23, 1917, Serial No. 150,403. Divided and this application filed Feb. 3, 1919. Serial No. 274,676. 5 Claims. (Cl. 286—8.)



3. A packing gland for sealing the space between a stator and a rotor carrying centrifugal impellers comprising a casing divided into two annular sections, one of which is provided with a series of packing rings, and the other of which is provided with a second series of packing rings, and a casing for enclosing the centrifugal impellers, the said casings being adapted when joined, to form an exhaust channel between the two sets of packing rings.

1,425,549. PAPER-BOARD BOX. GEORGE E. SCRUBY, Birmingham, Ala., assignor of one-fourth to Robert R. Taylor and one-fourth to Thomas M. McClellan, both of Birmingham, Ala. Filed June 24, 1921. Serial No. 480,050. 5 Claims. (Cl. 206—8.)

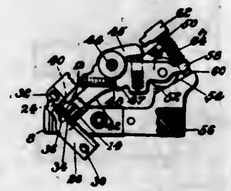


1. A box having a body formed of a series of panels and its bottom of a plurality of inner reinforcing members and outer members of larger area which are overlapped by the inner members, two of the body panels being formed with overlapping locking members bridging the bottom.

1,425,550. RECEPTACLE HOLDER. WALTER J. SPINO, White Plains, N. Y. Filed May 5, 1921, Serial No. 467,175. Renewed June 20, 1922. Serial No. 569,716. 4 Claims. (Cl. 248—20.)

1. A can holder comprising an end wall, a rigid angular holding plate having a curved recess adapted to embrace a can body, and a substantially parallel resilient pressure plate disposed within the area of and centrally beneath the recess of the holding plate.

1,425,551. FURNACE FOR PRODUCING SILICATE OF SODA AND THE LIKE. WILLIAM H. STANTON, Ridley Park, Pa. Filed Aug. 9, 1920. Serial No. 402,284. 4 Claims. (Cl. 158—7.5.)

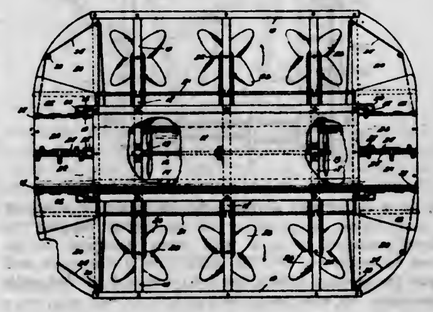


1. In a furnace the combination with a hearth disposed longitudinally thereof and a roof above said hearth, of a pair of gas regenerator chambers beneath said hearth extending longitudinally of said furnace, an air regenerator chamber beneath each of said regenerator chambers also extending longitudinally of the furnace, a flue leading from the outer extremity of each said regenerator chambers opening into the space between the superimposed hearth and the roof at a point adjacent an outer extremity of the hearth and operative to conduct gas from said chamber to said space, and separate passages communicating respectively with the inner end of each of said regenerator chambers operative to respectively conduct air or gas thereto and to conduct the spent gases of combustion therefrom.

1,425,552. LATCH FOR AUTOMOBILE DOORS. BAYARD E. TAYLOR, Oak Park, Ill. Filed June 21, 1920. Serial No. 390,243. 4 Claims. (Cl. 292—166.)

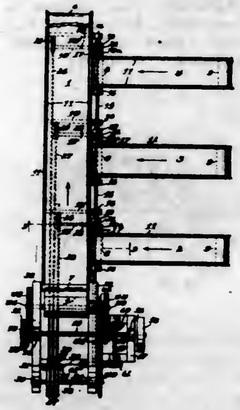
4. The combination with a lock and the strike plate therefor, of a projection formed on said strike plate having an inclined striking surface, a latch bolt adapted to be projected from said lock, and a wedge member slidable with respect to said latch bolt and having a straight striking surface parallel to said latch bolt adapted to be moved into engagement with the inclined surface of said projection.

1,425,553. TACK-HANDLING MECHANISM. FREDERICK W. TAYLOR, Salisbury, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 12, 1920. Serial No. 423,522. 14 Claims. (Cl. 1—6.)



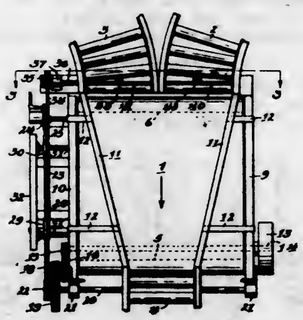
14. In a tack handling mechanism, the combination of a raceway, means engaging the head portion of the lowermost tack in the raceway to initiate separation from the tacks in the raceway, and means arranged to enter behind the tack being separated and to have a compound movement including movement in a direction transverse to the tack and in a direction lengthwise of the tack.

1,425,554. RUNNING BOARD. HORACE T. THOMAS, Lansing, Mich. Filed Sept. 24, 1917. Serial No. 192,836. 2 Claims. (Cl. 280—163.)



2. A running board of sheet metal having a plurality of longitudinal depressions therein, filler strips of non-resonant material and metal in said depressions and drainage openings at the bottom of said depressions.

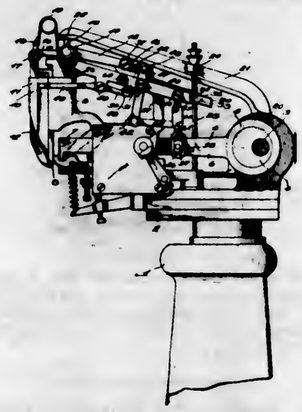
1,425,555. AIRSHIP. CHARLES D. THOMPSON, Kirksville, Mo. Filed Apr. 25, 1921. Serial No. 464,097. 3 Claims. (Cl. 244—29.)



1. The combination with an airship, of directing members projecting from the opposed ends thereof, said members being substantially arch-shaped and including relatively movable sections, said directing members being susceptible of vertical and horizontal movements, and means for simultaneously adjusting said members as and for the purpose specified.

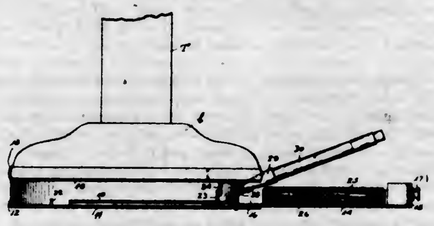
1,425,556. CONTROLLER FOR INTERSECTING CONVEYERS. LLOYD G. TINGWALL and ARTHUR J. JOHNSON, St. Paul, Minn., assignors to Standard Conveyor Company, a Corporation of Minnesota. Filed May 5, 1921. Serial No. 467,103. 6 Claims. (Cl. 198—79.)

1. In a device of the class described, a main conveyer, a plurality of auxiliary conveyers arranged to deliver packages to said main conveyer, a shaft to drive said auxiliary conveyers, clutches arranged on said shaft and means for operating said clutches to periodically connect and disconnect said auxiliary conveyers from said shaft.



1,425,557. CONVERGER FOR CONVEYERS. LLOYD G. TINGWALL and ARTHUR J. JOHNSON, St. Paul, Minn., assignors to Standard Conveyor Company, a Corporation of Minnesota. Filed May 5, 1921. Serial No. 467,104. 9 Claims. (Cl. 198—26.)

1. In a converger, a frame, an endless belt mounted in said frame, a plurality of conveyers adapted to deliver packages to said belt, stops arranged to be moved consecutively into the path of said conveyers and means for moving said stops into and out of the path of packages on said conveyers.



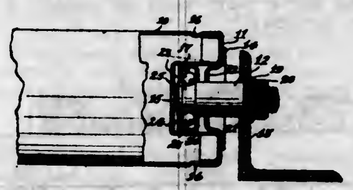
1,425,558. SHOE MACHINE. FÉLIX EMILE VALOIS, Haverhill, Mass., assignor to Hamel Shoe Machinery Company, a Corporation of Massachusetts. Filed Dec. 7, 1917. Serial No. 205,918. 25 Claims. (Cl. 12—18.)

2. In a shoe machine, in combination an adjustable edge gauge and means for progressively adjusting the same, said means comprising a pattern cam-member movable in a rectilinear path and means constructed and

arranged to advance or retract said pattern cam-member at the will of the operator.

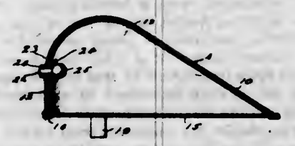
1,425,559. TELEPHONE ATTACHMENT. FRANK E. WAMPACH and ARVID E. KARLSEBO, Chicago, Ill. Filed Dec. 22, 1921. Serial No. 524,062. 6 Claims. (Cl. 45—51.)

5. A detachable sub-base for supporting a desk telephone, a drawer for said sub-base, means for supporting a memorandum pad on said drawer, a pencil holder supported on said drawer, means for raising said pencil holder when the drawer is opened, and means for forcing said holder downwardly when the drawer is closed to thereby move the pencil into the drawer so that the drawer may be closed.



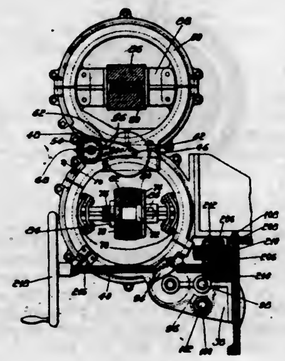
1,425,560. BROOM AND BRUSH. HARRY B. WATERS, Denver, Colo. Filed Nov. 15, 1920. Serial No. 424,166. 1 Claim. (Cl. 15—171.)

A brush or broom comprising a rigid socket-head, a removable brush member having a part entering the socket of the head and composed of a number of distinct tufts bound firmly together as a unit, means for connecting the brush member with the head to prevent ready removal and a handle rigidly connected with said head,



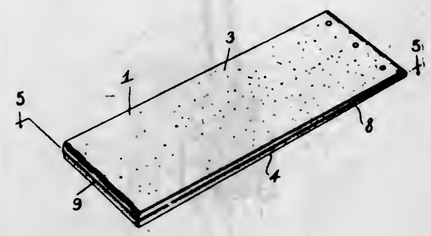
interiorly projecting ribs being formed on the inner face of said head and engaging in the grooves between said tufts.

1,425,561. CONVEYER ROLLER. PETER C. WEGO, St. Paul, Minn., assignor to Standard Conveyor Company, a Corporation of Minnesota. Filed Aug. 14, 1920. Serial No. 403,458. 4 Claims. (Cl. 64—17.)



1. In a conveyer roller a body, hubs in the ends of said body, pintles adapted to be rigidly secured at their outer ends in the frame of a conveyer and extending axially into said hubs, bearings for said body on the inner ends of said pintles, caps closing the outer ends of said hubs and annular grease cups between said bearings and caps.

1,425,562. HEADLIGHT. JAMES SAMUEL WHEELER, Mesa, Ariz. Filed Mar. 29, 1921. Serial No. 456,686. 4 Claims. (Cl. 240—41.)



2. In a headlight of the class described, comprising in combination, an inverted scoop-shaped casing, a transparent closure therefor, an electric lamp socket extending through a vertical recess in the rear wall of said casing, a stationary support for said lamp socket, and mounting means for said casing and said stationary support whereby the casing may be adjustably tilted forwardly or rearwardly while said lamp and support remain stationary.

1,425,563. PROPELLER LATHE. LELAND B. WHIPPLE, Rochester, N. Y., assignor to Fitz-Empire Double Pivot Last Company, Auburn, Me., a Corporation of Maine. Filed Aug. 4, 1919. Serial No. 315,083. 3 Claims. (Cl. 142—54.)

1. In a lathe for turning propellers, a gear for rotating the propeller blank, and a spindle for chucking the blank, comprising two sections, one having a flange and the other a nut, there being a screw joint between the sections, the flange having lugs arranged to fit the bolt holes in a prepared propeller hub and the nut being arranged to clamp the hub against the flange, and means for detachably bolting the spindle to the gear.

1,425,564. REENFORCED CEMENT ROOFING. JOHN ELKANAH WHITESIDE, Alexander, La. Filed Jan. 26, 1921. Serial No. 440,000. 1 Claim. (Cl. 108—8.)

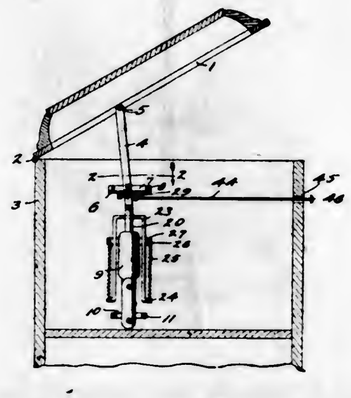
A roofing material comprising a base of plastic material reenforced by a strip of reticulated material disposed between the top and bottom faces of the base and extending the entire length and width thereof with its side and end edges exposed and a waterproof coating enveloping the plastic base.

1,425,565. METHOD OF PREPARING AQUEOUS SOLUTIONS OF ANTIMONY TRICHLORIDE. CLYDE E. WILLIAMS, Niagara Falls, N. Y., assignor to Hooker Electrochemical Company, New York, N. Y., a Corporation of New York. Filed Aug. 10, 1920. Serial No. 402,650. 3 Claims. (Cl. 23—13.)

1. Method of preparing aqueous solutions of antimony trichloride, comprising reacting with chlorin upon antimony metal in presence of hydrochloric acid at sufficient concentration to prevent separation of oxychlorid.

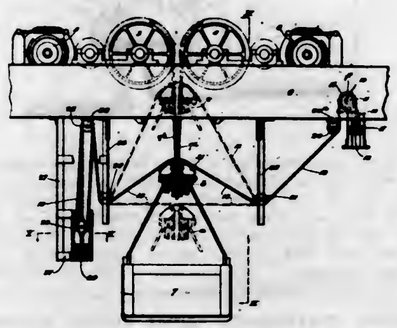
1,425,566. DIAPHRAGM-FRAME MOUNTING FOR REPRODUCERS. DAVID H. WILSON, Philadelphia, Pa. Filed Sept. 15, 1921. Serial No. 500,883. 2 Claims. (Cl. 274—35.)

1. In a device of the kind described, a reproducer casing, a diaphragm frame positioned within said casing in spaced relation to the walls thereof, balls spaced evenly around the periphery of the frame between said frame and the casing, and means to exert pressure inwardly on one of said balls and thereby increase the pressure between the remaining balls and the frame.



1,425,567. CONNECTING ROD FOR ENGINES. SUMNER WILTSE, Dayton, Ohio. Filed Dec. 24, 1919. Serial No. 347,228. 5 Claims. (Cl. 74—17.)

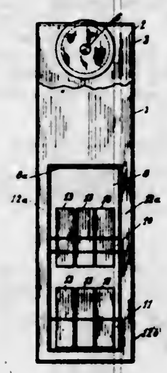
1. In a device of the type described, the combination with a piston having a concave bearing surface in its upper portion, of a connecting rod, a shield-shaped head on the latter, a retaining nut threaded into said piston, a dome-shaped top on said retaining nut between which, and the bearing surface above it, the shield-shaped head of the connecting rod has a free oscillatory movement, and a transverse element secured to the bottom portion of said nut, adapted to engage the interior surface of the piston, to lock the retaining nut therein.



1,425,568. DROP-COVER CHECK. HAROLD A. ARNOLD, Lenora, Kans. Filed Apr. 12, 1922. Serial No. 551,855. 4 Claims. (Cl. 217—60.)

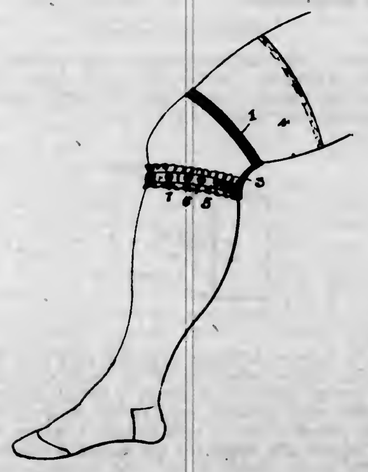
1. Means for checking the closing movement of a cabinet cover comprising a cylinder including a guide portion, a main chamber, an auxiliary chamber, a partition between the two chambers provided with a plurality of openings, a plunger in the cylinder movable in the main chamber, a supporting member connecting the plunger

with the cover, and a catch adjacent the supporting member for engagement therewith for holding the cover in a raised position.



1,425,569. CONTROL MECHANISM FOR HOISTING APPARATUS. SAMUEL ARNOLD, 3d, Ben Avon, Pa. Filed Apr. 6, 1921. Serial No. 458,923. 5 Claims. (Cl. 212—132.)

1. The combination with a hoisting crane trolley having a load carrying device, means for raising and lowering said device, and electric power means for operating said first named means, of a limit switch for breaking the forward operating circuit to said electric power means to control the upward movement of said load carrying device, and flexible means adapted to be tripped by said load carrying device for operating said switch, said last named means being adapted to permit an appreciable upward overrun of said load carry device after said means has been tripped.



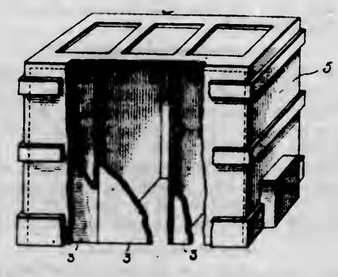
1,425,570. SASH WEIGHT. BENJAMIN F. AUFDERHEIDE, Sr., Davenport, Iowa. Filed Apr. 14, 1922. Serial No. 552,479. 4 Claims. (Cl. 16—218.)

1. A sash weight of rectangular dimensions, the surfaces of its edges beveled to center, one of its ends bifurcated, the said bifurcated end supporting a pulley revolubly installed within such bifurcation by axle means within holes provided in the jaws of said bifurcations; a transverse rectangular hole suitably disposed between the inward extremity of such bifurcation and the opposite end of such weight, said rectangular hole having its jamb, lintel and sill beveled to center, said rectangular hole having multiple saddle bar members disposed

across it, one of which members protrudes upwardly from said sill, the other of said members being connectedly supported by the said jambs, said saddle bars having their edges beveled to center and perpendicular sides, a petty weight member having a bifurcation in one of its ends capable of being mounted upon said saddle bars within said transverse opening, all further purposes specified.

1,425,571. GARTER. JEANIE BEAR, Pittsburgh, Pa. Filed Nov. 30, 1921. Serial No. 518,828. 1 Claim. (Cl. 241—5.)

A garter comprising two elastic members, each adapted to encircle the leg, one above the knee and the other below the knee, a flexible member connecting said upper and lower members, the lower member being disposed at the lower end of said flexible connecting member and having a stud, and the upper member at the upper end of said flexible connecting member, means to take up the slack in the lower member, including a supplemental band attached to and extending over said lower member, and having eyelets adapted to engage the stud on said lower member.



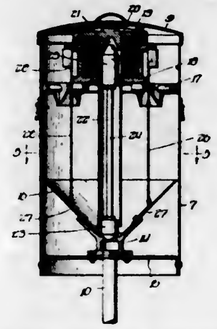
1,425,572. ZIRCONIUM ALLOY AND PROCESS OF MAKING SAME. FREDERICK M. BECKET, Niagara Falls, N. Y., assignor to Electro Metallurgical Company, Niagara Falls, N. Y., a Corporation of West Virginia. Filed Oct. 1, 1920. Serial No. 414,086. 6 Claims. (Cl. 204—63.)

5. Process of making a low-carbon ferro-alloy consisting essentially of iron, silicon and zirconium, comprising smelting in the electric furnace a charge comprising silica, a zirconium ore, a carbonaceous reducing agent, and a source of iron, the charge proportioned to yield an alloy containing silicon in at least as high proportion as the zirconium, whereby the formation of zirconium carbid in interfering quantities is prevented.

1,425,573. ELECTRIC BATTERY. RAYMOND C. BENNER and HARRY F. FRENCH, Fremont, Ohio, assignors to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 16, 1919. Serial No. 271,488. 8 Claims. (Cl. 204—38.)

6. In electric batteries, a negative electrode of zinc having mercury and lead material associated with the active surface.

1,425,574. BATTERY JAR AND PROCESS OF MAKING SAME. EDWIN S. BOYER, Plainfield, N. J., assignor to American Hard Rubber Co., New York, N. Y., a Corporation of New York. Filed July 14, 1921. Serial No. 484,800. 3 Claims. (Cl. 206—2.)



1. The process of holding a plurality of individual hard rubber battery jars together in a hard rubber container which comprises mounting the completed individual battery jars adjacent each other upon a plurality of battery cores one for each battery jar, enclosing the assembled battery jars by a hard rubber container made to slip over the battery jars immediately after the same has been vulcanized while still hot and before it has an opportunity to cool, permitting the container to shrink in cooling to firmly bind the individual battery jars and container together.

1,425,575. TRACK SANDER. CARL O. BURTON, Duluth, Minn. Filed Feb. 18, 1922. Serial No. 536,380. 3 Claims. (Cl. 291—23.)

1. A rail sander comprising a sand reservoir, a discharge opening therein, a bracket located in said reservoir

supporting a solenoid and a tubular guide extending in alignment with said opening, and a closure for said open-

ing operating in said guide and controlled by said solenoid.

1,425,576. CATALYST AND METHOD OF PREPARING THE SAME. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed May 8, 1920. Serial No. 380,002. 18 Claims. (Cl. 23—28.)

1. As a new article of manufacture, a catalytically active body comprising the product of thermal decomposition under oxidizing conditions of the cyanamids of a plurality of metals of the type of silver and copper.

1,425,577. PROCESS OF PREPARING PURIFIED GAS MIXTURES. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed May 8, 1920. Serial No. 380,003. 7 Claims. (Cl. 23—21.)

6. Process of preparing purified gas mixtures consisting essentially of hydrogen and nitrogen, comprising passing a gas mixture containing hydrogen, nitrogen, and carbon dioxid in contact with ammonia free from contaminating impurities.

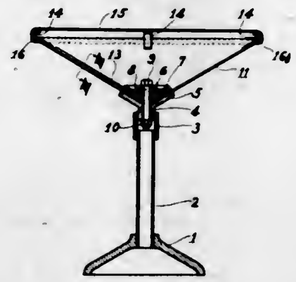
1,425,578. PROCESS OF PREPARING HYDROGEN. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed May 14, 1920. Serial No. 381,506. 5 Claims. (Cl. 48—198.)

4. Process of preparing substantially pure hydrogen, comprising reacting with superheated steam upon elemental sulfur at temperatures of at least 500° C., and removing sulfur dioxid from the gaseous reaction product.

1,425,579. PROCESS OF GENERATING HYDROGEN AND HYDROGEN-NITROGEN MIXTURES. JOHN COLLINS CLANCY, Providence, R. I., assignor to The Nitrogen Corporation, Providence, R. I., a Corporation of Rhode Island. Filed May 25, 1920. Serial No. 384,170. 5 Claims. (Cl. 23—10.)

2. Process of preparing mixtures containing hydrogen and nitrogen, comprising passing a mixture containing a hydrocarbon vapor, steam and air into contact with iron-chromium surfaces at a high temperature.

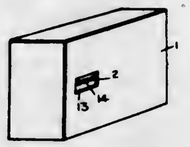
1,425,580. CELLULOSE DERIVATIVE AND PROCESS OF PREPARING SAME. GUSTAVUS J. ESSELEN, Jr., Swampscott, and HARRY S. MORK, Brookline, Mass., assignors to Arthur D. Little, Incorporated, Cambridge, Mass., a Corporation of Massachusetts. Filed Apr. 10, 1920. Serial No. 372,069. 19 Claims. (Cl. 260—101.)



1. In the process of preparing cellulose estera the step which comprises subjecting cellulose to a preliminary impregnating bath containing a solution of butyric acid and a catalyst.

17. As a new product, a cellulose butyrate soluble at normal temperatures in mixtures of bensol and alcohol.

1,425,581. PROCESS OF PREPARING CELLULOSE BUTYRATE. GUSTAVUS J. ESSELEN, Jr., Swampscott, and HARRY S. MORK, South Boston, Mass., assignors to Arthur D. Little, Incorporated, Cambridge, Mass., a Corporation of Massachusetts. Filed July 26, 1920. Serial No. 398,997. 7 Claims. (Cl. 260—101.)



1. The process of preparing cellulose butyrate which comprises subjecting cellulose to a preliminary impregnating bath containing an acid catalyst, a carrier therefor comprising acetic acid, and water, and butyrating the impregnated cellulose.

1,425,582. METALLIC TABLE. SANDOR FRIOLES, Pittsburgh, Pa. Filed May 4, 1921. Serial No. 466,679. 4 Claims. (Cl. 45—117.)

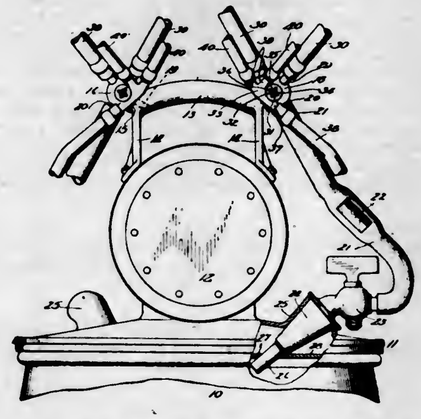
1. A metal table comprising a sheet metal top having a depending annular flange, a radially split annular sheet metal supporting member rendering the same expansible and contractible to vary its size expanded to engage its peripheral edge with the inner surface of said depending flange, and a removable support carrying the expansible sheet metal member.

1,425,583. STREET INDICATOR FOR STREET-RAILWAY SYSTEMS. ALFRED MALACHI GALLERY, Toronto, Ontario, Canada. Filed Mar. 23, 1922. Serial No. 546,007. 14 Claims. (Cl. 40—53.)

1. In a street indicator, a carrier on which a series of street names comprising a car route are indicated, two electric circuits each having a switch opening each provided with normally open switch contacts, a main motor located in one of such circuits, a driving connection between the motor and the carrier, a supplemental starting motor located in the other of such circuits, a push button for closing the normally open switch of the supplemental motor circuit, and means operated by the supplemental circuit for closing the circuit of the main motor.

1,425,584. TEAT CUP FOR MILKING MACHINES. FREDERICK A. GESELER, La Grange, Ill., assignor to Electric Milker Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 2, 1921. Serial No. 457,957. 6 Claims. (Cl. 31—102.)

1. A teat cup comprising a rigid outer shell, a flexible lining engaging the outer rim of the shell, a flexible milk tube of lesser diameter than the lining and integrally formed therewith and extending from the inner end thereof through the inner end of the shell, and means exterior of the inner milk passage for adjustably interlocking the inner end of the lining with the shell, substantially as described.



3. A teat cup comprising a rigid outer shell, a lining provided with an enlarged head adapted to engage the outer rim of the shell, a milk line tube leading from the lining, and means for adjustably securing the inner end of the lining to the shell, said means consisting of interlocking grooves and ridges formed in the base of the lining and shell respectively, substantially as described.

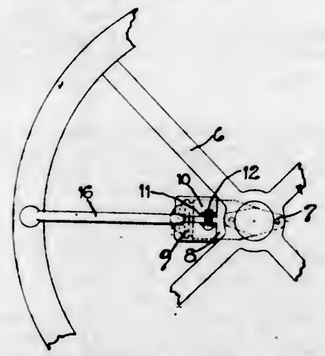
4. A teat cup comprising a rigid outer shell, a lining provided with an enlarged head adapted to engage the outer rim of the shell, a milk line tube leading from and integrally formed with the lining, and means for adjustably securing the inner end of the lining to the shell, said means consisting of interlocking grooves and ridges formed in the base of the lining and shell respectively, substantially as described.

5. In a teat cup, the combination of a metallic shell provided with a base plate having an aperture therein, said aperture being provided with a series of grooves, a lining provided with an enlarged head undercut to overhang the outer end of the shell and engage therewith, the base portion of the lining being reduced in diameter and merging into a milk line tube, and a series of beads or ridges contiguous to the base of the lining and adapted to adjustably engage with the grooves in the base plate, substantially as described.

6. In a teat cup, the combination of a metallic shell provided with a base plate having an aperture therein, said aperture being provided with a series of grooves, a lining provided with an enlarged head undercut to overhang the outer end of the shell and engage therewith, the base portion of the lining being reduced in diameter and merging into a milk line tube, and a series of beads or ridges contiguous to the base of the lining and adapted to adjustably engage with the grooves in the base plate, the lining with its head and milk line tube being integrally formed of rubber, substantially as described.

1,425,585. MILK AND AIR LINE CONNECTION FOR MILKING MACHINES. FREDERICK A. GESELER, La Grange, Ill., assignor to Electric Milker Corporation, Chicago, Ill., a Corporation of Delaware. Filed Apr. 2, 1921. Serial No. 457,958. 7 Claims. (Cl. 31—99.)

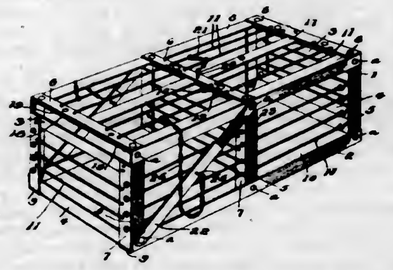
1. In a milking machine, the combination with a milk receptacle, a header block removably supported upon the receptacle, a milk line connection between the receptacle and the header block, the same being removably connected with the receptacle, branch milk line pipes connected with the header block and communicating therethrough with the main milk line pipe, air line pipes associated with the respective milk line branch pipes, and means for supporting the air line pipes upon the header block, substantially as described.



3. In a milking machine, the combination with a milk receptacle, a header block removably supported upon the receptacle, a milk line connection between the receptacle and the header block, the same being removably connected with the receptacle, branch milk line pipes connected with the header block and communicating therethrough with the main milk line pipe, a pair of air line fitttings each removably supported upon the header block, a main air line pipe leading to each fitting, and a pair of branch air line pipes leading from each fitting, substantially as described.

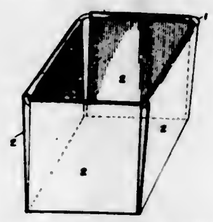
4. In a milking machine, the combination with a milk receptacle, a header block removably supported upon the receptacle, a milk line connection between the receptacle and the header block, the same being removably connected with the receptacle, branch milk line pipes connected with the header block and communicating therethrough with the main milk line pipe, a pair of air line fittings each removably supported upon the header block, a main air line pipe leading to each fitting, and a pair of branch air line pipes leading from each fitting, each air line pipe being connected with the associated branch line milk pipes, substantially as described.

6. In a milking machine, the combination with a milk receptacle having thereon a removable cover, operating mechanism carried by the cover, a handle upstanding from the operating mechanism, a header block removably connected with the handle, a main milk line connection leading to the header block and removably entered into the cover, four branch milk line connections leading to the header block, a pair of oppositely disposed studs outstanding from the header block, a milk line fitting mounted upon each of the studs, the connection between each stud and its associated fitting being such that the latter may be removed from the stud when turned to a given position and retained thereon in other positions, a main air line pipe leading to each of the fittings, and a pair of branch air pipes leading from each of the fittings, substantially as described.



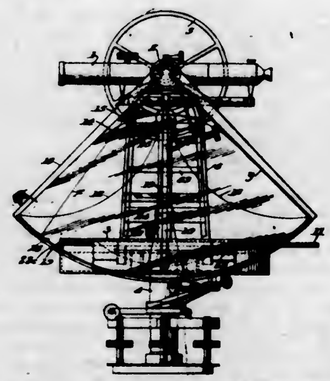
7. In a milking machine, the combination with a milk receptacle having thereon a removable cover, operating mechanism carried by the cover, a handle upstanding from the operating mechanism, a header block removably connected with the handle, a main milk line connection leading to the header block and removably entered into the cover, four branch milk line connections leading to the header block, a pair of oppositely disposed studs outstanding from the header block, a milk line fitting mounted upon each of the studs, the connection between each stud and its associated fitting being such that the latter may be removed from the stud when turned to a given position and retained thereon in other positions, a main air line pipe leading to each of the fittings, and a pair of branch air pipes leading from each of the fittings, the associated branch air line pipes and branch milk line pipes being connected together, substantially as described.

1,425,586. SIGNALING DEVICE. CHARLES F. GILBERT, St. Louis, Mo. Filed Apr. 21, 1921. Serial No. 463,334. 6 Claims. (Cl. 74—39.)



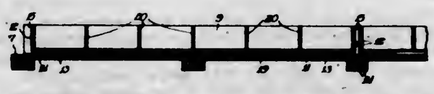
1. A clamping member adapted to be positioned on a push-button switch, said clamping member having means for holding an enlarged portion on the load end of a lever member, an opening in the clamping member whereby the load end of a lever may be inserted, and means on the clamping member for restraining the outward movement of the load end of a lever which means serve as a fulcrum for a lever.

1,425,587. COLLAPSIBLE CRATE. HARRY D. HAMMOND, JOHN W. ACHELPOHL, and ABNER LESLIE, Argonia, Kans. Filed Aug. 16, 1921. Serial No. 492,710. 5 Claims. (Cl. 220—6.)



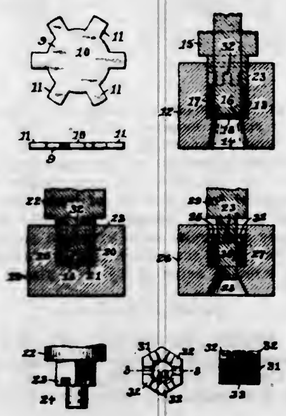
3. A crate provided with a bottom and a top supported to swing thereon whereby the crate may be expanded or contracted, an apertured sheath pivoted to the bottom of said crate, a bar pivoted to the top of the crate and extending into said sheath, said bar being provided with two spaced apertures, and means adapted to extend through the aperture in said sheath and one of the apertures in said bar, to lock said crate in expanded position, or to extend through the aperture in said sheath and through the other aperture in said bar to lock the crate in its contracted position, substantially as described.

1,425,588. TRANSPLANTING DEVICE. HANS E. HANSON, Innisfree, Alberta, Canada. Filed July 6, 1921. Serial No. 482,753. 3 Claims. (Cl. 47—34.)



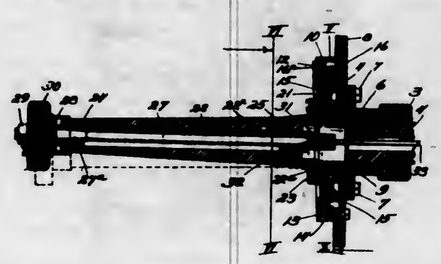
1. In a transplanting device, the combination with a rectangular hoop, of independent depending flaps hinged to each side of the hoop.

1,425,589. SURVEYING INSTRUMENT. PAUL O. HARDING, Carlton, Oreg. Filed Dec. 14, 1920. Serial No. 430,778. 27 Claims. (Cl. 33—46.)



1. In a surveying instrument including means for measuring angles, an adjustable scale indicating distances, means for setting the scale for any desired distance and means operatively connected to the first named means for indicating upon the scale any distance which is the function of an angle measured and the distance for which the scale is set.

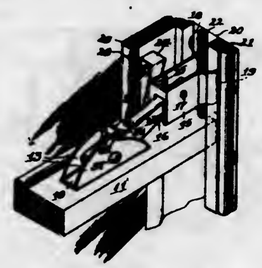
1,425,590. APPARATUS FOR MAKING CONCRETE BRICKS. ARTHUR G. HATCH, Duluth, Minn. Filed July 7, 1921. Serial No. 482,999. 2 Claims. (Cl. 25—121.)



2. Apparatus for making concrete brick or the like, comprising a molding deck, spaced parallel septums extending vertically from the deck, said septums being formed of metal, removable pallets fitted between the septums, the bodies of the pallets being formed of wood and being faced with metal having upwardly extending portions adapted to form the end faces of brick, said pallets being provided with handling clips whereby they may be removed from the molding deck.

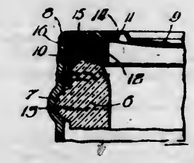
1,425,591. CASTELLATED NUT. FERNANDO OSCAR JAQUES, Jr., Providence, R. I., assignor of one-half to Harold Caldwell Peckham, Cranston, R. I. Filed May 12, 1919. Serial No. 296,560. 1 Claim. (Cl. 85—34.)

A nut blank having castellations and formed of sheet metal compressed and having a central hole and a web extending across the central hole.



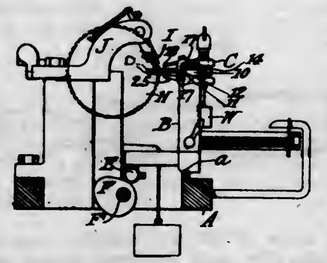
1,425,592. CYLINDER-GRINDING ATTACHMENT FOR LATHES. WILLIAM A. JENNINGS, Raytown, Mo. Filed May 31, 1921. Serial No. 474,085. 10 Claims. (Cl. 51—245.)

1. The combination of a rotatable plate, a wheel rotatable with said plate and having its axis permanently fixed at an angle to the axis of said plate, a shaft movable with and bearing a journaled relation to said wheel and disposed with its axis at an angle to the axis of the wheel, a grinding wheel on said shaft, and a flexible shaft coupled to revolve said first-named shaft around its own axis.



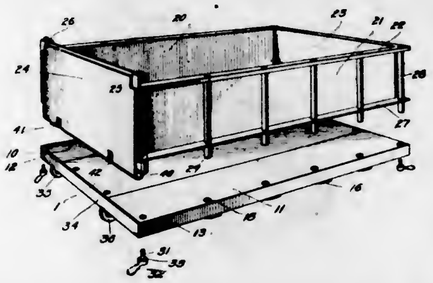
1,425,593. WINDOW CATCH. WILLIAM H. F. JESKA, St. Paul, Minn. Filed Aug. 18, 1921. Serial No. 493,208. 4 Claims. (Cl. 292—3.)

1. In a catch for a window having vertically slidable sashes and guide strips for said sashes, a plate adapted to be secured to the upper surface of the lower sash, an arm tiltably supported at one end on said plate, a head mounted on the free end of said arm whereby said arm is held in inclined position, abutments formed on



said head to severally engage the window frame and outer edge of a guide strip and means mounted on said head for engaging the upper sash.

1,425,594. JAR CLOSURE. CHARLES R. KERRAN, Chicago, Ill. Filed Oct. 27, 1917. Serial No. 198,808. 1 Claim. (Cl. 215—38.)

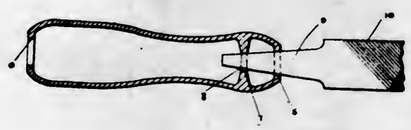


A closure for a jar, comprising in combination a disk arranged to cover the jar mouth and provided with a depending flange adapted to lie adjacent the jar neck, a gasket adapted for interposition between the disk and jar mouth, there being a slit formed in the flange adjacent the under face of the disk, whereby a wedging implement may be inserted to open up a passage between the disk and gasket, and means co-operating with the jar neck for clamping the disk and gasket operatively upon the jar mouth, substantially as described.

1,425,595. MACHINE FOR MAKING COMBS. GEORGE KOHLMEYER and CLAUDE B. WING, College Point, and HERMAN SCHELHAMMER, Whitestone Landing, N. Y., assignors to American Hard Rubber Co., New York, N. Y., a Corporation of New York. Filed Apr. 16, 1921. Serial No. 462,060. 12 Claims. (Cl. 144—26.)

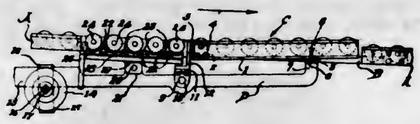
1. A comb clamp comprising a frame, a pair of jaws, a clamp plate positioned between and spaced from the jaws, and a screw carried by one of said jaws and adapted to engage the other of said jaws.

1,425,596. CONVERTIBLE VEHICLE BODY. ANDREW A. KRAMER, Kansas City, Mo. Filed Feb. 5, 1921. Serial No. 442,698. 5 Claims. (Cl. 296—28.)



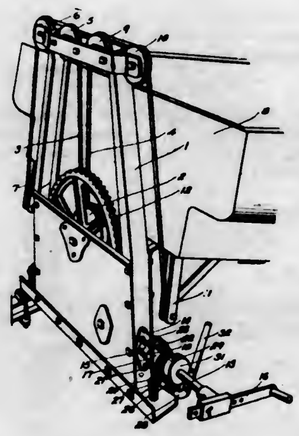
1. In a vehicle, a platform comprising a center plate having depending flanges, side plates connected to the center plate, each having an inner depending flange with a laterally projecting flange on the edge thereof, the depending flange of each side plate and a depending flange of the center plate lying one against the other, depending flanges on the side plates having inturned edges, tubular socket members interposed between the inturned edges of the depending flanges on the side plates and the lower faces of the side plates, said tubular sockets having openings aligning with openings in the side plates whereby stake pockets are formed, and means for fastening the tubular socket members to the side plates.

1,425,597. PICTURE-MAKING APPARATUS. LOUIS LA BORIE, Rochester, N. Y. Filed Feb. 3, 1921. Serial No. 442,264. 8 Claims. (Cl. 35—12.)



1. In a picture making apparatus, the combination with a support, of a movable guide sheet and a movable tablet adapted to support a picture receiving sheet beneath the guide sheet, the latter and the tablet being maintained in proper relationship by the support.

1,425,598. TOOL HANDLE. WILLIAM LAUBER, Milwaukee, Wis., assignor to The Lauber Handle Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 31, 1921. Serial No. 441,350. 3 Claims. (Cl. 279—102.)



1. A device of the class described, consisting of a hollow one piece metal tool handle having an opening in one end thereof through which the rectangular in cross section tapered end of a tool is insertable, and a partition within the handle spaced from the end having said opening, said partition having a smaller opening in register with said first mentioned opening, whereby the tool end may be driven into said openings to have the corner edges of the tapered end have a snug wedging fit with the partition and the end wall of the handle.

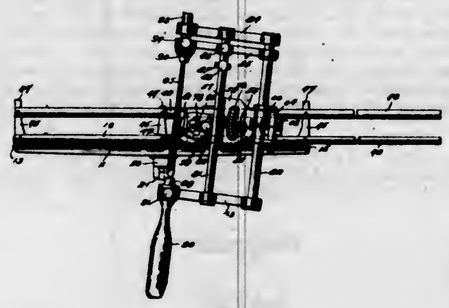
1,425,599. GRAVITY CONVEYER. CHARLES H. LISTER, North St. Paul, Minn., assignor to Standard Conveyor Company, a Corporation of Minnesota. Filed Mar. 4, 1920. Serial No. 363,172. 7 Claims. (Cl. 193—35.)

7. In a gravity conveyer, a stationary frame having a plurality of rollers mounted therein, a hinged section of rollers tiltably supported at one end on said frame, a lever tiltably supported on the frame and adapted to be actuated by the tilting of said hinged section of rollers, a support for a plurality of brake shoes pivotally mounted on said lever beneath the rollers in said stationary frame and brake shoes arranged on said support to engage certain of the rollers in said stationary frame when said lever is actuated by said hinged section of rollers.

1,425,600. BRAKE FOR HOISTS. WINFIELD S. LIVENGOOD, Kansas City, Mo., assignor to Andrew A. Kramer, Kansas City, Mo. Filed Dec. 13, 1920. Serial No. 430,565. 3 Claims. (Cl. 188—82.)

1. The combination with a hoisting frame, a power shaft and its bearing having a projecting tubular portion, of a bracket plate sleeved on the shaft and provided with a tubular portion telescoped with the tubular portion of the bearing, a lever pivoted to said plate, a brake band connected to the lever, and a brake drum on the shaft engageable by the band.

1,425,601. PORCELAIN TOOTH FOR CROWN, BRIDGE, AND PLATE WORK. VINCENT MALLON, New York, N. Y., assignor to Dental Manikin Head Co. Inc., a Corporation of New York. Filed Oct. 26, 1920. Serial No. 419,592. 1 Claim. (Cl. 32—30.)

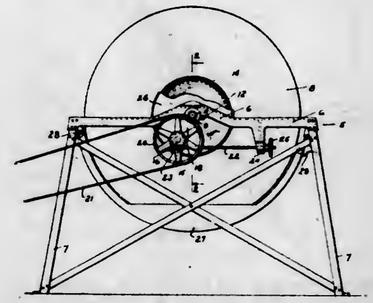


In a porcelain tooth for crown, bridge and plate work having a solid surface construction an encircling groove

commencing near the biting edge of the mesial surface, running in upward direction across the mesial surface, extending in mesio-distal direction through the porcelain

at the base of the tooth and again in upward direction across the distal surface, terminating near the biting edge of the distal surface.

1,425,602. SAW-FILING MACHINE. JAMES E. MEED, Palestine, W. Va. Filed Sept. 11, 1920. Serial No. 409,606. 25 Claims. (Cl. 76—33.)



1. A saw sharpening machine including a support therefor, said machine comprising a fixed clamping jaw and a movable clamping jaw, a housing depending from said fixed clamping jaw at a point medially of the ends thereof and having a portion underlying said movable clamping jaw, fastening means carried by said housing for securing the machine in position on the support, means carried by the underlying portion of said housing for controlling the clamping action of said movable jaw, a trackway extending parallel to said clamping jaws, a carriage movable on said trackway, a tool frame movable on said carriage, and means on said carriage for angularly adjusting said tool frame.

1,425,603. COMPOSITION FOR PRODUCING COATINGS ON REFRACTORY ARTICLES AND ARTICLES COATED THEREWITH. WILLIAM ROY MOTT, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Jan. 14, 1919. Serial No. 271,128. 5 Claims. (Cl. 106—9.)

1. As a new article of manufacture, a refractory article provided with a coating comprising an oxy-compound of boron, associated with iron and chromium.

1,425,604. BELT OR CHAIN TIGHTENER. IENAR F. NELSON, Racine, Wis. Filed Sept. 16, 1920. Serial No. 410,732. 1 Claim. (Cl. 64—52.)

In a device of the class described, the combination with a journaled shaft, of an internal gear carried thereby, a plate closing said gear, a counter shaft parallel with the first named shaft and movable in an arc using the axis of the internal gear as the center, said counter shaft having its inner end extended into said gear

through the plate, a drive gear on the inner end of the counter shaft and in mesh with the internal gear, and means for swinging the counter shaft to change the relative positions of said gears without disengaging the same.

1,425,605. PROCESS OF PRODUCING ORGANIC ACIDS. ALLAN F. ODELL, Brooklyn, N. Y. Filed Dec. 14, 1915. Serial No. 66,794. 17 Claims. (Cl. 23—24.)

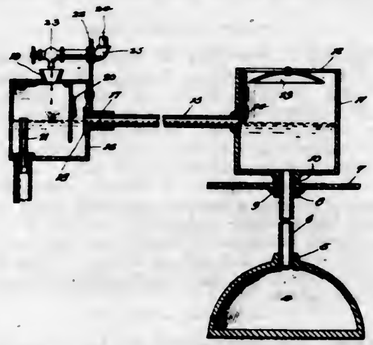
1. The process which consists in oxidizing a carbohydrate in the presence of a metalliferous catalyser under such conditions that tartaric acid is produced and recovering the thus produced tartaric acid.

13. In the manufacture of organic acids, the subprocess of treating a material containing mixed salts of tartaric and saccharic acids, which consists in treating the material with a soluble calcium salt solution to dissolve the saccharic acid salt, filtering, recovering the undissolved tartrate salt, and recovering the saccharate salt from the filtrate.

1,425,606. ELECTRIC-LIGHT BULB. CLEVELAND H. QUACKENBUSH and HARVEY E. QUACKENBUSH, Cleveland, Ohio. Filed Apr. 6, 1921. Serial No. 458,946. 3 Claims. (Cl. 176—16.)

1. As a new article of manufacture, an electric light bulb, comprising an inclosed head, and a tubular neck, the wall of said neck being drawn down from a predetermined thickness at the throat line to comparative thinness at the sealing line.

1,425,607. FOUNTAIN PEN. JOHN C. ROBISON, New York, N. Y. Filed Aug. 18, 1921. Serial No. 493,281. 4 Claims. (Cl. 120—42.)

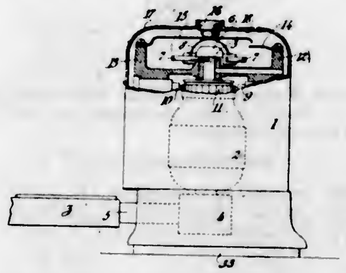


1. A fountain pen having a main reservoir, means forming an auxiliary reservoir having an unrestricted communication with said main reservoir to permit the

supply of ink in said auxiliary reservoir to discharge freely into said main reservoir when said pen is inverted

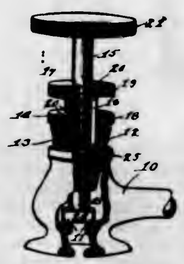
or sufficiently shaken, said means being constructed and arranged to retain a supply when said pen is in writing position.

1,425,608. AIR MOISTENER. CLARENCE E. SALLADA, Huron, S. Dak. Filed Aug. 2, 1921. Serial No. 489,290. 6 Claims. (Cl. 126—113.)



1. A humidifying attachment for hot air furnaces comprising a generator to be supported in the fire box of the furnace, an open-top reservoir to be supported exteriorly of the fire box of the furnace and in communication with the generator, a supply pipe extending laterally from said open-top reservoir, a receiving reservoir secured on the outer end of the supply pipe, and means for supplying water in a constant retarded regulated flow to said receiving reservoir.

1,425,609. SLED-RUNNER ATTACHMENT FOR MOTOR VEHICLES. JOHN G. SCHOLZ and EDWARD WELLER, Belgrade, Minn. Filed July 30, 1920. Serial No. 400,026. 1 Claim. (Cl. 180—6.)

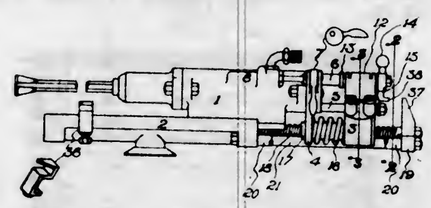


In combination with sled runners suspended from the front axle of a vehicle and wheels embodying clincher rims mounted on the rear axle of the vehicle, of a relatively broad traction rim equipped with ribs on its outer periphery, braces secured to the inner periphery of said rim and terminating centrally of the latter, and a hub carried by the inner ends of said braces and engageable directly with said rear axle substantially as described.

1,425,610. AUTOMATIC ELECTRIC SWITCH. WILLIAM GENTRY SHELTON, New York, N. Y. Filed Mar. 17, 1916. Serial No. 84,869. 9 Claims. (Cl. 200—80.)

1. A centrifugal switch comprising a rotor, weights carried thereby pivoted on axes parallel to the axis of said rotor, and movable in a plane perpendicular to the axis of rotation, circuit-closing contacts and a spring for applying the movement of said weights, to operate said circuit contacts, in a direction along the axis of said rotor.

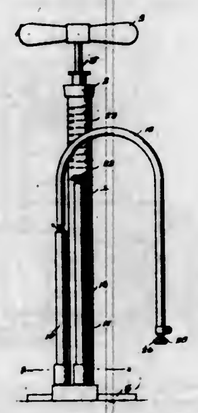
1,425,611. VALVE-RESEATING TOOL. MORTIMER B. SKINNER, Wilmette, Ill. Filed Apr. 22, 1920. Serial No. 375,721. 3 Claims. (Cl. 90—125.)



1. In a valve reseating tool of the class described the combination of a cutter, a shaft on which the cutter is mounted, means for rotating the shaft by hand, a feed stem through which the shaft extends rotatably, screw threads externally on said stem, a conical anchoring element having external threads adapted to engage with threads in the opening of the valve normally holding the valve-stem-holding parts, said anchoring element having an axial hole threaded to engage the threads of said stem, the stem being threaded into said anchoring element, stop means on said shaft against which said stem bears to hold the cutter against the seat to be surfaced, and means for turning said stem by hand on its axis to feed the cutter into the seat.

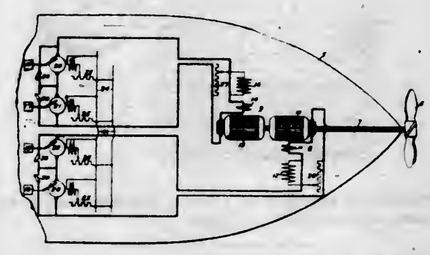
1,425,612. METHOD OF PRODUCING AND APPLYING ENAMEL COATINGS TO METALLIC SURFACES. HERBERT M. SMITH, Great Barrington, Mass., assignor to Stanley Insulating Company, Great Barrington, Mass., a Corporation of Maine. Filed Sept. 30, 1918. Serial No. 256,283. 2 Claims. (Cl. 91—73.)

1. As a part of the process of enameling, applying an enamel mixture to a surface which is to be coated there-



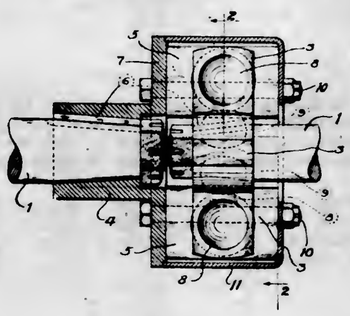
by, distributing the material over the surface, subjecting it to a fusion temperature and applying an air blast thereto while the fusion is going on.

1,425,613. FEEDING MEANS FOR DRILLS. HAROLD I. STAGE, Easton, Pa. Filed Sept. 18, 1919. Serial No. 324,426. Renewed June 22, 1922. Serial No. 570,186. 9 Claims. (Cl. 121—9.)



1. The combination of a carriage, an impact motor slidably mounted on said carriage, a non-rotatable feed screw, a feed nut, a fluid operated reversible feeding motor adapted to rotate the feed-screw nut on the said non-rotatable feed screw, motive fluid conveying and admitting means to operate said feeding motor, and spring pressed governing means to control said motive fluid admitting means to the feeding motor, actuated by the varying recoil pressure of the impact motor when drilling.

1,425,614. PUMP. FREDERICK STICKEL, Chicago, Ill. Filed Mar. 18, 1921. Serial No. 453,277. 5 Claims. (Cl. 230—27.)

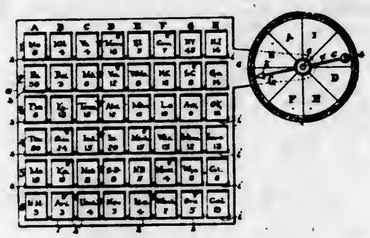


1. A combined pump and pressure indicator comprising a pump barrel, a cylinder extending parallel with said barrel, a supporting base for said cylinder and barrel provided with a passage establishing communication between the barrel and cylinder, said barrel provided with an air chamber in its lower end, a check valve for controlling passage of air into said chamber, an indicator carried by said base and comprising a tube having an air chamber in its lower end, said base provided with a by pass establishing communication between the chambers in said cylinder and tube, and means within said tube adapted to be acted upon by air entering the chamber in the tube for indicating the pressure of the air.

1,425,615. SYSTEM OF SHIP PROPULSION. WILFRED SYKES, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 23, 1919. Serial No. 299,304. 5 Claims. (Cl. 290—4.)

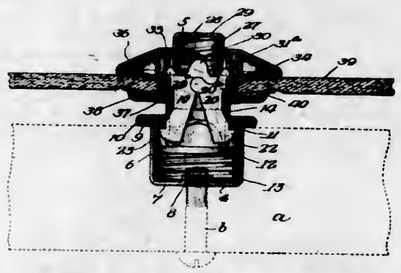
2. In a system of electrical ship propulsion, the combination with a shaft of a motor unit coupled thereto, a plurality of variable-voltage generators for the energization of said motor unit, said generators being adapted for independent speed variation, and a series circuit connecting said generators to said motor unit.

1,425,616. FLEXIBLE COUPLING. GURDON L. TARBOX, Plainfield, N. J., assignor to Spicer Mfg. Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Jan. 8, 1921. Serial No. 435,919. 7 Claims. (Cl. 64—96.)



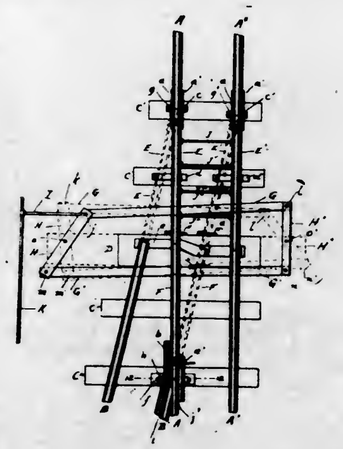
5. A flexible shaft coupling comprising two hub members, a series of projections fixed to each hub member, the projections on one member alternating with and disposed between those on the other member, bowl shaped cavities formed on the adjacent faces of the projections, rubber balls disposed in said cavities normally held under compression and operating to flexibly connect the two parts of the coupling, the cavities having a greater radius of curvature than the balls so as to permit the balls to roll under service conditions and the two halves of the coupling being free to move except as restrained by the balls.

1,425,617. GAME APPARATUS. RICHARD S. TERRY, Milford, Conn. Filed May 20, 1921. Serial No. 471,145. 3 Claims. (Cl. 46—63.)



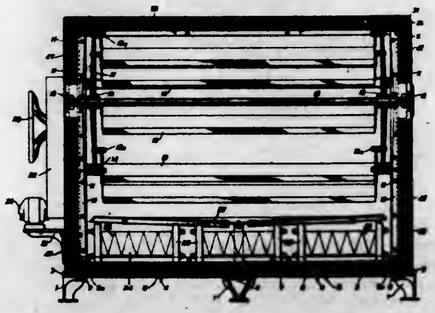
1. A game apparatus comprising a board having a series of individual openings therethrough arranged in horizontal and transversal rows, plates associated with said openings and adapted to normally assume a horizontal position on the board, and also adapted to be inserted in the openings into a vertical position, one end of the plates having means adapted to engage the board and

maintain said plates in such vertical position, and means at the opposite end of the plates adapted to engage the



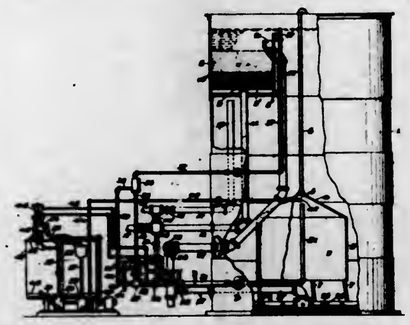
underside of the board to prevent disengagement of said plates with respect to the board.

1,425,618. CURTAIN FASTENER. JOHN VODICKA, Chicago, Ill., assignor to Cinch Fastener Corporation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1920. Serial No. 414,438. 7 Claims. (Cl. 24—211.)



1. In a curtain fastener a socket and an entering member having means for retaining it in the socket and a follower in the socket adapted to close the opening therein when the entering member is withdrawn.

1,425,619. FROGLESS SWITCH. MICHAEL WALSH, Denver, Colo. Filed July 2, 1920, Serial No. 393,658. Renewed Apr. 4, 1922. Serial No. 549,501. 4 Claims. (Cl. 246—387.)



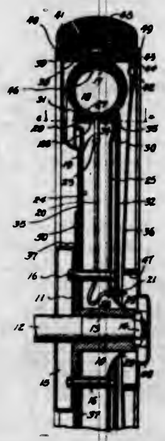
1. In trackway switches, the construction of sections of the main trackway, adaptable to be carried by an attached pair of connected and interacting parallel members moving in opposite directions, into position as elements of a completed switch-way from the main track, without additional or auxiliary rails, guard-rails or frogs, substantially as described.

1,425,620. ELECTRIC BAKE OVEN. JAMES C. WOODSON, Mansfield, Ohio, assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed June 25, 1921. Serial No. 480,289. 5 Claims. (Cl. 107—59.)

1. A reel type bake oven comprising a reel mechanism in said oven, a supporting frame, a double-wall bottom panel located on said frame and a plurality of members in said panel for spacing apart the walls thereof and for supporting said reel mechanism.

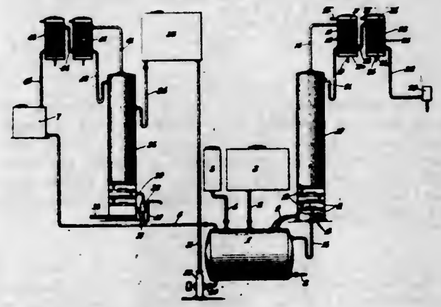
1,425,621. WATER-SOFTENING APPARATUS. JOSEPH D. YODER, Philadelphia, Pa., assignor to H. S. B. W.-Cochrane Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 27, 1920. Serial No. 376,956. 17 Claims. (Cl. 210—16.)

1. Water treating apparatus comprising a treating tank, pipes delivering water to be treated and reagent into said tank adjacent the bottom thereof, a filter adjacent the top of said tank to which the treated water flows upwardly through said tank, a conduit for filtered water passing downwardly in said tank and extending to the exterior thereof adjacent the bottom of said tank, and valve controls for said conduit external to said tank adjacent the bottom thereof for drawing filtered water from said conduit or for introducing filter wash water in reverse direction through said conduit.



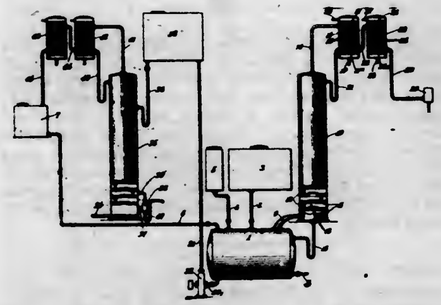
1,425,622. FLY SWATTER. RICHARD ZOHM, Rockford, Ill. Filed Oct. 17, 1921. Serial No. 508,270. 3 Claims. (Cl. 43—137.)

1. A swatter of the character described comprising a rectangular wire fabric body, a main spring member, one end of which constitutes part of a handle structure and to the other end of which is secured a pair of spring cross bars in longitudinally spaced relation, the



opposite ends of said wire fabric body being turned over said cross bars, and a binder enveloping the turned over ends of the fabric body.

1,425,623. RESILIENT WHEEL. HIRAM C. ANDERSON, New York, N. Y. Filed July 25, 1921. Serial No. 487,282. 3 Claims. (Cl. 152—34.)



1. In a resilient wheel, the combination of an external rim including a cylindrical member provided with a series of cups, and inwardly projecting dust excluding members, one of which comprises a flange mating with said cylindrical rim member and having cups interlocking with the cups aforesaid, and an inner wheel structure comprising a hub, a body portion comprising a pair of disks, and a cushion supported upon the peripheral portion of the disks and adapted for relative radial movement with respect to the dust excluding members aforesaid, the cushion having direct cooperation with the series of cups aforesaid to prevent relative circumferential movement between the parts.

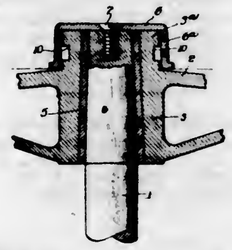
1,425,624. APPARATUS FOR THE MANUFACTURE OF ESTERS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Oct. 11, 1919. Serial No. 329,924. 6 Claims. (Cl. 260—173.)

1. In combination, an esterification chamber, a rectification column connected by a conduit thereto, a concentrating column connected by a conduit to the chamber to receive liquid therefrom, and a conduit from the vapor discharge of the concentrating column leading back to the chamber.

1,425,625. PROCESS FOR THE MANUFACTURE OF ESTERS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Oct. 11, 1919. Serial No. 329,925. 8 Claims. (Cl. 260—106.)

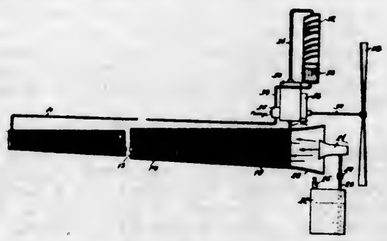
1. The process of esterifying an alcohol and an organic acid in the presence of a catalyst by the application of heat, characterized by continuously distilling off the ester formed and condensing out from the distillate vapors the major portion of the other vaporized constituents and continuously returning them to the sphere of reaction.

1,425,626. METHOD FOR THE PRODUCTION OF ESTER-CONDENSATION PRODUCTS. ARTHUR A. BACKHAUS, Baltimore, Md., assignor to U. S. Industrial Alcohol Co., a Corporation of West Virginia. Filed Apr. 29, 1921. Serial No. 465,473. 15 Claims. (Cl. 260—106.)



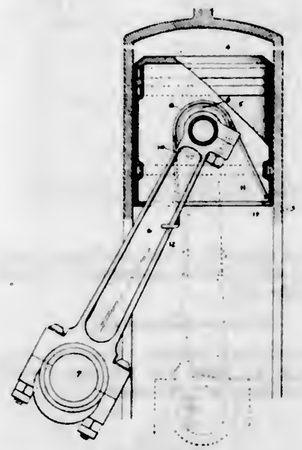
1. A process of forming a condensation product which comprises reacting upon an ester with a metal to form a compound of the metal therewith and an alcohol, continually removing substantially all of the alcohol so as to enable the reaction to continue and then adding sulfuric acid.

1,425,627. AUTOMATIC FIREARM. ARTURO BARDELLI, Milan, Italy. Filed Feb. 24, 1920. Serial No. 360,935. 3 Claims. (Cl. 42—3.)



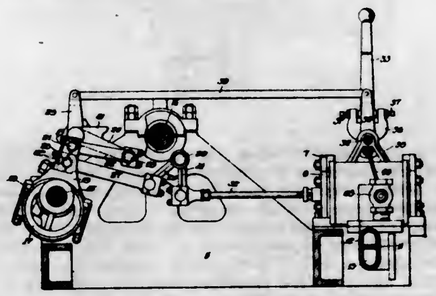
1. In automatic fire arms, means for preventing the firing pin from operating until the breech block is closed, comprising a firing mass, a sliding gas actuated tube, closing levers for the breech block, actuating levers for said closing levers directly operated by the sliding tube, and means controlled by the closing levers for holding the striking mass.

1,425,628. CENTRIFUGAL MACHINE. WILLIAM BARTHOLOMEW, Chicago, Ill., assignor to Troy Laundry Machinery Co., Ltd., Chicago, Ill., a Corporation of New York. Filed Sept. 15, 1920. Serial No. 410,432. 2 Claims. (Cl. 64—48.)



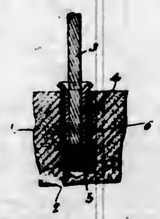
1. In a centrifugal machine, a vertical spindle of hard metal having an upwardly presented, longitudinally tapered free end, a packing sleeve of soft metal closely fitting said tapered end and having a longitudinally tapered outer surface, a basket having a metal hub bored to closely fit the packing sleeve and establishing frictional driving connection through said packing sleeve with the spindle, and a cap overlying the end of the joint formed by said packing sleeve between said spindle and hub, and having a depending flange surrounding the end of the hub.

1,425,629. STEAM POWER PLANT. HARVEY W. BELL, Boundbrook, N. J., assignor to Arthur C. Fraser, trustee, New York, N. Y. Filed Apr. 26, 1917. Serial No. 164,649. 27 Claims. (Cl. 60—96.)



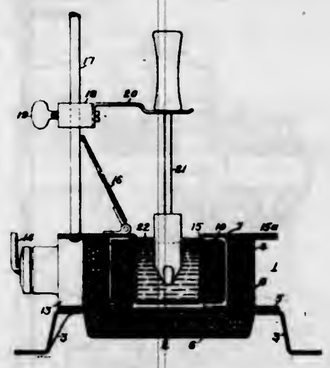
25. A power plant comprising a boiler having a tubular shell and a coil of vaporising pipe therein, a feed pump forcing water into one end of said pipe, a pipe leading steam from the other end of said pipe, a burner introducing fluid fuel into the boiler at said latter end, means for forcing air into said latter end, whereby the greatest heat is generated toward the delivery end of the boiler so that the generated steam may be superheated, the discharge from the boiler to the motor being free from manual control, and means for varying at will the rate of introduction of fuel, whereby the development of power is controlled by such latter means.

1,425,630. ANTIKNOCKING DEVICE FOR PISTONS OF INTERNAL-COMBUSTION ENGINES. CHARLES H. BROWN, Richmond, Calif., assignor of twenty-four and one-half per cent to John Ecklund and twenty-four and one-half per cent to George R. Lincks, both of Richmond, Calif. Filed May 17, 1920. Serial No. 381,812. 1 Claim. (Cl. 74—108.)



The combination with an internal combustion engine cylinder, a piston reciprocatively mounted in the cylinder, a connecting rod, a wrist pin in the piston and upon which the connecting rod is mounted, a coiled spring surrounding the wrist pin and having extended end portions bearing against opposed sides of the connecting rod and piston.

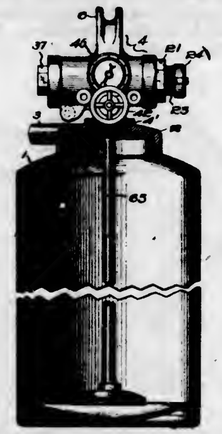
1,425,631. VALVE-GEAR MECHANISM. HARRY C. CLAY, Columbus, Ind., assignor to Emerson-Brantingham Company, Rockford, Ill., a Corporation of Illinois. Filed Jan. 27, 1919. Serial No. 273,224. 3 Claims. (Cl. 121—143.)



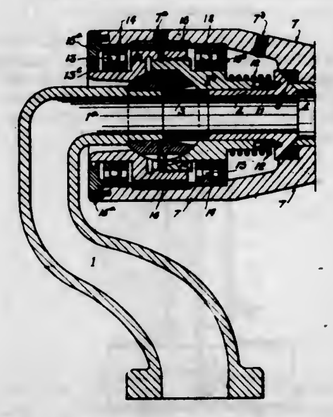
1. The combination with a throttle valve and a valve gear mechanism including a reversing arm, of a rock shaft, a yoke fixed to the rock shaft, fulcrum screws carried by the arms of the yoke, a control lever pivotally supported upon and between said fulcrum screws to swing in a plane parallel with the axis of said rock shaft, an arm fixed to the rock shaft and connected to the reversing arm, and a connection between the controlling lever and the throttle valve, whereby to operate the throttle valve by swinging said lever longitudinally of the shaft and to operate said reversing arm by swinging the lever at right angles to the shaft.

1,425,632. COMMUTATOR BRUSH. WILLIAM S. CLICK, Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 29, 1920. Serial No. 420,538. 3 Claims. (Cl. 171—326.)

1. A commutator brush having an aperture therein, a conductor disposed within said aperture, means for retaining said conductor in said aperture, and a powdered material having a relatively high coefficient of electrical conductivity disposed intermediate said retaining means and said brush.



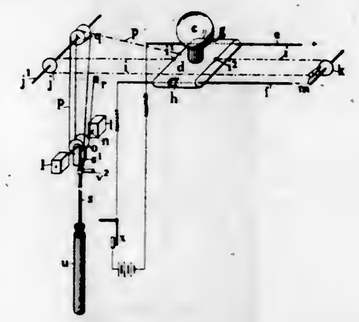
1,425,633. SOLDERING POT AND SOLDERING IRON. ORA A. COLBY, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 10, 1919. Serial No. 343,877. 7 Claims. (Cl. 219—44.)



1. In an electrically-heated apparatus, the combination with material to be heated and a heat-insulating supporting means therefor, of an annular resistor-supporting means, and a resistor wound thereon, said resistor-supporting means being located in spaced relation intermediate the material to be heated and said heat-insulating supporting means.

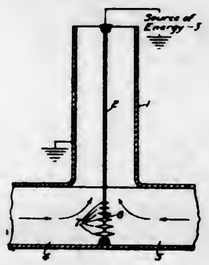
1,425,634. PRESSURE REGULATOR. HERBERT W. DAY, Wollaston, Mass., assignor to Spray Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 10, 1921. Serial No. 436,022. 9 Claims. (Cl. 91—45.)

1. In an apparatus of the class described and in combination, a liquid receptacle and an air brush or paint gun in connection therewith, a self-contained pressure regulator head having a projection adapted to be directly attached to said receptacle or closure thereof, and providing communication with said receptacle, said head being partitioned to provide a plurality of chambers, and a valve seat, one of said chambers being in communication with a source of fluid pressure supply, a reducing valve adapted to said seat, means establishing communication between said regulator head and said air brush or paint gun, there being communication through said regulator head between the liquid in said receptacle and said paint gun or air brush.



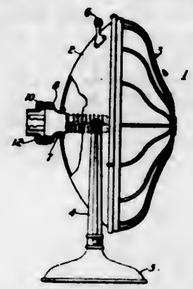
1,425,635. DOLL HEAD OR BEARING FOR DRYING CYLINDERS. GERALD DOD, Southport, England. Filed Nov. 15, 1921. Serial No. 515,372. 7 Claims. (Cl. 285—10.)

7. In combination, a stationary doll-head conduit, a ring or housing supported by said conduit, a hollow cylinder trunnion, a tubular extension fixed to said trunnion and overhanging the end of same, a packing ring carried by the doll-head conduit, and lying within and contacting with the said tubular extension of the trunnion, an annular member surrounding said tubular member and having a periphery corresponding to part of a sphere, and coacting with the said ring or housing to support the trunnion axially and allow of universal axial



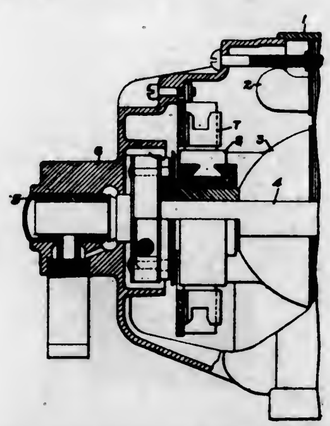
movement and endwise movement of said trunnion, anti-friction devices being provided between said tubular extension of the trunnion and the annular member to reduce friction and said annular ring having end flanges which enclose the anti-friction devices, as set forth.

1,425,636. APPARATUS FOR THE REPRODUCTION OF DRAWINGS BY ARTIFICIAL LIGHT. PHILIBERT ALBERT MARIUS DUBIEF, Courbevoie, France. Filed Sept. 2, 1919. Serial No. 321,127. 2 Claims. (Cl. 95—775.)



1. An apparatus for the reproduction of drawings by artificial light, comprising in combination, a frame; an electric lamp; a movable carriage for the lamp; fixed conducting guide rods for and insulated from the carriage; contact members connecting the lamp to the said guide rods; a driving counterweight; a plurality of pulleys; a cable passing over the pulleys and attached to the frame and to the carriage for moving the lamp in one direction; a hydraulic brake for retarding the descent of the counterweight and controlling the speed of the lamp; means for lighting and extinguishing the lamp; and means, adjacent t othe movable carriage and lamp, for receiving and holding the drawings.

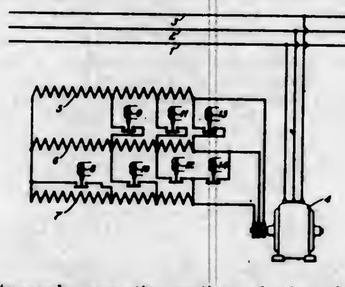
1,425,637. DISCHARGE ELECTRODE FOR PRECIPITATING SYSTEMS. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1919. Serial No. 277,329. 5 Claims. (Cl. 183—7.)



1. In a system of precipitation, a discharge electrode, a collecting electrode coacting therewith, the discharge electrode extending beyond the collecting electrode, the projecting portion thereof being tapered, the part of said projecting portion having the least cross-sectional area being disposed a greater distance from the collecting electrode than the remainder thereof, and further preionizing means integrally associated with said projecting portion.

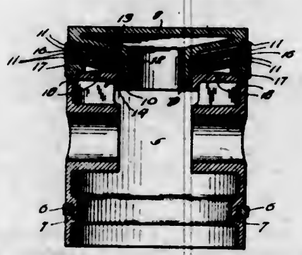
1,425,638. SCREW-SOCKET CONNECTION FOR RADIATORS. FRANK F. FORSHEE, Flint, Mich., assignor to Westinghouse Electric Products Company, a Corporation of Michigan. Filed Nov. 20, 1919. Serial No. 339,267. 8 Claims. (Cl. 219—34.)

1. In an electric radiator, the combination with a reflector having an axial opening and a rearwardly removable unitary heating element in axial alinement in said reflector said heating element comprising a rearwardly-extending terminal block and a forwardly-extending heater, of rearwardly-extending means secured to said reflector in said opening and having a portion provided with screw threads coaxial therewith for holding said heating element in axial alinement.



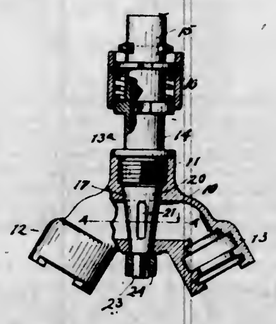
1,425,639. CENTRIFUGALLY-ACTUATED SHORT-CIRCUITING DEVICE. GEORGE H. GARCELON, Swissvale, and JOSEPH L. CHANTEMERLE, Turtle Creek, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed May 3, 1916. Serial No. 95,028. 9 Claims. (Cl. 172—279.)

4. In a dynamo-electric machine, the combination with a rotatable shaft having a commutator cylinder comprising a plurality of spaced conducting bars, a contact member movably mounted upon said shaft, and means for moving said contact member in a helical path for engagement with the ends of said bars.



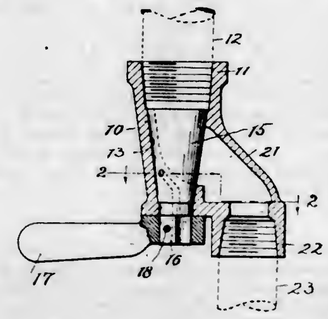
1,425,640. MOTOR-CONTROL SYSTEM. ADOLPH A. GANDA, Wilkinsburg, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 29, 1917. Serial No. 145,268. 9 Claims. (Cl. 172—274.)

1. In a motor-control system, the combination with an alternating-current motor having a plural-phase winding and resistors in circuit therewith, of means for successively shunting a portion of one of said resistors and



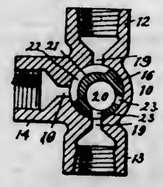
simultaneously connecting portions of other of said resistors in parallel relation to each other and in series relation to said one resistor.

1,425,641. PISTON AND PACKING FOR THE SAME. FRANK ELLIS GOUGH, Oklahoma, Okla. Filed Sept. 6, 1921. Serial No. 498,619. 8 Claims. (Cl. 74—109.)



1. In combination a two-part piston, a flexible concavo-convex packing element clamped between the parts of said piston and a laterally expanding ring acting under the influence of said concavo-convex element.

1,425,642. FITTING FOR AIR LINES AND THE LIKE. LOUIS W. GREVE, Cleveland, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 1, 1918. Serial No. 247,708. 1 Claim. (Cl. 251—109.)

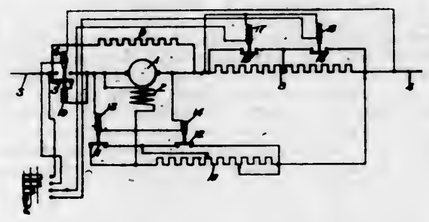


A fitting for air lines and the like substantially in the form of a Y provided with a central part with an inlet portion and a tapered valve seat having its end toward the inlet portion, said fitting being provided also with a pair of outlet portions having outlet passageways which are elongated adjacent the central part of the fitting and terminate in elongated ports in the valve seat, and a tapered valve engaging said seat and having elongated ports adapted to register with said elongated ports of the seat.

1,425,643. AIR VALVE. LOUIS W. GREVE, Cleveland, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 23, 1918. Serial No. 236,110. 4 Claims. (Cl. 251—95.)

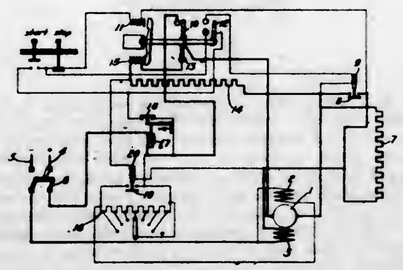
1. A valve comprising a valve body having an inlet end with a portion to which a pipe connection may be made and merging into a tapered valve seat which is in line with said inlet end and is provided with an elongated lateral port, and said valve body having a lateral extension terminating in an outlet end to which a pipe connection may be made, and provided with a passageway which leads from said port and at said port is narrowed and elongated in substantial conformity with the shape of the port, and widening as it approaches the outlet end, and a tapered valve engaging said seat and having its large end toward the inlet end of the valve body and having a reduced operating end projecting from the valve body, said valve having a passageway extending from the large end and a lateral elongated opening adapted to register with said port in the seat.

1,425,644. VALVE. LOUIS W. GREVE, Cleveland, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 26, 1920. Serial No. 426,408. 2 Claims. (Cl. 251—108.)



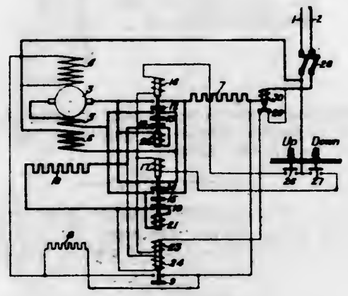
1. A four-way valve comprising a valve body having a valve seat, an inlet in line therewith, and three outlets, two being delivery outlets and the third being an exhaust outlet, a movable valve member engaging the seat and having an opening extending from one end into the same with lateral delivery means adapted to register with either of said delivery outlets when the valve is turned to different positions, and said valve having between its ends and external to said opening a circumferentially extending exhaust passageway adapted to connect the exhaust outlet to either delivery outlet when the other delivery outlet is connected by the lateral delivery means to the inlet of the valve.

1,425,645. PROCESS OF PURIFYING AND DEHYDRATING TRANSFORMER OIL. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 3, 1921. Serial No. 466,495. 2 Claims. (Cl. 233—29.)



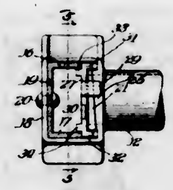
1. The process of continuously and practically completely dehydrating oil, such as transformer oil, containing a relatively very small proportion of water, which comprises subjecting the inflowing oil to be dehydrated to centrifugal force whereby the water therein will be carried to the periphery, confining the water from escape throughout the process so as to build up as the process proceeds a surrounding film or envelope of water of gradually increasing thickness but of a maximum thickness relatively small in comparison with the thickness of the remaining body of liquid that at any given time during the process is being subjected to said force, and while the oil is inflowing and is being subjected to said force floating off the oil from which the water has been eliminated at a point substantially closer to the axis of rotation than the inner wall of the water when the latter is of maximum thickness.

1,425,646. CONTROL SYSTEM. ALBERT L. HARVEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1919. Serial No. 296,563. 6 Claims. (Cl. 172—179.)



1. The combination with an electric motor having a shunt field-magnet winding, and a resistor in series therewith, of a dynamic-braking resistor and a switch biased to its closed position to effect the shunting of said field resistor, said switch having an actuating coil energized in accordance with the counter-electromotive force of said motor to control a shunt circuit for said resistor during acceleration and during dynamic braking of said motor.

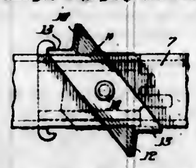
1,425,647. CONTROL SYSTEM. ALBERT L. HARVEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 15, 1919. Serial No. 297,357. 4 Claims. (Cl. 172—288.)



1. The combination with an electric motor having a pair of accelerating resistors and a dynamic-braking resistor, of means responsive to the drop in potential across one of said accelerating resistors and said dynamic-braking resistor for controlling the other of said accelerating resistors.

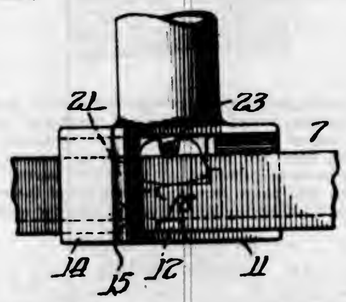
1,425,648. MOTOR-CONTROL SYSTEM. ALBERT L. HARVEY, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 3, 1919. Serial No. 335,468. 7 Claims. (Cl. 172—288.)

2. In a motor-control system, the combination with an electric motor and means for controlling the armature circuit thereof, of means, comprising a switch, for controlling the field excitation of said motor, said switch having two actuating coils that are respectively energized during the normal operation and during the dynamic braking of said motor.



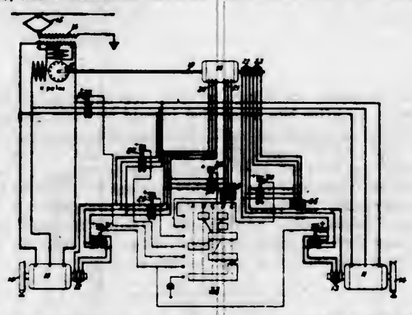
1,425,649. REVERSIBLE-FULCRUM ARRANGEMENT. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,497. 4 Claims. (Cl. 188—232.)

3. An integrally formed reversible brake beam fulcrum including an end portion for embracing a compression member, the front wall of which portion having a projection with inclined wedge-ways extending rearwardly from the end of the projection, and a wedge-key having wedge-shaped flanges occupying said wedge-ways and adapted to wedge in between the fulcrum and portions of the compression member for securing the fulcrum in its different operative positions.



1,425,650. REVERSIBLE-FULCRUM MECHANISM. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,499. 5 Claims. (Cl. 188—232.)

5. An integrally formed reversible fulcrum having V-shaped wall portions for embracing a brake beam compression member and limiting reversible movements of the fulcrum with respect thereto, and a wedge member insertible between the fulcrum and compression member, said wedge member having flanges engaging the compression member



and having a hook portion adapted to overhang one of said V-shaped wall portions to lock the fulcrum in operative position relative to the brake beam member.

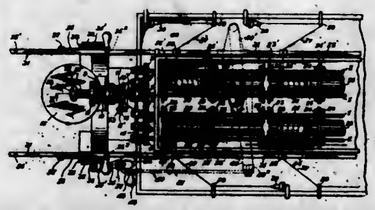
1,425,651. REVERSIBLE FULCRUM MEANS. WILLIAM C. HEDGCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 8, 1921. Serial No. 490,500. 7 Claims. (Cl. 188—232.)

5. In a brake beam, the combination of a compression member, a fulcrum having a portion embracing said compression member and a projection extending toward said compression member, means insertable between the compression member and fulcrum for securing the parts together and a removable member engaging the securing means and the projection on the fulcrum for maintaining the fulcrum fixed in operative position.

1,425,652. SYSTEM OF SPEED CONTROL FOR INDUCTION MACHINES. RUDOLF E. HELLMUND, Swissvale, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 10, 1918. Serial No. 249,333. 22 Claims. (Cl. 172—274.)

2. The combination with a source of alternating current, of two main induction machines, an auxiliary induction machine, means for connecting the primary windings of said main machines to said source, means for connecting the secondary windings of said main machines to the primary and secondary windings of said auxiliary machine, respectively, means independent of said connections for fixing the speed of said auxiliary machine, and means for adjusting the currents supplied to said auxiliary machine.

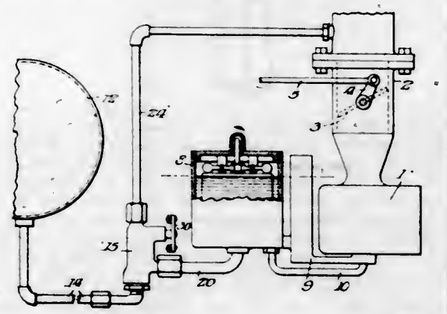
1,425,653. FENCEPOST. JOHN S. HOLLANDER, De Quincy, La. Filed Oct. 25, 1921. Serial No. 510,283. 2 Claims. (Cl. 256—52.)



2. A fence post comprising a reinforced vertical section provided with wire receiving notches, said post having near the ground line an inwardly extending angular notch, the upper end of said post provided with an integral screw threaded bolt extending from the top of said post at an angle substantially the same as the angle of said notch, a clamping bar adapted to co-operate with said post, terminating at its lower end in a wedge, and having at its upper end a perforated overhanging portion, said post adapted when assembled to positively cam the clamping bar into position and to releasably lock said clamping bar in locking position.

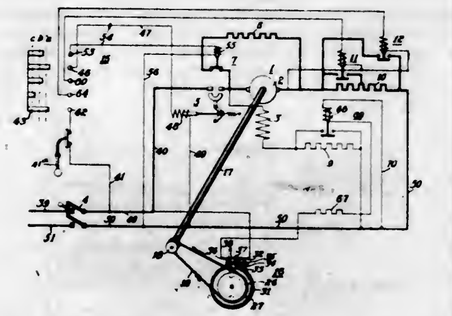
1,425,654. PROCESS OF PRODUCING LUSTROUS THREADS, ETC. CHARLES A. HUTTINGER, Lakewood, Ohio, assignor, by mesne assignments, to The Acme Artificial Silk Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 12, 1919. Serial No. 303,776. 6 Claims. (Cl. 18—54.)

1. The method of producing threads of the character described, consisting in, saturating wood pulp with a solution of sodium hydroxide and water of a specific gravity of substantially 1.17; subjecting the mixture to pressure; adding carbon bisulphide to the resultant alkali cellulose; adding water; filtering; and then forcing the resultant viscose solution through suitable dies into a precipitating bath comprised of a semi-neutral sulphate salt and water, said bath containing no free acid and being used at a temperature of substantially seventy (70) degrees Fahrenheit.



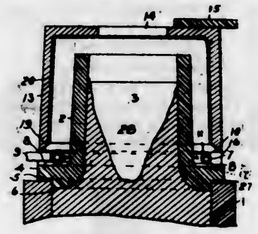
1,425,655. TRAVERSE MECHANISM FOR WINDING MACHINES. CHARLES A. HUTTINGER, Lakewood, Ohio, assignor, by mesne assignments, to The Acme Artificial Silk Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 9, 1919. Serial No. 329,471. 4 Claims. (Cl. 242—43.)

4. In traverse mechanism for winding machines, the combination of a driving member; means furnishing a pin-



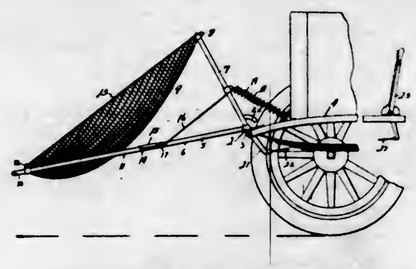
rality of threads; a series of axially aligned bobbins upon which the respective threads are to be wound; rotatable means connected to said driving member, said bobbins being turned by said rotatable means; thread guides disposed adjacent alternate bobbins; a movable bar upon which said guides are mounted; an operating handle pivoted at one end upon said bar and formed at the other end with a locking pin; locking recesses formed in said bar upon both sides of the pivotal axis of said handle and spaced from said axis a distance equal to the distance therefrom of said locking pin, said distance being substantially equal to the distance between the centers of adjacent bobbins; and means continuously relatively moving said bar and said bobbins.

1,425,656. AUTOMATIC GASOLINE SHUT-OFF VALVE. HARRY R. JACKSON, Chicago, Ill., assignor of one-half to Henry A. May, Chicago, Ill. Filed Sept. 12, 1921. Serial No. 499,994. 5 Claims. (Cl. 123—180.)



1. In combination, a carburetor having a delivery duct leading to the intake of the engine, a float feed chamber connected to the carburetor, a fuel tank, a pipe leading from the tank to the feed chamber and having a branch leading to the delivery duct, and a shut-off valve in said pipe located between the branch and the fuel tank, said valve being subject to the variation in vacuum in the branch and being normally closed and adapted to open when the suction in the branch reaches a predetermined degree.

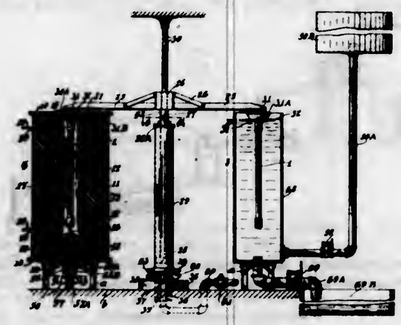
1,425,657. MOTOR-CONTROL SYSTEM. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1920. Serial No. 421,888. 12 Claims. (Cl. 172—179.)



12. The combination with a motor subject to variable loads, said motor having a field-magnet winding, of means for varying the excitation of said winding during dynamic braking, and an automatic device comprising a member controlled by the speed of said motor for operating said means to raise or lower the speed of said motor upon said motor varying its speed below or above a predetermined value during dynamic braking.

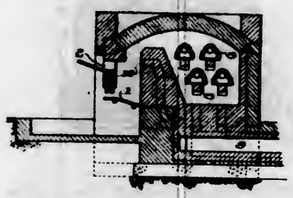
1,425,658. INGOT-CASTING DEVICE. FRANK L. JAMISON, Pittsburgh, Pa. Filed Jan. 6, 1921. Serial No. 435,341. 1 Claim. (Cl. 22—147.)

An ingot casting device comprising a head having its lower portion formed with a flange adapted to be seated on the top of a mold body, a hood enclosing and spaced from the head and providing a heating chamber, and a heating element arranged at the lower portion of the chamber, said flange forming the bottom of the chamber, and said hood having legs extending into the said flange.



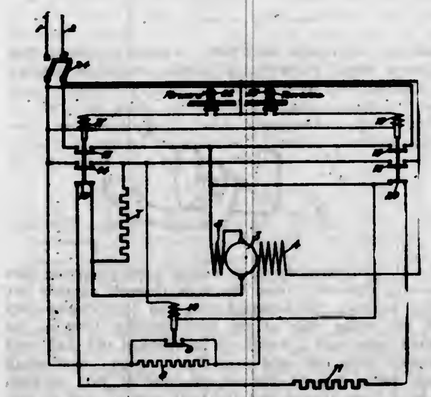
1,425,659. VEHICLE FENDER. OMAR G. JONES, Philadelphia, Pa. Original application filed Oct. 9, 1920, Serial No. 415,849. Divided and this application filed Jan. 25, 1921. Serial No. 439,763. 5 Claims. (Cl. 293—45.)

2. A fender including brackets for attachment to a vehicle, an after bar journalled in said brackets, uprights rotatably mounted on said after bar, stop arms carried by said uprights and offset therefrom and adapted to engage portions of said brackets for limiting the rearward movements of the uprights, springs attached to said uprights and the vehicle for normally drawing said uprights rearwardly, and means passing through said springs and attached to the vehicle for limiting the forward movements of said uprights.



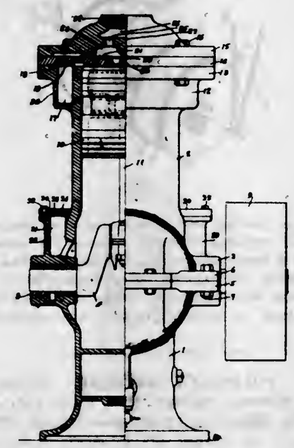
1,425,660. FURNACE FOR THE HEAT TREATMENT OF METALS. LYMAN C. JOSEPHS, Jr., Allentown, Pa., and GOTTFRIED WIEBEL, Plainfield, N. J., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 9, 1920. Serial No. 415,806. 10 Claims. (Cl. 266—4.)

1. In a furnace for the heat treatment of metal, the combination of a series of heat treating stations, a carrier movable to transfer the article under treatment from one station to the next, a motor for operating the carrier, electrical connections through which the motor is operated intermittingly and devices subject to a change



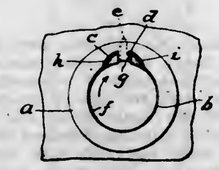
in the rate of change of dimension of the article under treatment whereby the operation of the motor is initiated after each period of rest.

1,425,661. PROCESS OF MANUFACTURING ZINC DUST. TEISUKE KATO, Hyogo Ken, Japan. Filed Nov. 26, 1919. Serial No. 340,928. 1 Claim. (Cl. 75—153.)



A process of manufacturing zinc dust which consists in volatilizing by heat metallic zinc in a retort from which atmospheric air is excluded; diluting the zinc thus volatilized with a non-oxidizing gas, and quickly cooling the same.

1,425,662. MOTOR-CONTROL SYSTEM. HAROLD L. KEITH, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 24, 1919. Serial No. 340,352. 8 Claims. (Cl. 172—288.)

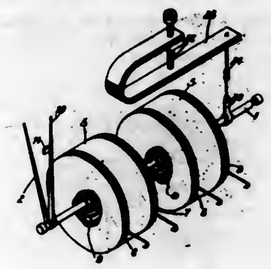


1. In a motor-control system, the combination with an electric motor and a field resistor therefor, of a single switch having a single actuating coil in shunt relation to the armature of said motor for controlling said resistor during the normal operation and during the dynamic braking of said motor.

1,425,663. AIR PUMP. JAMES W. LAWHEAD, Wilmington, Ohio. Filed Jan. 26, 1920. Serial No. 353,941. 4 Claims. (Cl. 230—34.)

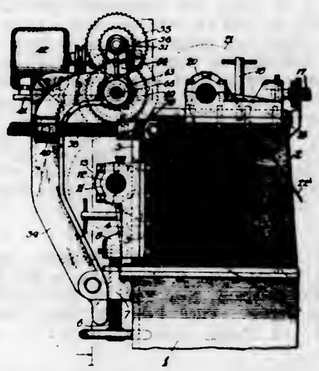
1. In an air pump, the combination, with a cylinder having near one end an inlet port and a valve therefor opening inward, an outlet port and a valve therefor opening outward, and having near the other end an outlet passage and a valve therefor opening outward, of a piston operating within the cylinder between said ports, whereby on the suction stroke air is drawn into the cylinder, on the reverse stroke air is forced out of the cylinder and whereby any air that leaks between the cylinder and piston is discharged through said outlet port when the piston is making its suction stroke, thus relieving the piston of back pressure.

1,425,664. BEARING FOR MACHINERY. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 26, 1920. Serial No. 361,610. 14 Claims. (Cl. 64—10.)



1. In a shaft bearing, the combination with a bearing support and a shaft, the one being rotatable relative to the other, of an interposed expansible shaft-supporting liner, and means adapted in the rotation of the shaft in either direction to expand the liner in the support.

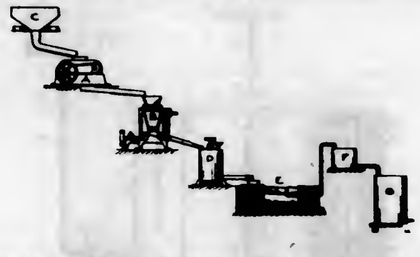
1,425,665. MAXIMUM-DEMAND METER. PAUL M. LINCOLN, Pittsburgh, Pa. Filed July 10, 1918. Serial No. 244,279. 11 Claims. (Cl. 171—34.)



1. A measuring instrument comprising a shaft, a pointer on the shaft, opposing thermal-responsive means

for actuating the shaft, and means for adjusting the indications of the pointer in accordance with the heat radiated from the thermal-responsive means.

9. In a measuring instrument, the combination with a pointer and opposing bimetallic means for actuating the pointer, of a bimetallic spring for opposing the operation of the pointer, said spring being responsive to the heat radiated from said bimetallic means to correct the instrument readings in accordance with the changes in said radiation.



1,425,666. POLISHING MACHINE. ELMER P. MCCLURE, Western Springs, Ill. Filed Oct. 27, 1919. Serial No. 333,573. 20 Claims. (Cl. 51—88.)

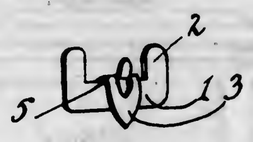
1. In a machine for polishing articles symmetrical about a radial line, a work-holding member arranged to engage an article and rotate it, a plurality of rotatable spindles parallel with the axis of rotation of the article and in different radial planes, said spindles being each equipped with polishing disks and the disks of the different sets being staggered with respect to each other, and means for automatically reciprocating said work-holding means axially.

1,425,667. PROCESS OF EXTRACTING METALS FROM ORES. SAMUEL MCKIBBAHAN, Golden, Colo., assignor, by direct and mesne assignments, of two-thirds to F. A. Fuller, Denver, Colo. Filed Feb. 14, 1918. Serial No. 217,279. 4 Claims. (Cl. 75—17.)

1. The process of extracting metals from their ores consisting in mixing a finely comminuted oxidised ore with sodium chloride (NaCl), heating the mixture to a temperature considerably above one thousand degrees centigrade so as to cause volatilisation of metal chlorides formed by the combination of metals present, with

chlorine liberated by decomposition of the salt, and recovering the metal from the volatile product.

1,425,668. TIRE. FRANK L. MARSHALL, Newton Center, Mass. Filed May 6, 1915, Serial No. 26,404. Renewed Jan. 21, 1922. Serial No. 531,005. 9 Claims. (Cl. 152—36.)

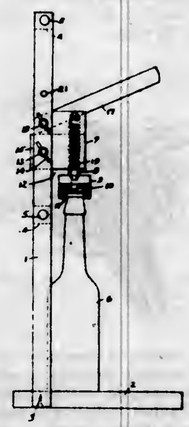


4. The combination of a wheel rim, a shoe on said rim, a hollow endless hoop within said shoe, a soft resilient cushion between said shoe and said hoop and a second soft resilient cushion between said hoop and said rim.

1,425,669. PROCESS FOR PRODUCING CHLORINE PRODUCTS FROM UNSATURATED HYDROCARBONS. AUGUSTUS E. MAZE, Denver, Colo. Filed Aug. 16, 1920. Serial No. 403,663. 9 Claims. (Cl. 23—24.)

7. The process of making chlorinated hydrocarbons comprising passing acetylene into an alkaline alkali-metal solution saturated with chlorine.

1,425,670. COLLAR BUTTON. JAMES S. MEAD, Cincinnati, Ohio. Filed Feb. 21, 1921. Serial No. 446,712. 1 Claim. (Cl. 24—101.)



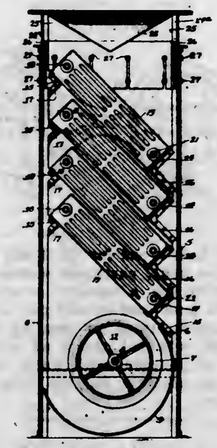
A collar button comprising a body portion, having tabs extending upwardly from the ends thereof, another tab formed between the terminal tabs and bent downwardly from the upper edge of the body portion, between the upward tabs, and a small tongue formed out and bent upwardly from the said bent down tongue, said small tongue being located beyond the line of fold between the bent down tongue and the body portion, and in substantially the same vertical plane as the bent down tongue, as and for the purpose described.

1,425,671. TAIL-DOCKING DEVICE. FREDERICK C. METZLER, Shoshone, Wyo. Filed Apr. 8, 1920. Serial No. 372,185. 8 Claims. (Cl. 128—305.)

1. A tail-docking device comprising a base, a chopping block and a stove oppositely mounted thereon, and a knife pivoted between the block and the stove, to engage the block in its movement in one direction and to be heated by the stove at the end of its movement in the opposite direction.

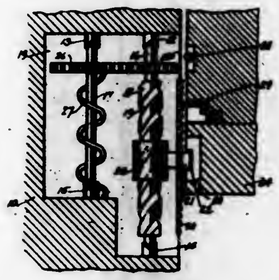
1,425,672. BOTTLE-CAPPING MACHINE. FRED G. MEYER, Detroit, Mich. Filed Sept. 25, 1919. Serial No. 326,203. 1 Claim. (Cl. 226—84.)

A plunger press, comprising a base, a frame formed of strap-metal having spaced upper portions and having divergent lower portions engaging said base, a head having an extension between said upper portions, means securing said extension to the frame, a flange upon said head engaging said upper portions to prevent swinging of the head about its securing means, a plunger vertically reciprocatory in said head, and a lever pivoted upon said frame between said spaced portions thereof for actuating said plunger.



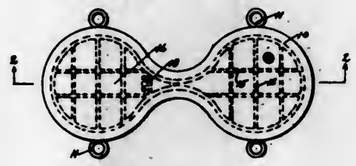
1,425,673. DEEP-WELL PUMP. WILLIAM A. MINOR, Rochester, N. Y., assignor to Luitwieler Pumping Engine Company, Rochester, N. Y., a Corporation of New York. Filed July 25, 1921. Serial No. 487,387. 5 Claims. (Cl. 103—200.)

1. A deep well pump comprising a barrel, two buckets arranged in the barrel, one above the other and having sloping seats, two valves, one for each sloping seat of a bucket controlling the flow of liquid through such bucket, two cages, each connected to one of the buckets about the valves, two rods, each connected to one of the cages, the rod of the upper bucket being hollow and having the rod of the lower bucket extending therethrough, said rod of the lower bucket also extending through the valve of the upper bucket, a packing carried by said



valve of the upper bucket and cooperating directly with said rod and a guide for the rod of the lower bucket, arranged in the upper bucket below the packed valve.

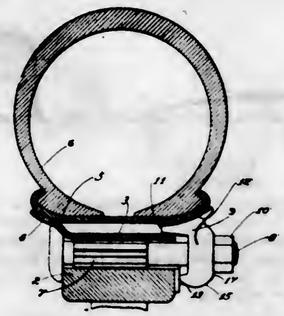
1,425,674. AIR HEATER. THOMAS H. MONAGHAN, Chicago, Ill. Filed May 12, 1921. Serial No. 468,925. 5 Claims. (Cl. 257—137.)



2. An air heater comprising a rectangular elongated fan casing having a cold air inlet opening at its bottom, and discharge openings at its top, disposed around its four sides, a fan mounted in said casing adjacent said cold air inlet opening, and a series of independent radiators mounted in said casing between the inlet and discharge opening, said radiators lying in inclined directions, parallel with and overlapping each other.

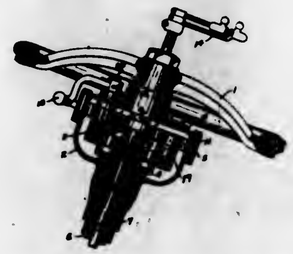
1,425,675. WINDOW ADJUSTER. KLEOFAS NAUDULAITIS, Chicago, Ill. Filed Nov. 30, 1921. Serial No. 518,924. 3 Claims. (Cl. 16—197.)

2. In a device of the character described, the combination of a chambered window frame and sash, with a balancing means for the sash, comprising pairwise arranged sockets, rods rotatably held in each pair of said sockets, a thickened part on one of said rods having an outer spiral groove, a sleeve adapted to move up and down on said rod for rotating the same, a tongue on said sleeve adapted to be operated by the up and down movements of the window sash, for rotating said rod, a spiral spring on said rod having one of its ends secured on the bottom wall of the frame chamber, means for imparting the rotation of one of the rods to the other, for tensioning said spring, means for locking the sash in any of its adjusted positions and rollers for facilitating the operation of the window sash.



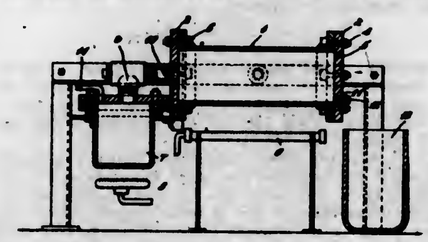
1,425,676. PROTECTOR FOR HORSES. KLEOFAS NAUDULAITIS, Chicago, Ill. Filed Nov. 30, 1921. Serial No. 518,925. 1 Claim. (Cl. 54—80.)

A protecting hollow pad for the heads of horses comprising a flexible body, partitions within said body for dividing said body into a plurality of chambers adapted to be filled with sand, ears on said pad allowing the passage of the harness straps for securing the pad on the head of a horse, said pad having an upper opening for the admission of the sand and water, and a plurality of small bottom openings for the slow escape of the surplus of water.



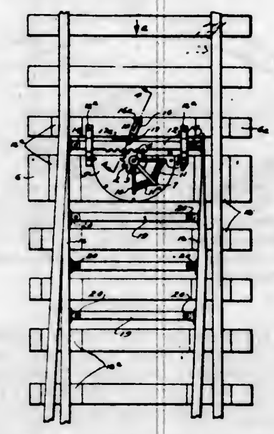
1,425,677. AUTOMOBILE RIM LUG AND WEDGE. ARTHUR WM. NELSON, Chicago, Ill., assignor to Stone Thompson Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1920. Serial No. 361,763. 2 Claims. (Cl. 301—20.)

1. A demountable rim holding device embodying therein a member formed to provide an opening for the accommodation of a bolt, an annular tapering flange projecting from the body of the device and being annularly reduced at its edge thereby defining an opening smaller in size than the opening defined by the remainder of the flange, a nut having a flange of a size greater than the opening defined by said reduced flange



portion and positioned between the wall defining said bolt opening and said inturned flange.

1,425,678. STEERING DEVICE. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 28, 1918. Serial No. 263,423. 15 Claims. (Cl. 74—34.)

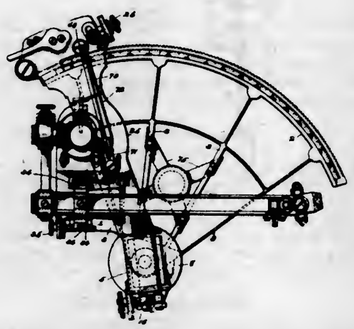


1. In a steering device, a manually operable steering element, a second element movable by said steering element, speed ratio-changing mechanism between said elements, said mechanism including a gear, and supporting structure for said steering element adapted to permit axial movement thereof and thereby to effect movement of said gear to interchangeably connect said elements in different speed ratios through a single set of teeth of said gear.

1,425,679. METHOD OF PRODUCING PHOSPHOR METALS. SAMUEL L. NICHOLSON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 29, 1920. Serial No. 427,091. 2 Claims. (Cl. 75—1.)

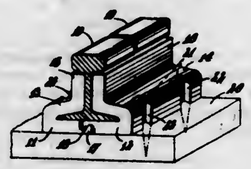
1. A method of producing phosphor-metals which coasists in heating a metal to a temperature below its melting point in a retort, passing phosphorus vapors therethrough to phosphorize the same, raising the temperature of the metal to its melting point in the same retort, and casting the same into ingots.

1,425,680. RAILWAY SWITCH. ERIK L. NYLUND, Detroit, Mich. Filed July 26, 1921. Serial No. 487,690. 2 Claims. (Cl. 246—342.)



1. In a railway switch mechanism, a pivoted bumper comprising a pinion, a rigid arm and yielding arms, and a rack-bar meshing with said pinion, said rack-bar connecting the two ends of switch rails, and spring means for holding said rack-bar against accidental lateral movement, and means for swinging said bumper.

1,425,681. RESERVE-SUPPLY SYSTEM FOR TANKS. JOHN GEORGE O'BRIEN and FRANK A. PICARD, Saginaw, Mich. Filed Nov. 2, 1921. Serial No. 512,222. 3 Claims. (Cl. 158—46.5.)

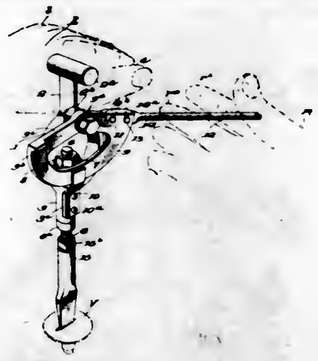


1. In combination with a tank having an outlet and a filling cap, a vertically movable hollow valve controlling said outlet, the casing of said valve formed with a threaded socket, a tubular valve stem, a compressible spring within said casing and surrounding said tubular stem, a rod connected to the upper end of said tubular stem and projecting through the top of said tank, a one-piece bowed handle secured to the end of said rod, one end of said handle adapted to engage the top of said tank, the other end of said handle removably engaging said filling cap, whereby to open said valve.

1,425,682. SEXTANT FOR USE WITH BALLOONS. ROBERT S. OLMSTED, Reading, Mass. Filed July 31, 1920. Serial No. 400,535. 11 Claims. (Cl. 88—2.2.)

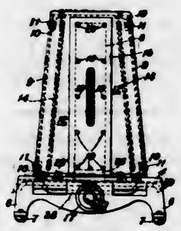
1. In an instrument for determining horizontal angles, a normally horizontal graduated limb, a sighting tube pivoted to move in a plane substantially perpendicular to the plane of said limb, a horizontal glass movable with and having a normally fixed relation to the said sighting tube, means for adjusting the angle of said horizon glass in relation to the sighting tube, and an index arm movable over said graduated limb and carrying an index mirror.

1,425,683. RAIL-JOINT FASTENER. SAMUEL PAPP, Lowelliville, Ohio. Filed Apr. 1, 1922. Serial No. 548,568. 1 Claim. (Cl. 238—193.)



A rail joint comprising a pair of members engaging opposite sides of the rail and having base elements extending under the rail and interlocked together, and hooked elements on one member projecting through slots in the rail and engaging in retaining recesses in the other member said recesses communicating with one end of said last member.

1,425,684. VALVE-GRINDING TOOL AND THE LIKE. THEODORE A. PARMENTER, Racine, Wis. Filed Apr. 8, 1921. Serial No. 459,700. 2 Claims. (Cl. 51—29.)

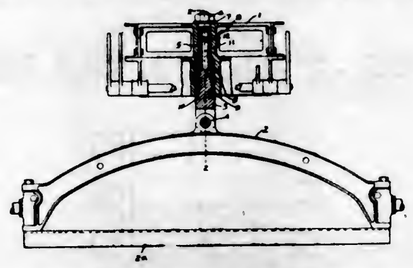


1. In a valve grinding tool, the combination with a frame, a spindle journaled in the frame, a pinion mounted on said spindle, and a rockaby mounted segmental gear in mesh with said pinion for imparting a back and forth rotation to said spindle, of a flat operating handle

secured to said gear and extending radially a distance therefrom, the extended length of said handle twisted longitudinally at approximately a right angle to the

secured length and the twisted portion of said handle forming a shoulder adapted to engage said frame to limit movement of said handle, gear and spindle.

1,425,685. INCLOSED TOASTER. WILBUR PASCOE, Detroit, Mich., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 11, 1920. Serial No. 409,558. 8 Claims. (Cl. 219—19.)

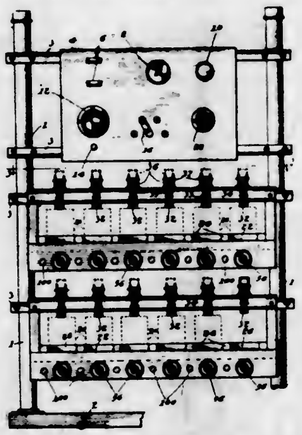


1. In an electric heater, the combination with an enclosing casing having a plurality of oppositely disposed openings and a plurality of heating coils located in said casing of a two-part material holder reciprocally movable in said openings.

1,425,686. COMPOSITE RAILWAY TIE. GEORGE H. PEGRAM, South Orange, N. J. Filed July 2, 1920. Serial No. 393,542. 3 Claims. (Cl. 238—91.)

1. A composite railway tie comprising a cross member of reinforced concrete and rail supporting cross beams adjustably embedded near the ends thereof, said beams being supported at their ends only and terminating in wedge-shaped ends for retention in correspondingly shaped recesses.

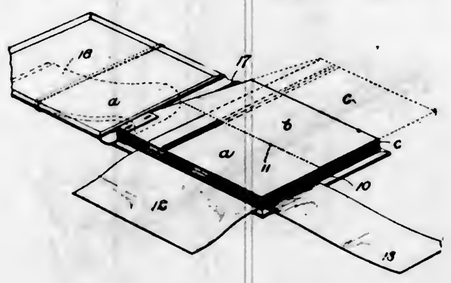
1,425,687. FLEXIBLE MOUNTING FOR TRACTOR FRAMES. CARL T. PENTON, Detroit, Mich. Filed Mar. 5, 1921. Serial No. 449,699. 1 Claim. (Cl. 280—112.)



In a tractor, the combination with the frame thereof and an axle supporting an end of the frame, of a vertically slotted pin slidably engaging the frame, and pivoted upon the axle transversely thereof, a spring embracing said pin yieldably transmitting the load of the frame to the axle, and a shaft mounted upon the frame and passing through the slot of said pin.

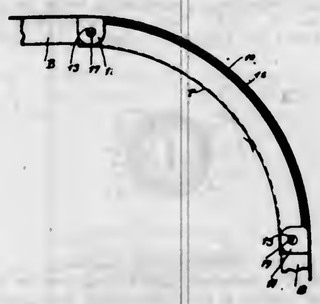
1,425,688. METHOD OF DELINTING COTTON SEED. LOREN G. POLHAMUS, Chula Vista, Calif., dedicated by mesne assignments to the people of the United States. Filed Apr. 19, 1922. Serial No. 555,636. 1 Claim. (Cl. 83—28.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

The method of delinting cotton seed consisting in exposing cotton seed to the action of gaseous hydrochloric acid for approximately one hour to render the lint extremely brittle, in then agitating the cotton seed to remove the lint, and subsequently, in exposing the cotton seed to fumes of ammonia gas to protect the viability of the seed.



1,425,689. CHARGING RACK. RAYMOND E. POWELL, Chicago, Ill., assignor to Federal Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 1, 1920. Serial No. 414,037. 5 Claims. (Cl. 171—314.)

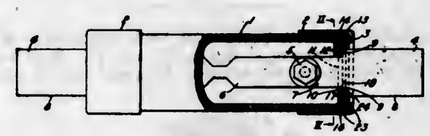
1. Battery charging apparatus having a charging circuit, a plurality of charging pockets adapted to receive the batteries to be charged and to put them in series in the charging circuit, meter circuits, one for each pocket, each meter circuit being controlled partially by a normally open switch adapted to be closed by the battery when the latter is inserted into a pocket, whereby the meter cannot be put



onto closed circuit unless the battery is in place, and partially controlled by a manually operated testing switch, whereby even though a battery be in place, the meter will not be on closed circuit except while the testing switch is closed.

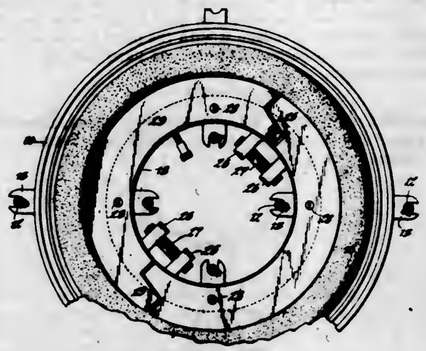
1,425,690. SALES BOOK. JOHN N. POWERS, Washington, D. C. Filed Aug. 6, 1921. Serial No. 490,334. 4 Claims. (Cl. 282—8.)

1. A manifold sales book comprising record sheets divided into sections adapted to be folded into superimposed relation, corresponding edges of the respective sheets being cut at an angle with respect to their direction of fold, said angular cut extending in a straight line through all of the sections when the latter are in unfolded relation.



1,425,691. SECURING DEVICE FOR THE CONNECTING STRIPS OF AUTOMOBILES. GUSTAVE H. PRIGAN, Burns, Mont., assignor of one-third to Edward H. Fuller and one-third to Arthur White, both of Burns, Mont. Filed Dec. 27, 1920. Serial No. 433,346. 3 Claims. (Cl. 296—118.)

1. In combination with a top supporting bow and a padding strip therefor, an attaching member comprising an elongated body portion provided upon one face with a plurality of integrally attached fangs extending through the strip and engaging in the bow, and means on the ends of said body portion securing said body portion to the sides of the bow at the sides of the padding strip.



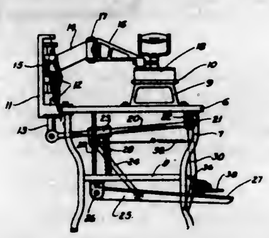
1,425,692. REFILLABLE FUSE. JOSEPH H. PROCTER and MAURITS J. SANDIN, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1919, Serial No. 273,024. Renewed Apr. 10, 1922. Serial No. 551,195. 3 Claims. (Cl. 200—132.)

1. A refillable cartridge fuse comprising a tubular insulating body member, a terminal member disposed at the end thereof, and having a transverse web portion having its greatest dimension less than the diameter of the interior thereof, means for preventing the turning of the terminal member with respect to the tubular member, a member conforming to the web portion and embracing the same to

form a disk of greater diameter than the interior of the tubular member, means for preventing longitudinal displacement of said embracing member with respect to said terminal member and means for maintaining all of the members in relative position with respect to said tubular member.

1,425,693. TIRE MOLD. HARRY RAFLOVICH, Buffalo, N. Y., assignor, by mesne assignments, to Slohm Tire & Mould Co., Inc., a Corporation of New York. Filed Dec. 31, 1919. Serial No. 348,590. 5 Claims. (Cl. 18—38.)

1. A mold for vulcanizing tires comprising a holder adapted to engage the inner circumferential part of a tire and constructed to be capable of expansion and contraction, means for expanding and contracting the holder, and a mold body having sections engaging with opposite sides of said tire and holder.



1,425,694. ELECTRICAL ATTACHMENT PLUG. ADOLPH C. RECKER, Oakville, Conn., assignor to The Chase Companies Inc., Waterbury, Conn., a Corporation. Filed Aug. 26, 1919. Serial No. 319,913. 1 Claim. (Cl. 173—332.)

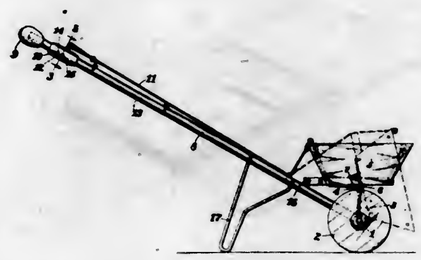
An electrical attachment-plug having a plug-body, and a pair of jaws located therein, each jaw having an integral perforated shank of which the shank of one jaw is longer than the shank of the other jaw and folded over the same to unite the two jaws and each jaw having its side-edges rolled inward to form contact leaves and the said jaws spreading apart for the accommodation between them

of flat contact-fingers and also for the accommodation of round contact-fingers, and the said folded leaves yielding under the action of round contact-fingers after the jaws have reached the limit of their spreading apart by contact with the interior walls of the said plug-body.

1,425,695. LOCKING DEVICE FOR PRESSING MACHINES. EDWARD E. REICH, Chicago, Ill. Filed Feb. 25, 1921. Serial No. 447,676. 8 Claims. (Cl. 74—81.)

5. In a machine having an operating treadle, a ratchet bar mounted on said machine, pawl means mounted on said treadle to engage said ratchet bar and lock said treadle in position, means mounted on said pawl means for embracing said bar to engage it with the pawl means, and resilient means to normally retain said pawl and bar in released position.

1,425,696. NECKTIE BRACE. JOHN H. RICE, Danville, Iowa. Filed Aug. 20, 1921. Serial No. 493,911. 2 Claims. (Cl. 2—84.)



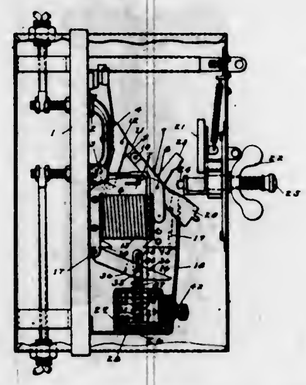
1. A necktie brace of the character described comprising a pair of sections, each section being longitudinally tapered, means carried by each section for connecting said sections to each other, and a flexible tab carried by one of said sections and arranged for connection to a tie to prevent disengagement of the brace from the tie when in use.

1,425,697. PUSH-BUTTON SWITCH. EDWARD E. ROSE and PAUL L. MAHDIS, Swissvale, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 13, 1919. Serial No. 344,564. 2 Claims. (Cl. 200—159.)

1. A switch comprising an apertured metal base member, a tubular insulating member secured thereto, an apertured ping member disposed in said tubular member, and a push-button member disposed in said tubular member having a reduced portion to provide a shoulder thereon, said reduced portion being operable in said plug member and the shoulder functioning to limit the operation of said push-button member.

1,425,698. DUMPING CART. ROBERT A. SALE, Philadelphia, Pa. Filed June 15, 1921. Serial No. 477,782. 6 Claims. (Cl. 298—5.)

1. A dumping cart including a body, tension means exerting pressure upon the body, tending to cause the same to rotate, means restraining the tension means from acting, an axle above which said body is mounted, and an auxiliary axle carried above the first axle and supporting the body, said tension means comprising a coiled spring encircling said auxiliary axle.



1,425,699. REFILLABLE FUSE. MAURITS J. SANDIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Continuation of application Serial No. 273,024, filed Jan. 25, 1919. This application filed June 4, 1921. Serial No. 475,043. 7 Claims. (Cl. 200—132.)

2. A refillable cartridge fuse comprising a tubular body member, a terminal member disposed at the end thereof and having a fixed transverse web portion, the greatest dimension of which is less than the diameter of the bore of the tubular member, and a member disposed in the plane of, and cooperating with, said web portion to constitute a plate of single thickness across the end of the tubular member and greater in diameter than the bore thereof.

1,425,700. CIRCUIT-BREAKER-TRIPPING STRUCTURE. WILLIAM M. SCOTT, Tredyffrin Township, Chester County, Pa. Filed Nov. 24, 1920. Serial No. 426,129. 20 Claims. (Cl. 200—108.)

19. The combination with an electro-magnet having an armature pivoted for movement in a vertical plane, of sucker structure comprising a fixed sucker element, a coacting movable sucker element connected to said armature, said armature supported by said fixed sucker element when said electromagnet is de-energized, a fixed support, and means for securing said fixed sucker element in different positions upon said fixed support for imparting to said armature different vertical positions
